Appendix

Address by Hon. Harry F. Byrd, of Virginia, Before the Illinois Manufacturers' Association

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, January 9, 1959

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered in Chicago, Ill., on December 11, 1958, before the Illinois Manufacturers' Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ABSTRACT OF SPEECH DELIVERED BY SENATOR HARRY F. BYRD, DEMOCRAT, OF VIRGINIA, BEFORE THE ILLINOIS MANUFACTURERS' ASSOCIATION, AT THE CONRAD HILTON HOTEL, CHICAGO, ILL., DECEMBER 11, 1958

These are times when prudent men should analyze the changes which are occurring against the indisputable fact that free enterprise democracy is the source of this country's greatness.

There is no doubt that developments such as those in atomic energy, rocketry, and so forth, have placed us upon the threshold of a new era.

In addition, this country is experiencing great increase in population.

While we may have unduly exploited our resources, they are still tremendous.

Our productive know-how and capacity are yet unsurpassed.

These are elements on which free enterprise democracy should thrive, and proceed soundly and constructively for the good of all mankind.

Our free enterprise democracy is the greatest system the world has ever evolved. But there is one controlling requirement, and it must never be overlooked. The system is based on solvent government and sound money.

It is in this requirement that we have allowed ourselves to become weak. This basic requirement of our system is equally vital to all of us as individuals, and to every segment of our people—labor, management, agriculture, finance, professions, government, and so forth.

With fiscal soundness I would have no fear for the future, economically or militarily. I would anticipate the period ahead with enthusiasm for my children and with pride in the contribution of my own generation.

Without solvency and sound money there will be neither solid economic progress nor national security with military preparedness.

Assurance of fiscal soundness in the future does not now exist. This is my concern.

We cannot perpetuate national solvency and integrity of the dollar through continuous deficit spending, unchecked national debt, and spiraling inflation. This situation jeopardizes our system of government and our future.

With only two bona fide exceptions, we have been on a deficit financing basis for 29 years. The fiscal situation deteriorated faster this year than in any comparable peacetime period to my knowledge.

Between January and June, we moved from estimates of virtually balanced budgets in the past and current years to combined deficits totaling $15 billion.

At the present rate, Federal agencies would spend more than $400 billion in 5 years. This would mean a Federal debt of more than $300 billion is in immediate prospect. This would be the highest national debt in the history of the world.

During the past session of Congress we were forced to raise the statutory limit on the national debt twice within 7 months. This was unprecedented. But we are forewarned. Some people are now contending the recent election was a mandate for even more dangerous Federal spending activity.

If more programs for nonessential spending should be adopted by the new Congress to be convened next month, our fiscal situation will deteriorate faster next year.

From experience it is to be expected that, if such new programs are enacted they will be long-term in nature with huge multiyear commitments for the future. It is programs of this kind that make the Federal budget so difficult to reduce when the necessity is upon us.

Contrary to general understanding, recent great increases in Federal spending have not been for defense and foreign aid. They have been for domestic-civilian programs.

Since 1954, expenditures outside of defense, atomic energy, and foreign aid categories have increased from $19.1 billion a year to $33.4 billion. This is an increase of $14.3 billion, or 75 percent.

It is in this category where we find so many Federal programs which may be popular, or even desirable, but nonessential.

Much of the domestic-civilian spending is for subsidies. And many of these subsidy programs are bottomless pits for Federal spending and contribute to sky-high inflation. Most of the proposals following the recent election were of this nature.

The Federal Government of the United States cannot now pay its bills except by increasing debt and inflation. Revenue from present tax rates does not meet our commitments.

Interest on the Federal debt is now taking more than 11 cents out of every tax dollar, and chronic inflation has reduced the purchasing power of our money 52 percent. The American dollar is now worth 48 cents by the 1939 index.

Inflation destroys fixed incomes, provident investment, prudent business, sound financing, national security, and democratic government.

More than 20 years of destructive inflation in this country to date have led to continual demands for increased subsidization.

The Federal Government is now subsidizing business, industry, private finance, agriculture, transportation, power, health, education, States, localities, individuals, and so forth.

By the process of cheapening our money and centralizing power in the Federal Government, we have descended to a level of state socialism which is obvious, if not admitted.

Social democracy is a subterfuge for sound government and constructive enterprise. Its evils are historically documented wherever nations have stooped to it.

Herein lies my concern, as I indicated before. Our free enterprise democracy is being undermined. In our present position there is no assurance of fiscal soundness for the future. In these circumstances, how can we hope fully to develop the great potentialities which lie ahead?

I think the situation is urgent. We must start Federal fiscal recovery immediately. Such recovery must start with balancing the budget, reducing the debt, and stopping inflation.

This must be our goal. Responsibility for achieving it lies equally upon the President, the Congress, and the people of the United States, individually and collectively.

The President originates budget recommendations, and the Congress enacts the authority for Federal spending. Both respond to the expressed will of the people.

The budget for the new fiscal year, beginning July 1, is being formulated at the White House now. I discussed the situation with the President last August when Congress adjourned. I have noted his actions since that time, especially his orders of the last few weeks. I hope and believe he will recommend a balanced budget for next year.

I have come to Chicago today to emphasize the seriousness of the problems confronting us. I believe by your own examination you would find I do not exaggerate the conditions we have allowed to develop, or the consequences we might expect if we continue on our present course.

The Federal position alone is bad enough, but we must keep the whole picture in view.

As background keep these facts in mind:

Total public expenditures in this country—Federal, State, and local—this year will be approximately $145 billion.

Federal, State, and local governments this year will take approximately $130 billion out of the pockets of American taxpayers in revenue receipts from all sources.

In their regular budgets Federal, State, and local governments this year will run deficits totaling some $15 billion.

Public debt—Federal, State, and local—this year will approach $350 billion.

Private debt now totals more than $500 billion.

This means our economy is burdened with indebtedness amounting to between $800 billion and $900 billion. This is close to a trillion dollars. These are figures beyond ordinary comprehension.

When individuals become insolvent, they take bankruptcy and dispose of their obligations. When governments become insolvent their money becomes worthless, and they go through some kind of a revolution wringer. The nature and the process may vary. But invariably the form of government is changed. Democratic government, as we have known it, could not survive.

Of course, I concede the necessity of deficits in extreme national emergencies.

For the first 150 years of our history we met our emergencies when they arose, but when they were over we promptly restored sound financing, characterized by balanced budgets, and began paying off the debt.

Under this practice, combined with our wealth and natural resources, this Nation grew great in the short span of a century and a half. But in our time we have not only

continued exploitation of our resources, we have abandoned our traditional policy of fiscal soundness.

For 25 years, through 1955, we were on a deficit basis without real exception. In that period the Federal debt rose from about $16 billion to $274 billion, and from 1939 the value of the dollar dropped at an average of more than 3 cents a year.

Finally, in 2 consecutive fiscal years, 1956 and 1957, we brought the Federal budget back into real balance. At the same time we financed substantial tax reduction, reduced the debt, and slowed inflation down to a virtual stop.

After a quarter century of deficit financing, rising debt and spiraling inflation these balanced budgets gave us reason to hope we were back on an even peacetime keel.

But for reasons I shall never understand, the President in January 1957 brought in his budget for fiscal year 1958 proposing an $8 billion increase in expenditures. It was the biggest peacetime spending budget to that date.

You remember that budget 2 years ago. The country was shocked. There has never been anything like the opposition which developed spontaneously from the grassroots of this Nation.

Congress responded, and reduced appropriations by billions. But in the complexities of big government, with tremendous balances remaining in prior appropriations, expenditures rose notwithstanding. They were rising before sputnik and recession appeared on the scene.

This brought us to the conditions of the past fiscal year which ended June 30 and the present fiscal year which started July 1. Original estimates for these 2 years showed a combined surplus of $2.3 billion. By the latest figures this has changed to a combined deficit of $15 billion.

I emphasize these figures to tell the story of recordbreaking deterioration in the Federal fiscal situation.

Seizing upon sputnik and recession as justification, Congress in the past session insisted upon enactment of legislation which could require Federal expenditures at an annual rate of $80 billion for years to come.

All of the New Deal recovery programs from 1933 to 1939 combined cost us only about half of the current year expenditure budget.

This year's budget was exceeded only in the 2 peak years of World War II.

The Korean war has been over more than 5 years. But Federal budgets in that costly campaign never came close to the level of Federal expenditures reached this year.

When the present administration came into office it established a commendable record. It reduced expenditures in 2 consecutive fiscal years—1954 and 1955.

But from a low point of $64.5 billion in that period, expenditures have now been increased to this year's estimate of $81.7 billion. For accurate comparison this figure includes expenditures for highways and Federal National Mortgage Association which are now financed through so-called trust funds.

To show the tremendous increase in domestic-civilian expenditures—straight from the budget documents, here is the Federal spending record for the period from fiscal year 1954 to date:

1. In categories other than domestic-civilian:

Expenditures for military functions have been increased $500 million, from $40.3 billion to $40.8 billion.

Expenditures for stockpile and defense production have been decreased $600 million from $1 billion to $400 million.

Expenditures for atomic energy have been increased $700 million, from $1.9 billion to $2.6 billion.

Expenditures for foreign military assistance have been decreased $1.4 billion from $3.6 billion to $2.2 billion.

Expenditures for foreign economic aid have been increased $400 million from $1.5 billion to $1.9 billion.

Expenditures for international affairs have been increased $100 million, from $200 million to $300 million.

From these figures, it can be seen that Federal expenditures in categories other than domestic-civilian have been decreased $300 million since 1954, from $48.6 billion to $48.3 billion.

2. But in the same period since 1954, domestic-civilian expenditures have been increased $14.3 billion, from $19.1 billion to $33.4 billion.

Federal expenditures, fiscal years 1954–59

[In billions of dollars]

	1954	1955	1956	1957	1958	1959
National security:						
Military functions	40.3	35.5	35.8	38.4	39.0	40.8
Stockpile and defense production	1.0	.9	.6	.5	.6	.4
Atomic energy	1.9	1.9	1.7	2.0	2.3	2.6
Subtotal, national security	43.3	38.3	38.0	40.9	41.9	43.8
Foreign aid:						
Military assistance	3.6	2.3	2.6	2.4	2.2	2.2
Economic and other aid	1.5	2.0	1.6	1.7	1.9	1.9
Subtotal, foreign aid	5.1	4.3	4.2	4.0	4.1	4.1
International affairs	.2	.2	.2	.3	.3	.3
Total, other than domestic-civilian	48.6	42.8	42.5	45.2	46.3	48.3
Domestic civilian:						
Veterans services and benefits	4.3	4.5	4.8	4.8	5.0	5.2
Labor and welfare	2.5	2.6	2.8	3.0	3.4	4.3
Agriculture and agricultural resources	2.6	4.4	4.9	4.6	4.5	6.4
Natural resources	1.3	1.2	1.1	1.3	1.5	1.7
Commerce and housing [1]	.8	1.4	2.1	3.4	3.8	6.4
General government	1.2	1.2	1.6	1.8	1.4	1.7
Interest	6.5	6.4	6.8	7.3	7.7	7.6
Allowance for contingencies						.2
Total, domestic-civilian [1]	19.1	21.7	24.2	26.1	27.3	33.4
Grand total [1]	67.8	64.5	66.7	71.4	73.6	81.7

[1] For comparison, includes trust fund expenditures of Federal National Mortgage Association beginning fiscal year 1955, and highways beginning fiscal year 1957.

NOTE.—Figures are rounded and may not add to totals.

I suggest the new proposal to expand the urban renewal program as an example of domestic-civilian programs which are bottomless pits for Federal expenditures.

In the first place, I think people should keep up their own property. I know of no reason why the Federal Government should absorb two-thirds of the loss entailed in cleaning up huge city subdivisions to be used for private profit.

Federal funds already available for this program total $1 billion for loans and $1.2 billion for cash grants. These tremendous sums will not be a drop in the bucket if we are to undertake these projects in cities and towns from one end of this country to the other.

Federal subsidies generally constitute a vast field of domestic-civilian expenditures. The Joint Committee on Reduction of Nonessential Federal Expenditures is contemplating a study of the subject.

At the outset we are confronted with two questions: What is a subsidy? Who is subsidized?

Nearly 40 million people will receive direct payments from the Federal Treasury this year. This includes nearly 200,000 Federal employees working overseas. Generally speaking, these 40 million people with their families could reach a number equivalent to half of the population of the United States.

Nearly $80 billion is outstanding at this moment under so-called Federal credit programs for housing, veterans, agriculture, commerce, defense production, small busines, and so forth. This has increased $12 billion in the last 3 years.

Grants to State and local governments now total $4.9 billion. There are now 62 programs for State and local subsidy.

When I came to the Senate 25 years ago, there was only one State aid program of any consequence. That was the highway program which was costing $250 million.

I mention these categories of Federal expenditures simply to illustrate the areas where there may be subsidies which do not meet the eye. There are others. For instance, who is subsidized by the postal deficit?

It may be contended that the foreign agricultural trade development programs are another subsidy to American agriculture.

Are the beneficiaries of government contracts with industry and institutions subsidized to the degree that they think they have a vested interest in the level of Federal expenditures? Reaction to justifiable reductions a year ago would indicate an affirmative answer.

A great fallacy has been built up around Federal payments, whether you call them subsidies or choose to avoid the ugly word. People have gotten the idea that they are getting something for nothing.

There is no greater mistake. American taxpayers sooner or later pay every dime of the expenditures through these programs, and more.

When we are on a sound basis we pay these costs directly from taxes. If we are on a deficit basis we charge them into the debt, pay interest on the loan until we pay off the obligation, and stimulate inflated prices in the process.

In either event, about 15 percent goes into overhead for Federal administration. Since I have been in the Senate, interest on the Federal debt has cost the taxpayers of this country more than $100 billion.

Until we get Federal expenditures down, balance the budget, and stop inflation, there is no hope for sound tax reduction. To reduce taxes when we are on a deficit basis simply charges the tax cut into the Federal debt. This aggravates the whole deficit-debt-inflation cycle.

Others may have their own programs for the coming new Congress. Mine would have two objectives. The first would be to balance the Federal budget. The second would be legislation to correct abuses practiced by unscrupulous labor leaders primarily

against labor itself, but also against management and the public.

Practices revealed by the McClellan Labor Rackets Committee are a national disgrace. I voted for legislation in the past session of Congress to correct these abuses. I shall vote for it again this year. It should have the support of the rank and file of labor, management and the general public.

I am frequently accused of being against labor. This is because I support the best interest of the laboring man; not the powerful labor czar.

I favor the right to work. But statements by certain labor leaders make it definite that when the new Congress convenes, great effort will be made to enact legislation to make States right-to-work laws invalid.

This would be another usurpation of State authority and still further concentration of power at Washington. Such an effort should be resisted to the utmost.

It is certain, too, that these same labor leaders will attempt to federalize unemployment insurance now administered by the States.

A strong effort to this end was made last year. As chairman of the Senate Finance Committee, I fought the proposal and it was defeated.

The purpose of the move to federalize unemployment insurance is not only to standardize the law for all States, but also the payments for all business and industry.

To federalize unemployment insurance would mean that the powerful labor lobby would be constantly applying pressure on Congress for increased benefits and extension of the payment period.

Early introduction of both of these proposals is certain, and the need to resist them is obvious. In our present condition, I think the Government of the United States is dangerously vulnerable to the influence of ruthless labor dictators.

I am fully aware that the achievement of both of my objectives—correcting abuses by labor leaders and balancing the Federal budget—will be extremely difficult. I am the only man remaining in the Senate who voted against the Wagner Act and for 25 years I have analyzed the budgets submitted by three Presidents.

Year after year I have gone over every expenditure and appropriation item, and these number some 1,100.

I know the problems involved in our outmoded appropriation procedures. I know the devices which have been developed to bypass appropriation control, such as authority to spend directly from the public debt.

I know how difficult it is to reduce expenditures when unexpended balances in prior appropriations approach or exceed the new requests to which annual congressional action ordinarily is limited.

In the current year approximately $147 billion will be available to Federal spending agencies, $75 billion or more in new spending authorizations enacted this year, and approximately $72 billion in unexpended balances carried over from prior years.

The President has a dual responsibility: First, to originate the budget with requests for the new year and, second, to administer the expenditures from both old and new money. I hope he will take the lead not only in balancing the Federal expenditure budget for the coming year, but in the full recovery of our fiscal stability.

On my own experience I submit that expenditure reductions of the necessary magnitude, if applied with care and wisdom, would strengthen our economy, strengthen our Government, strengthen our national defense and strengthen our international position.

I am certain that such reductions can be made in all of the Federal sending categories—military, foreign aid, and domestic-civilian.

With respect to defense expenditures, we should rechart the whole military program and reevaluate the objectives of our spending in view of changing methods of warfare.

I yield to no one in advocacy of national defense but, as the President has said, there is waste and duplication in the military departments.

We unified the armed services. We adopted the Eberstadt amendments for businesslike operations in the Military Establishment. We passed the Military Procurement Act. We revised military pay scales and increased survivors benefits to allow the Armed Forces to compete for capable personnel. In the past session of Congress we enacted the military reorganization bill.

It is time these actions paid off in economy and efficiency for more defense at less money.

The waste in foreign aid, especially economic aid, has been obvious from its inception. We enacted the Marshall plan in 1948 for 4 years. Postwar foreign aid expenditures have now run more than a decade. To date our gross authorizations for foreign aid expenditures have totaled more than $80 billion.

Expenditures for economic aid should be sharply curtailed. Our best interests, and those of our allies, would be better served by preserving the integrity of the American dollar to stimulate international trade.

I know basic legislation will be required for substantial reduction in domestic-civilian expenditures. This will require the exercise of statesmanlike leadership by the President and the unwavering support of Congress and the public.

But I urge the President in his January budget message to submit a blueprint for substantial expenditure reductions in all categories and to follow through with specific legislative recommendations where they are necessary. I pledge him my support and I hope this objective will have yours.

I am aware of the cynical contention that what this country wants is continuing inflation and a fast-buck economy, with no regard for the certain consequences and the next generation.

But I feel certain that the great majority of the people of this Nation want the integrity of our money protected, want their form of government preserved, and want their free enterprise system to survive, in order that we may pursue this Nation's great mission in the world.

If this is what we want, we must have a national crusade from the grassroots to save our representative democracy which is founded upon the free enterprise system.

Such a crusade must be inspired and led by the President. It must be supported by the Congress—House and Senate. Most important of all, it must be fired by the people themselves.

From long experience in the Senate of the United States I can say the voice of the people in this country, if it is loud enough, will overcome selfish and highly organized minorities and will prevail—that is the great virtue of our constitutional democracy as contrasted with dictatorship.

So the job is up to you and every other citizen.

Our people must remember that the very foundation of our democracy rests upon the fact that people must support the Government. It is not the purpose of government to support the people.

The national interest must come ahead of private gain.

So, to achieve our objectives, there must be sacrifice all down the line.

Responsibilities of Citizenship

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1959

Mr. SCHOEPPEL. Mr. President, on November 11, 1958, at St. Andrew's Cathedral, Honolulu, T.H., Lt. Gen. Vernon E. Magee, U.S. Marine Corps, delivered a very important address entitled, "The Responsibilities of Citizenship." The address which was delivered on that historic occasion is such a fine presentation of an important matter that I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address is ordered to be printed in the RECORD, as follows:

THE RESPONSIBILITIES OF CITIZENSHIP, AN ADDRESS BY LT. GEN. VERNON E. MAGEE, U.S. MARINE CORPS, ON THE OCCASION OF VETERANS DAY, NOVEMBER 11, 1958

Bishop Kennedy, distinguished guests, veterans of the service of the United States, I am singularly honored this morning with the privilege of addressing you from the pulpit of this great cathedral.

This is a privilege which comes to few laymen; I accept it with humility and reverence. It is fitting that we should choose this sacred temple for our purpose this morning. My fellow veterans, of whatever religion, who have walked through the valley of the shadow of death, will not forget that we did not walk alone. We were sustained through our ordeal by a spiritual presence—by whatever name called—whose earthly abode is in our churches and our temples. Thus, in meeting here this morning, we do reverence to that Supreme Being, and honor to our mortal brothers, the veterans of the United States.

Today marks the 40th anniversary of the armistice of World War I. America's greatest and most costly war to end all wars had come to an end. Some few of us here remember all too vividly the events of those action-packed years. The then Commander in Chief, President Wilson, who had been successful in carrying the great war to a victorious conclusion, was soon to learn that it was easier to win a war than to make lasting peace. For since that war we have added to the rolls 15 million veterans of an even greater war, and 5 million veterans of Korea. It is small wonder that the original observance of Armistice Day is no longer appropriate; and that by logical evolution we now dedicate this date of November 11 to all veterans.

Here in this historic area where World War II began, the day has real meaning. For no other city of American soil has Honolulu's distinction. If our Nation should ever again be forced into general warfare, Honolulu will not be so singularly honored. It is with this in mind that we who have spent years in learning the techniques of war are now learning the more difficult task of keeping the peace.

Three times within my span of service, the United States determined that it was willing to cast its lot in the fight against aggression and went to war in support of our beliefs. It may appear to be an anomaly, but our love for peace has never been so great that we were not willing to fight for the preservation of those principles and relationships which are the only justifiable foundations of peace.

In these short hours dedicated to our veterans, it is well to recall proudly the great scenes of the past wherein our freedom was won, nurtured and maintained. In our minds we can see the battles and picture the places where freedom was tested and where freedom triumphed. We can think of the shot heard round the world at Concord and Lexington, of the bitter winter at Valley Forge, of the long lean years of the Revolution, to be terminated finally with the triumph at Yorktown.

Then there were other places like Gettysburg, San Juan Hill, Manila Bay, the Argonne Forest, and Belleau Wood; and World War II with the flaming beach at Anzio, the enervating jungle of Guadalcanal, the concentrated hell of Tarawa, Iwo Jima, and Omaha Beach on Normandy, and lastly the defense of freedom in far away Korea. These were some of the places.

Then there were the men, Washington, John Paul Jones, Grant, Lee, Pershing, Eisenhower, MacArthur, King, Arnold, Nimitz, Halsey, and Howlin' Mad Smith. The places and the men who led. Names burned forever in the mind, tattooed across the soul of freedom. With them go many other names. The lesser known places where great bravery changed history. Places where American boys were laid down forever and kept their rendezvous with death, in the hills and valleys of these United States, in the blue depths of the oceans, and in the good earth of strange foreign lands.

The boys who did these things and went to these places had names, too, be they O'Brien, Mitsuez, Ginsburg, or Smith. They came from the farms with a rifle. They came from the cities with nothing but their courage. Some were poor and some were rich. They were of all races and religions and they shared the greatest of all adventures. To them all, including you veterans, in and out of uniform, and especially to those who never came back, we owe our freedom. This annual observance of Veterans' Day gives us the opportunity to acknowledge our debt.

True to this tradition and heritage, the personnel of the Armed Forces of the United States today stand strong and ready to carry on. In numbers we are the greatest ever to serve in peacetime. In training, morale, and equipment, we are also the best fitted. It is well that this be so. Never before has freedom been so totally threatened. Across the world a tough competitor, an alien ideology called communism, continues with relentless pressures its timeless march on world domination. All of the people of America are involved in this struggle. Yet we are not alone. This burden is shared by our friends and allies, by the people of the countries of NATO, of SEATO, by those with whom we have bilateral agreements, and by millions of yet uncommitted people of the world, all of whom seek and cherish freedom. Many of these people are free and can speak out. Some are rising in their struggle for self-expression, for a better way of life. Some are silent, speaking only with their eyes and their hearts, for they lie behind a curtain of darkness.

The grave responsibilities of this battle for the minds of men and the serious threats to our security and freedom, are things shared by all of these millions, including our own people who live in these islands of strength of the free world. No one can hide in his shell, leaving the job to others. No one can go away. No longer is there any place to go. The cold war belongs to us all and the effort toward peace is indivisible. There is no one answer. No taxes will pay the price. Each life and mind must be mobilized and dedicated to service. We cannot change this godless communism, but we can change ourselves, so that with strength and a belief in God we can continue to enjoy the free sunshine of living.

Strength comes from many sources. Most of all, it is deep within man himself. Let us, therefore, look at this strength. Let us not look too long at the vast organization, the missiles, the ships, or the aircraft. Let us look rather at the people. The weapons are awesomely new and different. Great technical changes have been unfolded and continue to occur almost every day. For instance, one need only to note the nuclear submarine, the *Nautilus*. Missiles that can span oceans and continents, and satellites orbiting the world, indicate the profound change. Just ahead is the exploration and conquest of space.

Suffice it to say, our technical progress is remarkable, almost mysterious, and bows to no other. We must be thankful for it and continue its progress, making certain we never stifle the basic research that springs from the mind of man and grows to make these wonders possible.

But, we should bear in mind that men will succeed on land, in the air, over and under the sea, in space itself, only to the extent that they succeed as men. Without moral growth, technological growth is but the tinkling of cymbals and the clang of brass.

Our weakness as a Nation, our Achilles heel, is not in material things. Our danger lies elsewhere in the realm of the spiritual, in the weakening of moral fiber within our youth.

Like the Nation in general, the armed services have been plagued by a deterioration in the quality of the manpower upon whom we must depend. The services are but a cross section of our country, and we inherit inevitably some of the juvenile delinquency, cynical attitudes, greed and laziness, and even open crime that have eaten into parts of our Nation. While the percentage of our delinquents is small, we must remember that the virus of cancer starts from a tiny cell.

We of the services are facing these problems and finding solutions. Moral issues have now been clarified; the responsibilities of leadership have been impressed on each person in authority, to the end that each man may be imbued with zeal, pride in his work, efficiency, devotion to duty, and a feeling of genuine patriotism. And as a bonus, greater happiness and success in his job.

These principles of leadership are equally applicable to the civilian community, whose responsibility it is to teach our young the basic virtues of citizenship. While the process of moral decay is a vicious cycle, with each person and each level in society afflicting the others, the antidote of moral revitalization also works in ever-widening circles. Trends of moral decay can be reversed. Steps toward moral greatness can be taken. Let us then rise to the challenge and resolve to meet our obligations as citizens.

You veterans, now out of uniform, have a tremendous potential for good, both as individuals and as organizations. You are the respected citizens of your communities. Your horizons have been widened by your service. Your responsibilities as citizens are accordingly increased. It is your duty to set an example to the youth of our land, an example of patriotism, unselfishness, and moral integrity. By so doing, you will make easier our task of shaping and training our future citizens in arms. You will, by example, demonstrate to our youth that patriotism is more than 4th of July oratory, more than the pageantry of Veterans' Day. We of the armed services consider the veterans to be our most effective link with the civilian community. We depend on you to keep that link strong and effective.

Only through such effective leadership can we become strong as individuals and grow stronger as a Nation. Amid the perils and opportunities of a greatly troubled world, our strength is the shield of our freedom. We can rise to moral greatness in peace as in war, and in that greatness lies our strength.

Distinguished Service Award Presentation to Harry F. Byrd

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, January 9, 1959

Mr. ROBERTSON. Mr. President, it was very pleasing to all Virginia, as well as to a large national group of friends and admirers of the distinguished senior Senator from Virginia, HARRY F. BYRD, when the American Farm Bureau Federation presented to him at its meeting in Boston on December 10, 1958, its Distinguished Service Award. Throughout a long and successful political career, farming and the welfare of the farmers have been major considerations with Senator BYRD. He well merited the honor conferred upon him by the American Farm Bureau Federation, and I ask unanimous consent to have published in the Appendix of the RECORD the text of the presentation.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

Mr. SHUMAN. Senator HARRY F. BYRD'S long and distinguished record in the Senate of the United States has earned him the respect of all who are concerned about the fiscal solvency of our Republic, the rights of States and individuals, and traditional American liberties.

In the Senate, he has been chairman of the Rules Committee, chairman of the Select Committee on Government Reorganization, the Joint Committee on Reduction of Nonessential Federal Expenditures, and the powerful Finance Committee. He has served also on the provisional committee to draft the original atomic energy legislation, the Finance Subcommittee on Inter-Governmental Taxation, and on the preparedness subcommittee which investigated Korean ammunition shortage. He has served on the Joint Committee on Internal Revenue Taxation since 1949.

Senator BYRD has been a successful apple grower since before he was 20 years of age. His public career began as early and has been even more outstanding. He was elected to the Winchester, Va., city council before he was 21, to the State senate at 27, and Governor of Virginia at 38. He has been U.S. Senator from Virginia since 1933.

A foe of nonessential Federal spending and socialistic proposals—regardless of the political party proposing them, Senator BYRD is one of the Nation's most forthright advocates of the philosophy of decentralized as contrasted with centralized government.

The noted historian and Pulitzer prize winner, Douglas Southall Freeman, wrote of Senator BYRD: "National solvency, national honor, national defense and as moderate a level of Federal taxation as decent administration permits—these are part of HARRY BYRD'S approach to his supreme goal of public service. That goal is to have government interfere as little as is possible with the citizen's effort to make a decent living, to rear and to educate his children, and to maintain a respectable home."

In the spring of 1958, HARRY BYRD announced his intention to retire from the U.S. Senate. The spontaneous and overwhelming reaction of people from all walks of life—not only from Virginia but from throughout America—caused him to reconsider and to allow the insistence for his continuance in public service to prevail over the personal considerations that prompted his plans to return to his home in Virginia. HARRY BYRD was drafted in the fullest and best sense of the word—one of the rare occasions in the history of American politics when this was literally and completely true.

Criticism of U.S. Supreme Court by Conference of State Chief Justices

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1959

Mr. BEALL. Mr. President, there has been a certain amount of uncertainty surrounding a portion of the report on the Supreme Court which was approved last August by the Committee of the Conference of Chief Justices of the State courts. The confusion, which arose as to whether or not the report was directed toward the Supreme Court's decisions in the school desegregation cases, recently was clarified by a newspaper article written by Mr. Gerald Griffin, Washington bureau chief for the Baltimore Sun. Mr. Griffin's article was based on an exchange of letters between Attorney General William P. Rogers and the Honorable Frederick W. Brune, Chief Judge of the Maryland Court of Appeals, who was chairman of the justices' committee. Because of the importance of the original report and the great value of this clarification, I request unanimous consent that Mr. Griffin's article, which appeared in the Sun of January 7, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COURT CRITICISM NOT AIMED AT RACIAL CASES, BRUNE SAYS

(By Gerald Griffin)

Washington, Jan. 6.—New light on a critical report on the Supreme Court, approved last August by the Conference of State Chief Justices, has been provided by an exchange of letters between William P. Rogers, Attorney General, and Frederick W. Brune, chief judge of the Maryland Court of Appeals.

In a letter to Judge Brune, Rogers asked whether the report was directed at the Supreme Court's decisions in the school desegregation cases, and what bearing the report was intended to have on the effect of those decisions to date.

KNOWS OF NO EXCEPTION

In reply Judge Brune, who was chairman of the Justices' committee which submitted the report, said the report was not directed at the school desegregation cases.

He said further that he knows of no exception to the rule that Supreme Court decisions are binding on questions arising under the Constitution. The report suggested no exceptions to that rule, he pointed out.

Judge Brune noted that before writing his letter he had confirmed these statements by consulting, by telephone, with members of the committee.

U.S.-STATE RELATIONSHIPS

Although the judges' report did not mention the school cases, it was regarded at the time, in some quarters, as a criticism of the Supreme Court's action in declaring that school segregation was contrary to the Federal Constitution.

The report dealt with Federal-State relationships as affected by judicial decisions. It held that the Supreme Court had adopted the role of policymaker without proper judicial restraint. It said the Nation's highest court was showing an unwillingness to wait for Congress to exercise its own lawmaking functions.

A resolution approving the report urged the Supreme Court to exercise one of the greatest of all judicial powers, the power of judicial self-restraint, in determining questions affecting the allocation of Federal and State powers.

Under date of October 1, 1958, Rogers sent this letter to Judge Brune:

"I am writing to you with respect to the recent report of the Committee of State Chief Justices, of which you are Chairman. That report comments upon a number of Supreme Court decisions in the field of Federal-State relationships.

"WOULD BE VERY HELPFUL

"Although the report is silent on the unanimous decisions of the Supreme Court in the school desegregation cases, some of the letters that I have received criticizing these decisions appear to imply or to assume that the report was nonetheless directed at them.

"It would be very helpful in dealing with the subject of such letters if you could indicate what bearing, if any, the report was intended to have on the school cases or on their effect as law under our constitutional system."

On October 4, Judge Brune replied:

"This letter is in reply to yours of October 1, 1958, with regard to the report of the Committee of the Conference of Chief Justices, of the State courts, on Federal-State relationships as affected by judicial decisions, of which committee I was chairman.

"FOUR SEPARATE GROUPS

"This report was presented at the meeting of the conference in Pasadena, Calif., on August 20. It was later discussed in four separate groups of the conference on that same day and was debated and voted upon on August 23 by the conference as a whole.

"As your letter notes, the above report did not mention the school desegregation cases; and it did not undertake to deal with them. In this connection, may I call your attention to the composition of the committee and its unanimity, and to the widespread geographical (as well as numerical) support which the report received in the general vote of the conference.

"COME TO QUESTION

"Insofar as the effect of the school segregation or desegregation cases as law under our constitutional system is concerned, I am sure that you have not overlooked two passages of the above report dealing generally with the power of the Supreme Court to determine questions arising under the Constitution and laws of the United States.

"Under the heading of 'Background and Perspective,' in item second the report states that 'when we turn to the specific field of the effect of judicial decisions on Federal-State relationships we come at once to the question as to where power should lie to give the ultimate interpretation to the Constitution and to the laws made in pursuance thereof under the authority of the United States.

"By necessity and by almost universal common consent these ultimate powers are regarded as vested in the Supreme Court of the United States. Any other allocation of such power would seem to lead to chaos.

"Then follows a reference to Judge Learned Hand's lectures on the Bill of Rights. As you will recall, he sets forth reasons for the controlling effect of decisions of the Supreme Court in constitutional matters.

"ARE BOUND BY THEM

"In item sixth of the committee report, under the same heading above referred to, it is also expressly recognized that even though we may find ourselves unable to agree with pronouncements of the Supreme Court we are bound by them.

"I know of no basis for any exception to the rule under which decisions of the Supreme Court of the United States on questions arising under the Federal Constitution are binding, nor does the above report suggest any.

"I may add that I have confirmed the above statements as to the scope and effect of our report by every member of our committee except one, who is ill. I am confident, however, that his is in agreement."

CONDEMNATION MOVE SEEN

Besides Judge Brune, the committee was made up of judges from New York, Michigan, Georgia, Texas, Wisconsin, Oregon, South Carolina, Massachusetts, and Minnesota.

During the discussion of the justices' report last August 23 at Pasadena, before the approving resolution was adopted, Chief Justice Charles Alvin Jones, of Pennsylvania, charged that the real purpose of the report was "to condemn the integration decision."

Chief Justice Theodore G. Garfield, of Iowa, took exception to this, saying that he failed to see the integration issue in the resolution.

AMOUNTS TO CLARIFICATION

Judge Brune's letter to Rogers amounts to an official footnote to clarify the committee's intent. It is expected to put at rest the suggestions, which have been taken up by some of the southern segregationists, that the State justices were attacking the school decisions.

Rulings of the Supreme Court in the civil-rights field—in cases dealing with antisubversion laws, security risks, contempt of Congress, and arraignment of prisoners by police—were under strong criticism in Congress during the last session, with southerners taking an active part.

Congress took no final action on the numerous bills which were put forward to restrict the Supreme Court or revise the effect of its decisions, but new bills may be introduced in the session which opens tomorrow.

The Injustice of Public Law 84–676

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. WILLIAMS. Mr. Speaker, I would like again to call my colleagues' attention to the injustice caused some Reserve officers because of the effective date of Public Law 84–676. Under leave to extend my remarks, I include a letter with respect to this matter which was written by Hon. Robert W. Collins, of Yazoo City, Miss., an attorney and Reserve officer, to the editor of the Army-Navy-Air Force Register. Mr. Collins' letter was

dated July 15, 1958, and it appeared in the August 2, 1958, edition of that publication.

I include, also, an editorial which appeared in the September 13, 1958, issue of the Army-Navy-Air Force Register entitled "They Were Left Out."

The letter and editorial follow:

URGES CONGRESS CORRECT OWN MISTAKE

DEAR SIR: The magnificent and prompt action of the President in sending a sizable marine force to rescue the integrity and independence of Lebanon brought many serious thoughts to many like myself who was privileged to serve in the Korean war as a career reservist. Perhaps the whole Nation can now get the meaning of the Korean war in a better sense of appreciation. Reappraisals are now being called for. Congress will be expected to and will support the actions commenced today. At this time of sober reflection on the Korean war the White House and the Congress can now correct an injustice to the two-war, former Reserve career officers who were released involuntarily after the end of those recent hostilities by applying the following remedy, to wit:

Reenact and approve Public Law 84-676 with one very simple and justiciable addition, as follows: "(i) This section shall be effective on July 1, 1954."

The Congress should reenact this public law on its own motion as a simple matter of correcting an injustice. Public Law 84-676 shows on its face why it fails in its stated purpose; to provide a lump-sum benefit to the members of the Reserve components who had served in World War II and the Korean war and were released involuntarily. The fact of the matter is that on the effective date of this statute, approved on July 9, 1956, practically all of the members of the Reserve components intended by the stated purpose of the legislation to be so benefited had already been released involuntarily in 1954 and 1955.

Sad to relate this anomaly is written into the hearings on H.R. 6725 and H.R. 9952 (both of the 84th Congress), to which attention is invited. Public Law 84-676 is identical to H.R. 6725 save in one particular. It provided an effective date of July 1, 1954. H.R. 6725 was approved by the Armed Services Committee of the House on July 26, 1955. In the meantime it was withdrawn from the Rules Committee and the effective date of July 1, 1954, was deleted. On February 3, 1956, a new set of hearings commenced on H.R. 9952. What the responsible committeemen thought of the changed version was expressed by the chairman, as follows: "The committee went into the question of cost. It was a financial situation rather than wisdom." Thusly, H.R. 9952 was enacted by the House of Representatives and the Senate and Public Law 84-676 became law on approval by the President on July 9, 1956.

Congress can correct its own mistakes, particularly its admitted and recorded errors of resort to false economy in place of its stated wisdom in the premises. Accordingly, it is strongly urged that the Congress on its own motion reenact Public Law 84-676 with a change in its effective date to July 1, 1954.

ROBERT W. COLLINS,
Commander, U.S. Naval Reserve, Yazoo City, Miss.

[From the Army Navy Air Force Register, Sept. 13, 1958]

THEY WERE LEFT OUT

When Congress returns in January it will probably get letters once again from supporters of a measure to give a lump-sum payment to Reserve officers involuntarily released between July 1, 1954 and July 9, 1956 when the basic readjustment pay act became effective. These letters should be heeded.

When Public Law 84-676 was being considered in 1956, Congress was planning to make payments to those released as early as the 1954 date. But because the lawmakers were in a money-saving mood, the final law states the pay will be given to those released after July 1956. The law provides one-half month's pay for every year of active duty. Many officers who served in World War II and Korea were left out.

This affair points up the need for a strong term retention contract bill. One has been in the works for some time. While the lawmakers are considering this bill, they should reconsider the plight of the two-war reservists released before the present readjustment pay was authorized.

Washington Robs States of Rights

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Washington Robs States of Rights," delivered by Hon. M. T. Phelps, justice of the Arizona Supreme Court, and published in the Arizona Republic for November 19, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WASHINGTON ROBS STATES OF RIGHTS

(By M. T. Phelps, justice, Arizona Supreme Court)

Our forefathers sought to create a government with such checks and balances incorporated therein as would insure that all public officials should forever remain subservient to the will of the people.

Unfortunately, they provided no checks against the exercise of excessive powers by the Supreme Court, although most of them agreed that this constituted a great weakness in the framework of the proposed new government and expressed fears of the potential dangers that lurked therein. The only restraint that exists today against the exercise of excessive power by the Supreme Court is that restraint which the conscience dictates to the individual members of the Court. Congress has the constitutional power to limit its appellate jurisdiction but it refused to exercise such power at its last session.

It was the fear of the inadequacy of the limitation provided that prompted immediate adoption of the first 10 amendments. The 10th amendment to the Constitution reserved to the States respectively, or to the people, all powers not delegated to the United States by the Constitution. This was done to serve as a check against all the branches of the Federal Government, and it served its purpose splendidly for 150 years, but if the present Court is aware of its existence, it has shown no evidence of it in recent years. The present Supreme Court apparently does not feel itself bound by either precedent or by the Constitution itself. Without any qualms or apologies they have set aside previous decisions of the Court recognized by the Court itself as binding upon it for nearly 60 years.

The Supreme Court's decisions are as unstable as the shifting sands of the desert and are as unsound as they are unstable. Many of the greatest judges and lawyers in the United States condemn these decisions as being purely legislative in character, and wholly beyond the power and jurisdiction of the Court to pronounce.

The Attorney General of the United States and the President and others tell the people of the Nation that decisions of the Supreme Court are the supreme law of the land and that it is the duty of every citizen to obey them. The Supreme Court itself, in a supplemental opinion in the segregation cases, stated that the decisions in those cases are the supreme law of the land. The fact is that no individual has to obey these opinions except the parties who were litigants in court any more than you have to obey a decision of the Supreme Court of this State unless you are a party to the cause of action in which the opinion is rendered. And it has been the declared law of all courts for 150 years until Mr. Warren established his arbitrary rule of being bound neither by precedent nor the Constitution.

The Constitution, acts of Congress, and treaties with foreign nations alone constitute the supreme law of the land by which the sovereign States of the Union and the people of the United States are bound.

Not until the Supreme Court reverses its philosophy of government and takes the position that it is bound by a previous decision of that Court on the same constitutional question and that such decision is integrated into the Constitution and becomes a part of it as much so as if originally written therein, can any one justifiably and truthfully say that the decisions are the law of the land. It will then become the supreme law of the land not because it is a decision of the Supreme Court, but because it has been integrated into and become a part of the Constitution.

The Supreme Court is not alone to blame for constitutional violations and the continued centralization of power in the Federal Government. Congress enacted a law in 1935 providing that anything which affects interstate commerce is a part of an interstate transaction which has been interpreted by the court to cover window washers and elevator operators in a building where there happens to be located a business engaged in interstate commerce subjecting them to the provisions of the interstate commerce clause of the Constitution, and therefore under the control of the Federal Government. The Constitution only gave Congress the right to regulate interstate commerce. By the use of the term, "affect interstate commerce," it broadened its own powers, which has been construed by the Court to empower Congress to regulate transactions wholly within a State upon the theory that it affects interstate commerce.

Both the legislative and executive branches of the Federal Government are deliberately violating the Federal Constitution. The President violated the Constitution when he sent Federal troops into Little Rock to picket a high school there and to order citizens off of their own front lawns and that of their neighbors. There wasn't a semblance of legal authority for this action.

In 1934, at the request of President Roosevelt, Congress passed a law commonly known as the Reciprocal Trade Agreement Act, in which Congress delegated to the President the power to enter into reciprocal trade agreements with foreign nations. Under the present arrangement with these nations, known at GATT, tariffs on commodities imported into the United States are fixed by these 37 nations and we have only 1 vote in 37 in fixing our tariff on imports.

The power to lay taxes, imposts, duties and excises and to regulate commerce with foreign nations is vested in the Congress of the United States by the Constitution, and Congress unlawfully abdicated its constitutional powers and its Members violated their oaths of office when Congress gave the executive

the power either to lay a duty on imports, or to regulate trade with foreign nations, and the President is violating his oath to support the Constitution when he urges its violation by Congress and in exercising that power.

Perhaps one of the most outrageous of all wrongs in further centralization of power has been the creation of dozens of Federal administrative agencies, giving to them the power to adopt rules and regulations which have the same force and effect of laws.

We are now exacting of our citizens income and other taxes to meet exorbitant budgets, billions of which are wilfully wasted. Other billions are being given away even to Russian satellites. This, too, is without constitutional authority. None of the branches of the Federal Government make any attempt to function within constitutional limitations.

The collapse of constitutional government is inevitable in this country if present trends continue. The officials in the higher echelons of government have repudiated the principal concept upon which our Government was founded and the creature has become master of the creator.

Whatever States rights are left are being rapidly lost.

Please let us, through the conservative thinkers of both national parties, try to preserve America. This can only be done by demanding an adherence to the principles embodied in the declaration of an abiding faith in God.

The New Carpetbaggers

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. HARRISON. Mr. Speaker, hatebred violence is abhorrent to the South, as it must be to persons of good will everywhere. We have been shocked profoundly by vicious use of explosives against places of worship and schools. We have been shocked because we have not been calloused to such senseless violence.

Outbreaks of deadly hate have not been part of the day-to-day pattern of life in the South. We have been unable to understand that assaults and killings bred of racial animosities apparently have disturbed little those in the great cities of the North who have been quick to point fingers of scorn at us.

Let there be no mistake—we will do our utmost to bring to justice the strangers among us who give increasing evidence of malicious direction from afar. Who is behind the John Kaspers, the dynamiters, and their fellow inciters of interracial and interfaith hatreds? Could it be that the strings of these malevolent puppets stretch to Moscow?

In any event, the South is committed to calm determination in resisting the persistent attacks on the constitutional rights of its States and its people. It will not embrace violence. It will strive to provide swift justice to the scorpions in its midst.

In this connection, and under leave to extend my remarks in the Appendix, I include a straightforward and praiseworthy statement included by President Philip M. Klutznick, of B'nai B'rith in his annual report to the board of governors. The statement follows:

If we examine the situation in its proper context we find that community tensions arising out of synagogue bombings and other expressions of anti-Jewish violence in the South have not changed the fundamental good relations between southern Jewry and its neighbors. There is no real rupture in the religious harmony and interaction of the southern community that southerners would share with their Jewish neighbors the same contempt and sense of outrage over the recent wave of anti-Semitic violence.

But one stubborn fact persists: the southern atmosphere will be clouded with anti-Semitic tensions so long as organized Jew-baiting movements are free to exploit the region's dilemma over desegregation.

The anti-Semite and the hate mail publisher fish in troubled waters. The social upheaval that has been sweeping across the South is tailored to the disruptive patterns of the professional bigots. It is an interesting commentary that much of the hate literature now being widely distributed throughout the South is carpetbagging stuff—northern in origin and trying to disguise itself with a southern accent.

The anti-Semitic movements by themselves are of little consequence. The danger lies in their ability to spread distrust and religious dissension in the right setting. That setting exists today in many parts of the South. It will not blow away hurriedly, not so long as a resistance to desegregation remains and it can be distorted by hate movements. The problem, then, for our ADL is to keep the anti-Semitic movements in check; to probe constantly their practices and expose their purpose. This is likely to be a drawn-out affair and we have to face up to that fact.

Address by Vice President Nixon Before the English Speaking Union of the Commonwealth at the Guildhall in London

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. SPRINGER. Mr. Speaker, during November the Vice President made a trip to England to represent the President of the United States on the occasion of the dedication of the American Chapel at St. Paul's Cathedral.

On that evening the Vice President addressed the English Speaking Union of the Commonwealth at the Guildhall in London. The Vice President made one of the best speeches of his career in explaining the responsibilities of English-speaking people in international affairs, both on home soil and abroad.

Mr. Speaker, this very thoughtful and enlightening speech is herewith appended in full:

TEXT OF ADDRESS OF THE VICE PRESIDENT OF THE UNITED STATES OF AMERICA BEFORE THE ENGLISH SPEAKING UNION OF THE COMMONWEALTH, NOVEMBER 26, 1958, GUILDHALL, LONDON, ENGLAND

In the 6 years in which I have had the honor of serving as Vice President of the United States, it has been my privilege to visit many countries and to participate in many significant events. I can assure you that no occasion in that period will live more indelibly in my memory than the dedication of the American Chapel at St. Paul's which I attended this morning and the gathering in this historic hall which I am privileged to address this evening.

This meeting of the English Speaking Union dramatizes the enduring character of the friendship and alliance of our two countries. The activities of this organization have been most vital in cementing our bonds of comradeship.

I consider it a particular privilege to pay tribute to the thoughtful and inspiring leadership of His Royal Highness, Prince Philip, who has spared no sacrifices in this dedicated work. His recent visit to Canada was only one of many activities which indicate his vital interest.

You all may be justly proud, not only of the contribution you have made to better understanding between our two countries, but also the even greater work of building an enduring basis of friendship among all English-speaking peoples.

The dedication at St. Paul's this morning dramatizes the unity you have worked so hard to achieve. It was symbolic of the enduring ties that bind us. It brought to mind the dramatic events of earlier and more trying days—the magnificent leadership and the great sacrifices that made possible our victory in the Second World War.

Our thoughts went back to our great national leaders, Sir Winston Churchill and President Roosevelt, working together in intimate harmony. They will receive the ungrudging tribute of history for their capacity to marshal the forces of democracy.

Our thoughts turned also to our incomparable generals and admirals—Eisenhower and Montgomery, Cunningham and King. They were more than brilliant strategists and commanders. Because of their unwavering devotion to the concept that military ingenuity must be combined with recognition of civilian authority, they rank indeed among the great military leaders of all times.

But above all today we honored brave men, whose names are legion and whose sacrifices can never adequately be repaid. British and American—farmers and laborers, from cities and countryside, from offices and classrooms—these were the men who made possible our victory in the greatest war in history. Many events of that war will be forgotten as we turn our eyes to other tasks, but their deeds will live forever. They bequeathed to us a spirit, a sentiment, a national memory that will never fail to capture our admiration as we move side by side in the path of friendship and alliance.

As Abraham Lincoln said at Gettysburg, "The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced."

What is the unfinished work they leave for our generation? I believe that two American Presidents speaking in this same Guildhall have simply, but eloquently, answered that question.

Woodrow Wilson on December 28, 1918, said, "The peoples of the world want peace, and they want it now, not merely by conquest of arms, but by agreement of mind."

And Dwight D. Eisenhower, 27 years later on July 12, 1945 said "To preserve his freedom of worship, his equality before law, his liberty to speak and act as he sees fit subject only to provisions that he trespass not upon similar rights of others, a Londoner will fight. So will a citizen of Abilene."

To preserve freedom, to keep the peace, not only for themselves but for all people—this, then, is the cause for which the brave men we honored today gave their lives. It is the challenge and opportunity of our generation

to further the ultimate realization of this noblest goal of mankind.

Let us examine the policies we should follow if this goal is to be attained. We begin by recognizing that the free world must be militarily stronger than any potential aggressor. The existence of our military strength and our determination and ability to maintain it are the basic elements without which the objectives we seek would be impossible to realize.

But we recognize that military strength in and of itself will not keep peace unless it is combined with a wise and judicious diplomatic policy. Let us see what some of the guidelines for our policy should be.

We must retain the armed strength needed for security in a troubled world, but we should speak with the calm assurance of those who are not afraid.

We know that to the extent the law of the jungle prevails in any area of the world, weakness and indecision lead to disaster. Yet, firmness is not and should not be arrogance.

We will shun assurances based merely upon naive hope or even self-deception. But we must never tire in our search for enforceable agreements which will reduce tension.

We know that little is lost by discussion but that all may be lost by war. Yet, even in our tireless striving for peace, we must always be prepared to say that freedom and the rights of man are even more ultimate values.

Above all, our policies must represent the best thinking the free world can produce. We are indeed fortunate in the fact that in men like Macmillan and DeGaulle, Adenauer and Spaak, Fanfani and Eisenhower we have the kind of dedicated and experienced leadership which is superbly qualified for the difficult task of keeping the peace with honor for the free world.

In this connection, I wish to pay special tribute to your Prime Minister for his initiative in developing the enlightened concept of interdependence which has proved so useful in bringing about closer understanding between our two nations and which points the way for improving consultation and cooperation among all the countries in the free world.

If the struggles for peace and freedom were to be decided solely by the adequacy of our military strength and by the quality of our diplomacy, we could look to the future with justifiable confidence as to the prospects for our eventual success. But we must recognize that this is only one phase of the struggle.

Our military strength and our diplomatic policies are designed to avoid a war we might otherwise have to fight in the future. We must not overlook the fact that other policies must be designed to avoid losing the nonmilitary battle which has already begun and which is being waged in many areas of the world today.

Let us examine the battleground where this conflict is taking place—in Asia, in the Near East, in Africa, and in parts of Latin America. A great revolution is taking place among the people in these areas of the world. What I refer to is not a military or political revolt, but the revolution of peoples' expectations, the assertion of all peoples of their claim to a greater share of this world's goods.

Millions of people in these newly developing nations are determined to break the bonds of wretchedness and poverty that have enslaved them through the centuries. They wish to achieve in this very generation a decisive breakthrough in the struggle against misery and disease.

They would prefer to attain these objectives and retain their freedom. But we must make no mistake about it, if they believe they are offered no other choice, they will choose progress even without freedom.

What is their choice? On the one hand, they have the example of the Soviet Union and the Communist satellites. Here is a pattern that promises quick results. Thousands of leaders of these countries are being invited to visit the Soviet Union to see the very real changes accomplished in the 40 years since the Communist revolution.

It is not an adequate answer to this challenge to cite the far higher material standards in most western nations. To the newly developing nations of the world, this is not the point. They are not particularly impressed by achievements primarily accomplished in the century of the industrial revolution. They are far more interested in what can be accomplished in the last half of the 20th century.

What must be made clear and unmistakable for all the world to see is that free peoples can compete with and surpass totalitarian nations in producing economic progress. No people in the world today should be forced to choose between bread and freedom.

To shape the world of tomorrow in a pattern compatible with freedom and human rights we must all take our part in a great offensive against the evils of poverty, disease, and misery. We cannot, for example, afford to allow the free Government of India to fail in its heroic effort to produce economic progress and retain freedom at the same time.

We need to apply in this field the same determination, willingness, and cooperation which enabled us to build the military strength which deters aggression today.

We must not be miserly, smallminded, and negative in our approach to this problem. And while it is wrong to favor change solely because it is change, it is worse blindly to insist that we have nothing better to offer than maintaining the status quo.

We must associate ourselves with the decent aspirations of people everywhere for the better life to which they are entitled.

Just a few weeks ago, Premier Khrushchev promised his people a revolution in living standards within the next 12 years. He claimed that the Communist system would overtake and surpass the economies of the Western World.

We should be happy that such claims have been made. We would be eager to match the Soviet leaders in putting less emphasis upon armies, military research, and the costly lethal weapons of modern warfare, and more stress upon better housing, food, clothing, and the other necessities for a good life.

If Mr. Khrushchev wishes to consider these steps as a form of competition or contest, I am sure that all of us would be delighted to accept the challenge. In such a contest no one could really lose. The world would be infinitely better off if man's energies were used for the welfare of families rather than the building of armies.

But our answer to the Soviet challenge should not stop here. We say, broaden this competition and include the spiritual and cultural values that have distinguished our civilization.

Material achievements, while necessary, do not meet the deeper needs of mankind. Man needs the higher freedoms, freedom to know, to debate freely, to write and express his views.

He needs the freedom that law and justice guarantee to every individual so that neither privilege nor power may make any man subservient before the law.

He wants the freedom to travel and to learn from other peoples and cultures.

He wants freedom of worship.

To us, these are the most precious aspects of our civilization. We would be happy if others were to compete in this sphere and try to surpass our achievements.

The free world is too often made to appear to be relying on our superior military power and economic strength. It is not worthy of those with the heritage of freedom we share to appear to be resting our case on materialism alone.

I know of no better example to illustrate the point I am trying to make than through an analysis of that much-maligned institution—British colonialism. It is understandable in view of the surging rise of nationalism that we have heard all that is bad and little that is good about colonialism in the past few years.

Colonialism has had its faults, but it also has had its virtues. I speak from some knowledge on this subject. I have visited 12 countries which at one time or another have passed through the status of British colonialism.

I have known personally and admired the dedicated and effective work of your superb colonial administrators. You can indeed be proud of the contributions that have been made by men like Grantham in Hong Kong, Templer in Kuala Lumpur, MacDonald in Singapore, Crawford in Uganda, and Arden-Clark in Ghana.

Let us examine some of the benefits British colonial policy has produced in the areas in which it has operated. It brought the military strength which provided the security from external attack. It brought in many areas the technical training which assured economic progress.

But more important than either of these, it brought the great ideas which provided the basis for progress in the future, ideas which will live on for generations after the nations concerned have acquired the independent status for which an enlightened policy has prepared them.

The common law, the Parliament, the English language, freedom of speech, assembly, press, and religion, these are the institutions which are the proud legacy of the British people in lands throughout the world.

And so today let us never forget that in the momentous struggle in which we are engaged our major advantage is not in the strength of our arms or even the productivity of our factories. It is in the quality and power of the great ideals of freedom which have inspired men through the ages.

Our responsibility then is clear. Here is a cause worthy of the descendants of brave men and women who crossed boundless oceans and settled in every area of the globe.

Once again we must venture forth not to seek untilled lands, but rather to bring encouragement, aid, guidance, and partnership to those peoples who want to live in freedom and decent prosperity.

We come to them as friends, as brothers in a shrinking world. We do not seek to impose upon them our economic system or our culture. It is theirs to choose the path to the future. But it is our responsibility to see that this choice is an informed one and a free one.

Let it never be said that because of our failure to present adequately the aims and ideals of freedom others chose the often irreversible path of dictatorship.

Let us speak less of the threat of communism and more of the promise of freedom.

Let us adopt as our primary objective not the defeat of communism but the victory of plenty over want, of health over disease, of freedom over tyranny.

With such a goal we shall give the lie to those who proclaim that we are witnessing the twilight of a dying western civilization. Rather we shall see the onset of a glorious dawn of a new world based on the immortal ideals for which men have sacrificed their lives through the ages.

In this very hall, a century and a half ago an English Prime Minister gave a brief address that has been ranked by Lord Curzon as one of the indisputable masterpieces of English eloquence. After the news of Nelson's glorious victory at Trafalgar, William

Pitt was toasted as the savior of Europe. He responded in these words: "I return you many thanks for the honor you have done me. But Europe is not to be saved by any single man. England has saved herself by her exertions and will as I trust save Europe by her example."

Here is a challenge worthy of the brave men we honored today. May we, the English-speaking peoples, proud in the heritage we share, join with the friends of freedom everywhere and by our example save the cause of peace and freedom for the world.

The Sovereignty of the States

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. HARRISON. Mr. Speaker, our constitutional form of government, with its inherent concept of checks and balances, has been under heavy attack in recent years.

The legislative function has been invaded by the judiciary. The powers clearly reserved to the States and to the people have been seized by those having contempt for the written law.

In this connection, and under leave to extend my remarks in the Appendix, I include a significant address by J. Sloan Kuykendall, distinguished attorney of Winchester, Va., delivered last fall at the annual meeting of the Virginia Bar Association on the occasion of Mr. Kuykendall's retirement from the presidency of the association.

The address follows:

Perhaps the most momentous chapter in American history deals with the Constitutional Convention of 1787. The drama of the origin of the Constitution has frequently been overlooked, so confidently have the American people taken the Constitution as a matter of course. The Constitution of the United States is not a document divinely inspired; it was born of the travail of long, bitter debate. No one will claim that it is perfect or that its draftsmen had that degree of prophetic wisdom that would have enabled them to provide solutions to problems yet unborn.

Paramount in the deliberations of that Convention was an ever-present concern for the sovereignty of the States. Happily, those contending for a Central Government with strictly limited and defined powers prevailed. Thus, a Central Government of general powers was deliberately rejected in favor of one of limited powers. The validity of this statement is vouched for not only by the record of the proceedings of the Convention, but by a reading of the final instrument itself.

The framers put first things first. The limitations upon the three branches of the new Central Government were placed in the very first three articles, article I, section 8, specifically, in detail, and in unmistakable language defined, and thereby limited, the powers of the legislative branch of the new Government. Article II defined within narrow limits the authority and duties of the Chief Executive. Article III, section 2, established and thereby limited the jurisdiction of the Federal judiciary.

It seemed hardly necessary, therefore, to do more to assure the retention by the States of the sovereign status so recently acclaimed for them in the Declaration of Independence and won by them in war. Nevertheless, out of an abundance of precaution article IV, section 4, was included, guaranteeing to every State a republican form of government and continued sovereignty.

This would seem to be assurance enough for the people, but not so. Upon the adjournment of the Convention the delegates returned to their respective States entrusted with the responsibility of procuring the approval and ratification of the proposed Constitution. Serious opposition was encountered, largely because of the fear that the proposed new Government would eventually wrest from the States the power to govern and direct the relationships of their citizens.

For the moment they felt secure in the enjoyment of those personal liberties and freedoms referred to as unalienable rights. The people were assured and reassured that the proposed constitution would not deprive the States of their jealously guarded sovereignty.

Perhaps the anxieties of the people of that troubled time should have been allayed by the forthright and unmistakable clear appraisal of the instrument of union by that extreme Federalist, Alexander Hamilton. He said:

"In the first formation of government, by the association of individuals, every power of the community is delegated, because the Government is to extend to every possible object; nothing is reserved by the inalienable rights of mankind; but when a number of these societies unite for certain purposes, the rule is different, and from the plainest reason; they have already delegated their sovereignty and their powers to their several governments; and these cannot be recalled and given to another, without an express act."

Notwithstanding that statement, and other assurances emanating from men of equal caliber and persuasion, objections to ratification still prevailed in many of the States because the Constitution failed to include a bill of rights. It was only upon the representations of many of the advocates of ratification that a bill of rights would be added by amendment that the Constitution was finally approved.

In keeping with the promises made to the people, James Madison of Virginia in 1789, proposed to the House of Representatives a bill of rights preceded by a preamble which began:

"The conventions of a number of States had at the time of their adopting the Constitution expressed a desire in order to prevent misconstruction or abuse of its powers, that further declaratory and restrictive clauses should be added." Ten of the twelve amendments proposed were accepted and finally became part of the Constitution. All are important, but the one having the most direct bearing upon the sovereignty of the States is the 10th amendment, which reads:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Thus, the record of the convention of 1787, the records of the State conventions for ratification, the unmistakable language of the instrument itself, the appending of the Bill of Rights—all these make clear that powers and authority not expressly conferred by necessary implication remained with the sovereign States.

Today it is the fashion of the uninformed to refer to decisions of Federal courts, however erroneous, as the law of the land. On the other hand, a prominent lawyer and legal scholar epitomized the doctrine of State sovereignty when he wrote: "As the Government under the Constitution commenced and the United States of America took their place as a nation, it was with the constitutional doctrine of States rights as the 'law of the land'."

So, with the adoption of the Constitution the sovereign States entered into a compact whose clarity and meaning was limited only by the inadequacy of the English language. It should not be restricted or enlarged except in the manner provided in the Constitution itself and with the approval of three-fourths of the States. It is conceded, of course, that all provisions could not be expressed in hard and fast rules of law. Some standards of law had to be used, such as due process and equal protection of the laws.

Even here everyone knew what the framers had in mind. These were not newly coined phrases. They had well-defined, definite, and generally accepted meanings. Although these standards had to be interpreted and applied to specific sets of facts, it was supposed that they would be interpreted, not prostituted.

It has primarily been by the prostitution of such provisions as these that the Central Government has usurped from the States their sovereign rights and unlawfully arrogated these powers to itself. The Federal Government has performed the feat of lifting itself by its own bootstraps.

This is the only instance that I know of in any of the world's system of law, past or present, where the grantee has the exclusive, unfettered power to construe the grant of his own authority—restricted only by an exercise of self-restraint. It seems they engage in a lot of exercises in Washington these days, but the exercise of self-restraint is not one of them.

Self-restraint requires character and integrity of the highest order. One who occupies a public office is a fiduciary, upon which devolves the burden and responsibility of administering the trust, in strict compliance with the limitations upon his authority. Those who direct and administer the affairs of the three departments of our National Government have the paramount responsibility of acting within the scope of limited and prescribed authority.

Only a short while after the new experiment got underway the three departments of the Central Government began inter se struggles for power. The Supureme Court asserted its right to interpret our basic law and to decree limits upon the authority of both the legislative and the executive branches. The legislative branch considered that it had the right to legislate within the limits of its own construction of the basic law. The executive proclaimed the independence of his department and insisted that neither by legislation nor by judicial fiat could his constitutional authority, as he construed it, be confined or limited.

Each department claimed not only that it had the power to construe its own authority under the Constitution, but that it was the final authority, on the limits of the constitutional powers of the other branches of Government.

President Jefferson's distrust of the judiciary resulted in his abolition of the circuit courts, impeachment of those judges who questioned his supreme authority, and a bitter contest with Chief Justice Marshall. The philosophy of the supremacy of the executive which caused Jefferson to assert his authority over the courts was later also shared by President Jackson, who sought to assert the supremacy of the executive over the legislative branch.

History records other examples of the struggle for power within the Federal Government. These repeated, bitter, and sometimes protracted contests played important roles in the formulation of checks and balances between the departments, but one of the most significant results was that each struggle had the effects of enlarging the powers of one or more branches of the Federal Government, not at the expense of the other

branches, but at the expense of State sovereignty. The States were the primary losers.

Amaury deReincourt, a French scholar, recently published a book entitled "The Coming Caesars in America." In October 1957, a highly respected national periodical published an article by deReincourt dealing with the subject of his book, and that magazine posed these questions: Is democracy dying in the United States. Is this country heading toward rule by a Caesar? It should alarm us that these questions were answered in the affirmative. I quote briefly from that thoughtful article:

"Our Western World, America and Europe, is threatened with Caesarism on a scale unknown since the downfall of the Roman Empire. In order to see this threat in its proper perspective, we have to assess the relationship between America and Europe, and define their historical destinies. It is the contention of this book that expanding democracy leads unintentionally to imperialism and that imperialism inevitably ends in destroying the republican institution of earlier days; further, that the greater the social equality, the dimmer the prospects of liberty, and that as society becomes more equalitarian, it tends increasingly to concentrate absolute power in the hands of one single man.

"Caesarism is not dictatorship, not the result of one man's overriding ambition, not a brutal seizure of power through revolution. It is not based on a specific doctrine or philosophy. It is essentially pragmatic and untheoretical. It is a slow, often century-old, unconscious development that ends in a voluntary surrender of a free people escaping from freedom to one autocratic master.

"The power and prestige of the President have grown with the growth of America and of democracy within America, with the multiplication of economic, political, and military emergencies, with the necessity of ruling what is virtually becoming an American empire—the universal state of a Western civilization at bay.

"Caesarism is therefore the logical outcome of a double current very much in evidence today: The growth of a world empire that cannot be ruled by republican institutions, and the gradual extension of mass democracy, which ends in the destruction of freedom and in the concentration of supreme power in the hands of one man. This is the ominous prospect facing the western world in the second half of the 20th century. But just as the Caesarism could rise only in classical Rome and not in Greece, it will, if left free to develop unchecked, arise in modern America and not in Europe."

This dire prediction of an eminent political thinker of our day will not come true if we employ the tried and true system of checks and balances. There have been incidents in our history when one branch has effectively checked another. But there have been other periods when the people, clamoring for a change, have been so overwhelming in their demands that the judiciary has been ineffective in its efforts to check the legislative and executive branches by requiring them to stay within constitutional limits.

There have been still other times when the legislative and executive branches have failed to coordinate in restraint of the judiciary. Had the Supreme Court adhered to precedent it would have justified James Bryce's regard for the judiciary as "America's greatest and most original contribution to the science of government." Although some of the renowned judges of that Court have felt bound by precedent, the majority of the Court during some of the critical times in this country have departed from precedent for one stated reason reason or another—all too often to further their own political philosophies.

It is in the departure form precedent that the Court has failed to perform its function as a checkrein against the violation of the Constitution and clearly established principles.

If it be conceded that the Supreme Court through its power to interpret the Constitution is a policymaker, this does not justify its self-assumed power to be a policy changer. Once the Supreme Court has announced to the people what the Constitutstitution means, by what logic should it be permitted to change its mind and say that it means just the opposite?

Would it not be more consistent with democratic constitutional processes to follow the English doctrine that once a constitution is interpreted by the courts, that interpretation can be altered only by the people through their elected legislative representatives or, in the United States, by proper amendment of the document itself?

Although the departure from precedent has been most flagrant in recent years, time will not permit review and consideration of the cases involved. It cannot be successfully denied at this time that the Supreme Court has, of necessity, the right to adjudge violations of the Constitution. The only limit upon this authority is the clear and unmistakable meaning of that document. The Constitution was drafted with care and its words were carefully chosen so that doubt and uncertainty might be avoided.

Where doubt has arisen in the interpretation and application of our basic law, the judicial resolve of that doubt is as binding upon the Court as it is upon the people and the States. The personnel of the Court may change, but the Court remains the same institution.

The Constitution may not legally be interpreted and applied so as to carry us beyond the meaning and purpose that have acquired certainty in historical and judicial precedent. Only by gradual and studied process may we progress and justify a better and fuller life. If tradition should be abandoned for the sake of progress and the betterment of human relationships, let it come within the framework of that solemn pact wrought by the labors of our liberty-seeking forefathers.

No human sitting on the Supreme Court of this land should indulge in the feeling that he has been endowed with a superior ability to judge our present and foretell our future. His course has been clearly marked, and he is constrained by the document that created the tribunal upon which he sits. When he assumes the duty and responsibility of interpreting * * * and apply our Federal Constitution, the laws made pursuant thereto, and the prior decisions of that Court, he should feel absolutely constrained by the rules prescribed for his judicial conduct as contained in the Canons of Judicial Ethics of the American Bar Association. Canon 20 provides:

"A judge should be mindful that his duty is the application of general law to particular instances, that ours is a government of law and not of men, and that he violates his duty as a minister of justice under such a system if he seeks to do what he may personally consider substantial justice in a particular case and disregards the general law as he knows it to be binding on him. Such action may become a precedent unsettling accepted principles and may have detrimental consequences beyond the immediate controversy. He should administer his office with a due regard to the integrity of the system of the law itself, remembering that he is not a depositary of arbitrary power, but a judge under the sanction of law."

That our forefathers contemplated that the urgency of changing times would require a course not envisaged by them is clearly recognized in the last article of the Constitution, which provides for its amendment to meet the exigencies of a changing world. It is by this process that you and I are afforded the opportunity to give studied consideration to suggested changes. If we by the exercise of our democratic franchise decree a change, we will be better prepared to live with it.

Some have suggested that amendment is too slow and tedious to effect needed changes. This is not true. There have been twenty-two amendments to the Constitution. The average time required for adoption was less than one year. Only one amendment, the fourteenth, has taken more than 2 years. It took only 10 months to adopt the 13th amendment abolishing slavery.

It is significant to note that Congress and the people of the United States felt it necessary to amend the Constitution by adding the fifteenth amendment in order to give the Negro the right to vote. Can it now be said, within constitutional limits, that racially-integrated public education is one of the unalienable rights within the terms of the 14th amendment, when it was so openly conceded that the right to express one's voice in free government by the exercise of the franchise was not one of those rights?

In a rash of recent judicial opinions by our highest court, which I need not enumerate, the states have been shorn of many of the powers reserved by them. The Constitution has been given a meaning never intended by those who wrote it and certainly not justified by its language. Those opinions, reflecting the political and social philosophy of their authors, have effected radical changes in our social order—changes that admittedly could not possibly have occurred by the process of amendment.

Whatever may be our philosophy and predilections respecting the trends of rapidly changing times, we are bound to respect the conservatism and traditions of an earlier era until such time as an informed public, acting within the framework of a constitution prescribed by the wisdom of their ancestors, decrees a change.

Our Mounting Debt

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Washington Evening Star of Tuesday, December 2, 1958. I do not agree with this editorial, as I think we in the Congress have suffered terribly because of the lack of leadership on the part of the administration. The present administration keeps talking economy, and then recommending record budgets after budgets, which are the highest in peacetime history. Whenever Congress tries to economize, the President or some of his captors cry, "Wolf, wolf," except that they use the term "emergency," instead of the term "wolf."

I do think, Mr. Speaker, that we Democrats, having the majority that we are going to have this year, are going to have to be careful to make sure that we are not to blame for the extravagances of a misinformed and misguided Executive.

The article follows:

THE CAUSE OF OUR MOUNTING DEBT—DEMOCRATS BLAMED FOR BIG EXPANSION OF NONDEFENSE EXPENDITURES

(By David Lawrence)

What would be thought of a man who kept on borrowing money and never paid back a dollar of it?

What shall be thought of a government that keeps on borrowing billions over a period of years and has a bigger debt today than it has ever had at any time in its history?

The annual interest now amounts to one-tenth of the United States budget. It adds up to between $7,500,000,000 and $8 billion a year. This interest payment will continue to grow unless somehow there is a beginning made toward reducing the principal.

It will be said that governments never pay off their debts. That's true. What they do instead is to cheat the citizen by devaluing whatever the purchasing power of the monetary unit happens to be.

If the millions of citizens who are thus being cheated understood it, they would not regard inflation as just a big word whose meaning they don't know. They would realize they are being robbed of their savings.

Today the dollar is worth 28 cents in comparison with what it was at the turn of the century 58 years ago.

In terms of 1930 values—when the public debt had been reduced to about $16 billion—the dollar today is worth 58 cents.

In terms of the dollar of 1939—just 2 years before America's entrance into World War II—the present dollar is worth only 48 cents.

This is a shrinkage of more than half the purchasing power of the American dollar in a period of less than 20 years.

It's true that two world wars and the Korean war have materially increased the public debt. But that's not the reason it is bigger today than when the Korean war spending was at its height in 1951 and 1952. Actually, nondefense spending also has gone up very rapidly. The politicians in both parties have been insisting that the Nation can afford guns and butter, too.

The Tax Foundation, Inc., of which Roswell Magill, former Under Secretary of the Treasury, is chairman, says in its November review that the "widely held" impression that defense spending is responsible for the growth of the public debt in recent years is inaccurate. It is pointed out that current expenses for defense are $350 million less than they were in 1954, whereas nondefense spending is up $12 billion higher than 6 years ago.

The President doesn't control the purse strings. Congress has the final word. One of the illusions spread generally is that the Chief Executive is responsible for the budget. He may suggest and recommend, but the Congress writes the appropriation bills.

As long as Congress thinks the public wants more and more spending on what is generally called welfare or social benefits, the tendency will be to spend more and more and send the public debt higher and higher.

But who is going to be cheated? There are in America more than 15 million citizens who are 65 years old or over. Of these, 11,640,000 are receiving benefits of some kind from Government. An additional 1.5 million get "old age" income from private pensions, annuities or interest or dividends on savings invested for retirement. Even allowing for some duplication, this is a sizable number.

Then there are the persons below the age of 65—the widows and orphans—who are dependent on fixed incomes from insurance policies or death-benefit funds. As the dollar fluctuates, these persons lose purchasing power each year.

The number of human beings affected directly or indirectly by the cheating process, whereby dollars originally saved are curtailed in purchasing power, may amount to at least 30 million persons.

The Congress has never felt the pressure it should from these voters, because they are unorganized. But someday the citizens will know where to put the blame for the drop in the purchasing power of the dollar, and they will express their opposition to the policy of "guns and butter, too."

Defense is all important for national safety. Luxuries and extravagances are not so essential. Yet the lobbies in Congress for bigger and better welfare appropriations are very powerful. The Democratic Party today has to accept the responsibility for the budget because, no matter what the President suggests, it is the Congress that must decide on how much shall be spent.

Supreme Court's Record on Reds

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. HARRISON. Mr. Speaker, the fight against subversion in the United States has been carried forward against the cunning and determined opposition of the disciplined Communist apparatus and its fellow travelers. The subverters have had the benefit of a pecular ally—the Supreme Court of the United States.

The Staunton (Va.) News-Leader performed a public service in its issue of January 4, 1959, by reprinting an article from the American Legion magazine, quoting a report of the American Bar Association's special committee on Communist tactics, strategy, and objectives.

Under leave to extend my remarks in the Appendix, I include this evidence of how valuable an ally the Supreme Court has been to the preachers and practicers of the Communist ideology.

The article follows:

We should like to present, without comment, a report of the American Bar Association's Special Committee on Communist Tactics, Strategy, and Objectives. This deals with the Supreme Court's decisions on communism during the past 2 years:

1. *Communist Party* v. *Subversive Activities Control Board.* The Court refused to uphold or pass on the constitutionality of the Subversive Activities Control Act of 1950, and delayed the effectiveness of the act.

2. *Pennsylvania* v. *Steve Nelson.* The Court held that it was unlawful for Pennsylvania to prosecute a Pennsylvania Communist Party leader under the Pennsylvania Sedition Act, and indicated that the anti-sedition laws of 42 States and of Alaska and Hawaii cannot be enforced.

3. *Yates* v. *United States.* The Court reversed two Federal courts and ruled that teaching and advocating forcible overthrow of our Government, even "with evil intent," was not punishable under the Smith Act as long as it was "divorced from any effort to instigate action to that end," and ordered 5 Communist Party leaders freed and new trials for another 9.

4. *Cole* v. *Young.* The Court reversed two Federal courts and held that, although the Summary Suspension Act of 1950 gave the Federal Government the right to dismiss employees "in the interest of the national security of the United States," it was not in the interest of the national security to dismiss an employee who contributed funds and services to a not-disputed subversive organization, unless that employee was in a "sensitive position."

5. *Service* v. *Dulles.* The Court reversed two Federal courts which had refused to set aside the discharge of John Stewart Service by the State Department. The FBI had a recording of a conversation between Service and an editor of the pro-Communist magazine Amerasia, in the latter's hotel room in which Service spoke of military plans which were very secret. Earlier the FBI had found large numbers of secret and confidential State Department documents in the Amerasia office. The lower courts had followed the McCarran amendment which gave the Secretary of State absolute discretion to discharge any employee in the interests of the United States.

6. *Slochower* v. *Board of Education of New York.* The Court reversed the decisions of three New York courts and held it was unconstitutional to automatically discharge a teacher, in accordance with New York law, because he took the fifth amendment when asked about Communist activities. On petition for rehearing, the Court admitted that its opinion was in error in stating that Slochower was not aware that his claim of the fifth amendment would ipso facto result in his discharge; however, the Court denied rehearing.

7. *Sweezy* v. *New Hampshire.* The Court reversed the New Hampshire Supreme Court and held that the attorney general of New Hampshire was without authority to question Professor Sweezy, a lecturer at the State university, concerning a lecture and other suspected subversive activities. Questions which the Court said that Sweezy properly refused to answer included: "Did you advocate Marxism at that time?" and "Do you believe in communism?"

8. *United States* v. *Witkovich.* The Court decided that, under the Immigration and Nationality Act of 1952, which provides that any alien against whom there is final order of deportation shall give information under oath as to his nationality, circumstances, habits, associations, and activities, and such other information, whether or not related to the foregoing, as the attorney general may deem fit and proper, the attorney general did not have the right to ask Witkovich: "Since the order of deportation was entered in your case on June 25, 1953, have you attended any meetings of the Communist Party of the U.S.A.?"

9. *Schware* v. *Board of Examiners of New Mexico.* The Court reversed the decisions of the New Mexico Board of Bar Examiners and of the New Mexico Supreme Court which had said: "We believe one who has knowingly given his loyalties to the Communist Party for 6 or 7 years during a period of responsible adulthood is a person of questionable character." The Supreme Court ruled that membership in the Communist Party during the 1930's cannot be said to raise substantial doubts about his present good moral character.

10. *Konigsberg* v. *State Bar of California.* The Court reversed the decisions of the California Committee of Bar Examiners and of the California Supreme Court and held that it was unconstitutional to deny a license to practice law to an applicant who refused to answer this question put by the bar committee: "Mr. Konigsberg, are you a Communist?" and a series of similar questions.

11. *Jencks* v. *United States:* The Court reversed two Federal courts and held that Jencks, who was convicted of filing a false non-Communist affidavit, must be given the contents of all confidential FBI reports which were made by any Government witness in the case even though Jencks "restricted his motions to a request for production of the reports to the trial judge for the judge's inspection and determination whether and to what extent the reports should be made available."

12. *Watkins* v. *United States:* The Court reversed the Federal district court and six judges of the Court of Appeals of the District of Columbia, and held that the House Un-American Activities Committee could not require a witness who admitted, "I freely co-

operated with the Communist Party" to name his Communist associates, even though the witness did not invoke the fifth amendment. The Court said: "We remain unenlightened as to the subject to which the questions asked petitioner were pertinent." The Court did not question "the power of the Congress to inquire into and publicize corruption, maladministration, or inefficiency in agencies of the Government." The Court did question the right of Congress to inquire into and publicize communism and subversion, and suggested that this "involved a broad scale intrusion into the lives and affairs of private citizens."

13. *Raley, Stern, and Brown* v. *Ohio:* The Court reversed the Ohio Supreme Court and lower courts and set aside the conviction of three men who had refused to answer questions about Communist activities put to them by the Ohio Un-American Activities Commission.

14. *Flaxer* v. *United States:* The Court reversed two Federal courts and set aside the conviction of Flaxer of contempt for refusing to produce records of alleged Communist activities subpenaed by the Senate Internal Security Subcommittee.

15. *Sacher* v. *United States:* The Court reversed two Federal courts and set aside the conviction of Sacher of contempt for refusing to tell the Senate Internal Security Subcommittee whether he was "a member of the lawyers' section of the Communist Party." In the second Sacher appeal, the Court again reversed the court of appeals and said that this question was not pertinent to the subcommittees' investigation of Communist witness Matusow's recantation. The Court refused to hear any argument from the Government lawyers representing this Senate subcommittee.

16. *Yates* v. *United States.* In the second Yates appeal, the Court reversed two Federal courts and held that the refusal of Communist Party member Yates "to answer 11 questions about Communist membership of other persons" did not constitute 11 contempts. In the third Yates appeal, the Court reversed two Federal courts and held that Yates' contempt sentence of 1 year should be reduced to the 15 days already served for this contempt.

17. *Bonetti* v. *Rogers.* The Court reversed two Federal courts and held that, although the Internal Security Act of 1950 provides that any alien, who "at any time" after entering the United States shall have been a member of the Communist Party, is deportable, Bonetti, an alien who became a Communist after entering the United States, was not deportable because he had reentered after quitting the party. The dissenting judges charged that this construction reads "at any time" out of the act and the word "last" into the statute, and "cripples the effectiveness of the act."

18. *Consul General for Yugoslavia* v. *Andrew Artukovic.* The Court reversed two Federal courts and held that Artukovic, an anti-Communist refugee from Yugoslavia who is living with his wife and children in California, could not claim political asylum in America, but had to submit to an extradition hearing which would be based on Yugoslavia's political charges.

19. *Rockwell Kent* v. *Dulles.* The Court reversed two Federal courts and held that the State Department could not require every applicant for a passport to file a non-Communist affidavit.

20. *Dayton* v. *Dulles.* The Court reversed two Federal courts and held that the State Department had to give a passport to a research physicist whose passport application to accept a job in India had been denied for security reasons. The Secretary of State had found that Dayton had lived for 8 months with a Communist who "was involved in the espionage apparatus of Julius Rosenberg" and that Dayton was going to work in India with another Communist "who recently renounced his American citizenship."

Tax on Long-Term Capital Gains

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. UTT. Mr. Speaker, it is my firm conviction that revision in our tax structure is a must if we are to encourage the individual capital investment so necessary for providing jobs for our ever-increasing working force.

The amount of new risk capital required to keep our economy healthy at any given time is obviously related to population—to the demographic facts of births, deaths, longevity, retirement, and other germane matters over a period of time. As I read the figures, it now requires over $15,000 of new risk capital to bring one new little job into the world. An examination of the available data on babies growing up and wanting jobs, on automation's replacement of old jobs with more costly new ones, and on inflation's toll on the cost of maintaining and replacing wornout or obsolete machinery, it would seem that we now need annually not only over $40 billion of new risk capital to meet our new job needs, but also at least another $40 billion of new capital each year to keep in good repair the tools of the jobs we already have.

This new capital can come directly or indirectly, from only one source—the invested savings of the individual citizen. And high taxes and unwise taxes which impede incentives to thrift, savings and investment, pose a serious threat to economic growth and full employment.

On the other hand, I well realize the fiscal plight of a Federal Treasury faced with a budget deficit of $8 billion and the inflationary consequences that might result at this time from intemperate tax reduction schemes that would merely shift our tax burdens from one group to another and thereby stifle economic growth and further choke off the reservoir from which all taxes must be paid—the excess margin of real productivity over consumption, which we call savings.

Nevertheless, there is one area of Fedral tax reform which would go far toward encouraging equity investment in new and small businesses, creating new job opportunities and providing additional revenues to the Federal Government. This area exists in that portion of our Revenue Code which deals with taxation of so-called long-term capital gains. To begin with, this tax is a very poor revenue producer because of its voluntary nature and because of its unrealistic high rate.

It is my firm belief that this is an unwise, and an unfair tax. It is largely a levy on capital and not on income. It penalizes elderly owners of homes and farms who wish to sell and retire into smaller and less expensive quarters. It penalizes owners of investments who wish gradually to shift their holdings into more conservative securities as they gradually attain their less productive years. It prevents many constructive business transactions that would be in the public interest, especially the ability of small and weaker enterprises to merge with stronger organizations rather than be forced to discontinue operations which provide our citizens with jobs. And last, but not least, it has sterilized vast pools of risk capital, substantial portions of which otherwise would find their way into risk investment in new and small business ventures and thereby afford vast new employment opportunities, new productive capacity, and new sources of tax revenues to the Treasury.

It is for these reasons that I am introducing today a resolution which provides that the alternate rate of tax on long-term capital gains be reduced from 25 percent to 12½ percent.

It is my firm conviction that this bill is a revenue producing measure.

If this tax rate were so changed, investment in our economic system would receive substantial encouragement, new jobs would be created and the Treasury would actually gain revenues as a result thereof. After all, no one has to sell his capital assets, but a great many would willingly do so if the tax rate were made more realistic.

I welcome the bipartisan support of my colleagues in bringing this bill to early committee consideration, separate and apart from other revenue measures. I am sure the evidence produced before them at the attendant hearings will convince them of the wisdom of enacting this legislation.

General Practitioner of the Year, Dr. Lonnie A. Coffin

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1959

Mr. MARTIN. Mr. President, last month the American Medical Association's house of delegates meeting in Minneapolis, Minn., named as the general practitioner of the year Dr. Lonnie A. Coffin of Farmington, Iowa.

The tribute was most highly deserved. Dr. Coffin has spent most of his 68 years working for the welfare of all residents of the Farmington area beginning in his youthful days when all trips were by horse and buggy. He has brought into this world some 2,500 babies and has been of immeasurable service to thousands of other persons.

I ask unanimous consent to have printed in the appendix of the RECORD an Associated Press story about Dr. Coffin

and the honor paid him as printed in the Des Moines Register for Wednesday, December 3, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIFE STORY OF IOWA DOCTOR: CARE FOR ALL, AT ANYTIME

MINNEAPOLIS, MINN.—The Nation's new outstanding family doctor of the year wishes that all physicians would practice medicine from the humane side, caring for any patient needing their services.

And that's the life story of Dr. Lonnie A. Coffin, 63, a kindly mannered doctor from Farmington, Iowa.

He was named general practitioner of the year Tuesday by the American Medical Association's house of delegates at a meeting here.

"I am worried that a small minority of doctors look at their practice from the commercial side," he told a news conference. "But it is a very small minority. The majority of doctors do a good job."

SEVEN DAYS A WEEK

To Dr. Coffin a good job has meant working days and nights as needed, 7 days a week, during his 44-year medical career in Farmington, a community of about 1,000.

When he started practice in the horse-and-buggy era he was 1 of 5 doctors serving the town. Now, with the automobile simplifying the transportation problem, he serves the area alone.

Since suffering a heart attack 8 years ago he has limited the number of night calls. But he still works on Sundays.

Dr. Coffin, who said he doubts he ever will retire, recalled he has delivered 2,500 babies—2,000 of them in their own homes—and he has helped handle many kitchen table operations, because Farmington never has had a hospital.

What's the difference between today's medical patients and those seen nearly a half century ago?

FAST-CLIP LIVING

More of today's patients suffer from psychosomatic complaints.

"It's tension caused by fast-clip living," he said.

He thinks the family doctor is well equipped to handle complaints of this type.

The patient is close to his family doctor and comes to him naturally for treatment, advice, and assurance, Dr. Coffin said.

"What is the most outstanding case or event that has occurred to you?" he was asked.

His answer was nothing more dramatic than the injecting of a hypodermic needle into a boy critically ill with tetanus infection.

But while tetanus was an old story for him even then, it was his first experience with antitoxin. The boy lived. All the others had died.

FIRST IOWAN

Dr. Coffin, a widower, was flanked at the news conference by his two daughters, Mrs. William Hols and Mrs. Floyd Miller of Farmington.

Dr. Coffin is the first Iowan to win the award.

He was born on a small farm in Clark County, Mo., and moved to Iowa at the age of 5. He was graduated from Farmington high in 1909 and 4 years later was a member of the last medical class graduated from Drake university in Des Moines.

He served as president of the Iowa Medical Society in 1956.

Cotton: A "King" in Trouble

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. THORNBERRY. Mr. Speaker, two of Texas' top morning and afternoon newspapers, the Austin American and the Austin Statesman, published in their Sunday combination—the American-Statesman—of December 14 an alarmingly graphic feature involving the bleak status of our Nation's ailing cotton-producing industry.

Captioned, "Cotton: A 'King' in Trouble," the analytic feature was written by State Editor Dave Shanks, columnist and authoritative analyst of agricultural and ranching matters.

Mr. Shanks' report represents a skillfully drawn literary portrait of despair, based not on the intangibles of theory, but on the hard facts of economics, the kind of economics which are day-to-day facts to a great body of American farmers. The tragedy of agriculture, or the small farmer's share of it, simply is that farmers are expected to perform as free producers when the things they buy and sell are subject to various controls, governmental, industrial and union. Of equal importance is the threat to an agricultural culture that has given this country the only overall farm abundance enjoyed by any nation on earth.

Surely, there is a better approach than the one we now have for restoring stability and incentive to the farmers of America—prosperity.

Mr. Speaker, I think every Member of Congress should be given opportunity to read and study Mr. Shanks' article; and I, therefore, under unanimous consent, include it in the Appendix of the RECORD.

[From the Austin (Tex.) American-Statesman, Dec. 14, 1958]

COTTON: A "KING" IN TROUBLE

(By Dave Shanks)

The long drought that shriveled the cotton economy of central Texas' "black waxy" region was succeeded by another weather cruelty.

Rains, welcomed in the dormant winter season, stayed on too long. Chocolate-colored mud bogged tractors loaded with can-shaped planting rigs in the spring. A humid summer cheapened lint grades with rot and spots and drove impatient migrant-field laborers under barns and finally on to west Texas.

One day last week at Elgin, on the southern edge of prairie triangle spreading across Texas northward to the Red River, Ed Lundgren watched a work crew inch into place a heavy machine for a new cotton oil mill on the site of one gutted by fire just before New Year's. A frog voiced warning of the Katy's freight thundering through the crossing between the oil mill and the bank, two blocks west of Main Street, had interrupted his complaints.

"A new crop year begins, but we still have old cotton in the fields," lamented Lundgren, a short, bald man who has grown or processed cotton for most of his life.

On Monday, just as they have for the last 6 years, small farmers of the old Cotton Belt from Georgia to Texas and the newer "cotton ranchers" from Lubbock to Los Angeles will drift into courthouses and country schools to vote in another industry-wide referendum.

A CERTAIN OUTCOME

The election outcome is certain: 1959 will be cotton's seventh season of controlled acres and subsidy payments since the end of World War II.

The certainty of the outcome spotlights the precarious hold on sovereignty by King Cotton.

Vagaries of weather, dictionary-thick stacks of Government regulations, innovations of the technology that quadrupled farm output as well as launched a rocket moonward. All these plague cotton, making tragic the era for a crop once powerful enough to arm a Confederate nation with an economic weapon the equal of the Union's industries. Even now, the crop is the South's biggest industry and the West's biggest farming venture.

Squeezed round bale-to-round bale in compress warehouses across the South, the cumbersome surplus of cotton is only slightly less bulky than the commodity mountains of wheat in Great Plains elevators and bulging corncribs on Midwest farms.

The surpluses are symbols of the new farm problem just as they were of the old.

Next year, the symbols may be bigger, but the farm policy will be different.

AIMING FOR A LAW

Bearing the imprint of Agriculture Secretary Ezra Taft Benson's philosophy of free choice for agriculture, the 1959 referendum triggers a historical policy change. Substituting a new flexibility for the older rigid-type programs, Benson has maneuvered the first breakthrough in U.S. farm policy in a decade.

The current complex of Federal farm law and bureaucratic regulation began as a Government-sponsored assurance to depression-scared farmers, offering them a guaranteed price floor to boost production for World War II.

The aim was a quasi-law of supply and demand. Simple arithmetic and more sophisticated statistical guessing were to enforce the law.

U.S. Agriculture Department experts would add up these figures: (1) Last year's crop carryover; (2) a stockpile for national emergency; (3) foreign export; (4) domestic consumption.

This sum would be divided by the average per acre cotton yields.

An answer-quotient would be the number of acres required to grow cotton to meet the demand.

The quotient, in acres, has ranged from 20 to 16.5 million. The land pool was divided among States, counties, individual farms. Allotments for each were based on the history of past plantings.

For restricting production by formula, farmers got the chance to hedge their crops. They could sell in the open market or borrow at a price floor through Commodity Credit Corporation loans. Theoretically, an accurate estimate of acres and demand welded supply and demand into unity.

A strange admixture of politics and the gadgets of technology set in motion a crisis that began with the peace treaties.

Politically, the congressional farm bloc—an alliance of cotton and corn State solons—insisted the acre pool be kept constant and big. The statisticians lost the battle with Congress.

Farmers eyed the price floor, then turned to try out the efficiencies of the war-created technology. This meant new machines, a fantastic new chemical industry that turned out tons of crop-boosting fertilizers and crop-saving insecticides, irrigation wells, and a host of other expensive capital items.

As it had in industry, technology paid dividends in agriculture. In 1958 producers could grow 469 pounds of lint (just under 500-pound bales) per acre, or 52 pounds more than the past alltime record in 1955.

In central Texas, growers used the new techniques to build acre yields from 175 pounds to 250 pounds in less than 10 years. John Vernon Stiles of Taylor, the region's economic expert for the industry, says Williamson County farmers planted 30,000 acres, hauled 57,000 bales to gins this season.

Added to the political decision and the science of production was a new market enemy.

Other U.S. chemists had built a synthetic fiber industry that produced without regard of weather or insects enough fibers to spin cloth equivalent to 5 million cotton bales, or a third of the nation's fiber consumption.

Across international boundaries, peons in Mexico and peasants in South America and Africa labored in the harvests on more and more acres planted to crop. Buyers at Tokyo, Hamburg, and Liverpool bid substantially less for foreign cotton than they did for the U.S. crop.

What had happened to cotton had occurred for most other U.S. staple crops, and the surpluses cost the Agriculture Department most of its $5 billion a year budget.

After 6 years as the most controversial U.S. Agriculture Secretary in history, Benson gunned down the farm bloc. His arsenal included city-based Democrats, a Presidential veto, and a self-asserted public opinion. His victory already has forced corngrowners to discard Government controls, which may incur tremendous corn stocks next year, and will force cottongrowers to make a new choice in 1959.

Next year, a farmer can—

(1) Plant within a base acre allotment, receive a guaranteed loan of 80 percent parity (33 cents per pound, Middling 15/16-inch class);

(2) Plant the base allotment plus 40 percent more acres, receive a guaranteed loan of 65 percent of parity, or about 27 cents per pound.

Ostensibly, the choice for a farmer is simple, or if complicated, the degree is arithmetical and not algebraic.

But in the beer parlor at Niederwald, at the Farm Bureau meeting at Hutto, even after church on Sundays, central Texas farmers are making calculations for a choice they know is not simple or satisfying.

Essentially, these calculations could be typical:

A farmer with a 100-acre base allotment and prospects of growing half a bale of cotton per acre could—

(1) Plant within his base allotment, receive $8,250 for his 50 bales worth $165 a bale, or 33 cents a pound.

(2) Plant 140 acres (40 percent more than his base allotment), receive $9,450 for his 70 bales worth $135 a bale, or 27 cents a pound.

Another calculation must intervene. Farmers estimate harvest costs ranging from $35 to $45 per bale, based on paying hand labor $2 per hundredweight for the 2,000 pounds of "bollies" needed to make a 500-pound bale of lint.

Deducting these charges, 50 bales would still yield $6,250 with higher subsidy rates and 70 bales would yield only $6,650 at the lower rate.

Involved in this last calculation are all the complexities of economic theory and fact that distinguishes agriculture from most other industries.

The assumption is that harvest charges will be more and more expensive, since farm labor wage rates are tied to rising urban wages and salaries. Moreover, most farmers reason that the bulk of their other production costs (tractors, gasoline, planting seed, etc.) are fixed at a per unit level that would not vary for 1 bale, 10 bales, or 100 bales.

UNIT COST INCREASE

In short, a technology that increased production by as much as 20 to 30 percent in a decade has failed to achieve a decreasing cost production pattern that would lower unit costs less as production increased. Despite the machines, or maybe because of them, unit costs not only are constant for large or small output levels, but they are getting higher and higher.

This assumption represents a conflict, even a paradox. For strange and different results have been counted over the expanded Cotton Belt that extends now ocean to ocean. For one thing, the production units range from patch-sized farms to ranch-big factories. Typically, central Texas, in the center of the continental industry area, is characterized by middle-sized units described by agriculturists as the family sized farm.

The Texas blacklands, however, encounter two important problems in matching the technological advances: The family sized farm's optimum size is getting bigger and bigger (to use four-row instead of two-row tractors); about half the farm operations are by tenants on year-to-year tenure agreements, making impossible either long-term soil conservation practices or other investments.

Few farms in the area can utilize $6,000 cotton harvesting machines that cut harvest charges or $20,000 irrigation wells that bolster production.

Despite this snag, a piece of machinery may change the cost structure, bolstering farm income in this area. Cotton strippers have been used by some farmers in the area. Most give the machines an A–1 rating, claim they can cut harvest charges 60 percent as compared to a hand-harvested crop. Typical cost estimates are about $15 per bale (instead of $40).

This sort of saving could widen the margin of profit for a larger crop, even as soon as 1959.

THE CHOICES FOR 1959

The choices for planting a crop in 1959 have an even longer range importance than next year's production.

Some experts say the 1959 crop will be grown on more acres than the 1958 crop. This means that production will be stepped up, creating an even larger cotton surplus and requiring new cuts in acre allotments.

The record of crop controls is one of acre retrogression already. For central Texas growers this year sustained a 10- to 12-percent acre cut. Over a longer period, cotton expert Stiles cites the Williamson County acre history.

Prior to the control years, Williamson farmers planted from 175,000 to 200,000 acres of cotton. The decline has been steady. Next year, farmers in this county can plant 102,000 on base allotment acres. Even that is 13,000 acres less than there were allocated in 1958.

What choice will farmers actually make?

A poll of growers in three central Texas counties indicates that most area producers will plant fewer acres to get higher subsidies.

There are exceptions, R. H. Brookshire of Thrall and R. W. (Dusty) Rhoades of Taylor both plan to plant the maximum number of acres.

Explains Brookshire: "I would plant more acres because it would be more profitable. A cotton farmer's biggest cost is harvesting his crop. With machine harvesting, I can make more profit per bale with more cotton."

Rhoades favors planting more cotton acres "to get away from planting so much milo, which really cuts down on land production."

But Rudolph Kovar of Circleville says he plans to "plant within the base allotment to get a better price for the cotton I grow."

In Williamson County, Correspondent Vera Allan found that farmers intended to plant for the higher loan rate by a 4-to-1 margin.

One, Robert Riske of Walburg, even advocated complete abandonment of government programs. "I'd like for them to turn the farmer loose. If it ever comes to a vote on that, I'll vote to let farmers be free again."

A OPTION FOR MOST

But most others, though dissatisfied, will use the A option.

Said Martin Bergstrom of Georgetown: "The program is a mess. It's not functioning like it ought to. Seems to me the little fellow is being taken advantage of. But I don't want to plant too much cotton and get a low price for it."

Frank Simek of Jarrell believes that a farmer "will have it rough" unless he stays within the lower allotment plan.

Correspondent Henry Martindale at Lockhart said farmers favored 7-to-1 the A option. But County Agent Steve Lindsey reported farmers who had used cotton stripper machines were satisfied and some may plant under the B option.

American Investments in Foreign Ventures

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. BOGGS. Mr. Speaker, as you know, the Foreign Trade Subcommittee of the Ways and Means Committee recently completed a series of extremely important hearings designed to gain information that will be helpful to the House in determining what should be done legislatively to encourage productive American investments in foreign ventures and the reinvestment of foreign earnings.

The committee has received a great many useful and constructive suggestions from representatives of industry and Government which have been helpful to us in preparing legislation for the consideration of the House. However, time did not permit the committee to hear representatives of all the groups interested in this vital aspect of the world's economy.

However, I have a statement from Mr. Chad F. Calhoun, vice president of Kaiser Industries Corp., and many of its affiliates, which contains a number of excellent suggestions with respect to a possible approach to this problem. Consequently, I would like to have this statement made a part of the RECORD of the

House so that it will be available to many individuals in Government and industry who are interested in this problem.

The Kaiser companies are active in many areas of the world and have had practical experience in this field. I am extremely pleased that Mr. Calhoun and his colleagues have given us the opportunity to gain from their vast experience in this area of international economics.

Under leave to extend my remarks in the RECORD, I include the statement, as follows:

My name is Chad F. Calhoun, of Washington, D.C. I am vice president of Kaiser Industries Corp. and its various affiliated companies, including Henry J. Kaiser Co., Kaiser Aluminum & Chemical Corp., Kaiser Steel Corp., and Willys Motors, Inc.

Like many other American business firms, the Kaiser companies are working today in all parts of the world. Our engineering and construction division is presently building a large hydroelectric project in Australia, a steel plant in India, a steel plant and an automotive manufacturing plant in Brazil, and a power plant in Puerto Rico. We are making a study of the proposed Volta River dam for the Government of Ghana, and are in the planning stages of numerous other engineering projects throughout the world. Willys Motors, Inc., a Kaiser wholly owned subsidiary, is now manufacturing Universal Jeep vehicles, Jeep trucks and passenger cars, either through affiliated companies or licensees, in every continent except Africa, and we believe that an African manufacturing project is not far off. Kaiser Aluminum is now mining or searching for bauxite in many countries. It is also planning to invest in reduction and fabricating plants in India, and is considering participating in similar projects in Argentina, Brazil, and Spain. Kaiser Steel is seriously studying the feasibility of participating in the development of the rich iron ore deposits of Brazil. Permanente Cement, also a Kaiser company, obtains the raw material for its gypsum products in Mexico.

We have also joined other American investment and business firms to contribute part of the initial capital for foreign development banks sponsored by the International Bank for Reconstruction and Development. We are stockholders of Pakistan Industrial Credit and Investment Corporation, and with the approval of the Indian Government, we are now arranging a similar investment in the Industrial Credit and Investment Corporation of India.

The Kaiser management is aware not only of the business opportunities that may be found abroad, but also of the risks that surround these opportunities. We are equally aware that the choice between doing business at home and doing business abroad is no mere matter of dollars and cents, but a matter of the survival of our basic economic and governmental institutions. Both as businessmen and as citizens, we realize the urgent need to stimulate the greatest possible flow of western capital and technical skills to other parts of the world in time to channel the "revolution of rising expectations" into economic and governmental forms that are compatible with western ideas of a free society.

It is not our purpose to dwell on this urgent need, which has been clearly recognized by the legislative and executive branches of the Government, and by virtually all of the witnesses, both Government officials and businessmen, who have testified before this committee. We take it there is general agreement that the flow of private American capital and know-how to the underdeveloped areas must be increased as a matter of primary national interest, and that any Government measures which can help speed that flow deserve serious and urgent consideration.

Like many other American industrial firms, the Kaiser companies can contribute a part of the required capital and skills, and want to do so. We are interested not merely in the export of goods and services, but in investment of physical assets and individual skills in partnerships with foreign firms and investors in the underdeveloped areas with any financial return to us dependent on the ultimate financial success of the venture. We have found, however, that our ability to make such investments is sometimes seriously hampered by the need to pay American taxes in cash at the time the investment is made, long before the investment has created any earnings. We have also found that when foreign earnings do come in, our ability to reinvest them in other productive activities in the same or a different foreign country is seriously curtailed by the need to first pay an American income tax, even though the earnings are not being brought back to the United States, but are instead being reinvested abroad.

We therefore warmly support the objectives of H.R. 12368, and we suggest that its scope be widened as indicated below. We propose that, in order to encourage productive investments in foreign ventures and the reinvestment of foreign earnings, the United States tax on the making of such investments or on the resulting earnings be deferred until the earnings are realized and brought back to the United States for distribution. We have three specific suggestions, and we have attempted to illustrate the reasons for each of them by incidents from our own experience.

Summarized briefly, our suggestions are as follows:

(a) In order to encourage the making of productive foreign investments in the form of services, know-how, and equipment, we have the following suggestions:

1. Paper profits resulting from investment of engineering or construction services, technical assistance, or know-how in productive foreign manufacturing firms, in exchange for shares or in exchange for a deferred-payment obligation, should not be subject to United States tax until such time as the shares are sold or the deferred obligation is paid.

2. Paper profits or increase in values resulting from the investment of machinery and other assets in exchange for shares or deferred payment obligations of a foreign manufacturing firm should not be subject to U.S. tax until such time as the shares are sold or the deferred obligation is paid.

B. In order to encourage the reinvestment abroad of realized foreign earnings (including but not limited to those described in the first two suggestions), we have this third suggestion, which has already been made by Chairman Boggs and by several other witnesses at these hearings:

3. A new class of corporation, to be known as a U.S. Foreign Business Corporation, should be established under the Internal Revenue Code. To be so classified, it would have to engage primarily in the active conduct of business abroad. Its profits and gains from such foreign business activities would not be subject to U.S. taxes until they are made available to its U.S. shareholders as ordinary or liquidating dividends.

It goes without saying that all of these suggestions should be embodied in legislation so drafted as to stimulate the flow of bona fide investment in active foreign business operations, without creating loopholes for tax avoidance and without creating tax havens for investments that have no useful purpose in the struggle to improve world living standards.

We would now like to cite some specific examples from our own experience which in our opinion illustrate the need for the measures we suggest:

1. Paper profit resulting from investment of engineering or construction services, technical assistance or know-how in productive foreign manufacturing firms, in exchange for shares or in exchange for a deferred payment obligation should not be subject to U.S. tax until such time as the shares are sold or the deferred obligation is paid.

Kaiser engineers designs, engineers and supervises the construction of industrial plants in many countries. We want to expand this business. We have the men and the skills that are the true ingredients of capital formation in underdeveloped countries, often more important than the physical plants themselves. We will take the risk of participating in a project by accepting minority shares or deferred payment obligation payable in local currency for part of our engineering fees. A joint venture participation of this type is clearly a valuable contribution to the economy of an underdeveloped nation, since it not only reduces the immediate foreign exchange burden, but also brings all the tangible and intangible benefits of continuing partnership. Under present law, however, the acceptance of shares or deferred payment obligations would require us to make an immediate cash payment in dollars of income tax to the U.S. Treasury based on our anticipated engineering profit, and computed as if we had been paid in cash, instead of in securities which we cannot, or, in the interest of the project, should not immediately sell.

The tax law considerations which normally lead the Treasury to consider the receipt of marketable securities or obligations as the equivalent of cash clearly ought not to be applied to the type of transaction described above. Whether and when it will be possible to sell the securities or obligations, and for how much, is usually a matter of conjecture. Moreover, our national interest in promoting foreign investment makes it highly undesirable to liquidate the investment the moment it is made, in order to pay United States taxes. Accordingly, it would seem to be in the national interest to permit the payment of tax to be deferred until such time as a sale or liquidation, or the payment of dividends or interest, gives rise to tangible and convertible cash income.[1]

2. Paper profits or increase in values resulting from the investment of machinery and other assets in exchange for shares or deferred payment obligations of a foreign manufacturing firm should not be subject to United States tax until such time as the shares are sold or the deferred obligation is paid.

The need for such a provision is illustrated by the experience of our wholly owned subsidiary Willys Motors, Inc. Willys Motors, Inc., makes the world-famous Universal Jeep line of vehicles. The principal natural market for Jeep vehicles is in the underdeveloped countries, where the lack of paved roads creates such formidable obstacles to economic growth. Since most of these nations lack the foreign exchange to import American-made Jeep vehicles, Willys has adopted the policy of establishing foreign manufacturing plants, wherever a sufficient market and industrial base exists to support an adequate volume of production. In order to establish a firm base for the plant's operation through the participation of local investors, Willys has organized these foreign manufacturing plants with Willys owning a minority stock interest. The majority ownership, and often the principal voice in management, is held by the local people. Willys is thus in partnership with more than

[1] If this tangible income is received by an eligible U.S. foreign business corporation of the type described in our third suggestion, the tax would be levied only when the income is distributed to the shareholders of the foreign business corporation.

10,000 local stockholders in Argentina, more than 15,000 in Brazil, almost 10,000 in India, and with responsible local businessmen in Australia, Israel, Turkey, and other countries.

The principal Willys contribution to these foreign manufacturing operations has been to invest American machinery and to arrange machinery investments by others, and to supply management and technical skills and know-how under license.[2] The American equipment invested has usually been taken from an existing operation of Willys or one of its automotive suppliers in the United States, and the fair value of this equipment to the foreign manufacturing firm has been substantially above its so-called basis for United States tax purposes, because of depreciation charges during its past useful life. On some occasions the equipment has been specially made by a machinery builder and has been invested by the builder for shares in our foreign affiliate, with the investment value being the sale price of the machinery, which includes the builder's profit. In all such cases, a transfer of equipment in exchange for shares gives rise to a taxable capital gain or taxable income when the shares are received, unless the transaction qualifies as a tax-free reorganization under section 351 of the Internation Revenue Code and has the prior approval of the Commissioner of Internal Revenue under section 367 of the code.

For the transaction to qualify as tax-free for the American investor, all of the persons (including foreign associates) investing money or property in the venture as part of the same transaction must end up owning at least 80 percent of each class of stock of the foreign company. This test is automatically met when the foreign company is first organized. However, after the venture has gotten started, the time almost inevitably comes to make a second or third investment of additional machinery required as the foreign plant widens the extent of its manufacturing operations. By that time, well over 20 percent of the foreign company stock may be in the hands of thousands of local investors who hold bearer shares, and it may not be feasible to arrange matters so that enough of them participate as a matter of record in the second or third investments to meet the 80-percent test. Accordingly, when the time comes for Willys or its suppliers to make a follow-up investment of machinery in one of these foreign ventures, they may face the need of paying a United States capital gains tax or income tax, not on an assured profit in hand, but on the doubtful privilege of holding new shares in a foreign company, shares which may be difficult to sell and convert into dollars, and which in any event cannot be sold and converted immediately without prejudicing the success of the venture.

Similarly, Willys has at times found it necessary to contribute working capital to its foreign affiliates by making an investment of component manufacturing parts produced in the United States, in exchange for shares or long-term deferred payment obligations of the foreign company. The component parts are then assembled by the foreign company together with locally manufactured parts and sold as completed vehicles, with a portion of the sales price representing the Willys parts thus providing a source of local working capital needed for expansion purposes. In such cases, under present tax laws, Willys faces the need of paying a United States income tax on its paper profit on the component parts, even though the reality of a cash return is a long way off in the future.

Once again, the policy reason for deferring U.S. tax until the profit has actually been realized by liquidation of the shares, discounting of the long-term deferred payment obligations, or by receipt of dividends and interest, seem very strong indeed. The present policy of taxing when shares, particularly, are received strongly discourages the making of such investments in the first place, and, when the investments are made, tends to produce the undesirable result of forcing their liquidation.[3]

3. A new class of corporation, to be known as a U.S. foreign business corporation, should be established under the Internal Revenue Code. To be so classified, it would have to engage primarily in the active conduct of business abroad. Its profits and gains from such foreign business activities would not be subject to U.S. taxes until they are made available to its U.S. shareholders as ordinary or liquidating dividends.

American business firms, including our own companies, could do far more if they were permitted to take the income received on one foreign investment and reinvest this income in the same or another development project abroad in the same or another foreign country without first having to pay a U.S. tax on these earnings, even though the earnings are not being brought back to the United States.

Under present law, any dividends or royalties received by a U.S. company from a foreign affiliate are subject to tax when received in whatever currency, so long as the currency can be converted into dollars or otherwise utilized. The amount of the U.S. tax is often substantial even after credit is taken for foreign taxes on the same income. The need to, in effect, prepay the U.S. tax greatly reduces the amount available for productive reinvestment abroad. Moreover, this need to prepay the tax tends to force the conversion of the dividend or royalty into dollars in order to provide the means, even though the exchange rate may be unfavorable at the time, and the temptation to keep the discounted balance in the United States rather than risk it abroad again is very great.

Instead of this negative disincentive to foreign investment, it would appear to be much wiser to create a positive incentive for the reinvestment of foreign earnings by subjecting them to tax only if they are brought back to the United States and distributed and not reinvested abroad. In this way, the income on U.S. foreign investment abroad would be kept at work through reinvestment abroad, thus greatly enhancing the amount of U.S. capital and know-how effectively being used to help raise the living standards of the underdeveloped peoples.

A specific example will illustrate. Through Willys Motors we own a minority interest in a Brazilian manufacturing affiliate. We are also interested in doing engineering work and iron ore development work in Brazil. We cannot use the income of our manufacturing affiliate for these purposes, because we cannot commit our fellow Brazilian shareholders to a completely different venture of our own. Accordingly, we can commit to these new ventures only our share of the dividends and royalties actually paid out to us by this manufacturing affiliate. But once the dividends and royalties are paid out to Willys, they become subject to a substantial U.S. tax. We must convert a large part of the dividends and royalties into dollars in order to pay this tax, and when we make a decision on reinvesting the balance, the decision really becomes one of deciding whether to risk fresh dollars on which we have already paid U.S. tax. We have no incentive to keep the earnings working abroad in a new investment instead of bringing them home.

We could conceivably form a foreign holding company to hold the stock and license agreements of our Brazilian subsidiary, receive the dividends and royalties free of U.S. tax, and reinvest the profits. Some firms have foreign subsidiaries which serve this very purpose. But serious U.S. tax problems would arise if we formed a foreign company to hold these foreign securities and license agreements. Furthermore, it would be much less artificial and much more convenient if we could form a domestic rather than a foreign corporation to receive and reinvest abroad our profits from our foreign subsidiaries.

Accordingly, we wish strongly to endorse as our third major recommendation the idea of a U.S. foreign business corporation to serve this purpose. A U.S. foreign business corporation would be a domestic corporation. If it met tests requiring it to engage actively in a trade or business abroad, directly or through subsidiaries, with strong safeguards against loopholes, its foreign earnings would not be subject to U.S. tax until distributed to the U.S. stockholders of the U.S. foreign business corporation. This would apply to the following major types of income:

1. Profits from the sale of merchandise for use, consumption, or resale outside the United States;

2. Royalties from the use of patents, know-how, and the like outside the United States;

3. Compensation for technical assistance rendered outside the United States;

4. Interest and dividends from a foreign corporation which is engaged in the active conduct of a trade or business outside the United States and in which the U.S. Foreign Business Corporation has at least a 10-percent interest; and

5. Gains from the sale of stock or securities of a foreign corporation which is engaged in the active conduct of a trade or business outside the United States, provided the stock or securities have been held as an investment by the U.S. Foreign Business Corporation for 2 years or more.

When the U.S. Foreign Business Corporation made a distribution to its parent, it would then include in its taxable income the amounts which had been previously deducted and deferred. Deductions and credits related to the deferred income would also be deferred so as clearly to reflect the net income over the years. Thus, the ultimate tax paid, if and when profits are repatriated, would be the same substantially as would currently be paid by United States corporations and stockholders not allowed the deferment privilege. This would create a strong incentive for foreign investment by permitting the full use of foreign earnings for reinvestment abroad.

If incentive measures along the lines we have recommended are adopted, we believe that American private industry can play a much more effective role in helping other peoples to develop their economies along western rather than totalitarian lines. We do not mean to suggest that this will be a cure-all, or a panacea. There will remain great need for protection against the risk from currency devaluation, expropriation, and other foreseeable hazards inherent in doing business abroad. Also, no matter how much can be achieved by private industry, there remains a vast area of basic public works, such as transportation and power, beyond the present means of private industry, in which investment and development must remain the primary responsibility of

[2] If patents, trademarks and know-how are invested for shares instead of being furnished on a royalty basis, the problem of a taxable capital gain arises in the same way as in the machinery example described in this paragraph.

[3] If this tangible income is received by an eligible U.S. foreign business corporation of the type described in our third suggestion, the tax would be levied only when the income is distributed to the shareholders of the Foreign Business Corporation.

governments. But a well-aimed program of incentives for private foreign investment can do a great deal to stimulate the outward flow of American capital, know-how, and enterprise. It deserves a serious try.

Gratuitous Advice

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. HARRISON. Mr. Speaker, in the Nation's Capital, where the public schools were integrated at a headlong and headless pace in a burst of official enthusiasm following the proclamation of its new legal philosophy by the Supreme Court, editors seemingly have a permanent far-away look in their eyes.

Oblivious to juvenile crime and moral laxity at home, they stare intently across the Potomac, where they see a mirage of disorder and decay in the efforts of the people of Virginia to educate their children in the face of Federal judicial interference and threats.

Under leave to extend my remarks in the Appendix, I include a pertinent editorial on this a peculiarity of editorial vision in the District of Columbia which appeared in the December 16, 1958, issue of the Northern Virginia Daily, published at Strasburg, Va.

The editorial follows:

ADVICE FROM WASHINGTON

Some of our esteemed contemporaries across the famous "line," having fully exploited the legal, moral, social, and religious aspects of racial segregation in the public schools, have now trained their guns on the economic phases of the problem. Thus the Washington Post, in an editorial captioned "Closed Schools Cost Money," discusses the economic dislocations threatened by Virginia's massive resistance program, and says the blunt facts furnish further dramatic illustration of the debacle into which the State's present official policy inevitably leads. It quotes a University of Virginia professor as warning that closed schools would halt the State's economic development.

If there have been any serious economic dislocations in Virginia, they are not observable in Front Royal, where the first school to close under the State's massive resistance program is located. There has been no wholesale exodus from the city, such as they have had in Washington, the model integrated city, where white citizens are moving into the nearby areas of Maryland and Virginia to escape the blight of integration. Bank deposits are normal, and merchants report an excellent pre-Christmas business. The entire business outlook is considered good. If the Post seeks support for its economic dislocations theory, it will have to look elsewhere than Front Royal to find it.

George Massey, secretary of the Front Royal Chamber of Commerce, says there is no tangible proof of economic dislocations, and no evidence of employee dissatisfaction or existing industries threatening to move out because of school conditions. The Post, as usual, is exercising a very vivid imagination and setting up a strawman at which to shoot in its bitter warfare on Virginia's segregation policy. And what is true in Front Royal is true throughout the State. There have been no serious economic dislocations in Virginia, and it seems very unlikely that there will be. Virginia is conducting an honorable and lawful resistance to what it believes to be both unwise and unconstitutional.

If the Post would fix its sight a little closer home, and see the moral filth and degradation in its own backyard, it would have less time to criticize what it regards as the shortcomings of Virginia, particularly in respect to racial segregation. The racially mixed schools of Washington have become notorious as hotbeds of immorality and crime. Rape and illegitimacy are of common occurrence. Educational standards have dropped. Teen-agers roam the streets in wild and reckless gangs and beat and rob innocent citizens. It would seem that the Post would have its hands full if it attempted to correct the faults in its own city, without spreading its integration propaganda into nearby Virginia.

Twenty-five Percent Minimum Pay Hike Asked—Textile Man Seeks Boost by United States Law

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the attached story from the Columbia (S. C.) The State, of Wednesday, December 3, 1958. It is the story in which the head of the Nation's largest textile company called for a 25 percent boost in the minimum legal wage permitted by the Federal Government for textile workers. I think the story will be of interest to everyone who might be thinking about the subject, and certainly either this issue, or ones similar, is going to be before the 86th Congress. The article follows:

TWENTY-FIVE PERCENT MINIMUM PAY HIKE ASKED—TEXTILE MAN SEEKS BOOST BY UNITED STATES LAW

GREENSBORO.—The head of the Nation's largest textile company called Tuesday for a 25 percent boost in the minimum legal wage permitted by the Federal Government for textile workers.

J. Spencer Love, chairman and president of Burlington Industries, declared in a statement that the only fair and just way of raising textile wages would be a law requiring all textile companies to fall in line.

Otherwise, he said, companies raising their workers' pay would be at a competitive disadvantage.

Competitive conditions are such, he said, "that a general wage increase cannot be made at this time, because all producers would not follow any pattern, even if set by a few leaders."

Love's company has more than 50,000 employees. The present local minimum wage is $1 an hour. Love proposed that it be increased to $1.25 in two steps.

"Our industry is operating today on much too narrow a profit margin to permit any producer to risk being seriously out of line in competitive costs," he said.

Boosting the minimum wage to $1.25 would further widen "the enormous competitive advantage held by foreign producers," the Burlington chairman said. Therefore, he declared, "realistic quotas on imports would be even more necessary to protect the job of American textile workers."

The minimum wage law applies to industrial and other workers in addition to textile employees. Some groups, including retail employees, are exempt.

In New York, President William Pollock of the Textile Workers Union of America, AFL–CIO, said: "We welcome the news that Burlington Industries recognizes the need for a $1.25 minimum wage. Our union has been working for such an objective since 1956. But this is no excuse for delaying an increase until Federal legislation is enacted. Nor does it remove the necessity for an immediate general wage increase for all American textile workers.

"In resisting such a step on grounds that there is no assurance his competitors would place such an increase into effect, Mr. Love is admitting that the textile industry is undisciplined and incapable of doing the right thing by its employees. * * *

"The auto, steel, oil, and rubber industries do not have this problem because they freely accept collective bargaining. Wages are not a major factor in competition."

Pollock said the times "clearly call for a general increase in the textile industry. The cost of living has gone up 5.1 percent since the last raise in the fall of 1956 and productivity has risen 18 percent in the same period. Textile workers have not been compensated on either score."

Reached at his company's New York sales office, Halbert Jones of Laurinburg, N.C., president of the American Cotton Manufacturers Institute and head of Morgan-Jones Inc., declined immediate comment on Love's proposal.

Other southern textile officials, however, did comment and some of them had questions to ask Love about his statement.

Amendment of Senate Rules

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1959

Mr. KEFAUVER. Mr. President, the Santa Fe New Mexican, of which Mr. Robert McKinney is the editor, published a very thoughtful editorial yesterday entitled "What Limits to Debate?" The editorial supports the position taken by our majority leader, the Senator from Texas [Mr. JOHNSON], and other Senators. Mr. McKinney is a very able and unusually progressive editor. I know that the editorial will receive wide attention. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Santa Fe New Mexican, Jan. 8, 1959]

"WHAT LIMITS TO DEBATE?"

One of the U.S. Senate's first orders of business will be to decide whether to amend its rules and, specifically, rule XXII, which governs requirements for limiting debate.

Unfortunately, many of us lose sight of the extreme importance of the prompt and sound resolution of this question, because we see it only as a tactical maneuver forerunning a showdown on civil rights legislation.

It is true, of course, that there is danger, under rule XXII in its present form, that the North versus South struggle over school integration could grow into a long battle of attrition between immoderates on both sides, destroying chances for effective congressional action on a mass of other important legislation during this critical year when we are on the defensive not only on the earth but in infinite space.

The so-called filibuster issue is at heart the question of how to modernize the machinery of legislation without taking the governor off the steam engine, without destroying the historic safeguard of minorities against sometimes fleeting and often impulsive majorities.

Traditionally, the Senate has been the open forum of the world's most successful republic—the chamber where the American philosophies of government were fully, carefully weighed. Six-year terms and the designation of only a third of the Senators in any one election are provided in our Constitution, not through chance, but to give this deliberative body insulation from the whims and tides tossing on the surface of that sea of people which the 175 million of us make up.

So it's easy to understand by moderates supporting the proposed cloture amendment have been careful not to go too far—not to destroy the last defensive beachhead of minorities.

For tomorrow's burning issues are bound to be different. The West may find itself defending a minority position on public lands; the Senator from Illinois and his neighbors may be battling the majority on inland waterways. The day could soon come when those now most anxious to cut off debate could find themselves in desperate need of the traditional open forum to stave off legislation they know to be unwise.

There have been times when unlimited debate has proved immensely valuable. As Senator CARL HAYDEN of Arizona points out, New Mexico and Arizona would have been a single State these past 46 years had not a handful of farsighted and determined Senators maintained by filibuster that their minority view was the proper one, insisted on admission of each territory under its own constitution, and finally won over the majority after long debate.

We believe that the present rule, which requires the assent of two-thirds of the total membership of the Senate to limit debate, has been outdated and should be revised.

We agree with those backing an amendment to rule XXII to permit cloture by a vote of two-thirds of those present and voting.

While the amendment would not abolish the filibuster, it would mean that an effective segment of the Senate would have to hold the minority view or a filibuster could be broken with relative ease.

We hope the moderate Senators representing the Western States will assert their leadership and bring an immediate vote—rejecting the Douglas proposal to apply cloture by a simple majority and adopting the compromise amendment—without allowing the situation to develop into the spectacle of a filibuster on the filibuster rule.

This newspaper supports LYNDON JOHNSON and the other statesmen of the Senate who are willing to face up to the civil rights issue, are purposed to modernize the Senate machinery without changing its character, and are determined to get down to the mass of other important business on which our world position demands action.

Proposed Amendment of Senate Rule XXII

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Walter Lippmann concerning rule XXII of the Senate.

Mr. Lippmann has long been one of the most profound observers of the American scene. He has given serious consideration to rule XXII and how it affects our Government for many years, and I do not believe there is anyone in this country who better understands the forces which affect the operation of our Government than Mr. Lippmann. Mr. Lippmann knows from long and deep study that the complex system of Government which we operate in this country cannot be reduced to simple mechanical formulas which ignore the varying intensity of human emotions. He knows that simple principles such as majority rule, which may be quite appropriate for a city council or for the board of directors of a corporation, or even a social club are not adequate for decisions concerning the vital interests of a great federation of 49 States.

I urge my colleagues to give most careful consideration to the reasoning of Mr. Lippmann.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAJORITIES AND CIVIL RIGHTS

(By Walter Lippmann)

Presumably, the first business before the 86th Congress which opens on January 7 will be the question of amending the rules to prevent filibusters. Under the existing rules which were adopted in 1949, debate can be ended by what is called cloture only when two-thirds of the entire Senate—or at least 66 Senators—vote in favor of it.

There is one exception. If the question is on amending the rules of the Senate, there can be no cloture.

Probably not more than 20 Senators in the new Congress will want to keep rule XXII exactly as it is. A great and overwhelming majority will support amendments to rule XXII. But they differ on how far they want to go. There are two main choices. The one is supported by Senator LYNDON JOHNSON of Texas and the other by Senator PAUL DOUGLAS, of Illinois. Under the Johnson proposal debate can be ended by two-thirds of the Senators present and voting. In theory, this could mean that cloture might be applied by as few as 34 Senators, that is to say two-thirds of a quorum which is 50 Senators.

The proposal of Senator DOUGLAS, which has the support of men like JAVITS, KEATING, HUMPHREY, and CASE, also provides that within 2 days of the filing of a cloture petition debate can only be closed by a two-thirds vote of those present. But if debate continues for as long as 15 days, cloture can then be voted by a simple majority of the whole Senate, or 50 affirmative votes. Under the Douglas proposal there could be a long debate, perhaps as much as 8 or 9 weeks, but in the end 50 Senators could bring the bill to a vote.

The choice will be between the Johnson and the Douglas proposals, and in all probability the Johnson proposal will prevail. The real issue at the bottom of this complicated argument about the rules of the Senate is, I believe, a constitutional question. It is not what the letter of the Constitution says. For it says nothing. It is about what is in accord with the spirit of the Constitution.

The question is how big a majority must there be in order to overrule the opposition of a determined minority. Rule XXII, as it now exists, says that 66 Senators must favor the legislation before a determined minority can be overruled. The Johnson proposal says that a determined minority can be overruled, in theory at least by as few as 24 Senators. In practice, on a controversial measure there is, of course, likely to be a very full attendance. So, the Johnson proposal is not substantially different from the existing rule. There is one exception to this. It does not contain the indefensible provision of the present rule, which is that there never can be cloture on any proposal to amend the rules.

The Douglas proposal, while it permits extensive debate, allows 50 Senators to close the debate and to pass a controversial bill.

Having read carefully the material being circulated by Senator DOUGLAS, I have come to think that he has not dealt with the real issue. The real issue is not whether measures shall be fully debated. The question is how they can be passed. There is no doubt that 8 or 9 weeks of debate is quite sufficient for any measure, and that after that there is no hope of anybody's mind being changed by the debate itself. The real question is what are you to do with a minority which is not open to being converted by a debate. Under what conditions should you override it?

In my mind, the proposal to decide highly controversial questions by a vote of no more than one plus one-half of the Senate is not good enough. While the Constitution itself says nothing about the question, it is a fact that the Constitution is by no means devoted to the principle that a simple majority should rule. Treaties and impeachments require two-thirds of those present and voting. Constitutional amendments, the expulsion of Members, the overriding of the President's veto, require two-thirds of all the Senators elected. What is the reason for these exceptions to simple majority rule? Is it not that what is at stake is of such great moment that it should have the concurrence of more than half of the representatives of the States?

Why should it have this concurrence? Because when controversial matters are decided by a too narrow majority, the prospect of resistance and nullification is increased. To enforce difficult laws, there should be a very large majority which concurs in them.

The issue of the rules is a hot one because filibuster is a principal instrument of obstruction against Federal legislation on behalf of the civil rights of Negroes. The substantial question is whether the indisputable rights of Negroes can be achieved

and maintained by simple majorities which overrule the South, or whether progress depends on winning the assent of the rapidly growing enlightened opinion in the South.

In addition, we must not forget that majorities are not always liberal, and may indeed be quite tyrannical. It is a short view of history to equate simple majority rule, as does Senator DOUGLAS, with the defense of civil rights. He might ponder, for example, the case of President Truman's emergency strike legislation which proposed to break the railroad strike by drafting the railroadmen into the Army. The House was stampeded into passing this bill 2 hours after the President's message by a vote of 306 to 13. But Senators Taft and Wagner held it up in the Senate, and after 6 days of debate its sponsors were compelled to omit the provisions for a draft.

That too, was a civil rights case, and a very striking example of why simple majorities are not necessarily the guardians of civil rights.

Prizewinning Essay by Miss Peggy Neal of Huntsville, Ala.

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1959

Mr. SPARKMAN. Mr. President, recently Miss Peggy Neal, a high school student in the junior class in my home town of Huntsville, Ala., won a statewide contest in writing a paper on the subject "I Speak for Democracy."

It is an excellent statement, one which I believe will challenge the thinking of those who read it. Peggy is to be commended for the excellency of her work and the clarity of her thinking.

I ask unanimous consent that her essay be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Peggy Neal)

I speak for democracy when I say that down the street from me lives a German family, one of several families who came to this country as part of the missile development program. Across the street lives a family from California. And in the same block there are families from States as widely separated as Florida, Maine, Texas, Michigan, and Colorado.

This is true of every section of the city where I live because as the site of Redstone Arsenal it has drawn on the supply of technical people from all over the country.

Each family brought its own ideas and ideals. Each family's ideas and ideals were different in some respect. But, fundamentally, the merging of those different ideas makes up a better community than was here before these families came. These families are all individual, with individual tastes, individual talents, individual hopes, and yes, individual prejudices. Prejudices that to us seem strange. Strange at least, until we look into ourselves and find our own prejudices that must seem as strange to them.

And the taste is as varied as the prejudice—more so, if possible. Painters, music lovers in all degrees, botanists, bird watchers, gardeners, sports car enthusiasts, tennis players, football fans, soccer fans, and even wrestling fans. These are only a few of the many tastes that make up the community.

There are Democrats, Republicans, Independents, and probably representatives of every political idea. Religion is the same: Catholic, Baptist, Episcopalian, Methodist, Christian, Scientists, Jewish, probably an agnostic, and even possibly a Hindu.

With this much variation in personality, taste, religion, prejudice, and geographical background, there must be constant and profound difference of opinion as to what is best for the entire community. There is. And those differences sometime seem bitter. No civic leader pleases the whole population at all times. No elected official travels an easy road.

But democracy is not an easy road. It is not the road of least resistance with every turn marked clearly for the idea traveler to follow at the direction of one central committee. It is a road on which every road change is the call to discussion, disagreement, argument, and finally, admission of the majority choice.

And therein lies democracy, the respect for majority will in the major community, and the respect for minority choice by the individual.

My community is no different from thousands of communities throughout the United States. The same prejudice, taste, religion, and background exist in them all. But with them all the one common denominator pulls them together, respect for the majority will in the community and national thinking, and respect for the individual choice and right to live within the overall community frame.

We are what we are, and we shall continue to be so unless by so being we interfere with the rights of others to be the same.

Support for the TVA

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent that an editorial entitled "TVA Deserves Support for Value to Nation," published in the Jackson (Tenn.) Sun of January 5, 1959, be printed in the Appendix of the RECORD. The editorial sets forth in summary form the great contribution which the TVA has made to our defense.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TVA DESERVES SUPPORT FOR VALUE TO NATION

Proposals to sell the Tennessee Valley Authority have been rejected unanimously by directors of the Jackson-Madison County Chamber of Commerce.

Not only have sale proposals been rejected by the local chamber's directors, but they are calling for adequate financing of the TVA's operations through revenue bonds.

The local chamber of commerce by this action joins many other valley organizations in defense of TVA.

The Tennessee Valley Authority, it would be well for its opponents to know, is not just another public power project.

That charge forms the basis for attack on TVA and is the means being used to try to destroy the Authority.

Were TVA just a public power project, there would be little to commend its retention other than the low rates it charges for power.

But TVA is far more than an electric power producer.

The Tennessee and other rivers on which TVA dams have been built belong to the people.

These rivers as far back as memory goes have overflowed and damaged millions of fertile acres of land, land upon which thousands of families depend for a living.

No person nor group of persons in private business could afford the cost of harnessing these floods. Nor should individuals be called on to pay for damage caused by public agencies.

So the Federal Government properly planned a series of dams to control floods from rivers owned by the public.

In so doing, it became apparent that building of dams would make it possible to make of the Tennessee and other rivers a great waterway for industry and business. That, too, is in the public domain just as are the superhighways now being built.

With water impounded and navigation assured, it took little imagination to discover that electric power could be produced from these lakes—and thereby pay for the cost of the entire operation.

Thus were the basic functions of the Tennessee Valley Authority incorporated in the act.

With the construction of TVA dams went efforts to eliminate disease, just as they did when the Panama Canal and other Government projects were built.

Availability of low-priced electric power enabled the people of the valley to use household and farm equipment for which no power had been available. And they bought that equipment. It was no gift.

Low-priced power also served as the one element which had been lacking to make of the valley the ideal place for industry.

These factors, and more too numerous to list here, have produced in our valley an economy which yields high tax returns to the Government, which has enabled TVA to remain far ahead on its debt repayment schedule, which produced atomic fission materials to win World War II, which day by day benefits all parts of the Nation.

Dismemberment of TVA would damage our valley. It would prove disastrous to our Nation.

With the new Congress elected and soon to start its deliberations, let us make our voices heard. Let us insist that TVA be preserved, and be permitted to continue its growth by giving it adequate financing.

More Farming Capital

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article by Hugh Cosline, appearing in the American Agriculturist of January 3, will be of interest to those who, like myself, are deeply interested in the plight of the neglected farmer of the Northeast.

This article is constructive in that it shows that by facing the future with courage, and adapting himself to modern methods, the farmer can still not only have a good life, but can even have a better life than his fathers had before him.

The article follows:

MORE FARMING CAPITAL

(By Hugh Cosline)

It has been said that an investment of $20,000 is necessary to keep one man employed in industry, but that the investment needed to keep one farmer profitably employed is nearer $60,000.

This rapid increase in capital needs raises serious problems. It becomes increasingly difficult—almost impossible—for a young man to start farming from scratch and hope to save that kind of capital.

It has been suggested that one solution of the dilemma is to interest outside capital in farm investments, with the idea that it will be a permanent or semipermanent debt, that the interest will become an operating expense, with little or no attempt being made to repay the capital.

It may come to this, but the question then arises as to who or what agency is to supply this permanent type of capital? One source of additional farm capital which is receiving some unfavorable comment is that provided by some agency which either sells supplies to farmers or markets farm products, in other words, what we have come to call vertical integration. Personally, I am inclined to think that the need for additional capital has caused many farmers to become interested in some type of contract farming, rather than the supposed benefits of smaller risk and less responsibility for management.

It has even been suggested that farm cooperatives and other farm organizations might be called upon to supply capital to members and patrons. To date farmers have supplied the capital to operate their cooperatives, but it may be that in years to come cooperatives will be able to tap some source of outside capital and to act as a middleman, to supply much-needed capital for farm operations.

More and more commercial banks are becoming interested in supplying farm credit, and some are doing a good job. The Farm Credit System, of course, has filled a real need. But in spite of all the good work done, the growing need for larger and larger capital investments on farms is worthy of the best thought of farmers and farm organizations.

OPPORTUNITY—NOT TRAGEDY

One result of rapid change is the necessity of unlearning much that we once considered gospel truth. For example, when I was in college I was taught that 1,000 laying hens were a full-time job for 1 man. Now, with modern poultry houses and the application of power to eliminate lifting, a man can take care of 5,000 hens without even raising a good sweat. And there is talk of a 1-man, 10,000-hen business.

Change requires dropping the old, adopting the new. For example, we have the trend toward fewer and bigger farms, a trend which we may not like, but which won't disappear because we ignore it to argue against it. To me the new lesson this teaches is that the path to satisfactory income on a family-sized farm lies in splitting up the total market for farm products among fewer producers.

To the man who plans to stay in farming, the trend to fewer farms, so long as farmers are free to stay or change, presents no tragedy. It's an opportunity. This is the American way, the path that has led to the world's best standard of living.

Of course, with changes coming so rapidly it is difficult to adjust quickly enough. But there's never a change that cannot be met. It is still possible to make a satisfactory living from full-time farming by meeting change as a challenge and an opportunity, and adjusting operations to take advantage of that opportunity.

Changes Wrought by the TVA

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article, in the nature of a report, entitled "Report Lists Miraculous Changes Wrought by TVA," and published in the magazine Labor for January 10, 1959. The article summarizes the last report of the directors of the TVA.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPORT LISTS MIRACULOUS CHANGES WROUGHT BY TVA

The Tennessee Valley Authority this week issued a report on its 25th anniversary year, citing the achievements of the great river-development system since it was created during the administration of Franklin D. Roosevelt. The report pointed out that TVA grew out of the natural resource conservation movement founded by another President Roosevelt—F.D.R.'s cousin, Teddy.

Thus, the report said, "TVA, in the fiscal year 1958, marked a double anniversary—the golden anniversary of the conservation movement and the silver anniversary of TVA."

All three members of the TVA Board—Chairman Herbert D. Vogel, A. R. Jones, and Frank J. Welch—signed the report. Their favorable account was regarded as surprising and welcome, particularly since all were appointed by President Eisenhower, who has shown hostility toward TVA.

Speaking first of TVA's success in ending floods in its seven-State area, the report says, "This farflung flood control mechanism does more than ward off disaster. It protects land having immense economic potential. Now safe from devastating waters are waterfront sites for factories and business, for parks, resorts and homes."

HUGE GROWTH

As a result of this safety from floods, the report adds, private investment in Tennessee riverfront industries has grown from only $8 million in the first 13 years of TVA to $676 million in the 13 years since then.

Moreover, control of the river has brought a huge recreational industry into being, a teeming fish and wildlife development, and improved water supplies for municipal and industrial use.

The report points out that two of Uncle Sam's atomic plants, and other Government uses, take more than half the power produced by TVA. Also that other demands are rapidly increasing for TVA power because its low cost makes it practical for use even in heating homes.

In attempts to meet the rising demand and avert a power shortage, the report says, TVA in recent years has been forced to depend solely on its power revenues to finance new plants and facilities, because the present administration has not asked Congress to appropriate any money to lend to TVA for new construction, as always had been done in the past.

Eisenhower in 1958 proposed that Congress authorize TVA to finance expansion by selling revenue bonds to private investors, the report recalls, but it was bottled up by the House Rules Committee.

The revenue-bond bill will come up again in the new session of Congress, with its chances improved by the fact that last November's elections tossed out some strong TVA enemies and put more liberal Democrats in the House.

Among other achievements of TVA, the report declares that it has wiped out the former plague of malaria in its region, and has attracted thousands of visitors from foreign countries, who go back home telling about the wonders of Uncle Sam's great multipurpose river program of developing the resources of an entire river, its tributaries and the vast surrounding area.

TVA TAX FIGURES

With figures and facts, the report answers the Power Trust propaganda charge that TVA pays no taxes and is costly to the taxpayers of the rest of the country.

In its 25 years of operation, the report says, TVA has earned for Uncle Sam a 4 percent average annual return on his investment in the public power system itself. TVA has paid into the U.S. Treasury $250 million of power revenues and $39.6 million of nonpower income. TVA is far ahead of schedule in paying back the money it borrowed from the Government.

In addition, TVA in its 25th year paid $5.3 million in lieu of taxes to the State and local governments in its area. They also got $8.5 million taxes from the municipal and farmer co-op systems which distribute TVA power. Thus, the report points out, the TVA system as a whole paid $13.8 million in taxes and tax equivalents, which are taxes in everything but name.

That $13.8 million, says the report, was 6.4 percent of all the power revenues received by TVA during the year from all its non-Government customers. And the 6.4 percent is more than the taxes paid by many of the Power Trust companies whose propagandists shout that TVA pays no taxes.

Physicians to the World

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. GATHINGS. Mr. Speaker, one of the inspiring discourses of 1958 was Dr. Gunnar Gunderson's given as his presidential address before the 107th annual meeting of the American Medical Association in San Francisco on June 24 last.

Dr. L. H. McDaniel, of Tyronza, Ark., past chairman of the American Medical Association's section of general practice, was kind enough to bring this splendid statement of principle and dedication to my attention—and, because it speaks so eloquently of the high aspirations of our American medical profession, it deserves to be more widely known. Dr. Gunderson, a resident of La Crosse, Wis., truly expresses the devotion of all our doctors and medical men to the ideals of "concern for human life and health, a respect for personal freedom and dignity" and of the "clear, logical mutuality of interest" of this concern.

The article follows:

[From the Journal of the American Medical Association, June 28, 1958]

PHYSICIANS TO THE WORLD

(President's address by Gunnar Gundersen, M.D., La Crosse, Wis.)

In accepting the office of president of the American Medical Association, I do so with deep feelings of appreciation, humility, and responsibility. My sense of responsibility is heightened by realization of the tremendous number and variety of challenges which medicine faces today. As individual physicians, members of organized medicine and citizens in the community and the Nation, we have in recent decades encountered an ever-increasing complexity of demands on our time and thought. Now, like all of our fellow Americans, we find our problems compounded by the world struggle for survival and freedom—in the new age of hydrogen bombs, ballistic missiles, and earth satellites.

In recent years the individual physician has had an increasingly difficult time in trying to keep up with the accelerated scientific advances in medicine. Now, with man probing into outer space, it appears that our scientific future will be further complicated by the development of still another specialty—space medicine. Nevertheless, right here on terra firma it is more than ever true that medicine is a lifelong study—one which actually is just beginning when the young doctor receives his doctor of medicine degree or completes his graduate training.

Meanwhile, we also are reemphasizing the emotional, personal, and spiritual factors in medical care. The age-old art of medicine—that intangible element made up of compassion and warmth—is regaining its proper place. In medicine, as in all other phases of American life, we are rediscovering that philosophy is just as important as technology, that the human personality cannot be subordinated to crisp efficiency.

The challenge of how to apply the science and art of medicine is formidable enough in itself. But it, too, has been further complicated by the changing backdrop on the American scene. Over the past 20 years we also have been called upon to consider a snowballing trend of social, economic, and political developments affecting medicine.

These problems are related to still another area—one in which we have obligations and responsibilities shared by all our fellow Americans. This is the broad arena of citizenship. We as individuals have the duty to bring our weight to bear on the vital question of whether the individual or the state shall stand supreme in America's future.

OBLIGATIONS OF THE PHYSICIAN

Certainly, one might say, all of that should be more than enough to ask of a physician or his profession—scientific excellence, concern for the patient as a human being, active effort to solve medicine's socioeconomic problems, and full discharge of the responsibilities of citizenship. I would, however, call your attention to still another challenge, still another set of demands. In this day and age—a time of terrible decision—we also must consider our obligations to all of humanity. As both physicians and citizens we must see that medicine plays its full role, not only in promoting better world health but also in helping the search for brotherhood and peace.

Some of you may be saying to yourselves, "With all our local, State, and national problems, how can we possibly find time to do anything about world health? What is the connection?" That, of course, is a natural reaction in view of the growing complexity of our professional life.

I would answer in two ways—one dealing with tradition and one with the realities of the present. The traditions of modern medicine began many centuries ago with Hippocrates, the Greek physician and teacher. Students from all over the Aegean area gathered around him on the island of Cos. From there they returned home to spread the knowledge and ethics which Hippocrates had taught them. And it is important to remember that when Hippocrates wrote the medical oath which all of us have taken he was speaking not just to and for Greeks; his words speak a universal language that applies to all men. So, ever since those distant days on the island of Cos, dedicated physicians have made their knowledge and compassion available to all who needed them.

Turning to present-day realities, I am convinced by personal experience that our medical heritage—which stems from Hippocrates—can be applied more widely, more effectively, in today's troubled world. As many of you know, I have been active for several years in the affairs of the World Medical Association. As a delegate in its General Assembly and a member of its Council, I have had the opportunity to meet hundreds of physicians from more than 50 countries. And I have learned that they sincerely desire closer understanding and cooperation—not only on scientific and professional matters but also on a human basis. There is growing recognition that medicine, with its resources and influence fully mobilized, can perhaps do more for world peace than the billions of dollars being poured into armaments. There is mounting conviction that the time has come when medical statesmanship must be used to augment the methods of political diplomacy.

I firmly believe that we can and must expand our vision and face up to this new challenge. The problems which trouble us here at home exist also for the physicians and peoples of other lands. The knowledge, ideas, and experience which we have gained can help them. But we also can benefit from learning more about their difficulties—how they might have avoided some, how they are trying to solve others. Our international obligations are simply extensions of our local responsibilities.

The common thread is a concern for human life and health, a respect for personal freedom and dignity. In my opinion, there is a clear, logical, mutuality of interest.

If we think we have difficulty in keeping up with medical advances, let us consider the thousands of physicians, nurses, and technicians throughout the world who carry on their work with only a fraction of the facilities, equipment, journals, books, exhibits, and other aids which are available to us. For many of them, just this 1-week meeting in San Francisco would be the professional event of a lifetime.

If we think that our patients should have more sympathy and understanding, we who are bestowed with the blessings of our country must consider the millions of persons in other parts of the world who are diseased, undernourished, crippled, or dying. To them, just one kind look, one gentle word, one soothing drug would be like a miracle.

If we think that we have socioeconomic problems in American medicine, let us consider the plight of physicians and patients in those countries where there are extreme shortages of doctors, where people still pay medicine men and witch doctors for their incantations, or where medical care long has been used as a political football. In the latter case, let us learn well the lesson of medical unity.

If we think that our freedoms are threatened here at home, let us consider the millions who already have been subjugated by authoritarian philosophies or who are being victimized by constant, ruthless pressure and exploitation in the cold war between communism and democracy—a war that really can be won only by ideas, not by missiles or bombs.

As physicians, our first obligation is, of course, to our patients. But as members of the medical profession, our obligation extends to all mankind.

THE PHYSICIAN AND WORLD PEACE

As American citizens our first duty is to this country. But as members of a civilization which believes in the brotherhood of man, we also have a duty toward all men who yearn for freedom, dignity, peace, and health. Physicians in America should never forget their responsibilities to all humanity or neglect their opportunities to promote the brotherhood of man.

We physicians have a unique opportunity to provide a spark of leadership which can help bring the world closer to the dream of world brotherhood. If you do not feel the compulsion of that task, I can only remind you of the sputniks, explorers, and vanguards whirling overhead. They in themselves are but the toys of grown men, compared with the potential engines of destruction which put them into orbit. If our alternative is destruction or a dream, the only sensible choice is to make the dream work.

Medicine can play a vitally effective part in bringing reality to the dream of world peace. For medicine, despite the designs of politicians or dictators, is above the harsh conflicts of ideologies and power politics. Medicine, like religion, speaks a universal language which passes all barriers of race, creed, color, and nationality. Already, great work has been accomplished by individuals, private organizations, medical associations, and official agencies. In fact, the brightest chapter in the international story since World War II is that on health and medicine. This is no uncharted course; the way is well marked.

San Francisco is a particularly appropriate place in which to stress the challenge of international cooperation. For it was here in 1945 that the United Nations was formed and the first suggestion was made for establishment of a new international health organization. Three years later the World Health Organization came into being.

While the World Health Organization was going through its formative stages, the physicians of many countries were meeting informally to discuss the need for an international medical organization. As a result, the World Medical Association was officially established in September 1947, with the American Medical Association as a founding member.

Thus, both organizations—rooted in postwar ideals of world collaboration—have just recently completed their first decade of service. From the beginning, they have maintained close liaison with one another and with many additional international groups interested in various phases of medicine, health, and general welfare. They are the main avenues for mobilizing and coordinating world medical resources for the common good of humanity.

Whereas the World Health Organization represents governments and the field of public health, the World Medical Association speaks for the medical profession. It now is composed of 53 national medical associations representing about half a million physicians throughout the world. Its principal objectives are to maintain the standards, ethics, and traditions of medical practice; to raise the standards of medical education; to promote the mutual exchange of information and ideas among the physicians of the world; to help raise the level of world health; and to promote world peace.

In pursuit of those objectives, the World Medical Association has carried out a wide variety of activities. As just one example, in 1953 the World Medical Association sponsored the First World Conference on Medical Education. More than 600 participants from over 60 countries and 127 universities and medical schools attended that London meeting, which focused attention on under-

graduate medical education. The proceedings have been widely distributed throughout the world. The Second World Conference on Medical Education—spotlighting the theme of "Medicine as a Lifelong Study"—will be held next year in Chicago, where we of the American Medical Association will be hosts to our medical colleagues from other lands.

Another new avenue of approach to help the cause of international peace is the Medicine and Health Professions committee of the people-to-people program, initiated last year by President Eisenhower. This program is designed to promote close contacts and friendships among individuals and groups who share professional, cultural, and economic interests. It is based on the idea that if the people of the world could begin to know one another—to meet, talk, correspond, and exchange visits—many of the world's troubles would be over. We might then begin to use the knowledge of the atomic age for humanity rather than in an attempt to destroy our civilization.

American doctors, medical missionaries, nurses, and technicians—serving humanity in far flung parts of the world—are contributing immeasurably to this great cause. The work of some of them was beautifully reported last January in the March of Medicine telecast called "M.D. International." They were described as unofficial American ambassadors of good will—men and women who are demonstrating the forceful good that lies in the basic brotherhood of man, who are revealing our greatest hope for the future—man's humanity to man.

President Eisenhower recently pointed out that the Armed Forces of the United States are only supports for the much larger purpose of a just peace and the advancement of human well-being at home and throughout the world. In the struggle for peace, he said, "the strength that endures rests with those who live in freedom." And he added that "tyranny is too brittle—too insecurely based—too dependent upon force and brutality—too contrary to the hopes and ideals of humanity—to last over the long pull."

Physicians, alerted here and abroad, can do much to advance the cause of freedom and human well-being. For medicine, by its very nature, speaks a universal language dedicated to scientific truth, humanitarian service, individual dignity, and world peace. In medical science there are no secrets, no iron curtains, no cold war. To physicians everywhere, atomic energy means a new way of fighting disease, not a new way of conquering the world. Medicine exists to save life, not destroy it.

The demands of these troubled times require that we perform at only one level—our very best. The time has come for medical statesmanship which will help point the way toward better health—and a better life—for all the peoples of the world.

Twenty Years of Court "Packing"

EXTENSION OF REMARKS
OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article which appeared in the December 12, 1958, issue of U.S. News & World Report, by David Lawrence:

TWENTY YEARS OF COURT "PACKING"

(By David Lawrence)

For 20 years now the Supreme Court of the United States has been "packed" with justices selected from a cult that believes the Constitution can be rewritten at will by the judiciary.

The late Samuel Gompers, president of the American Federation of Labor, once proposed a constitutional amendment "to curb the power of the Supreme Court over Congress, the Constitution, and the rights of the individual citizen." He wrote in 1924:

"Labor and the Progressives do not attack the Supreme Court or any court. Their proposal to check the present assumption of power arises wholly from two facts: first, that the Supreme Court, whether by usurpation or by a sound interpretation of the Constitution, has exercised supreme power over our entire governmental structure; and, second, that this Court is selected in the most undemocratic manner conceivable under our governmental system, namely, appointment by the President for life. * * *

"According to Thomas Jefferson, the danger to our Constitution lies, not in lessened power of the courts, but in their augmented powers. He said:

"'The germ of dissolution of our Federal Government is in the judiciary—the irresponsible body working like gravity, by day and by night, gaining a little today and gaining a little tomorrow and advancing its noiseless step like a thief over the field of jurisdiction until all shall be usurped.'

"If this process of judicial usurpation outlined by Jefferson should continue, it would inevitably lead to a revolutionary explosion. For a judicial autocracy is no better than any other form of tyranny."

Mr. Gompers pointed out that the Supreme Court is not supreme over the Constitution because Congress can at any time increase the number of Justices and, by this means, a Congress and the President "can overthrow this judicial autocracy." But the labor leader said this was a "very dangerous" method and he preferred instead a constitutional amendment limiting the powers of the Court.

The late President Franklin D. Roosevelt, however, did propose in 1937 just such a plan to increase the number of Justices. He hoped to be able to appoint Justices sharing his viewpoint so as to achieve a new majority. This move failed in Congress, but Mr. Roosevelt won his victory anyway. It was a victory for the philosophy that believes in "adapting" the Constitution to the demands of the hour—ignoring the amending process.

Mr. Roosevelt gloated over his victory. Having made several appointments to the Court to fill successive vacancies, he wrote in 1941, in the introduction to the 1937 volumes of his public papers, as follows:

"By the time the Court term was over in June of 1937, it was very clear that the entire approach of the Court to the many problems confronting us had completely changed. The views of the liberal minority of 1935 and 1936 were being gradually adopted by the one or two Justices on the other side necessary to make them the views of the majority. * * *

"It was not until after the end of the judicial term in June 1937, that a single vacancy on the Court actually occurred. The about-face in the decisions of the Court had come from the very same personnel that had been on the Court since my first inauguration. The victory, therefore, cannot be attributed to the new Justices. It was rather a realization by one or two members of the Court that the Court had exceeded its powers, that it had strayed away from the Constitution itself, and that the liberal minority of the Court had been correct in its conclusions."

But the fact is that the few decisions of this brief period which did represent a change were not as fundamental as those that came afterward from the Court that Mr. Roosevelt did "pack".

This writer in 1936 wrote a book in defense of the Supreme Court as an institution and particularly emphasized the long line of decisions that had affirmed and reaffirmed what Abraham Lincoln once described as "settled law". The Court decisions prior to 1936 were commended as in accord with basic constitutional principles. But by 1941 it was apparent that settled law was being tossed aside by a new majority made up in large part of Justices appointed by Mr. Roosevelt. In an editorial here on June 13, 1941, this writer commented on the change as follows:

"The opinions handed down in the session of the Court just ended are amazing in their deviation from accepted principles of constitutional law. Words not written in the statute have been supplied by the Justices. What Congress meant to say or did not mean to say—though not revealed in the statute—are glibly interpolated through judicial legislation. Principles that have stood the test of time in their thoughtful balance of relationships between the Government and the citizen are demolished overnight. The lower courts are bewildered. The bar is stunned. The basic guide to human intercourse—that principles once settled are immutable but that details and applications of principles in specific cases alone may change—is now brushed aside. * * *

"The members of the bar who have been reading the decisions of the five 'yes men' stand aghast. For they see a Court 'packed' with men who are engaging in the very practices Mr. Roosevelt so vehemently condemned—the writing of legislation. * * * They see the Court voting almost always as a unit on New Deal issues."

There has been a lot of misrepresentation of the current criticism of the Supreme Court. It is mistakenly argued that the attack is against the Supreme Court as an institution and that this tends to undermine the prestige of the Court.

Nobody can undermine the prestige of the Supreme Court of the United States except the Justices themselves.

By their decisions they twist the Constitution out of its accustomed and natural meaning, as they assume the power to legislate or as they supply words to the law and to the Constitution which never were there in the first instance. When they do this, they provoke widespread condemnation.

An effort is being made nowadays to make it appear that the criticism of the High Court is due wholly to its decision in the desegregation cases. This simply is not true. The report which was approved last summer by a vote of 36 to 8 by the chief justices of the State supreme courts did not even mention the segregation issue. It did accuse the High Court of a lack of judicial self-restraint and cited a long list of decisions in recent years to back up the indictment.

The trouble is not wholly in the Court itself. It is in the law schools, too, where many of the new cult hold sway. Students are taught that the Supreme Court need not respect the intent of Congress nor the decisions of the past but instead can at any time ignore the law of the land and issue its own amendments to the Constitution.

Up to recent years it was accepted that the Supreme Court should make an initial interpretation of the Constitution and, once this was proclaimed as the law of the land, it would not be changed unless some new legal point was raised or new legislation passed by Congress or a new amendment added to the Constitution.

America didn't depend on Supreme Court decisions to change the Constitution in order to permit a Federal income tax to be levied

or woman suffrage to be adopted or prohibition to be imposed and later repealed. The people had an opportunity in each instance to vote on a constitutional amendment. This is as it should be.

But today we have what Judge Learned Hand of New York—perhaps the ablest of the Federal circuit court judges of our times, now retired—recently described as a "third legislative chamber."

Criticism of the Supreme Court is not only legitimate but essential to a free republic. There are voices heard which would stifle criticism and require of everybody a sycophantic obeisance.

It is healthy to discuss all phases of public questions. The American people have not yet been aroused to the dangers of judicial tyranny that face them. It is time to expose the true meaning of the philosophy of the cult which is teaching our youth that we no longer need to amend the Constitution and that the Supreme Court—nine Justices appointed for life—hereafter will perform that task for us.

How easy it is to fall into the ways of totalitarianism—to let an autocracy rule the people because presumably the people are unable to rule themselves.

The fight for constitutionalism must go on. Sam Gompers won his fight by public agitation, as Congress in 1932 passed the Norris-LaGuardia Act curbing the courts' jurisdiction over labor disputes by prohibiting injunctions in a large variety of cases.

Franklin Roosevelt won his fight when he appointed only those Justices that he knew were believers in an elastic Constitution which could be altered at any time to satisfy the whims of so-called liberalism.

Unfortunately, the Presidents who have followed him, misled by some of the same cult in the Department of Justice, have selected several Justices known to be dedicated to the belief that the Supreme Court can rewrite the Constitution at will.

Thus, we have had 20 years of Court packing and the time has come for the people to checkmate that practice by limiting its effects. This can be done by a constitutional amendment prescribing a limited tenure for Justices and requiring that, among their qualifications, they be experienced, not in party politics but at the bar or on the bench. Also, it should be provided in the Constitution itself that, once an initial interpretation is made by the Supreme Court, this interpretation can be changed only by a constitutional amendment when a provision of the Constitution is in dispute—or by a valid act of Congress when a previous Federal statute has been declared unconstitutional. This is the historic doctrine—known as stare decisis or settled law—bequeathed to us by the Founding Fathers.

U.N.'s Empty Gesture

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article appeared in the Washington Post and Times Herald while the House of Representatives was not in session.

It seems a good time to call the question of Hungary and her martyrdom, so well pictured by Mr. Roscoe Drummond, to the attention of the new 86th Congress at the very beginning of its deliberations.

Certainly both the United Nations and the United States have little to be proud of in this matter. We have both passed by on the other side of the road with pious platitudes on our tongues and emptiness in our hearts:

The article follows:

U.N.'s EMPTY GESTURE—SOME MEANINGFUL ACTION ON HUNGARY IS URGED

(By Roscoe Drummond)

When it comes to taking any meaningful action whatsoever on Hungary, the United Nations General Assembly is now showing all the firmness of a cream puff in a heat wave.

And the present evidence is that the United States delegation has itself caved in and isn't even prepared to stand up for its own convictions.

It is bad enough for the United Nations to wilt and refrain from taking the one, single, practical step to show the Hungarian people that the U.N. doesn't support their Moscow-imposed government any more than they do.

It is worse still, it sems to me, for the United States to toss its convictions aside, abdicate its leadership and go quietly along with a pious resolution designed to get the Hungarian issue off the agenda and under the rug as painlessly as possible.

This is what is happening at the U.N. in New York.

It ought not to be allowed to happen without somebody protesting and I think that most Americans at least, will want to protest to President Eisenhower, to Secretary Dulles, to Cabot Lodge, and to anybody at the U.N. who will listen.

What can the United Nations do that would mean something to the people of Hungary—at least a little something?

It can perform one positive act. It can refuse to accept the credentials of the Hungarian puppet delegates to the U.N.

The U.N. is powerless to enforce a judgment against this pseudo-Hungarian regime. But it is not powerless—unless it wants to make itself powerless—to render its judgment against the regime. And it is not powerless—unless it makes itself so—to deny this imposed regime a voice at the U.N. It cannot lift this regime off the backs of the Hungarians, but it can lift from itself the opprobrium of accepting the credentials of its spokesmen.

In the judgment of Hungarian refugees and others, such an action would do these things:

It would reduce the prospect of further internal terror within Hungary.

It would provide some deterrent influence if the Kremlin should be tempted again to ride roughshod inside Hungary—or other satellites.

It would salvage the moral authority of the U.N.

It would give some moral encouragement to all peoples locked behind the Iron Curtain of satellitism and let them see that the U.N. was not neglecting at least the one thing it could do, however modest.

And what, with the good—or the bad—offices of the United States, is the U.N. headed toward doing?

It is headed toward what it calls an alternative. This means naming a U.N. agent whose duty it would be to call upon the Hungarian Government to hold free elections, and respect human rights, and to call upon the Soviet Union to withdraw its forces.

That's what it appointed Prince Wan Waithayakon to do 1 year ago. He called upon and called upon and called upon—and he couldn't even get a visa to visit Budapest. He is now being thanked for trying.

The naming of a successor to Prince Wan to do what Prince Wan couldn't do is pointless, useless, empty, and futile. It is a way of appearing to do something while doing absolutely nothing. It puts the U.N. in the worst possible light.

To deny the Hungarian puppet regime a voice at the U.N. is a small thing; but it is something. It is honorable and meaningful and within the authority of the U.N.

Then, at the next meeting of the General Assembly the name of a brave nation would stand in front of an empty chair, a blazoning symbol of what Soviet force has done to a people who committed the crime of seeking their freedom. And that chair could be reoccupied any time the Hungarian Government met reasonable conditions—free elections, political amnesty, and no more persecution.

Perhaps the U.N. cannot be persuaded to do even this much. But for the United States not to stand up in the open and try seems to me disgraceful.

How the Electric Cooperative Helps Its Members To Live Better

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following prize-winning essay, which was presented by Miss Judy Wood, of Centerville, Tenn., at the 1958 annual convention of the Tennessee Rural Electric Cooperative Association. In my opinion, Miss Wood's essay is interesting, instructive, and presents a concise picture of the growth in electrical usage and its value to rural homes.

The essay follows:

HOW THE ELECTRIC COOPERATIVE HELPS ITS MEMBERS TO LIVE BETTER

(By Judy Wood)

(The Meriwether Lewis Electric Co-op, typical of its sister rural electric co-ops throughout Tennessee in the rendition of services to its members and area in addition to that of distributing electricity, has for a number of years sponsored an essay contest in all high schools in its service area. The winner of this year's cooperative-sponsored contest was Miss Judy Wood, of Hickman County High School. The following is her prize-winning essay.)

Occasionally a powerline is blown down or a fuse burns out at our house. Only then do I realize how much a part of all our activities electricity is. No lights. No radio. No refrigeration. I want to iron a dress; I said, "I'll do that now." But how silly of me. The iron is also electric. At least maybe I can eat lunch. What time is it? Naturally, the clock's stopped. And I can't fix any lunch, because the hotplate is electric. So I, who ignore electricity just as I ignore the usefulness of my 10 fingers, I sink into a chair—helpless without it.

Now this is a magnificent discovery—this magic little current running through our homes. Certain manifestations of it have been known by man for centuries (e.g., lighting). Our own Franklin showed the "sameness of frictional electricity and lightning." Watson, Gilbert, Lesage, Gal-

vani, Volta, Faraday, Morse, Edison—all these and many more contributed invaluable findings in the identification of electricity. Man today uses various other kinds of energy to generate the electric current which is superior because of its lack of bulk and its efficiency. It has been harnessed to manipulate almost any mentionable household tool, even down to eggbeaters and shavers. However, perhaps as magnificent as its development and practical application is its mass distribution.

Today in America power lines are strung down our highways and are congregated in all our towns. They are the commonest of sights. Also, they are common gracing the vast miles of rural area in the United States. Needless to say, electricity first became practically utilized in cities. And there it found its main business for some time. Now, though, and at reasonable rates, country people enjoy its benefits.

As the power was transmitted further, generating plants grew larger and less numerous. A tying together of systems has lowered the costs of electricity to the consumer and has made service to him more dependable. These great regional schemes are comparable in their work to the mass production technique in manufacturing. They have the capital to provide good service and by means of their consolidation, can furnish both it and the current more cheaply than otherwise. It is true that electricity, which is furnished to cities cheaply, is more costly for rural consumers. By pure logic, the higher the number of consumers per square mile, the less the individual rate: "It has been found that the cost of serving the average farm with electricity is about five times the average cost of serving the average city customer."

Therefore there was a great need for more inexpensive rates on farms. Farmers had a hard time; their operational costs were high, their inconveniences many—they, if anyone, needed the current. Congress, in the thirties, created an agency concerned with this problem and in 1936 farmers throughout America began to congregate and to discuss the feasibility of electric cooperatives. These spread across America and they are, in fact, so recent in evolution that many of us on farms still have coal oil lamps stored away in some dusty corner. The co-ops started as local organizations and consolidated, thusly increasing efficiency and service just as the great private power schemes had done for the cities. I myself remember the lines being built in my neighborhood and the occasion of having our house wired. A great saving in farm expenditures has been in evidence. Here, for instance, are some statistics compiled from Rural English life: light; 81 lbs. saved—pumping; 684 lbs. saved—milking; 540 lbs. saved by the use of electricity.

And so we see how the farmers' co-ops, among them our own Meriwether-Lewis (which covers Hickman, Perry, Lewis, Humphreys, and Houston Counties), have brought us the electricity which otherwise would have been beyond our reach. These co-ops are nonprofit organizations. That is to say, their profits are all used for the good of the project. For example, Meriwether-Lewis takes some of its profit for a reserve fund, the rest for repaying Rural Electrification Administration loans. And of course money must be allowed for salaries, etc.

Now let's summarize the ways in which electricity has helped us live better. In every household, rural and urban, we find lights, washing machines (in most), irons, water systems (in some rural homes), refrigerators, ranges, milking machines, clocks, radios, televisions, phonographs and ten thousand other priceless items. All these devices, needless to say, are improvements over their hand-run counterparts. They are great time savers and, in the long run, are vastly more economical. And what has made such advantages possible for us of the farming areas? In 1935, only 1 out of 10 farms received electrical service. By 1950, more than three-fourths of the American farms were using electricity. This amazing increase in the use of electric power came about largely through effects of the Rural Electrification Act of 1936." Under it, private power companies, power districts, cities, and co-op groups were given funds to distribute electricity in rural areas. Over 92 percent of the funds set aside has been borrowed. And a further quote: "The REA program (of which Meriweather-Lewis is a part) has added several billion dollars worth of production goods to the national wealth of the United States."

Those of us who have seen electricity come to our homes and who remember the coal oil lamp days, can certainly appreciate the pricelessness of our shadow, the magic little current which is so very powerful, and which might not have been ours to use except for the work of the electric cooperative.

Salute to Ground Observer Corps

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of December 4, 1958:

SALUTE TO OBSERVER CORPS

It is a high privilege for this newspaper to salute members of the Ground Observer Corps, a civilian volunteer unit of the civil defense, which will be inactivated on January 31 after 8 years of service.

The purpose of the Ground Observer Corps was to augment radar surveillance of air approach zones to the continental United States.

In 1956, the peak year, 388,000 volunteers manned 17,000 observer posts, reporting to 73 filter centers. Pennsylvania has had 511 active posts with 6,500 volunteers. In Luzerne County, there were 11 posts with 325 volunteers. Many individuals put in as much as 10,000 hours on duty in cold and heat, frequently in isolated districts and at no little personal sacrifice. Until 1955, these posts were manned by volunteers 24 hours daily.

Their devotion to their country, which they served so faithfully and unselfishly, will remain always as an example of patriotism in the finest American tradition. And that is saying a great deal in view of what has transpired since 1776.

Now it is possible to dispense with the services of these volunteers in this field and utilize them in other phases of civil defense, as the addition of the distant early warning line in northern Canada and the inclusion of our seaward extensions of radar with navy radar ships and aircraft make it possible to detect enemy-manned bomber strikes and identify them before they reach the borders of the United States. To meet the increasing speed and effectiveness of the various types of aerial weapons, the Air Force has installed and is presently using a new semiautomatic air defense system.

In a country, known for its peacetime lethargy, the record of the Ground Observer Corps is a refreshing exception to the rule.

Former Senator Davis Elkins, of West Virginia

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. BROWN of Ohio. Mr. Speaker, former U.S. Senator Davis Elkins, of West Virginia, died today from an extended illness. Death came in his sleep at a hospital in Richmond, Va., where he had been a patient.

With the death of Senator Elkins there passed from the industrial scene of West Virginia one of the last of a long list of pioneers in the development of much of the natural wealth of the State. The former U.S. Senator Stephen B. Elkins, father of Davis Elkins, had collaborated with former U.S. Senator Henry Gassaway Davis, his father-in-law, in processing and marketing timber and coal and in building many of the original railroads of the State.

It was from the late Stephen B. Elkins that the city of Elkins received its name.

Senator Elkins is survived by his widow, three children and six grandchildren. His children are Mrs. Charles J. Kelly (Katherine), of New York City; Davis Elkins, Jr., of Elkins, W. Va.; and Mrs. A. Thomas Zirpolo (Maureen), of Cleveland, Ohio.

The family has been active in Republican politics in West Virginia and the Nation for three-quarters of a century.

Davis Elkins was born in Washington, D.C., in 1876 while his father was serving as a Delegate in the United States Congress representing the Territory of New Mexico. His mother, the former Hallie Davis, daughter of the then U.S. Senator Henry Gassaway Davis, met and married his father when he came to Washington as a Congressional Delegate.

He attended Lawrenceville, N.J., preparatory school; Phillips Academy, Andover, Mass.; and Harvard University.

He was a veteran of the Spanish-American War, having served as a first lieutenant with Company E of the First West Virginia Volunteer Infantry. He reentered the active service of his country during World War I and served as a major in Europe. It was during his service in the Army that he was elected to the United States Senate from West Virginia in November of 1918. He did not seek reelection at the conclusion of his term in 1925.

Upon leaving the U.S. Senate, Senator Elkins undertook the active management of his coal and timber holdings, principally in northern West Virginia. He actively pursued this interest until his retirement due to ill health several years ago.

He had helped shape the Republican Party activities at the end of World War I and had played an important role in the party's financing during the period from 1920 until his health no longer permitted his active participation.

It was upon this withdrawal from a leading role that his wife, Mary R. Elkins, began to represent him in active participation on the political stage and was sent from their home Congressional District in West Virginia a sa delegate to the 1952 Republican national convention. Following that Mrs. Elkins was twice a candidate for Congress in the Second District.

The Elkins family has been one of the political and social leaders in the Nation since Stephen B. Elkins came to Washington in the 1870's. During the period of Davis Elkins' business career in West Virginia, he also maintained a home in Washington and most of the Nation's political leaders were frequent guests with him and his family.

The Davis and Elkins College in Elkins, W. Va., was an original joint gift to the Presbyterian Church by the two families who had lived in and developed that part of the State. Their original homes still serve as dormitories on the campus of the school.

Funeral arrangements are incomplete, but the body will be interred in the family plot at Elkins.

Tribute To J. L. Boal

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, January 9, 1959

Mr. YARBOROUGH. Mr. President, most of us will consider that we have enjoyed a full and successful life if we distinguish ourselves in one field of endeavor. Today I want to pay my respects to an outstanding Texan who recently retired after having rendered his neighbors and friends great service in two professions, and who has actively worked until he reached the age of 4 score years, and 15.

I refer to the Honorable J. L. Boal, who at age 95 years retired from the practice of law in Yorktown, De Witt County, Tex. He had served with distinction as county judge of De Witt County. Prior to his practice of law he was a highly respected teacher in the public schools. Thus his career of public service embraced two learned professions, and in both he did a job that won him the love of his neighbors.

Upon Judge Boal's retirement, the Bar Association of De Witt County passed a resolution to express the high esteem in which he is held.

Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD the resolution adopted by the Bar Association of De Witt County, Tex., on January 5, 1959.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Honorable J. L. Boal has retired from the practice of law after a half a century of honorable service to the people of Yorktown and of De Witt County; and

Whereas the said J. L. Boal has served the people of this county with distinction as county judge of De Witt County; and

Whereas, prior to his service as an attorney and judge he was a teacher in the public schools, so that his career in public service has embraced 2 learned professions in 2 centuries; and

Whereas, upon his retirement the said J. L. Boal donated his law library to the De Witt County bar for the use of the attorneys who practice and the judges who preside in the courts of this county; and

Whereas throughout his long career he has distinguished himself both by his legal attainment and by his devotion to duty: Now, therefore, be it

Resolved by the Bar Association of De Witt County, Tex., That the Bar Association of De Witt County, Tex., express to the Honorable J. L. Boal the sentiments of high esteem in which he is held by the members of his bar; that it extend to him sincere good wishes for his continued good health and happiness in his well-earned retirement; and that it express to him the bar's deep gratitude for the generous gift of his law library to the bar of this county, and be it further

Resolved, That this resolution be transmitted to the said J. L. Boal by the president and secretary of this association and that a copy hereof be spread upon the minutes of this association as a permanent testimonial to the said J. L. Boal.

Adopted by unanimous vote of the association in regular meeting assembled at Cuero, in De Witt County, Tex., this the fifth day of January 1959.

FRANK B. SHEPPARD, *President*.

Bills Designed To Empower the U.S. Government To Deal With Certain Crimes of Violence

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LINDSAY. Mr. Speaker, I have introduced today, January 9, a group of seven bills designed to empower the Federal Government to deal with crimes of violence such as hate-bombings, hate-mail, and threats directed at, or attempts to intimidate, Federal officers in the performance of their duties. These bills are substantially identical to a group of bills which the Honorable JACOB K. JAVITS and the Honorable KENNETH B. KEATING have advised me they intend to introduce in the Senate today. I wish to express here my wholehearted accord with those honorable gentlemen in the policy which these bills seek to effectuate. There may appear, upon committee examination and exegesis, the need for some technical revisions in some of these proposals in the interest of conformity to established Federal criminal law patterns. Such changes as may be necessary will not, I am sure, derogate from the fundamental thrust of these bills in the prevention and punishment of a program of conduct which has shocked and revolted us all.

Address by Maj. Gen. Ralph A. Palladino, Chief, Army Reserve and ROTC

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Maj. Gen. Ralph A. Palladino, Chief, Army Reserve and ROTC, at a dinner held this past fall in Wilkes-Barre, by the Luzerne Columbus League: League:

ADDRESS BY MAJ. GEN. RALPH A. PALLADINO, CHIEF, ARMY RESERVE AND ROTC

Judge Pinola, Congressman FLOOD, members of the Luzerne Columbus League and your guests, it is a great pleasure for me to be here this evening, and for this I must thank our good friend, Congressman FLOOD. I am highly flattered that he considered me for this splendid occasion.

I was happy to accept for at least three reasons:

First is for the opportunity to meet with the Luzerne Columbus League.

Second is for the sentimental reason that my father first settled in Pennsylvania when he came to America from the old country, I don't know what possessed him to move to Boston.

And third as an expression of my appreciation to Congressman FLOOD for his stanch support in strengthening America's defense.

Because of his efforts in behalf of our Reserve forces, my office has felt particularly close to him—and our working relationship with his office has always been excellent.

Some of this, I suppose, is because Mr. FLOOD is a kindred soul. As you know, I am a Bostonian, and Mr. FLOOD is a Harvard man.

In Boston we say there is little separation of the two. If you are a Bostonian, some of the Harvard influence is bound to rub off on you, and if you are a Harvard man some of the Bostonian influence is bound to rub off on you.

So you see, we in Boston make some claim to Mr. FLOOD. This much is certain, we understand each other, and this makes working with him a distinct pleasure.

When he asked if I could come to Wilkes-Barre there was some doubt that I could make it. As you know I was scheduled in Boston last night, and it looked like an extremely tight schedule might prevent me from accepting his kind invitation. However, everything developed in favor of my appearance here this evening, for which I am grateful.

For more than a year now since I joined the Army staff in Washington, I've been called upon to speak to many groups. I have talked to veterans' organizations, officer candidate schools, college students, local civic groups, Reserve Officers Associations, and many others. My talks have been on military subjects and confined generally to my work as the Army's chief of reserve and ROTC affairs. Until very recently I have had little opportunity to address Italian-American groups. Last night in Boston I addressed the Italian-American Charitable Society, and a month ago I talked to the Italian-American War Veterans at their national convention in Providence. Because I was among kindred folk, I felt that I could escape

from shop talk, and address myself to a subject close to my heart: that is, our Italian-American heritage. This is a matter which I believe commands our interest here tonight.

I developed my talks around the many Italian-Americans who made such a great contribution to America, to its culture, to its industry, to its economy, and to its character.

Much has been said and written about Italian-Americans. Some of it not good. Because it is true that wrongdoing attracts more public attention than good deeds, there has been a lot of public clamor about the small criminal element which detracts from the great contribution made to America by the millions of fine Italians like yourselves. Think what a terrific din there would be if we made as much noise when things go right as we do when things go wrong. Take your own organization, the Luzerne Columbus League—think of how much good you have done, the goodwill created, the patriotic effort you have put into community projects. Supposing all individuals, agencies and communities who benefited by your hard work applauded at once; it would be a cheer that would rock this great valley for months. But this is not likely to happen. But supposing my good friend here, Judge Pinola, makes off with your funds—then there will be a howl heard throughout the country. Of course, that's not likely to happen either.

I do not want to dwell tonight on that ugly element in our society, for whom I have no sympathy and whose way of life is abhorrent to all of us. All they deserve here tonight is this fleeting reference to point out that they are the exceptions—and few of them at that. Rather, when I consider our Italian-American heritage, as I frequently do, I am inspired by Dante's lines in the "Divine Comedy." "Consider your origin," he wrote; "you were not formed to live like brutes, but to follow virtue and knowledge."

Surely one of the truly great among many great Italians—he had us in mind when he penned those famous lines. Italians are many things to many men, but none can disagree—this Dante knew—that Italians are creative, highly individualistic and have a gift for life. These are virtues to treasure.

One of our prominent contemporaries, Prof. Angelo Pelligrini, of the University of Washington, caught the spirit of our character in a recent magazine article. He wrote, "What is there about Italians that makes them unique in their power to attract. We can say that as the English have a talent for government, the Irish for revolution, the Americans for the accumulation of wealth, so the Italians have a gift for life."

See if you don't find in yourself, or in members of your family, some of the characteristics Professor Pelligrini points out in these lines, and I quote: "A people in whom there is so much sympathy, such an abundance of passionate interest, cannot let a single moment of life escape unobserved."

He goes on to say, "Even a minor traffic accident summons them to the spot, not as spectators but as participants in a moment of life. They ask questions; they dispense advice; they quarrel; they take sides; and when the traffic officer arrives, they forget their differences and instinctively combine against him, the symbol of restraint. Only life matters."

Because, as Professor Pelligrini tells us, life matters so much, the Italians have developed, against great odds, the gift for survival.

There is an old Italian legend about the importance of life and this gift for survival. Many of you may have heard it; but for those of you who did not, let me repeat it here: "Once there was a court jester named Bertoldo who for some misdeed was sentenced by the King to die. When he was condemned he asked for and received one grace: That he may choose the tree from which he was to hang. He roamed Italy far and wide for 20 years at the King's expense, searching for just the right tree fit to be his gallows, but of course he never found it. Thus the fool Bertoldo survived." But this is legend. Let me give you a true life story closer to home.

In Japan a few years ago, a mine collapsed, trapping four Japanese coal miners. The Japanese, a fatalistic race by nature, conceded the loss. But nearby in a U.S. Army camp was a young soldier, a former Pennsylvania coal miner who heard about the disaster. He borrowed some of our Army engineer equipment and with the help of some Japanese laborers, worked without letup for 11 days. By driving a 90-foot shaft, he rescued the men who had managed to keep alive by drinking from a small stream of spring water that trickled into the trap. This dramatic rescue by a young American soldier was heralded in the Japanese press, and taught the Japanese a great lesson about Americans. That soldier's name was Salvatore Forte, an Italian-American from nearby Hatboro.

These anecdotes—one legend and one fact—tell us a lot about ourselves—the pathos and the humor, the pride and the passion, the sweet and the fortitude. To these we must add individualism, even an excessive individualism. Most of us want to be wheels rather than cogs. This is because we love life so dearly that we must be out in the sun; we do not want to be in the shade.

We resist restraint because we are a vibrant, expressive, creative breed. This accounts in large measure for why we are here today.

America offered our fathers the latitude, the freedom, the opportunity to expand, to express ourselves, to be creative. And we have responded by bringing to this great country our great vitality, our vibrance and our passion for life, our creative abilities. These have become an important part of the American character, an important part of the American scene. The Italian blood which flows here carries in its stream the stuff from which American sinews are made stronger, the stuff from which American industry and culture have grown. America gave us the opportunity for expression, and there never was a more grateful people than we.

I never think of the wonderful opportunity this land offered our immigrant fathers, without recalling the heartwarming story I once read, of Luigi Salzarulo. Some of you may know this story:

Luigi left his village of Bisaccia, Italy, about 50 years ago to come to America. When he left the village his neighbors rang the bell in the church tower. To Luigi, the bell seemed to say, "Ariverderci." Later, Luigi heard that this bell had cracked in an earthquake and the village people were too poor to have it recast.

In the summer of 1953, Luigi then a gray-haired American, returned to Bisaccia to attend a fiesta. Life in America had been kind to Luigi Salzarulo who had now Americanized his name to Louis. From a penniless immigrant he worked hard to become a freight trainmaster for the Pennsylvania Railroad in Richmond, Ind. He sent all of his six sons to college.

Even at age 70 he kept busy in civic affairs, taking a fierce pride in his citizenship and his community. Now the people in the village of Bisaccia had assembled to hear the Bishop of Conza bless the bell that Salzurola had recast for them in memory of one of his sons, an American major, killed in World War II.

After the speeches the bell rang clear and true. Salzarulo thought the ceremony was over, but there was a surprise in store for him.

In the town hall a priest unveiled a bronze plaque, and asked the guest to read the English words inscribed on the plaque. With tears in his eyes the once illiterate immigrant read: "From the people of Richmond, Ind., to the people of Bisaccia, Italy, in recognition of the high esteem in which we hold your native son, and our fellow citizen, City Councilman Louis Salzarulo."

In his absence, and much to his surprise, he had been elected to the city council.

As I look about this room I cannot help but think how easily this story could apply to many of you present here today. In all but some details this is the story of most of our citizens of Italian birth and descent.

You cannot begin to name the many great Italian-Americans who, coming from another heritage, have made so great a contribution to our American heritage. There are many Luigi Salzarulo's. One must begin with the great explorers, Columbus, whose name we honor tonight, and Cabot, to truly tell the story. Or one can turn to origins of American freedom to find there the words of Philip Mazzei, one of the early Maryland settlers, who first gave utterance to the words, "All men are by nature created free and equal to each other in natural rights," words used later by Thomas Jefferson in our Declaration of Independence. William Paca was one of the signers of the Declaration of Independence.

Today you can go down to the Jamestown festival in Virginia where the original colony has been restored. And there, a highlight of the colony, is a copy of the glassworks set up originally in 1622 by 16 Venetians to make glass beads for trade with the Indians.

It should be expected that a people who trace their heritage to the great giants of the renaissance, Leonardo da Vinci, Michaelangelo, and Machiavelli, would produce so many fine Americans. How far need we look for great leadership? To Senator PASTORE, of Rhode Island, Governors Furcolo, of Massachusetts, and Rossellini, of Washington? Or to our cities for men like Mayor D'Allesandro of Baltimore, Mayor Cellebrezze, of Cleveland, or the late Fiorello LaGuardia, of New York? Consider for a minute the greatness of this man alone. One of his remarks which I recall most vividly—and this fully catches the character of the man—was in his tremendous appeal to the United Nations to expedite relief and rehabilitation for the war-torn countries of Europe. He was for less ceremony and more action when he said, "Ticker tape ain't spaghetti." Here again was another man of Italian descent who knew the importance of life.

There is no area in American life in which Italian-Americans have failed to make an important contribution. "The fine Italian hand" so frequently referred to, is evident everywhere.

We here are fully aware of the role played by Italian-Americans in our national defense. You know our own important role. In my own work I see everywhere, Italian-Americans working hard to develop the strength in reserve necessary to build up our Reserve components to such readiness that they would discourage aggression. It is this sort of strength I believe Machiavelli had in mind when he said, "Among other things which being unarmed brings you, it causes you to be despised." Americans will never be despised for weakness, and Italian-Americans will work hard and offer their sons that this strength be maintained.

Everyday in the Pentagon I am fully aware of the important role played in our Defense structure by these Italian sons. Just a fast review of the Army's recent promotion list to colonel reveals the following names: Sabatelli, Perella, Perrini, Grassi, Grondona, and many others. This past spring, I am proud to report, my own son graduate high in his class at West Point, and has now dedicated his life to the defense of our country.

Many times I am asked if I have achieved the highest military rank in the Army for a person of Italian descent. The answer is no. Italians have provided generalship in our Armed Forces for many years, and one of the most notable was Maj. Gen. Luigi Palma di Cesnola, a Civil War general, who not only was among the first of many Americans of Italian descent to receive the Congressional Medal of Honor, but also was the first director of the Metropolitan Museum of Art in New York.

There are other Medal of Honor winners—names like Capezio, Borrelli, Boglione Aiello and Allegretti. Perhaps the name that comes to my mind most readily is that of the great marine hero, Sergeant Basilone. I am reminded almost daily of the great sacrifice and heroism of these men, when on my way to the Pentagon I pass the Sergeant Basilone American Legion Post in Arlington, Va.

Rarely anything of significance and importance comes out of Washington without the influence of that fine Italian hand, legislation from the Congress, or the model of a submarine that will traverse, under ice, the North Pole. In the Navy's model basin in Washington there is a skilled wood-carver named Fiori, who makes to exact scale, such precise wood models of navy craft that scientific data can be obtained from floating these in a test basin. His brotehr, also a skilled woodcraftsman does similar work for Army. When asked how they acquired these skills, the answer is simply, our father brought the talent from the old country, and we have learned from him.

It is a great part of our pride in America that we have not been content to avail ourselves of American liberty without the work and sacrifice necessary to guarantee this liberty. Never have we taken for granted the benefits of citizenships, citizenship we regard as not just a right but a privilege.

Coming as many of us did from an afflicted area of the world, we have regarded Americanism as a great goal to achieve and maintain. We have been active in the community, the schools and at the polls, because we feel strongly our responsibilities as citizens and Americans, and are not content to sit by—in the shade so to speak—while others in the sun carry the burden. I like to believe that this is something else we learned from Machiavelli who said, "When neither their property nor their honor is touched, the majority of men live content." This cannot be said of the Italian-American who must not, as Professor Pelligrini said, let a single moment of life escape unobserved.

This passion for life was carefully observed and fully recorded by the American Letitia Baldridge when she was the secretary in Italy to Clare Booth Luce, our former Ambassadress there. Miss Baldridge sees it from a different point of view, and I pass this on to you because it has so much meaning, and because I am sure your lovely ladies seated here tonight will appreciate these comments:

In writing about enchanting Italians in Italy, Miss Baldridge says, "There is no other country where 'he' feels more like a 'he' and 'she' more like a 'she'—and terribly glad of it.

"Here a woman's only qualification for being worshiped is that she be female."

Miss Baldridge gives the account of Italian men at a sidewalk cafe who on watching a 70-year-old woman go by, say "Ah, see how her legs are still good."

And then a few minutes later, a cross-eyed girl of 12 passes, hugging her school books, and the men say "Mamma mia, what a nice colt."

I can easily see among you that this appreciation for beauty in everyone and everything is another great quality Italians have brought to America.

This appreciation, this feeling for beauty, our creativity, our industry, our great sympathy, our passion for life, which has found so much unbridled expression in America are the contributions we must continue to make to our adopted land. We must never withhold, in any degree, from America and Americans our ability to help, to achieve, to share in the great national ideals of peace and democracy. We are well suited for these. Let me repeat again from Dante who said, "Consider your origin, you were not formed to live like brutes, but to follow virtue and knowledge."

Now we are Americans among the great American people to whom much of the world looks for leadership and inspiration. How much of that leadership and inspiration will again be contributed by those Americans of Italian descent depends on us, for the challenge to America is great. But borrowing again from the great Italian Machiavelli, "When the willingness is great, the difficulties cannot be great." We have that willingness.

Mindful again of our origin, that our forebears were once among the afflicted humanity of the Old World, and that now we have been so readily assimilated as Americans and so adaptable to American freedom, let us now consider the urgency and importance of the words of another great Italian—the late Pope Pius XII, the pope of peace, who left us this great thought which I would like you to take home with you:

"The American people have a genius for splendid and unselfish action, and into the hands of America God has placed the destinies of afflicted humanity."

Ladies and gentlemen, we are the American people and this is our challenge, the challenge for all Americans.

I thank you.

Herbert Kohler Named Man of the Year by Manufacturers Association

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. VAN PELT. Mr. Speaker, Wisconsin is an important industrial State because of the ability and high character of its business leaders. As a result of this leadership Wisconsin ranks tenth in the Nation industrially, employing nearly a half million production workers.

One of the business leaders who has made a great contribution to manufacturing in Wisconsin is Herbert V. Kohler, chairman and president of the Kohler Co., located at Kohler near Sheboygan, Wis.

Recently, the National Association of Manufacturers gave deserving recognition to Mr. Kohler by presenting him with its Man of the Year Award. The event was ably described editorially and in a news account in the Sheboygan (Wis.) Press. Under the unanimous consent of my colleagues, I insert these reports in the CONGRESSIONAL RECORD. The articles follow:

HERBERT V. KOHLER NAMED MAN OF THE YEAR TODAY BY MANUFACTURERS ASSOCIATION

NEW YORK.—Herbert V. Kohler, chairman and president of the Kohler Co., Kohler, Wis., today received the man-of-the-year award of the Old Timers' Council of the National Association of Manufacturers.

The Wisconsin business leader was honored at the luncheon at the opening day session of NAM's 63d Congress of American Industry at the Waldorf Astoria.

In presenting the award, Cola G. Parker, director of the Kimberly-Clark Corp., Neenah, Wis., and head of the council, said that Kohler was being recognized because of "his devotion to protecting the rights of people as individuals." He also cited Kohler's contributions to education, his "awareness of the responsibilities of good citizenship," and his "fearless leadership in industrial relations."

Referring to the Kohler Co.'s long-standing difficulties with the United Automobile Workers, Parker said that Kohler has "refused to sign away his employees' rights."

"Some 6 years ago, Mr. Kohler began fighting—and is still fighting—for the principles he believes in as a citizen and a responsible industrialist. That principle is freedom from coercion—freedom for his employees and freedom for the management of the company that bears his name."

Parker said the principle upheld by Kohler is simple and basic—that a company has no more right to force an employee to join a union in order to get or hold a job than it has to prohibit an employee to join a union.

In responding to Mr. Parker and the members of the Old Timers' Council and the NAM, Mr. Kohler said in part:

"It is, indeed, an honor to receive this award. I accept it—not for myself alone—but for many men and women of the Kohler organization who stood with me.

"Especially I appreciate the significance of this award—that you endorse the principles for which I have stood—that individual rights and individual freedoms must be preserved at all costs.

"Our American constitutional form of government and our free enterprise system both depend entirely on the rights and liberties of the individual.

"If I have played any worthy part in the fight to preserve those rights—I can only say that I am grateful that circumstances have given me the opportunity."

HERBERT KOHLER HONORED

The National Association of Manufacturers presented its Man of the Year Award today to Herbert V. Kohler, chairman and president of the Kohler Co.

The ceremonies took place at the opening of the 63d Congress of American Industry in New York City. The selection of Mr. Kohler for the award was made by Old Timers' Council of the national organization.

In presenting the award, Cola G. Parker, Neenah, head of the Old Timers' Council, cited Mr. Kohler for his contributions to education, his "awareness of the responsibilities of good citizenship, and his fearless leadership in industrial relations."

Mr. Parker said that the principle upheld by Mr. Kohler is basic—that "a company has no more right to force an employee to join a union in order to get or hold a job than it has to prohibit an employee from joining a union."

While there is wide disagreement with this principle—within unions, and among Government officials, educators, and labor relations authorities—the right to enunciate such a principle and to fight for it cannot be denied. And persons or organizations who support such a principle certainly have the right to honor a man who has remained steadfast throughout what has become the longest strike in the Nation's history. Even the strongest opponents must recognize a man who has the courage of his convictions. Every person from his own experience knows that making decisions does not come easily; sticking to them, come what may, can be far more difficult.

In mentioning Mr. Kohler's contributions to education, Cola Parker undoubtedly had in mind the former's distinguished record of service in behalf of the University of Wisconsin. Although not a graduate of the university, Mr. Kohler has been a leader in fund-raising campaigns of the University of Wisconsin Foundation. Last April he was signally honored for the successful manner in which he directed the campaign for the Wisconsin Center, which houses adult education classes, short courses, and special institutes and seminars. Under Mr. Kohler's chairmanship, contributions totalling $2,400,000 were received for the Center.

Mr. Kohler is the surviving member of the trio in whose honor plaques were erected at the Wisconsin Center during the dedication ceremonies. The other plaques are of the late Frank O. Holt, who conceived the idea for the adult education center and who served the university for 20 years, and the late Frank J. Sensenbrenner, who, as a member of the Board of Regents, regarded the Center as a personal crusade.

Mr. Kohler's deep interest in the cultural and civic life of the community, is of course, well known to the people of this area and the State as a whole. The Kohler Foundation, Inc., has been a vital factor in support of cultural projects, whether of a historical nature or for current affairs.

It is recalled that in 1955, Mr. Kohler received a special citation in behalf of the Kohler Foundation. The citation was given by the American Institute of Architects in recognition of the Foundation's restoration of Old Wade House at Greenbush.

The many friends of Mr. Kohler are greatly pleased, we are sure, that he was chosen by the National Association of Manufacturers as the recipient of the Man of the Year Award.

The Happy Man

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York World-Telegram of December 29, 1958. All who knew him or read his columns mourn the passing of the genial and beloved Fred Othman who died in his sleep on Saturday, December 27, 1958, after having suffered a heart attack on December 16, 1958, while covering a news story on Capitol Hill:

THE HAPPY MAN

We mourn today the death of our colleague, Fred Othman, who died Saturday night in his sleep. He had suffered a heart attack December 16.

His passing is all the more poignant because he was such fun to be around; because, in his quiet and unfailingly good-humored way, he so enjoyed life.

As those who read his daily column in the World-Telegram knew, the way Fred made people smile was by reporting with astuteness and unfailing freshness, the didoes of scalawags, rascals, and fakes in a way that revealed the pathetically humorous fact that cheaters cheat themselves most of all.

We're sure that the engaging qualities of our modest and able friend came through in his columns to his many thousands of readers and that they, too, will share with us a sense of deep personal loss.

Needed: A Bombing Law

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LOSER. Mr. Speaker, I have reintroduced my bill to amend title 18 of the United States Code so as to make the transportation and/or possession of dynamite and other explosives in interstate commerce, with the knowledge and intent that such explosives will be used to damage or destroy any building for the purpose of interfering with its use for educational, religious, charitable, or civic objectives, or of intimidating any person pursuing such objectives, a Federal crime. The bill further provides that any person guilty of these acts shall be fined not more than $1,000 or imprisoned not more than 1 year, or both, and, if death results from a violation of this subsection, shall be subject also to the death penalty or to imprisonment for any term of years or for life. Other important provisions are set forth in the bill.

I want to further state, Mr. Speaker, that the shocking events of last year caused by the dynamiting of a grammar school and later a Jewish recreation center at Nashville, Davidson County, Tenn., prompted me to introduce H.R. 11806 on April 1, 1958. Subsequently, similar legislation was introduced by Represenative CELLER, SULLIVAN and others, and the same bill was then introduced in the other body by Senator JOHN F. KENNEDY, of Massachusetts.

Since the introduction of this legislation I regret to say there have been other similar senseless acts of violence and destruction in many other sections of the country. And yet we do not have a Federal statute under which persons who committed these acts may be apprehended, tried and punished.

The bill I propose today contains all the changes and recommendations made by Subcommittee No. 3 of the Committee on the Judiciary chairmanned by Representative WILLIS, of Louisiana, on the original bill. I want to take this opportunity to again urge the members of the Judiciary Committee, and the entire membership of the House as well as those in the other body, to act favorably upon this legislation without further delay. Time is of the essence, and it is obligatory that those of us in the legislative branch provide a Federal law to prohibit such dastardly acts of violence to life and property in our society.

I commend to your attention the following editorial from the Nashville Banner of November 15, 1958, entitled "Interstate Challenge: Needed—A Bombing Law":

INTERSTATE CHALLENGE: NEEDED—A BOMBING LAW

Bombed schools and religious institutions do come within the purview of public concern—and governmental concern, local, State, and Federal. The monstrous crime feeds on hate; beyond any question is interstate in its ramifications, and justifies the proposal of Attorney General William P. Rogers of Federal law as a weapon to combat it.

Hermitage District Representative J. CARLTON LOSER presented one such weapon, adequate to its purpose, in the measure that would have made it a Federal crime to transport dynamite in interstate commerce for criminal purpose. That bill was offered in the 85th Congress. It died in committee.

Dynamite or other explosive used in bombings, whether of schools or churches or homes, or business institutions, is of criminal purpose. And in the vast majority of cases the exponents of that are not only "outsiders," insofar as community and State are concerned, but are "outsiders" in the matter of national and ideological allegiance. They are of the sponsoring party of insurrection—doing the job of hate and terrorism, to incite American against American, group against group, and race against race.

The basic premise of this law, proposed against outlawry as clearly needed in protection of life and property and decency, is entirely apart from issues of segregation or integration. It cannot rest upon that tenuous question, or be tied to it as a legislative package—or omnibus bill—to pass or fail according to acceptance or rejection of the whole.

Details of the conglomerate "civil rights" legislation proposed inevitably would have infringement aspects which constitutional concern forbids.

There is no reason adequate law could not be enacted on its own merits to arm and coordinate these units of Government against the bombers.

By enactment of the Lindbergh Law, the FBI was enabled to move—and successfully—against kidnapers.

The Mann Act is a Federal law against the transportation of women across State lines for immoral purposes. The Dyer Act forbids interstate transit of stolen automobiles. Etc. and etc.

Federal authorities, such as the FBI, can move effectively in the program of justice to bring bombers to account—and break up this crime.

A law justly and realistically drawn to that end, without ramifications giving it any other aim or inference, would be welcomed by the law-abiding element of America, North, South, East, and West.

Reappointment of Joseph T. Kennedy as Pennsylvania Secretary of Mines

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Wilkes-Barre Record of December 20, 1958:

KENNEDY APPOINTMENT

With the predominantly Democratic election returns in mind, retention of Joseph T. Kennedy, of Wilkes-Barre, as secretary of mining, a post he has held in the Leader administration, will be politically acceptable in large measure in Luzerne County. It is also acceptable on a broad community basis for Secretary Kennedy stands well personally with his fellow citizens.

His fitness for the post has been demonstrated and is further attested by the fact

that he has been associated with the mining industry and with the United Mine Workers of America since 1916.

This background was taken into account by Governor-elect David L. Lawrence. As he announced the appointment, he credited Kennedy with the able performance of his duties. The Governor-elect made the sound comment that everyone concerned with the activities of this department knows how important its functions are to the great mining industry in Pennsylvania.

Mr. Kennedy has had varied experience. He has known what it was to work in the coal mines, where his career began. Then he became secretary to the president of district 1 of the United Mine Workers of America and held other posts with the union, serving as a delegate to the International Labor Organization in Dusseldorf, Germany, in 1953. It was natural that he had the UMWA endorsement for the cabinet post he now occupies and is now scheduled to fill for another 4 years.

A Citizen Speaks His Mind on the Supreme Court

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. HUDDLESTON. Mr. Speaker, a few days before I left my home district in Jefferson County, Ala., to return to Washington for the convening of the 1st session of the 86th Congress, one of my constituents, a sincere, loyal, sound-thinking citizen, came to my office carrying an open letter to the Members of the U.S. Senate and the House of Representatives which he had prepared. This letter expresses in very forceful terms the views of this citizen and the vast majority of his fellow men in the Ninth District of Alabama on the decisions of the Supreme Court in the segregation cases.

I assured my constituent that I would be pleased to make his open letter available to the Members of the Senate and the House of Representatives. I insert same herewith, under permission heretofore granted, and commend its careful reading and study to the Members of this body:

To all U.S. Senators and Representatives:

Whether or not it is evident to the powers that be in Washington, D.C., nevertheless our Nation is in the throes of a dire emergency. Time is of the essence to save this Nation.

Isn't it time, and long past due, that the Senate and the Congress of these United States take into serious account this impending disaster and promulgate such laws as will leave to the States of this country complete control of the educational matters of their respective States? It appears that legislation to limit the jurisdiction of the Supreme Court might well be the remedy.

Russia has only one dictator—the United States (in the form of the U.S. Supreme Court) now has nine in a combined dictatorship to force upon the sovereignty of the Southern States the ideas of these nine men.

Opinions are being written which disregard and abandon the law as written and interpreted for generations; and the Court has no constitutional power to make a change in the law. It bitterly condemns those who are disposed to censure its usurpation of power; and yet its actions show that it has no regard or respect for the law.

For peace and tranquillity to continue within this Nation, and particularly in the people of the Southern States, both white and colored, some immediate action is needed to make certain a constitutional provision which was certain in the minds of lawyers and laymen alike, North and South, for 86 years, until the day of this Supreme Court of the United States.

God forbid that this Nation shall be torn asunder as once it was.

A CONSTITUENT AND VOTER OF THE NINTH CONGRESSIONAL DISTRICT OF ALABAMA.

Judge Lewis Fawcett

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable John Cashmore, Borough President of Brooklyn, at the dedication of the Fawcett Memorial Garden of the Brooklyn Botanic Garden held on Tuesday, September 23, 1958. It is a privilege for me to insert this moving tribute to my late and beloved friend, Judge Fawcett, who served with great distinction as a Justice of the Supreme Court of the State of New York. This beautiful garden to be enjoyed by all of the people of Brooklyn will keep ever bright the memory of the gentle, kindly man to whom it is dedicated:

This quiet and simple ceremony in which we dedicate this beautiful terraced garden to the memory of Judge Fawcett is one that fills me with a great deal of emotion.

I am, of course, keenly aware of the honor that is mine in being chosen to express the appreciation of the community for this lovely gift that Mrs. Osborne and Mrs. Frohne have made to the people of Brooklyn. But this dedication means something far more personal than that to me. It is an opportunity to pay a tribute—humble and sincere—to a man whom I loved and revered while he lived, and whose qualities of true greatness grow clearer as the passing years etch them in ever sharper tones upon the pages of my memory.

The personality of Judge Fawcett characterized as it was by such dignity, gentleness, and sweetness, will be well commemorated by this garden, that will in a subtle way convey the same impression of sweetness and gentleness to all people who can appreciate beauty.

Judge Fawcett and those of us who were of his time have lived in a changing world. In one brief lifetime we have seen a new civilization built from granite and steel. The world has seen the power and strength of that new civilization, but it was only the sensitive few among us like Judge Fawcett who could see that all that power and all that strength could not create the beauty of a single flower or match the priceless gifts of nature's countryside.

Today in the tradition of Judge Fawcett and his family, and in his memory, we try to preserve in this garden a concept of beauty and gracious living that will be characterized by the gentleness and the dignity that were so much a part of him.

In all ages and in all generations there will be sensitive people who will flee the civilization of granite and steel. Here they may come to refresh their souls with the beauty provided by nature and nature's God, and as they find rest and new purpose may they be mindful, as are we, that this haven of peace was preserved for them by the vision and zeal of one who personified Brooklyn at its best—Judge Lewis Fawcett.

Balance the Budget

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. VAN PELT. Mr. Speaker, one of the most important issues confronting this Congress is the matter of balancing the budget for fiscal 1960. President Eisenhower has listed this as one of his chief objectives. Our economy cannot afford further inflation and I am convinced this should receive the most serious consideration from every Member of this body.

Our President's program is well described in an editorial which appeared recently in the Oshkosh (Wis.) Daily Northwestern, of which Mr. A. J. Mace is the chief editorial writer. I believe the editorial is of interest to all our colleagues and ask permission at this point to have it printed in the Appendix of the DAILY CONGRESSIONAL RECORD. The editorial follows:

BALANCED BUDGET

President Eisenhower, earlier this week, handed John Q. Taxpayer and his family an unexpected and welcome Christmas gift. It was an attractive package, prettily decorated with dollar signs in long green. Inside was the announcement of plans for reduced Federal spending and a balanced budget for fiscal 1960.

But, in the great American tradition that permits the return or exchange of gifts after Christmas, it had hardly been unwrapped before some members of the family, notably Senators and Representatives of Democratic persuasion, were suggesting that it be changed. Some of the parts—the revenue and the expenses—didn't fit, they complained, and they didn't like the suggested postal rate and gasoline tax hikes. So, although the gift was delivered before Christmas, it is unlikely Mr. Taxpayer will actually receive it for some time and, then, it probably won't look much like the original package.

Mr. Eisenhower, in a statement issued by the White House, said the budget he will submit to Congress next month has been decided and that expenditures and revenues will be in the neighborhood of $77 billion. That is a pretty expensive neighborhood but it sounded good to Mr. Taxpayer because the budget for fiscal 1959 is running a deficit of more than $12 billion and fiscal spending is figured at a minimum of $79.2 billion. Revenues, considerably reduced by the economic recession earlier this year, are estimated at only $67 billion.

The President's announcement that his plans do not call for any general tax in-

creases was pleasing to the public but the proposed hike in postal rates, coming on top of the one this year, and call for higher gasoline taxes did not find the same welcome, either from the public or Members of Congress. There was no particular comment on the President's announcement that added revenue would accrue from some new user taxes for Government services, probably because Mr. Eisenhower did not go into detail as to what these would be.

The announcement of a balanced budget and that the balance has been achieved at levels of spending and revenue considerably different from those of fiscal 1959 came as a surprise to many. He had promised he would try to reduce nondefense expenditures in the next fiscal year but it was generally believed these cuts would be more than offset by increased spending for the military. It was, in fact, expected he would call for expenditures in the neighborhood of $79 billion or $80 billion, about the same as this year, and not $77 billion.

It is generally admitted the speedy and consistent rebound of the economy from the recession's low last April will mean increased revenues. But many economists have placed the Federal income in fiscal 1960 at about $75 billion. Mr. Eisenhower's anticipated figure of $77 billion is about $10 billion greater than the revenue estimated for fiscal 1959 last September, when the administration issued its latest budget revision.

Mr. Eisenhower, while promising a balanced budget, gave assurance this balance would not be reached because of a sacrifice of national defense. Rather, he said, such expenditures will be higher than ever before in time of peace. Whether his figure will satisfy those in Congress, whom he has termed spenders, seems unlikely because some of his critics have already labeled his proposal as a "pennywise and pound foolish" stand. He also said some domestic nondefense programs will continue at high levels while others will be held at varying levels consistent with the public interest.

Judging by the reception given the President's announcement by the Democrats, it would be too optimistic to believe he will get what he asks. Postal rates were hiked this year from 3 to 4 cents for both local and out-of-town letters as part of a program that will boost postal revenues about $550 million annually. Mr. Eisenhower's request for a 5-cent rate, however, was given a cold shoulder and it seems probable it will suffer the same fate in the next session of Congress. It has been hinted the proposed gasoline tax hike will be for a cent or a cent and a half. This, on top of the present 3-cent-a-gallon tax, represents a figure that will be fought by many in Congress as well as by the petroleum and highway lobbies. And the public certainly won't welcome any such boost.

While the liberal faction of the Democratic Party has already voiced disapproval of Mr. Eisenhower's proposals, most Republicans and the Democrat conservatives, such as Senator BYRD, of Virginia, are likely to give it support. Political observers see the balanced budget announcement as a smart political move because it will put the responsibility for further deficit spending on the shoulders of the Democrat-controlled Congress. Democratic critics see Mr. Eisenhower's estimated revenues as too high and his spending estimates as too low. Whether the balanced budget will be achieved remains to be seen but some bitter battles are assured when Congress convenes.

Charity Begins at Home

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. SILER. Mr. Speaker, charity begins at home. Who first said it, I do not know. Maybe it was out of the wisdom of King Solomon. But anyhow that old saying has always been a sparkling proverb of everlasting truth in my book and in the books of many others.

Way up in Harlan County, Ky., is a valley called Clover Fork, where I did some visiting this past December. But right now all the bloom is off the clover on Clover Fork. And no one is knee deep or even ankle deep in clover anymore up there. It is a narrow vale of mining camp dejection at present. The men look right at you out of solemn and desolate eyes. The women speak a silent, mournful language that says, "Yes, the hope is all gone but we still keep a brave front for the sake of our families." The children, the perennial chatterboxes of cheer, still hula their plastic hoops and blow their bubble gum full of air pockets. And the Kentucky cardinals still flash their bright colors in the native bushes on the mountainsides. And, too, the waters of the creek still gurgle their cheerful optimism as they roll over rough rocks, yet these waters seem to hasten along as if hurrying to leave forever Clover Fork Valley and its sad plague of poverty.

I look at that man over there with the miner's light cap and with shoulders considerably stooped by a thousand bent-over trips through low-room necks and narrow airways and long entries inside the dark, damp mines. And then I ask along with the great poet, "Is this the thing the Lord God made and gave to have dominion over sea and land; to trace the stars and search the heavens for power; to feel the passion of eternity? What to him are Plato and the swing of Pleiades? What the long reaches of the peaks of song, the rift of dawn, the reddening of the rose?" Well, enough of poetry. It is poverty, not poetry, that is claiming our attention just now.

It was exactly 2 weeks and 2 days before Christmas, but the season failed somehow. Because the bloom was off the clover; the berries were off the Christmas holly. Whenever the people are worrying over coffee and pork chops, all the Santa Claus business in the world is merely as a sounding brass or a tinkling cymbal. There is just no harmony from it or jingle in it.

I stepped inside the dark hot room filled with several people and many odors. Someone with me said in a cheerful voice, "This is your Congressman come to see you." No one stirred. No one spoke. The introduction was flat. If Ike himself had come in, maybe someone would have gotten up and said, "Here, take a chair." But I have some doubt about that. The mind was on the unseen "vittles," on the unknown job out yonder in the beautiful and prosperous valley of somewhere. I tried to sound something of a hopeful note and to lift their spirits just a little bit, but I was a considerable amount of nothing and their gaze was still on the floor as I left the house. God help me. I could not raise their souls one bit. I was a failure at that undertaking. But somehow I do not believe my country nor its people would want to fail that vale up yonder on Clover Fork in Harlan County.

I am right now more interested in this valley's Evarts than Estonia and more concerned over this valley's Verda than Venezuela. It is just human nature. Maybe it is nearsightedness that makes a fellow see the thin seat of his neighbor's pants before he ever sees a faraway Arab needing a new pair of sandals for the desert road. I guess this Congressman from southeast Kentucky is just a little nearsighted.

Mr. Speaker, in my book, charity begins at home.

Letter by Northerner States Case for South

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. HUDDLESTON. Mr. Speaker, on October 13, 1958, Mr. Carleton Putnam of Washington, D.C., addressed a letter to President Eisenhower, stating in a very forceful manner the South's case for the maintenance of segregation. Mr. Putnam, prominent writer and airlines executive, has through the years been in sufficiently close contact with the South, its problems, opportunities and aspirations to be well acquainted with the situation in our part of the country.

Mr. Putnam's letter to the President was mailed, after receipt by the President, to the editors of every leading newspaper in the country. Not one single major paper north of the Mason-Dixon line considered the letter of sufficient importance to make it available to its readers. Many papers in the South ran the letter in their "Letters to the Editor" column, but nationwide distribution was not possible because of lack of interest among northern editors. As a result, a group of citizens of Birmingham, in my district, raised sufficient funds by private subscription, to finance the cost of running

the letter as a full-page advertisement in the New York Times. This advertisement appeared in the Times a few days ago.

With the thought that my efforts will lend assistance in giving the letter the type of currency it deserves, I am pleased to insert same herewith in the CONGRESSIONAL RECORD, under permission heretofore given.

Mr. Putnam, a member of the famous New England Putnam family of Revolutionary War days, is a native of New York City, a graduate of Princeton and Columbia, and founder and president of the Chicago and Southern Airlines (1943–48). He is presently on the board of directors of Delta Airlines. In addition to being an outstanding business executive, Mr. Putnam is also a writer of note. He recently published a widely praised biography of President Theodore Roosevelt.

The letter which follows is commended to the careful reading and study of every Member of the House:

WASHINGTON, D.C., *October 13, 1958.*

The Honorable DWIGHT D. EISENHOWER,
President of the United States,
The White House, Washington, D.C.

MY DEAR MR. PRESIDENT: A few days ago I was reading over Justice Frankfurter's opinion in the recent Little Rock case. Three sentences in it tempt me to write you this letter.

I am a northerner, but I have spent a large part of my life as a business executive in the South. I have a law degree, but I am now engaged in historical writing.

From this observation post I risk the presumption of a comment.

The sentences I wish to examine are these: "Local customs, however hardened by time, are not decreed in heaven. Habits and feelings they engender may be counteracted and moderated. Experience attests that such local habits and feelings will yield, gradually though this be, to law and education."

It is my personal conviction that the local customs in this case were hardened by time for a very good reason, and that while they may not, as Frankfurter says have been decreed in heaven, they come closer to it than the current view of the Supreme Court.

I was particularly puzzled by Frankfurter's remark that "the Constitution is not the formulation of the merely personal views of the members of this court."

Five minutes before the Court's desegregation decision, the Constitution meant one thing; five minutes later, it meant something else. Only one thing intervened, namely, an expression of the personal views of the members of the Court.

It is not my purpose to dispute the point with which the greater part of Frankfurter's opinion is concerned. The law must be obeyed. But I think the original desegregation decision was wrong, that it ought to be reversed, and that meanwhile every legal means should be found, not to disobey it, but to avoid it. Failing this, the situation should be corrected by constitutional amendment.

I cannot agree that this is a matter involving "a few states" as Frankfurter suggests. The picture in reality is of a court, by one sudden edict, forcing upon the entire South a view, and a way of life, with which the great majority of the population are in complete disagreement.

Although not from the legal, in fact from the practical, standpoint the North, which does not have the problem, is presuming to tell the South, which does have the problem, what to do.

To me there is a frightening arrogance in this performance. Neither the North, nor the Court, has any holy mandate inherent in the trend of the times or the progress of liberalism to reform society in the South.

In the matter of schools, rights to equal education are inseparably bound up with rights to freedom of association and, in the South at least, may require that both be considered simultaneously. (In using the word "association" here, I mean the right to associate with whom you please.)

In any case the crux of this issue would seem obvious: social status has to be earned.

Personally, I feel only affection for the Negro. But there are facts that have to be faced. Any man with two eyes in his head can observe a Negro settlement in the Congo, can study the pure-blooded African in his native habitat as he exists when left on his own resources, can compare this settlement with London or Paris, and can draw his own conclusions regarding relative levels of character and intelligence—or that combination of character and intelligence which is civilization.

Finally he can inquire as to the number of pure-blooded blacks who have made contributions to great literature or engineering or medicine or philosophy or abstract science.

We were all in caves or trees originally. The progress which the pure-blooded black has made when left to himself, with a minimum of white help or hindrance, genetically or otherwise, can be measured today in the Congo.

Lord Bryce, a distinguished impartial foreign observer, presented the situation accurately in his "American Commonwealth" when he wrote in 1880:

"History is a record of the progress toward civilization of races originally barbarous. But that progress has in all cases been slow and gradual. * * * Utterly dissimilar is the case of the African Negro, caught up in and whirled along with the swift movement of the American democracy. In it we have a singular juxtaposition of the most primitive and the most recent, the most rudimentary and the most highly developed, types of culture. * * * A body of savages is violently carried across the ocean and set to work as slaves on the plantations of masters who are 3,000 or 4,000 years in advance of them in mental capacity and moral force. * * * Suddenly, even more suddenly than they were torn from Africa, they find themselves, not only free, but made full citizens and active members of the most popular government the world has seen, treated as fit to bear an equal part in ruling, not only themselves, but also their recent masters."

I would emphatically support improvement of education in Negro schools, if and where it is inferior.

Equality of opportunity and equality before the law, when not strained to cover other situations, are acceptable ideals because they provide the chance to earn and to progress, and consequently should be enforced by legal fiat as far as is humanly possible.

Throughout this controversy there has been frequent mention of the equality of man as a broad social objective. No proposition in recent years has been characterized by more loose thinking. Few of us would care to enter a poetry contest with a top-ranking poet. And few would care to play chess with the champion.

Pin down the man who uses the word "equality," and at once the evasions and qualifications begin. As I recall, you, yourself, in a recent statement used some phrase to the effect that men were "equal in the sight of God."

I would be interested to know where in the Bible you get your authority in Scripture for the concept of potential equality in the sight of God—after earning that status, and with various further qualifications—but where is the authority for the sort of ipso facto equality suggested by your context? The whole idea contradicts the basic tenet of the Christian and Jewish religions that status is earned through righteousness and is not an automatic matter.

Frankfurter closes his opinion with a quotation from Abraham Lincoln, to whom the Negro owes more than to any other man. I, too, would like to quote from Lincoln. At Charleston, Ill., in September 1858 in a debate with Douglas, Lincoln said:

"I am not, nor ever have been in favor of bringing about in any way the social and political equality of the white and black races; I am not nor ever have been in favor of making voters or jurors of Negroes nor qualifying them to hold office. * * * I will say in addition to this that there is a physical difference between the white and black races which I believe will ever forbid the two races living together on terms of social and political equality. And inasmuch as they cannot so live, while they do remain together, there must be the position of superior and inferior, and I as much as any other man am in favor of having the superior position assigned to the white race."

The extent to which Lincoln would have modified these views today, or may have modified them before his death, is a moot question, but it is clear on its face that he would not have been in sympathy with the Supreme Court's position on desegregation.

Perhaps the most discouraging spectacle is the spectacle of northern newspapers dwelling with pleasure upon the predicament of the southern parent who is forced to choose between desegregation and no school at all for his child.

It does not seem to occur to the papers that this is the cruelest sort of blackmail; that the North is virtually putting a pistol at the head of the southern parent in a gesture which every northerner must contemplate with shame.

Indeed, there now seems little doubt that the Court's recent decision has set back the cause of the Negro in the South by a generation.

He may force his way into white schools, but will not force his way into white hearts nor earn the respect he seeks.

What evolution was slowly and wisely achieving, revolution has now arrested, and the trail of bitterness will lead far.

Sincerely yours,

CARLETON PUTNAM.

"The Red Mass"

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon given by the Very Rev. Robert Gannon, S.J., on September 18, 1958, at the annual mass of the Holy Spirit, known as the Red Mass, and which is sponsored by the Catholic Lawyers Guild of the Diocese of Brooklyn to mark the opening of the fall term of the courts in Brooklyn:

In the summer of 1947 President Truman reassigned Myron Taylor as his personal representative at the Vatican. On this occasion he wrote the Holy Father a beautiful letter which caused some excitement in Brooklyn. In it he said without qualification, "Your

Holiness, this is a Christian Nation." Whereupon he was promptly accused by one of your colleagues of violating the Constitution by an attack on the white elephant which is supposed not only to separate church and state but to assure their mutual hostility. The accusation was, of course, fantastic and unimportant, except for the fact that it called our attention to an interesting phase of our national development. After all, was the President right? Or was the Brooklyn lawyer right when he cried out with some heat, "The U.S.A. is not in any sense a Christian Nation." The answer is not as simple as it might be.

Certainly we are not a Christian nation by law established as England, Spain and Sweden are Christian nations. The First Amendment to the Bill of Rights takes care of that. "Congress" we read "shall pass no law respecting the establishment of religion." The words are clear enough but the background is sometimes misunderstood. Judging from developments of recent years, one would think that the Founding Fathers were taking precautions against the Pope of 1789. Actually, he was the last one in their minds. The Papacy had been declining all through the 18th Century so that the poor Holy Father was probably never weaker at any period since the Western Schism than he was in the years between the fall of the Bastile and Waterloo. The same was true of the Catholic Church. It was undergoing one of its periodic burials and most people thought this was the last. No. The church which James Madison and the rest had in mind was the church which had collected tithes in the colonies for generations—the Church of England. So that by the First Amendment the Founding Fathers wished to make it clear that the Church of England was being disestablished in America and that no other was to take its place forever. Henceforth, all religions, Mohamatan, Protestant, Jewish and Catholic would be absolutely equal before the law. Clearly then, we are not a Christian nation as England, Sweden and Spain are Christian nations.

Are we, however, Christian on the basis of population? It is certainly true that the majority of our fellow citizens would list themselves as Christians in a noncommittal sort of way. They come of Christian stock. They look like Christians, they talk like Christians and frequently out of habit act like Christians but when it comes to Christian doctrine which forms the basis of Christian life, they ignore it or openly reject it. Many will say, "Of course I'm a Christian. What else could I be? I'm not a Jew or a Buddhist and my father helped to build the main church in our town." But if you press them and ask, "Do you believe then in the Holy Trinity, the divinity of Christ and in the inspiration and inerrancy of the New Testament?", the picture changes. It would be very difficult to prove that the United States is Christian on the basis of population.

What then of its ideals—as far as these can be separated from its theology? What of its education, its philosophy, its morality? Would these still be Christian enough to justify the former President's claim, "Your Holiness, this is a Christian country." A hundred years ago, the answer would have been "Yes," and this, in spite of the fact that fewer Americans proportionately were signed up as church members. Our schools, beginning with Harvard, whose motto was "Christo et Eccesiae," were all with the exception of the University of Virginia, Christian foundations. But Horace Mann, an excellent Christian himself, in his effort to avoid offense against any particular sect, practically banished Christianity from the public schools, while the Christian private schools and colleges gradually succumbed to the influence of the Ph. D.'s who had flocked to Europe after our Civil War to Paris and Berlin and had returned eager to spread the naturalism they had learned there. As a result, the education of the United States, by and large, is anything but Christian today.

That being so, what can we expect of our philosophy? The real leaders in the field have ben men like James and Whitehead and Cohen and Dewey and Santayana, so that in spite of a liberal sprinkling of neo-Thomism our philosophers have not helped keep the United States a Christian nation and much less can be said for the arbiters of our moral standards. We may brush off as propaganda the comments that are written in the Soviet press about our business practices, our family life, and our female alcoholics, but we cannot ignore the annual reports of Edgar Hoover which invariably stress the percentage increase of crime amongst us, especially of juvenile crime. It would take an optimist to hold that, on the basis of our moral tone, the United States is a Christian nation.

And yet, Harry Truman was not altogether wrong. Ours is a country with at least a Christian past which cannot be ignored. The former President in his letter mentioned the discoverers, explorers and missionaries who were Christians and frequently heroic Christians. He mentioned the colonists, too. Many of them came over here because they wanted to practice their Christian religion and most of them brought some form of Christianity with them. When the time arrived to establish an independent government, very few of the leading citizens were deists or freethinkers. The so-called fathers of our country, the signers of the Declaration of Independence and the signers of the Constitution were almost without exception practical Christians. Franklin and Jefferson are the only exceptions cited. It is true that Jefferson was a conservative materialist, a child of the so-called enlightenment who considered God as "ethereal gas" but Franklin would protest that he was himself a true Christian. He had had a quarrel with the Presbyterian church and never joined any other but he was a deeply religious man and many of his speeches and many parts of the autobiography breathe the spirit of the New Testament. In fact, the tone of that whole generation is to be found in Washington's message to the Governors of the 13 States on resigning his commission as Commander in Chief of the Army. In it, he assumed that all the American Governors believed as he did that the future happiness of the United States depended on the imitation of Christ.

It is not surprising then that the form of democracy bequeathed to us by the Founding Fathers was a Christian form of democracy, a democracy that rests on two distinctly Christian ideals. The first of these is the supremacy of law over the ruler, the second is the equality of all men before the law based on the God-given dignity of the human person. The first, the supremacy of law over the ruler, was handed down to us through English common law which derived from custom and tradition rather than from formal codes. It recognized the existence of a higher law that was in its broadest outline knowable through reason, knowable because it could be deduced from the nature of man. Before the rise of Christianity, no one recognized a natural right. All law was positive law. For the Jews, God's chosen people, it was divine law known as revelation and collected into codes, the greatest of which was the Ten Commandments given to Moses on Mount Sinai. For the Gentiles it was positive law known by state edict and, likewise, collected into codes. But our Founding Fathers presupposed in the democracy they bequeathed to us a higher law binding rulers and ruled to which all positive law must conform. This great tradition which involves every man's right to immunity from the arbitrary leads back through John Marshall, Hamilton, and James Wilson to Edmund Burke, Lord Somers, Seldon, and medieval lawyers like Henry De Bracton, back beyond the Magna Carta to St. Ambrose and St. Augustine.

The same is true of the second great principle underlying our democracy, the principle of equality. This is not to be confused with the egalité of the French Revolution any more than Robespierre's Fraternité is to be compared with Christian charity. The French had been profoundly affected by the revival of Roman law under Philip the Fair and the subsequent weakening of the medieval tradition. Their egalité was understood in the pagan stoic sense which condemned all inequality of any sort. Our Founding Fathers not only preserved for us the English common law and the parliamentary tradition but also carried over from the Middle Ages the Augustinian concept that all men are equal under God as persons; as individuals, that is, with spiritual powers; as adopted sons of God and heirs of the kingdom of heaven. You will find nothing about personal rights in Aristotle or Cicero or the books of the Old Testament. It was because of the church's teaching on personality that we Americans fell heir to the tradition that no man has the right to impose his will on another except as God's representative. This is a tradition that might find a cool reception in Washington today. It might be thought repugnant to the rights of our National Free Thinkers Association but it would be difficult to declare unconstitutional traditions which gave rise to the Constitution.

President Truman, therefore, should have qualified his statement saying not "This is a Christian Nation" but "the two boasts of our country in which we take the deepest pride are Christian still—its origin and its special form of democracy. In its origin it is immutably Christian but the form of its democracy is subject to change. Some expect that change will come suddenly through Red revolution or conquest but violence is quite unnecessary. It can be so much more efficiently accomplished through the day-by-day decisions of our courts. There we can witness the struggle already joined between the old and the new theories of law. The old theory—your theory—the theory which is presupposed in the Constitution and the Declaration of Independence which is essential to the tradition of American democracy rests on the fact that there is a superior law which tests the laws of men and that there are objective standards for weighing the validity as well as the expediency of new legislation. The new theory of law popularized by Oliver Wendell Holmes ignores the existence of God as the source of all authority, minimizes principles and precedents and makes the judicial process a thing of mere utility and force, tempered with emotion, whim and intuition. The man in the street can feel the sands shifting under him. There is no more certainty in the law since consistency is not to be expected at the summit of the law. There are no more permanent rights, no more unalienable rights, no more natural rights since English common law got out of fashion in Washington. The situation is not hopeless. There is enough of our inheritance left to fight for but you gentlemen of the bench and bar will have to do most of the fighting. The rest of us are practically in your hands. If you fail us the last link that binds us to our Christian past, our Christian concept of democracy will disappear and Truman's critics will be right in saying that the United States of America is in no sense a Christian nation.

Will Congress Save Our Priceless Heritage?

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. JENSEN. Mr. Speaker, the election of last November 4 gave the Democratic Party an overwhelming majority in both Houses of Congress, which, Mr. Speaker, imposes a greater responsibility on your party—and especially on you, as leader of the party in control—than you have ever experienced in all your years as Speaker of this august body. I am sure you are well aware of that fact, and that the future welfare of America depends to a very great degree on your every act and decision during this session of Congress.

The time has come to speak plainly. Many Members who had the contracted support of Reuther's so-called liberal labor party were elected last November and, of course, they are expected to blindly follow orders from the organization which contributed greatly to their campaign, since they are bought and paid for. But, I sincerely hope it is not yet too late for us to profit from the costly experience which England suffered under the Fabian Socialists, who also masqueraded under the banner of the liberal labor party, and who got control of Parliament shortly after World War II and immediately put into effect the identical program Reuther's A.D.A. and C.O.P.E. are now proposing for us here in the U.S.A. To learn the facts about the suffering of the English people, especially the laboring people, the farmers and the small businessmen who suffered first and most at the hands of the Fabian Socialists makes the blood of any good American run cold. It must not happen here.

Democrats and Republicans are hoping—yes, praying—that Congress will hold the line against those who for selfish reasons are bringing concerted pressure on us to follow their their anti-American liberal concepts. Every well informed, unbiased, American citizen knows that the true definition of a "modern Reuther liberal" is one who is primarily liberal with our constitutional rights and with our taxpayers' dollars.

Hence, under the circumstances as they now exist, were it not for my faith in you, Mr. Speaker, and in the good sense of most of my colleagues, I would shudder to contemplate the future of our blessed land. May God give us courage and the strength to meet the test, with the outspoken support of courageous men and women here in Congress and all over our broad land.

On this, the opening of the 86th Congress, I felt it in my heart to give expression—as I have here—to my innermost feelings, to be printed in the RECORD, that thousands, yea millions, might read and then do their part, and more, to preserve our precious American liberties.

Panama Canal Zone: Constitutional Domain of the United States

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. FLOOD. Mr. Speaker, during the second session of the last Congress starting on March 26, 1958, I made a series of addresses dealing with various phases of Canal Zone diplomatic and legislative history and problems. Though the writings on these subjects are voluminous and at first sight bewildering, when reduced to their essentials they are relatively simple.

At the request of Maj. Gen. U. S. Grant 3d, president of the American Peace Society, I undertook to condense into a brief article for the fall 1958 issue of "World Affairs," the quarterly magazine of that organization, the basic points in the Canal Zone sovereignty question.

The article follows:

PANAMA CANAL ZONE: CONSTITUTIONAL DOMAIN OF THE UNITED STATES

(By Honorable DANIEL J. FLOOD, Representative from Pennsylvania)

SUEZ CRISIS FOCUSED ATTENTION ON PANAMA

The dramatic but "legally unjustifiable"[1] nationalization by Egypt on July 26, 1956, of the Suez Canal was an epochal event. It has focused world attention on the other great interocean waterway, the Panama Canal, to a degree not equaled since those memorable years near the start of this century when the key canal treaties, under which it was constructed and subsequently maintained and operated, were negotiated.

Originating in the Soviet Union and its satellites, the ensuing clamor has been featured by voluminous propaganda aimed at wresting ownership and control of the Panama Canal from the United States and transferring its jurisdiction to some international or other authority. This uproar, instead of tending to clarify and stabilize conditions on the American Isthmus, has formed a sinister agitation that conforms to the well-known pattern of penetration and subversion so characteristic of the tactics of the international Communist conspiracy for world conquest. Moreover, the din is today being fanned by jingoistic elements in Panama, including high officials in the government of that republic and has created a situation that is definitely hazardous.

Meanwhile, a widespread ignorance of the most elemental facts in canal history, prolonged silence by our government with respect to the rights and responsibilities of the United States at the Isthmus,[2] and its weak policies of appeasement and giveaway, together have served to aggravate the situation, which truly needs rigorous clarification.

JURIDICAL BASE FOR ISTHMIAN CANAL POLICIES

Rooted in four centuries of history,[3] the foundations of the United States Isthmian canal policies find expression in three important canal treaties:

First. The Hay-Pauncefote Treaty of 1901 between Great Britain and the United States, which facilitated construction of an Isthmian canal across Central America. In this treaty, Great Britain relinquished its own rights for the construction and control of such canal and recognized the exclusive right of the United States thereto. The United States, in assuming this responsibility, adopted the main points in the Convention of Constantinople of 1888, concerning the Suez Canal, as rules of the operation, and regulation of the American canal.

Second. The Hay-Bunau-Varilla Treaty of November 18, 1903, between the Republic of Panama and the United States. On the part of Panama, this treaty granted to the United States in perpetuity the use, occupation and control of the Canal Zone for the construction, maintenance, operation, sanitation and protection of the Panama Canal, and, most significantly, as if the United States were the sovereign of the territory and to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power or authority. On the part of the United States, the main point for the purposes of this paper was that it guaranteed the independence of the Republic of Panama, which had just seceded from Colombia and whose existence depended on the protection of the United States and the success of the canal undertaking.

Third. The Thompson-Urrutia Treaty of April 6, 1914, proclaimed March 30, 1922, between the United States and the Republic of Colombia, the sovereign of the Isthmus prior to the Panama Revolution of November 3, 1903. This treaty aimed at removal of all misunderstandings growing out of political events in Panama in November 1903, restoration of the cordial relationship that had previously existed betwen Colombia and the United States, and definition of their rights and interests with respect to the Canal and the Panama Railroad.

The negotiation of these three treaties, it should be emphasized, was not accidental. Instead, it was the result of long-range interoceanic canal policies of the United States developed over many years and having in mind always the history of the affected territory.

Here, as a matter of special interest, it should be remarked that the Panama Railroad, running through the Canal Zone and constituting the first American transcontinental rail system and the first practical step in the construction of the canal, was built by United States citizens in 1849–55. Later, it was acquired by the French, and sold to the United States as part of the French canal holdings acquired in 1904.

Throughout the period of United States operation of the canal, the requirements of these treaties have been carefully followed. Their main provisions have stood the test of experience and fully justify their adoption. They form a splendid monument to those who evolved them, and today Public Law 841, 81st Congress (1950), governing the administration of the canal enterprise and popularly known as the Thompson Act, actually mentions these treaties and specifies

[1] George A. Finch, "Navigation and Use of the Suez Canal," Proceedings of the American Society of International Law (1957), p. 42.

[2] Hon. DANIEL J. FLOOD, "Panama Canal Zone: Constitutional Domain of the United States," CONGRESSIONAL RECORD, vol. 104, March 26, 1958.

[3] Miles P. DuVal, Jr., "Cadiz to Cathay," (2d ed.) and "And the Mountains Will Move" (Standford University Press, 1947) tell the story of the acquisition of the Canal Zone and building the Panama Canal.

that the levy of tolls is subject to their provisions.

PEAK OF U.S. ISTHMIAN INFLUENCE, 1903–39

Following the independence of Panama in 1903, the Hay-Bunau-Varilla Treaty was negotiated with the new sovereign of the Isthmus, instead of Colombia, pursuant to the Spooner Act of June 28, 1902, that had authorized negotiation of a treaty for canal purposes with Colombia.

As previously stated, this treaty authorized the acquisition and perpetual control of the Canal Zone for the primary objectives of constructing the Panama Canal and its perpetual maintenance, operation, sanitation, and protection, all exclusively by the United States and also wholly at U.S. expense.

In addition, it is also clear from the diplomatic and legislative history of that era that the aim of both the United States and Panama was to establish and maintain complete sovereignty over the Canal Zone by the United States. This was done not only to assure the construction, efficient operation, and protection of the Canal in perpetuity, as provided in the Spooner Act of 1902 and in the 1903 treaty, but also to guarantee that Colombia could never be able to reassert successfully its sovereignty over the Canal Zone, the Panama Canal, the Panama Railroad, or the Republic of Panama.

Except for the Caesarian operation known in history as the Panama Revolution, out of which the independence of Panama resulted, and the provisions of the Hay-Bunau-Varilla Treaty, the Republic of Panama would never have been created and could never have survived. Besides, the United States would never have undertaken construction of a project as vast as the Panama Canal in a region then justly described as the pesthole of the world and long characterized as a land of endemic revolution repeatedly requiring the presence of naval vessels to maintain freedom of transisthmian transit.[4]

These points were fully understood at that time by Panamanian as well as North American leaders. Both realized that political stability in the Isthmian area was imperative for the success of the Canal enterprise—its construction and subsequent maintenance, operation, sanitation, and protection. They also recognized that such stability could be obtained only by vesting complete and exclusive sovereignty over the Canal Zone in the United States.

The great North American statesman who developed our Isthmian policies included such eminent leaders as President Theodore Roosevelt, John Hay, John Bassett Moore, Adm. John G. Walker, William Howard Taft, and Elihu Root. President Roosevelt always viewed the Canal as the greatest accomplishment of his administration, and comparable in importance to the Louisiana Purchase. In essence, the results of their vision and efforts remained unimpaired until 1939—a period now recognized as the peak of United States influence on the Isthmus.

COLOMBIA'S INTEREST PROTECTED BY TREATY

Because of the importance of the Thompson-Urrutia Treaty, and the fact that it is not as well known as it should be, its principal provisions are summarized.

In article I, Colombia recognizes the title to the Panama Canal and Panama Railroad as "vested entirely and absolutely in the United States, without any encumbrances or indemnities whatever." Furthermore, this article provides that Colombia shall enjoy certain rights, which include:

First. Transit through the Canal of Colombian troops, materials of war, and ships of war, without paying charges to the United States.

Second. Exemption of charges on products of Colombian soil and industry, as well as mails, other than those to which the products and mails of the United States are subject.

Third. Exemption of Colombian citizens, crossing the Isthmus, from every toll, tax, or duty to which the citizens of the United States are not subject.

Fourth. Use of the Panama Railroad or any other railroad substituting therefor, in event of interruption of transit, for the transport of troops, materials of war, products, and mails of Colombia on the same basis as those of the United States.

In article II, the United States agreed to pay Colombia $25 million, which was done.

By article III, Colombia recognized Panama as an independent nation and agreed to conclude a treaty of peace and friendship and to establish regular diplomatic relations, all of which was accomplished together with a treaty agreement between the two countries as to their common boundary.

Thus, it is clear that Colombia not only has substantial rights with respect to the Canal, but also a treaty interest in the continued operation of the Panama Railroad, which is binding on the United States. As will be later shown, this treaty interest of Colombia in 1955 was overlooked or ignored in the formulation of the treaty between the United States and Panama of that year.

TREATY POWER UNDERMINES UNITED STATES AUTHORITY

With the passing of the years after opening the canal to traffic on August 15, 1914, the operation of the project became a matter of routine with decreased public interest and scrutiny in the United States and Colombia. In Panama, however, there developed determined efforts toward securing revision of major provisions in the treaty structure.

Thoughtful North American officials, stationed in the Canal Zone as early as 1931–32, recognized the dangers involved and expressed fear that such treaty revision might lead to the ultimate loss of exclusive control of the canal by the United States.

Not until 1936, however, was the first major step in this direction made with the signing of the Hull-Alfaro Treaty. This treaty, because of opposition in the Senate, was not proclaimed until July 27, 1939.

The Hull-Alfaro Treaty, unlike the 1903 treaty, was negotiated without authorization or direction by the Congress. It weakened the dike in the diplomatic setup of the Panama Canal, but without impairment of the fundamental principle of its exclusive sovereign control by the United States.

To understand better its important provisions, it should be borne in mind that, by the time of the 1936 treaty, Panamanian leaders felt, because of the 1914 treaty between the United States and Colombia, that their country's independence was secure. Thus, they sought and secured abrogation of the guarantee provision of the 1903 treaty together with the right of the United States to maintain order in the terminal cities. In addition, the 1936 treaty surrendered other important rights of the United States granted in the 1903 treaty, including the important right of the United States of eminent domain within the Republic of Panama for canal purposes, and raised the canal annuity from $250,000 to $430,000 to compensate for the devaluation of the gold dollar, all without consideration except of token character.

The crippling of United States accessory powers, however, did not stop there. After prolonged secret negotiations started in 1953, the process was advanced much further in the Eisenhower-Remon Treaty, proclaimed August 26, 1955, also negotiated without the authorization, direction, or suggestion by the Congress. This treaty gave to Panama additional valuable properties worth many millions and substantial rights, the latter including the authority of the United States to enforce sanitary ordinances in the terminal cities of Panama and Colon, which rights had been indispensable to building the canal. Moreover, the 1955 treaty increased the annuity by $1.5 million, from $430,000 specified in the 1936 treaty to $1,930,000.

The Congress, in implementing this treaty, did not accept the additional $1,500,000 as a charge on the Panama Canal enterprise but as foreign aid to Panama accorded by the Department of State as a diplomatic gesture. Thus, the annuity of $1,930,000 is now being carried as an item in the budget of that Department, with reimbursement for $430,000 of it to the Treasury, chargeable to the Panama Canal Company. This means that the annual cost of this diplomatic move ($1,500,000) is borne by U.S. taxpayers and not canal users, further illustrating the propensity of the State Department to give away tax money for purposes of political placation. What a paradox is thus presented and what a dangerous precedent for the future administration of the Panama Canal.

Because all the 1955 treaty benefits and surrenders to Panama were extended for no other than purely token considerations, their costs ultimately will have to be covered by either increased taxes or higher tolls. Furthermore, they have definitely weakened the police power of the United States in meeting its treaty responsibilities for the maintenance, operation, sanitation, and protection of the canal—a situation that might well prove fatal for the proper conduct of the canal enterprise in the future.

PANAMA RAILROAD LIQUIDATION NARROWLY AVERTED

One of the most objectionable features of the 1955 treaty was its surrender to Panama of valuable Panama Railroad property in the cities of Panama and Colon, even including the terminal freight yards and passenger station but excepting tracks in Colon necessary for Cristobal pier switching. Not only that, the treaty actually contemplated without the authority of the Congress the abandonment of the railroad itself, which, as shown previously, had been acquired with adequate compensation by the United States pursuant to both law and treaty. In addition, this move appears to have been taken with complete disregard or ignorance of the treaty rights of Colombia with respect to the Panama Railroad.

Apprised of the situation, congressional leaders intervened. An independent congressional inquiry[5] resulted in the reversal of the formal endeavor of the Directorate of the Panama Canal Company to liquidate the railroad—a congressional decision fully justified by subsequent operation of the railroad. This action, however, was too late to save the terminal facilities of this historic and strategic rail line.

Now where does this leave us? Because the treaty has no provision for replacement of the ceded facilities, we are going to have a trans-Isthmian railroad without its originally designed and adequate terminal yards and stations. Could there be anything more absurd, or more ominous for the future conduct of our Isthmian policies?

CANAL ZONE IS CONSTITUTIONAL TERRITORY OF THE UNITED STATES

The sustained surrenders of our Isthmian rights and prerogatives, designed for proper maintenance, operation, sanitation, and protection of the canal, extend beyond the limits of the Canal Zone into the very foundation of our constitutional form of government.

---

[4] FLOOD, "Panama Canal Zone: Constitutional Domain of the United States—Further Supplementary," CONGRESSIONAL RECORD, vol. 104, Apr. 2, 1958, lists many incidents of Isthmian turmoil.

[5] H. Rept. 2074, 84th Cong.

The acquisition of the Canal Zone and Panama Railroad was accomplished with adequate compensation pursuant to the Spooner Act of 1902 and the 1903 Hay-Bunau-Varilla Treaty. Constructed and subsequently managed according to laws enacted by the Congress, the canal enterprise symbolizes to the people of the United States the productive benefits to be derived from our system of government.

Long recognized as part of the "coastline of the United States," the Canal Zone is not an occupied territory,[6] as was once erroneously reported to the United Nations by our Department of State, but a portion of the constitutionally acquired territory of the United States.

BASIC ISTHMIAN POLICIES MUST BE REAFFIRMED

Unfortunately, the tragic surrenders culminating in the present Isthmian crisis represent a threat to our national power. In fact, the course pursued has resulted in the surrender without justification of our bargaining rights with Panama. It has created a situation that will require statesmanship of the highest order on the part of both Panama and the United States to correct.

In approaching this complicated task our leaders must realize that they are not dealing with a routine matter but one of transcendent importance for the indefinite future. History has shown that the canal question cannot safely be entrusted to minor negotiating officials of the executive departments alone but must be forthrightly faced by the Congress, which, as the ultimate authority, should reaffirm our canal policies in the light of all the basic considerations and realities involved.

The great lesson to be derived from a critical study of more than a century of experience in matters affecting security of transit, and the protection of the canal itself, is the imperative necessity for political stability on the isthmus, with no dilution or diminution of United States sovereignty and control over the Panama Canal enterprise.

The Starvation Diet

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks, I wish to present to the House of Representatives an editorial containing most valuable observations on the TVA which appeared in the Decatur Daily, Decatur, Ala., on January 4, 1959.

The editor of this newspaper, Mr. Barrett Shelton, is a distinguished journalist and an outstanding civic leader. Recently, he was elected president of the Associated Tennessee Valley Chambers of Commerce, and he is the author of this significant and thought-provoking editorial.

The editorial follows:

THE STARVATION DIET

Our old friends the private power interests and their new mouthpiece, the Chamber of Commerce of the United States, have almost succeeded in putting us on a starvation diet in the Tennessee Valley in the matter of electric power generation. The 5 million people who depend on the Tennessee Valley Authority for electricity to light and heat their homes could run into a power shortage in 1961.

Who says so? The board of directors of TVA in their annual report to President Eisenhower and the Congress.

Some salient points in the board's report: Even if Congress passes the TVA self-financing bill this spring the action won't add any new generating capacity in time to keep supply ahead of demand through 1961.

Studies are being made to see how much new capacity can be financed out of power revenues, the source of funds for adding new generating units since 1953.

Units now under construction will add 1,535,000 kilowatts to the system which are expected to provide a modest margin of capacity over requirements in the winter of 1959–60 and a slight margin in the winter of 1960–61.

This is the situation produced by the starvation diet provided for 5 million Americans in the Tennessee Valley by the Eisenhower administration the result of advice from the "fat cats" who surround President Eisenhower and who hate TVA with a purple passion.

This is the result of the continuing campaign of propaganda handed out by the private power companies to people all over this Nation. Certainly if any money invested in advertising ever paid off a hundredfold, this power company investment in propaganda has done just that.

It is no wonder that the business interests, as represented by the many individual chambers of commerce in the Tennessee Valley are rising up and will make themselves heard. We have been taken to the cleaners, given this starvation diet long enough, and the Nation in general is going to know about it and the U.S. Chamber of Commerce is already learning about it. We do not propose to kick over the traces and get out of the U.S. Chamber to do it, but rather we do propose to stay in that body and have our say over and over again to the end that TVA is not sold off nor starved to death.

There is a great future ahead for this valley, for the 5 million people who live and work and pay taxes in this valley, and we do not propose that any carefully planned, continuing campaign of hate against public power and distortion of facts concerning TVA and the people of this valley shall succeed.

Tax Equity for Disabled

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Howard A. Rusk, M. D., which appeared in the New York Times of November 10, 1957:

TAX EQUITY FOR DISABLED—AN ANALYSIS OF MEASURE TO PROVIDE ADDED EXEMPTIONS FOR HANDICAPPED

(By Howard A. Rusk, M.D.)

Two recent tax rulings reported in the press have properly shocked a great many people.

The first was the denial by the Federal Tax Court of a claim for the deduction of expenses for a specially equipped automobile used by a man paralyzed from polio in traveling to and from work. The second was a ruling by the Internal Revenue Service that the expenses of caring for a Seeing Eye dog, even when used in the conduct of business, may not be deducted.

As one of a number of letters sent to this writer said:

"Surely, our Government can't need tax money that badly."

The first case involved that of a paralyzed resident of Queens. He had claimed a deduction of $1,800 for his automobile, which is equipped with hand controls, for expenses "essential to production of income." The court, however, ruled that, despite his disability, "his expenses related to that automobile are, in essence, nothing more than a commuter's expenses, which are personal in nature, and, therefore, specifically not deductible."

In its ruling on the seeing-eye dog, the Internal Revenue Service quoted a similar situation in which deduction was not permitted for the cost of maintaining a hearing and as a business expense even though the taxpayer was a lawyer. It did rule, however, that the expenses of caring for a seeing-eye dog might be deducted as a medical expense rather than as a business expense.

But the catch here is that, whereas business expenses are totally deductible, only that portion of medical and dental expenses that exceeds 3 percent of adjusted gross income is deductible.

BILL WOULD PROVIDE RELIEF

For a number of years, various organizations have sought legislation providing tax relief for certain other disabled individuals, such as the annual exemption of $600 allowed the blind.

A bill to provide such relief is now before the House of Representatives. It was introduced by Representative EUGENE J. KEOGH, Democrat of Brooklyn, and bears the endorsement of a great many veteran, fraternal, and labor organizations. It would provide a disabled individual with an additional tax exemption of $600 annually and an additional $600 exemption for his spouse, and would include transportation costs to and from work by disabled persons as tax deductible business expenses.

It would seem there could be absolutely no argument against the last provision of Mr. KEOGH's proposals. Persons with physical disabilities practically always have extraordinary expenses in connection with the production of income. Many cannot use public transportation and must use taxicabs or have specially equipped automobiles. The recent case of the expenses of the seeing-eye dog and the prior ruling on hearing-aid maintenance for a lawyer are other examples.

To make these expenses tax deductible would be entirely consistent with basic income tax principles. These permit other categories of wage earners to deduct certain expenses that they incur as a necessary part of their income producing activities. This situation would be no different than that of the salesman who deducts entertainment expenses or the physician who deducts the cost of operating his car on professional calls.

INCENTIVE TO EMPLOYMENT

There is also little doubt that such a ruling would motivate certain disabled persons to seek employment. This writer knows personally of numerous instances in which disabled persons, having been placed in employment after rehabilitation, actually have less net income after their travel costs to and from employment than when they received public assistance prior to rehabilitation. It is difficult to motivate a person to work if by so doing he loses money.

The other provision of the Keogh bill—the annual exemption of $600 each for the disabled person and his spouse—is designed to aid those with extraordinary expenses that are incurred because of disability but that are not related to the production of income.

For example, not all costs incurred in the purchase and maintenance of orthopedic and prosthetic devices are completely deductible under the medical deductions provisions of the law. Wheelchairs used by active disabled persons require repairs and maintenance. Many disabled persons require custom-made clothing or alterations on clothing. Clothing of persons using orthopedic and prosthetic appliances is subjected to unusual wear.

Some disabled persons must, of necessity, live in ground-floor apartments, which command higher rentals. Others must invest in ramps and special household equipment. The severely disabled person cannot climb to the balcony; he must pay the higher cost of orchestra seats at the theater or a concert.

These are little things. But they loom large in the budget of the disabled persons when they come up 365 days a year.

The proposed additional $600 exemption for the physically disabled would be more difficult to administer than that which now exists for the blind. In the case of blindness, there are accurate measurements to determine if an individual is legally blind.

There are, however, no similar easily applied objective yardsticks to measure functional capacity in other types of disabling conditions. This must be based on the clinical opinion of a physician. Admittedly, there might be some abuses of the proposal, but evidently the medical society of the State of New York thinks they would be minimal, for it has endorsed Mr. KEOGH's bill. In any event, the moral and practical values would far outweigh possible limited abuses.

One of the first matters before the Congress when it reconvenes is hearings on our tax structure, including treatment of the physically handicapped. These will begin on January 7.

The treatment the physically handicapped ask is not favoritism or special treatment. All they want is equity and parity.

VFW Resolution Opposing Cut in Veterans' Benefits

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and a resolution with respect to reduction of veterans' benefits:

ANTHRACITE COUNTIES COUNCIL,
VETERANS OF FOREIGN WARS OF U.S.A.,
DEPARTMENT OF PENNSYLVANIA,
December 12, 1958.

Hon. DANIEL J. FLOOD,
Congressman, 11th Congressional District, Wilkes-Barre, Pa.

DEAR MR. FLOOD: This has reference to the regular monthly meeting of the Anthracite Counties Council, Veterans of Foreign Wars, comprised of the 10th and 11th Pennsylvania Districts of Luzerne, Lackawanna, and Wayne Counties, held at the Nescopeck Memorial VFW Post 8227, on Sunday, December 7, 1958, with Comdr. William J. Lester presiding.

At that meeting this council adopted a resolution, which will be acted upon by our VFW council of administration of Pennsylvania, relative to vigorously opposing the proposed action of the Bureau of the Budget in Washington with regard to making recommendations, to be presented to the 86th Congress, in cutting of veterans' benefits in order to balance the budget.

The council also went on record to transmit a copy of subject resolution, a copy of which is attached, to the two Pennsylvania U.S. Senators along with Congressmen in the council area and three times past commander in chief of the VFW, JAMES E. VAN ZANDT, Congressman from Altoona, Pa.

The action of this council was prompted as a result of an address by you on Veterans Day at the Captain Christian S. Stegmaier, VFW Post No. 50, advising that the Bureau of the Budget in Washington is contemplating making proposals to Congress, to severely cut veterans' benefits. This along with the council's action has been evidenced by newspaper clippings of the Wilkes-Barre Record appearing on attached document.

* * * * *

It would be greatly appreciated if you would have subject resolution, along with letter of appreciation under signature of district 11, VFW, Com. John Radko, included in the CONGRESSIONAL RECORD when Congress convenes in January 1959. I would also appreciate 50 copies if and when same is made a matter of record for distribution throughout our council, department, and national headquarters.

Contacts are being made with other veterans organizations urging that they unite with us in counteracting any adverse moves which might materialize in having a demoralizing and financial effect upon the veteran.

On behalf of the council delegates I wish to extend my sincerest appreciation for your advice in your message at Post No. 50 and also the stand that you have already taken in connection with this matter.

Your comments on subject matter will be sincerely appreciated.

Sincerely,

ANTHONY A. FORLENZA,
Senior Vice Commander, Anthracite Counties Council, VFW, Pittston, Pa.

ANTHRACITE COUNTIES COUNCIL, VFW
RESOLUTION

Whereas in accordance with an address to veterans at a Veterans Day program, held on Veterans Day, November 11, 1958, at the Capt. Christian E. Stegmaier, VFW Post No. 50, Wilkes-Barre, Pa., by the Honorable DANIEL J. FLOOD, Congressman of the 11th Congressional District of Luzerne County, Pa., the Bureau of the Budget in Washington is contemplating making recommendations to severely cut veterans' benefits in order to balance the Federal budget. It is expected that the administration in Washington will pressent these proposals to cut back the veterans program, on a broad front, at the next session of Congress convening in January 1959;

Whereas it is anticipated that the administration in Washington when presenting these recommendations to cut veterans' benefits to the 86th Congress that veterans housing, VA hospital services, deduction of pensions from social security benefits, and proposing small lump payments for service-connected disabilities and many other phases of the veterans program benefiting the veteran, will be affected if Congress accepts these proposals;

Whereas if Congress accepts proposals to cut back any veterans aid it will result in having a demoralizing and financial effect upon the veteran, his family and/or dependents. Many veterans are now facing a period of crisis both financially and economically in order to maintain a standard of living that should be accorded to every American citizen. If benefits are cut as contemplated, then the veteran will have a more serious crisis to face in order to make ends meet;

Whereas, mitigated by war time service, deserving veterans benefits should preclude any attempt at economies on a Bureau of the Budget school of thought;

Whereas America's one-time heralded heroes are now being sacrificed on the altar of economy in order that optimum budgetary functional responsibilities can be effected toward overseas and domestic entities: Now, therefore, it shall be

Resolved, At this meeting of the Anthracite Counties Council, Veterans of Foreign Wars, comprised of the 10th and 11th Pennsylvania districts of Luzerne, Lackawanna, and Wayne Counties, held at the Nescopeck Memorial, VFW Post 8227, on Sunday, December 7, 1958, that this council has gone on record vigorously opposing any adverse moves by the administration in Washington during the 86th Congress to cut back veterans' benefits, should such moves materialize same will have a financial and demoralizing effect upon the veteran, his family and/or dependent; it is further

Resolved, A special committee of the council VFW will make personal appearances at other district meetings of veterans' organizations urging united support to counteract and adverse moves by the administration. Copy of subject resolution will be directed to all Pennsylvania VFW district commanders, urging that they contact their Federal legislators and unite with this council in opposing cutback of veterans' benefits; be it further

Resolved, Copy of subject resolution will be directed to U.S. Senator JOSEPH S. CLARK and U.S. Senator-elect HUGH SCOTT; copy to Congressman DANIEL J. FLOOD, 11th Congressional District of Luzerne County, and Congressman-elect STANLEY A. PROKOP, 10th Congressional District, along with Congressman JAMES E. VAN ZANDT, of Altoona, Pa., three times past commander in chief of the VFW, urging that they exercise their vested authority to preclude any proposed actions that might materalize in adversely affecting veterans' benefits: Be it further

Resolved, If moneys are required to balance the Federal budget during the next fiscal year, close scrutiny of existing and contemplated requirements of monetary dole could and would suffice for realizing a balanced budget.

John R. Humphreys, Adjutant, Anthracite Counties Council, VFW; Najid Saadi, Junior Vice Commander, Anthracite Counties Council, VFW; John Radko, Commander, District 11, VFW; Harold Ulrich, Past Commander, Anthracite Counties Council; Robert Davis, Chief of Staff, Department of Pennsylvania, VFW; John Sincavage, Trustee, District 11, VFW; William J. Lester, Commander, Anthracite Counties Council, VFW; Anthony A. Forlenza, Senior Vice Commander, Anthracite Counties Council, VFW; James Gallagher, Commander, District 10, VFW; John J. Lane, Past Commander, District 11, VFW; Harry Wilkie, Sr., Commander, Kingston, VFW Post 283.

Appendix

The Leadership of Senator Lyndon B. Johnson, of Texas

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. HUMPHREY. Mr. President, we Democrats have long been proud of the high quality of our congressional leadership.

It has been constructive and responsible. It has been statesmanlike and forward-looking. It has been leadership of both vision and effectiveness.

As one member of the majority, I am proud at all times to be enrolled in the ranks led by the Senator from Texas. We may disagree upon occasion. But the occasions are few and they do not detract from the high standards of his leadership.

On January 7 the Democrats met to organize for this session. Upon that occasion, the Senator from Texas delivered an address which expressed the very highest aspirations of the American people.

Senator JOHNSON talked of peace; of our vibrant, growing, expanding country; of the problems we face—problems which are also opportunities. It was a speech of optimism; of confidence; of strength.

Mr. President, I ask unanimous consent that this able address by the Senate Democratic leader be printed in the RECORD as a part of my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF REMARKS BY JOHNSON TO SENATE DEMOCRATS

We start today a new year and a new Congress.

We have met now to transact the necessary business of our party, but I feel it would be inappropriate to proceed without acknowledging the context in which we assemble.

For us, this is the starting of a new era.

We have been given great strength. In all the long history of the Senate, never has one party won so many seats at a single election as we have won. For this, we are grateful—and certainly we are proud. Yet, we realize that our strength has never been, and is not now, the strength of numbers.

Our strength is what we are, and what we prove ourselves to be. What we hold we have earned. What we keep will be no more than what we deserve.

That is our special challenge.

Our strength will be deserving in proportion as we use it for the interests of all. By this standard, we have won the public trust; by this means, we shall honor the trust we have won.

JOHNSON SEES NEW ERA

New strength has brought us to a new era. Yet, as we note this, we cannot fail to note that this is, in much the same terms, the beginning now of a new era for our Nation, for the world, and for all humankind.

Our Nation is at the edge of what can clearly be its greatest age of expansion, growth, and abundance. Among the nations of the earth, we see emerging the first beginnings of a new age. Our times are yielding daily new capabilities for man.

The capabilities of government must keep pace with the capabilities of the people it serves. For this we know with certainty. There is no expense of government more costly or more intolerable than the burden of laggard government.

That is the work to which we come.

It is our purpose to fashion greater capabilities for our Government from the growing capabilities of man.

As Americans, not as partisans, we must acknowledge this reality: The capabilities of our Nation and its people are, in many vital areas, now outrunning the capabilities of our Government.

There is between the people and their Government a deficit of vigor, a deficit of confidence, and a deficit of will.

Prudence requires that we bring these books into balance.

To do so, we must seek the cause rather than tilt at the symptom. The faults of men and the failings of the system must not be confused. The one will pass; the other must be removed.

Government, if it is to serve at all, must serve the future—not the present alone, and most certainly not the past.

Today the future is already the controlling fact of these times—and of the decisions we take here.

The advent of a 200 million population, a $500 billion national income, a trillion dollar economy are all near at hand.

THE PAST IS SERVED

Throughout our system, conservative men are already working with these facts.

Yet where men are responding to this future, their Government is not. The past is served—at penalty to the present and at the danger of default to the future.

It is against this danger of default that we must work.

Responsible government is responsive government. Our urgent duty—and our special opportunity—is to undertake the labors necessary to make the Government of our land responsive to the potential and the promise of the future.

What we can do now is subject to certain limits.

We have been given great strength, but not overriding strength. The executive arm of National Government remains under control of another party.

We have—by our majority here—an obligation to lead. We do not have authority to command. We have powers to advise and consent. We do not have powers to implement and accomplish.

These facts we appreciate, yet they do not matter for much beyond the confines of the Senate.

Our mandate is a mandate for confident and creative and constructive leadership—beginning now, not 2 years hence.

We shall honor the mandate.

Our opportunity—the great opportunity of this Senate—is to marshal the considerable resources of inquiry of the legislative branch to the task of defining for America new goals for the many new capabilities of its people, its economy, its technology and its national will.

We are clearly moving to a new age—an age of new standards, new accomplishments, and new potentials.

Against the promise of this new age, American industry and business is now pouring fourth billions in research to discover new capabilities.

Government, though, is moving hardly at all.

Research is under way on instruments of national security but, beyond that, little is being done. Great minds of the Nation are not being mobilized to the challenges of self-government by free men. The intellect of the Nation is not being used where it is most needed. Thus failing imperils us, fully as much, I believe, as would a failure to pursue research in the more obvious realms of national security.

I speak only for myself, of course, but I believe this. I believe that we should, through the resources available to us in the legislative branch, undertake the rewarding work of turning our land into the campus of the West.

We are working with the future. We are working with a new dimension—the most challenging men have ever faced.

If we are to be competent even for the routine of tomorrow, we shall need vision in our preparations—and we shall need both boldness and freshness.

We do not have it now.

It is the indictment of those who presently hold the responsibility of the action arm of our leadership that in dynamic times they have exalted—and still exalt—the static.

Free men can afford much. They can never afford the price of inertia.

Today we must face this fact: We have led the free world through a time of sickness and convalescence, but we are faced now with a well and vital world. The test of our national character and capacity will be our ability to lead a well world by our vigor and purpose as we have led a sick world by our wealth and compassion.

We need new ideas in many fields. We need to forge new tools of government.

Our controls over the monetary system are now two world wars old.

Our budget processes were formed in another day.

Our tax structure is obsolescent.

Our Government is dedicated, in many areas, to programs for which the purpose is no longer pertinent.

If we are not to default the integrity of our free enterprise system, we must concentrate vigorous effort on its future—rather than hold to easy concepts of its past.

We must not surrender to inflation.

We must not surrender to poverty.

We must not surrender to educational blight or medical mediocrity or social depression in any field of our society.

We must not abandon regions or cities or classes or ages to despair.

We must not allow the obsolescence of our ideas to foredoom vital segments of our enterprise.

We must not allow ourselves to forfeit the goals of equal standards of freedom, opportunity, and equality for want of boldness.

We certainly must not abdicate progress to the rule of tension and strife.

In a world reborn—facing the new youth of a new age and a new dimension of space—we must certainly not default the leadership of vigor to the totalitarians.

THE FIRST CONCERN

Fiscal solvency concerns us all. It is a first concern, for no course is honest without the courage of financial prudence. But we cannot afford to bankrupt the national conscience to serve the ends of political bookkeeping.

Moral integrity, as well as fiscal integrity, requires that we acknowledge deficits of will and deficits of effort and undertake a united search for responsible solutions to the problems of our times.

We, here in the Senate, have within the powers open to us under the Constitution a great opportunity to reach out across the land—into the universities and colleges, into private business, into labor, the professions, all walks of our national life—and ask great minds to come here to help us seek and search.

We can reach beyond our shores—to all the Western World and especially to our neighbor republics of this hemisphere—and ask others to share this labor with us.

We can bring men together to explore tomorrow's horizons for our land, our hemisphere, and the world.

From such explorations, we will find the facts and from the ideas with which we shall work the next decade to make government responsive to the potential of the future.

The world is in a race today that is more likely to be won by minds than missiles. We neglect this at our peril.

There is much that we must do and shall do in this session, yet, for our work, we do not come with a checklist in hand to attend only the pressing problems of the present.

We are—as are the people who sent us here—looking to the future.

We know that we shall win respect by our vision, not by our vendettas; by courage, not by carping.

Our first responsibility is responsibility itself.

The era is new. The promise is new. We work with new and growing capabilities. Yet our purpose remains unchanged. Always our party has been the party of confident men and we have drawn our strength from young and confident regions of a young and confident land.

Today there is a new youth and zest and confidence across all our land and we, in consequence, find ourselves here now as party of all the Nation.

New strength is ours. With that new strength we shall—by resonsibility service—add strength to our Nation, our world, and our times.

The Objectives of International Communism Never Change

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, January 12, 1959

Mr. BUTLER. Mr. President, "The American people must not be fooled into thinking that Communists have changed their long-range ambition for world domination or embraced the cause of peace." In the light of Soviet Russia's recently accelerated activities on the political, scientific, and psychological warfare fronts, this admonition was contained in an inspiring address by the Honorable J. Sinclair Armstrong, Assistant Secretary of the Navy—Financial Management—which he delivered on November 25, 1958, to a joint meeting of the Rotary and Kiwanis Clubs in Baltimore. Secretary Armstrong's speech was so outstanding that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY J. SINCLAIR ARMSTONG, ASSISTANT SECRETARY OF THE NAVY (FINANCIAL MANAGEMENT), AT THE ROTARY-KIWANIS LUNCHEON, BALTIMORE, MD., NOVEMBER 25, 1958

It is a great pleasure for me to be in Baltimore today with these Rotary and Kiwanis organizations. I am particularly honored to be with you under the auspices of your distinguished senior Senator and my friend of many years, JOHN MARSHALL BUTLER, who has rendered outstanding service to the people of Maryland and of our country during his service in the U.S. Senate.

I would like to talk briefly this afternoon about some current aspects of national defense.

I propose to speak about problems which we as a nation face in dealing with the implacable and hostile forces of international communism.

To put this in historical perspective, let me turn back the clock for a moment and review briefly our U.S. national policies and aspirations during the past 40 or so years.

It has been a fact that the United States, in all of our international relations, has had as a fundamental purpose the attainment of freedom and justice for our country and all other peoples. In pursuing this fundamental objective of freedom and justice, our policy has been to maintain peace, not to wage war.

For we have believed that the best way to solve international problems is through the maintenance of peace rather than the waging of war. Never during the past 40 years and more have we ever willingly started a war. Each time we have participated in a war it has been because there was no other way by which the United States could proceed toward our purpose of establishing conditions of liberty and justice.

For example, the United States entered World War I not to accomplish any territorial gain, not to accomplish any economic domination of other people, not to secure any commercial or industrial advantage, but solely for the purpose of protecting countries whose peoples were devoted to the ideals of liberty and justice from domination by an aggressive military-minded empire.

We entered World War I with the highest ideals for which any country in modern times has gone to war. They were later expressed in President Woodrow Wilson's famous 14 points. Although the 14 points were not accomplished at the peace table at Versailles in 1919, they remain an enduring tribute to America's aspirations for freedom and justice for the peoples of all countries, small as well as large.

Twenty-three years later, because the free world was at bay and we were most grievously attacked at Pearl Harbor, on December 7, 1941, our country once more took up arms for freedom. After great efforts and great sacrifice in which our country's men and women, young and old, were mobilized either in uniform or in the tremendous war production effort at home, in which our military forces were deployed all over the globe, we succeeded by force of arms in defeating the forces of darkness and tyranny which had been almost at the point of engulfing the free world.

After the surrenders in April and August, 1945, of the Nazi-German and the Japanese Axis Governments our country again participated in strong and idealistic efforts to establish world peace. We laid down our arms. We demobilized our forces. We placed the support of our country behind the new world organization, the United Nations.

Unfortunately, once again the forces of darkness and tyranny arose, and within the space of only 5 years. By 1950 the Communists of Korea, aided and abetted by the Soviet Union, commenced overt aggression against one of Asia's free nations, the Republic of Korea. The Chinese Communists joined in. So once more our country mobilized and, under United Nation's auspices, fought to prevent the Communist conspiracy from overrunning a friendly and responsible free people. This war was brought to a successful end in 1953, after 2 long years of truce talks, because it appeared to the Communists that our intervention and determination made it impossible for them to overrun Korea. The one language Communists understand and respect is strength.

What are the problems we face today as a nation and how do they affect our national defense responsibilities? We are living in most dangerous times. Five years after the end of the Korean war, the danger is far greater than in other times. We face not just a military threat, but also a psychological attack. The force of Communist arms is no longer the only danger. The struggle of mankind toward a fuller life in freedom and liberty has assumed new dimensions. Free men today are being assailed by the Communist movement in the realm of ideas and ideals. Front-lines today are in the hearts and minds of men and women, and school children, not just on battlefields.

The insidious influences of communism seek to weaken the free will of people, to strike fear into their hearts, to undermine their moral fiber and their ability to tell the difference between right and wrong, truth and falsehood, justice and tyranny. Communism represents a danger to our philosophy and to our moral convictions about the basic institutions of our country. Worst of all, communism seeks to take away men's confidence in themselves and in their ability to see and do the right.

The Communist conspiracy has assumed tremendous world significance. No free country, least of all the United States, can afford to relax in the face of the menace of international communism.

Communists have been extraordinarily busy and at times successful snuffing out men's aspirations for freedom with the most ruthless suppression. Hungary is a recent example. And long after the brutal Soviet suppression of the Budapest uprising in November 1956, the subsequent execution, indeed the indefensible murder, of Premier Imre Nagy, despite a safe-conduct pledge to the Yugoslav Embassy, shocked the free world.

Recently the free world has been watching the Soviets draw the rope tightly around their Nobel prize author, Boris Pasternak, who dared to tell some ugly facts about Communist society.

Is it ever to be expected that the Communists will accord basic human rights and freedoms to the pepole whom they now dominate, and to the peoples the world over who are still free but whom they aspire to dominate? I think not.

Indeed the world well knows, and the Soviet Union recognizes, that the United States

stands as the great bulwark in the cause of human freedom. We are the one power in the world capable of preventing communism and its attendant slavery from engulfing the world. In this we have a great responsibility an done which we have borne manfully in the past 5 years.

In order to combat communism, in order to protect the security of our country, in order to assist other free countries in preserving their own freedom against aggression, we maintain strong United States military forces today. For after 1953, when we brought the Korean war to a conclusion, our country recognized that we must remain militarily strong.

We have kept over 2½ million men under arms. We have forged the greatest retaliatory capability against Communist nuclear attack which the world has ever known, through our Strategic Air Command. We have maintained strong, modern ground forces in our Army. We have maintained, over the seas of the world, great naval and marine forces, silent, mobile, ready and at all times capable of assuring freedom of the seas and being in trouble spots when our national policy dictates their so doing to protect American interests and fulfill our obligations to other free countries. We have participated with other free countries in forging alliances like NATO to protect free Europe, and SRATO to protect southeast Asia. Most important of all, we have lent our full power and influence to support the United Nations in the never-ceasing search for peaceful solutions of international problems.

We have succeeded in avoiding military conflict during the years of Communist-inspired tension since the Korean war ended. No American soldiers, sailors or airmen have been in battle. And in several important instances, as in Lebanon last summer and the Taiwan Straits in recent months, by showing our strength and resoltuion we have also succeeded in our efforts to assure the protection of friendly free nations against naked, brutal Communist aggression. Our resolution and strength, brilliantly shown in the Mediterranean and the western Pacific, have helped preserve peace.

For this past summer and fall the Communists have been testing our resolution and fortitude on two sides of the globe almost simultaneously. We can take great pride and have confidence for the future when we think that our standing up and facing dangerous consequences resulted in the preservation of nations of the free world which otherwise might have fallen prey to subversion and to direct aggression.

But we cannot rest on our laurels. We must not let down our guard. We must look to the future. We must seize our opportunities and at the same time recognize the dangers we face. We must be aware that the Communists are artful and clever in their use of psychological warfare, as well as their use of subversion and military aggression. We must recognize that each individual man, woman, and child is a target for Communist intrigue.

It is tremendously important that we ourselves recognize and resist the psychological pressures which the Communists will apply in months ahead, and the methods they use. How do the Communists apply psychological pressures?

It is not unusual for the Communists, with much fanfare, to broadcast blandishments to the world about the allegedly provocative nature of United States military strength. These blandishments they follow up with unenforceable and unsatisfactory proposals for disarmament or demobilization. Then, by their own acts of aggression or subversion, they create crises in which the armed power of the United States must be displayed for our own security, and for the security of our friends and allies.

Sometimes an incident of aggression is followed by an offer to confer or negotiate, noisily announced all over the world. A conference or negotiation in turn may be followed by some other aggressive maneuver. Cammunist propaganda is applied so as to bring pressure in any discussions and conferences that do occur so that the settlements arrived at will be as favorable as possible to them.

Let me illustrate just how the Communists skillfully interweave propaganda with negotiations and with the crises they create, all to serve their own best ends.

Let us look at the negotiations presently going on in Geneva on technical means to guard against surprise attack. Last March the Soviets complained against the flight procedures of our Strategic Air Command, alleging falsely that they represent a threat to the U.S.S.R. So the United States proposed in the United Nations Security Council the establishment of an Arctic inspection system against a surprise attack. This the Soviets vetoed.

Then we proposed a conference to cover technical measures of preventing surprise attack. Now at Geneva our delegation has faced political demands that our strategic bases abroad be abandoned and that our Arctic reconnaissance flights stop. Mr. Khrushchev has bitterly denounced our 6th Fleet in the Mediterranean.

This twisting of facts must be resisted by our people. Our forces abroad, our bases and our fleets, are there for one reason and one only, to secure the United States and our allies against attack. We cannot let the world believe that we maintain bases and forces abroad out of any desire on our part to attack anyone. We don't. Our forces are defensive in purpose. Yet the whole burden of Soviet propaganda, as these conferences in Geneva go on, is to attempt to show that our defensive bases and forces constitute a threat to them.

A second example of skillful Communist mixture of propaganda, crisis and conference is the Soviet handling before world public opinion of the question of the cessation of nuclear testing. Six months ago the Soviet Union announced that they were unilaterally stopping tests and challenged the United States to do the same. We replied, as we have consistently maintained when we offered the atomic secrets to the world in 1946, that we cannot do so unless an inspection system is established which will guarantee the world against one party violating the agreement. So all summer long, the Soviet propaganda mill beat out the false story that the United States was standing out against mankind's aspirations against nuclear war. Then, as we were forced to show our armed strength in the crises they created in Lebanon and Taiwan, they argued to the world that we were aggressors. We agreed to a conference on suspension of nuclear testing and agreed to stop our own tests when the conference began, on October 31. Yet by tragic and inhuman defiance of the hopes of mankind, secretly, in early November, after the conference began, the Soviets themselves once again began nuclear testing.

While these conferences on technical means of guarding against surprise attack and on cessation of nuclear tests have been going on at Geneva, during the past week the Soviets have again applied pressure, as they did 10 years ago, on one of the nerve centers of the free world, Berlin. The Soviets well recognize the importance of our "showpiece" in West Berlin. They recognize West Berlin's effect on the subjugated peoples of East Germany. They recognize the unfavorable comparison of the Communist system in Eastern Europe in the satellite countries to conditions in West Berlin, where those who live under free world auspices have achieved far higher standards of economic and human freedom. They also recognize Berlin as a place where they can apply pressure against basic policies affecting the security of the United States and our allies. So, whatever emerges in the difficult days that lie ahead in this Soviet-manufactured Berlin crisis, we must always remember that it is part of an overall Soviet purpose and plan. For the Communists remain highly flexible in their use of every possible device to achieve their ends, and their policies combine the skillful combination of crisis, propaganda, and conference—all for their own Communist aims.

The American people must not be fooled into thinking that Communists have changed their long range ambition for world domination or embraced the cause of peace. They have not, and to think so would be a dangerous delusion on our part. Indeed, the free world must win the psychological battles just as surely as we must win any military engagement. The Communist aim is world domination. This we must resist, in whatever way it appears. And we must prepare ourselves, in our own hearts and minds, to bear the struggle that lies ahead.

As our country looks into the future, looks to the negotiations, the propaganda, the pressures, the shooting that will undoubtedly from time to time be brought to bear upon the free world by the Communist world, we must have strength, courage and fortitude. We must not be fooled by the Communists, and we must not give in to them.

We must show potential aggressors that they cannot expect to win.

We in the Navy have always remembered Theodore Roosevelt, who sent the Great White Fleet around the world in 1907 and first impressed the world that the United States had become a world power and leader. A few weeks ago we celebrated Theodore Roosevelts hundredth birthday. I have often thought that he described our own personal responsibility for preserving our own freedom when he wrote this: "We, here in America, hold in our hands the hope of the world, the fate of the coming years; and shame and disgrace will be ours if in our eyes the light of high resolve is dimmed, if we trail in the dust the golden hopes of men."

So we must dedicate ourselves to the principles of liberty, justice, and love of country through which alone mankind can rise to achieve our highest human aspirations.

The Debt Limit Is Meaningless

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Why Debt Limits If They Are Not Observed?" published in the Freemont County Chronicle-News, of St. Anthony, Idaho.

The editorial, which was written by Harry N. Beall, publisher of the Chronicle-News, points out a pugent economic fact which today our Government seems to be ignoring. It cites figures to show that in only 13 years the average American's Federal taxes have almost doubled, and that one-third of his workday is spent simply creating revenue for a profligate Government.

I should like to suggest that my colleagues read this thoughtful editorial,

because I believe it strikes at the heart of our Nation's greatest peril today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY DEBT LIMITS IF THEY ARE NOT OBSERVED?

There can be no other conclusion but that the debt limits set by Congress for our Nation are nothing but a stupid farce.

They are not being observed and apparently will not be observed. A long time ago a thoughtful Congress set a maximum which it felt the public debt must not be allowed to exceed because of the obvious danger to our economy.

That figure was reached. Did the Congress quit spending and attempt to hold the public debt within bounds? No, it simply increased the debt limit. Having done it once, it was easy to do again. Now the policy is simply to set a debt limit, pay it no mind, and raise it whenever it is reached. If memory serves, it was raised twice in recent months and now it is at $288 billion. It isn't necessary to remember the exact figure—it will be raised again shortly.

All of which is dangerously stupid. If a debt limit is necessary—and surely it is—then it must be observed. In peacetime, in fact, if we cannot live within our income and pay back a little against that great indebtedness, what sort of a future can we expect but runaway inflation, a 10-cent or a 1-cent dollar and ultimate bankruptcy—with communism ever ready to move in and take over a government we haven't sense enough to keep afloat.

The figures are frightening. Our population is increasing very rapidly—more rapidly than at any time in our history. Yet the per capita Federal debt has increased heavily. Again—in 1946 Federal taxes were $284 per capita, just after the war. Today in peace, with many millions greater population in the country in which to spread the load, the per capita tax figure is estimated at $451.

Another example of the runaway power of taxes is that despite inflation and an ever increasing national product, taxes take a higher and higher percentage of that product—not just more money each year. In 1939 taxes took 17½ percent of a national product of $83 billion. In 1946 they took 25 percent of a national product of $200 billion. And in 1957 the took 28 percent of the national product of $402½ billion.

The average man works 2½ hours of each 8-hour day just to pay his taxes—putting out far more effort for that than he does for his family's food, housing or clothing. It's time he insisted that the Congress set a debt limit and keep that limit, that it holds taxes from going higher and begins to pay off indebtedness, and that it finds and follows a financial program that will preserve instead of wreck this economy of ours.

Senator Johnson's Strategy

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Senator JOHNSON'S Strategy," published in the New York Times of January 12, 1959.

The New York Times is admittedly the greatest newspaper in this country, and probably the greatest newspaper in the world. It is a conservative newspaper. It is a moderate newspaper. It is a middle-of-the-road newspaper, but it is also an honest newspaper, and it analyzes the measures before Congress with keenness and with a balanced view.

I invite the attention of the Senate and the country to the concluding paragraphs of this editorial, dealing with the motions which will shortly be before this body, and dealing with the strategy of the majority leader in seeking to get his proposal through. The New York Times editorial reads in part as follows:

But this week there will be a test that should separate those who believe in majority decisions from those who do not. Senator JOHNSON'S own proposal for amending rule XXII, the closure provision, does three things: (1) It says that two-thirds of the Senators voting, instead of two-thirds of all the Senators, may order closure; (2) it repeals the clause that exempts a rule change from closure; (3) it states that the Senate is a continuing body and thus need not adopt new rules at the beginning of a session.

What this compromise adds up to this year and this session is that the minority opponents of civil rights legislation can talk the majority to death. The intent is not to debate or to educate, but to frustrate the will of the majority. Senator JOHNSON knows this. He sanctions it, apparently, because he thinks it is worthwhile to keep the Democratic Party intact at the price of letting a minority veto its program.

This may be good strategy this year and this session. We believe it will turn out to be bad strategy in the long run. The Democratic sweep last fall was a liberal victory. Senator JOHNSON'S strategy may drive multitudes of independent voters back into what is admittedly at this moment a disorganized and discouraged Republican Party.

I commend the entire editorial, and particularly its concluding paragraphs, to the attention of all Senators, on both sides of the aisle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR JOHNSON'S STRATEGY

The strategy by which Senate Majority Leader LYNDON B. JOHNSON, of Texas, is laboring to retain the filibuster as an instrument of Government has won admiration from the experts. Senator JOHNSON last week not only rounded up the expected goats but also some of the sheep against the Anderson proposal to reopen the Senate rules. He even roped in the two brandnew Senators from Alaska, whose records indicate they would go with the liberals on most questions.

This victory over Senator ANDERSON and his friends might be due in part to the belief of some Senators that it would be a dangerous precedent to start each session with a new wrangle over the entire set of rules. The belief may be right or it may be wrong—the House of Representatives, which renews its youth every 2 years, usually makes a routine job of adopting the same old rules.

But this week there will be a test that should separate those who believe in majority decisions from those who do not. Senator JOHNSON'S own proposal for amending rule XXII, the closure provision, does three things: (1) It says that two-thirds of the Senators voting, instead of two-thirds of all the Senators, may order closure; (2) it repeals the clause that exempts a rule change from closure; (3) it states that the Senate is a continuing body and thus need not adopt new rules at the beginning of a session.

What this compromise adds up to this year and this session is that the minority opponents of civil rights legislation can talk the majority to death. The intent is not to debate or to educate but to frustrate the will of the majority. Senator JOHNSON knows this. He sanctions it, apparently, because he thinks it is worthwhile to keep the Democratic Party intact at the price of letting a minority veto its program.

This may be good strategy this year and this session. We believe it will turn out to be bad strategy in the long run. The Democratic sweep last fall was a liberal victory. Senator JOHNSON'S strategy may drive multitudes of independent voters back into what is admittedly at this moment a disorganized and discouraged Republican Party.

Naval Air Overhaul and Repair Station, Corpus Christi, Tex., Shutdown Should Be Reconsidered in Fairness to All

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. YARBOROUGH. Mr. President, we are all aware that the Republican administration is so wedded to the idea of government by budgetary ledger sheets that it seems willing to jeopardize the Nation's security. This is not my belief alone. It is the firm feeling of a great number of people who have considered the matter carefully.

Certainly, national security permitting, I am as desirous as anyone of securing a balanced budget. But I believe it is very foolhardy and governmentally irresponsible to set out to balance the budget at all costs, and particularly at the costs of the security of America.

Recently this administration, exercising pressure through the Department of the Navy, arbitrarily ordered the firing of 3,200 skilled workers, and the shutdown of the overhaul and repair facilities at the Corpus Christi Naval Air Station. I say arbitrarily because the Congress, after due investigation, appropriated funds for the continued operation of this facility, believing it to be a necessary part of our defense effort.

Mr. President, the Navy, under pressure from the budget department of the administration, saw fit to totally disregard the consequences to a whole city and area by this budgetary move. It does not matter to the Budget Bureau and the administration that thousands of people are in jeopardy of losing their homes by government decree. It does not matter to the administration and the Budget Bureau that many small businesses in Corpus Christi may be bankrupt by this Government order.

This step was taken in the name of economy and efficiency, but there is a great deal of evidence that the opposite is the case. Upon closing down this facility, the Navy must ship much of the equipment and all of the work being done at Corpus Christi to Pensacola, Fla. Does it sound very efficient to ship airplane engines and other parts all the way to Florida for overhaul and repairs? It certainly does not. It is likely, indeed,

that shipping costs alone would eat up any economy in such a plan.

Mr. President, so far as I have been able to determine, and I am studying the matter quite closely, the only reasonable way to fairly and efficiently cut down overhaul and repair operations would be to decrease proportionately the operations at all nine of the Navy overhaul and repair facilities across the country. This would be, I believe, the just move and the efficient move.

A large number of individuals and organizations have been studying this matter and have communicated to me their findings.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD these remarks and the following:

A news story from the Corpus Christi Caller-Times of January 6, 1959, under the heading "Over 1,500 Hear Report on Fight To Keep Overhaul and Repair Here."

A letter from Mr. Bob Conwell, chairman of the public and business affairs committee of the Six Points Kiwanis Club, at Corpus Christi, Tex., and the text of a resolution adopted by that organization.

A resolution adopted on December 31, 1958, by the Gragg-Sherrill Post 248, of the American Legion, and a letter from the Corpus Christi Masters and Foremen's Association, by its secretary, Mr. William R. Tobe, dated December 20, 1958.

There being no objection, the article, letters, and resolutions were ordered to be printed in the RECORD, as follows:

[From the Corpus Christi Caller-Times, Jan. 6, 1959]

OVER 1,500 HEAR REPORT ON FIGHT TO KEEP OVERHAUL AND REPAIR HERE

By Georgia Nelson

A crowd of about 1,500 braved cold, wet weather last night to hear a report on what has been and is being done in the fight to keep the Overhaul and Repair Division at NAS from being shut down.

The meeting in Memorial Coliseum was sponsored by the Chamber of Commerce Overhaul and Repair Committee, headed by Robert P. Wallace.

Tom Hanley, Overhaul and Repair production superintendent, gave a résumé of voluminous information that has been compiled and sent to Washington in an effort to get the Navy to rescind its order.

Russell Kirkland, Corpus Christi manager for Merrill Lynch, Pierce Fenner & Smith and local president of the Navy League, pledged assistance from the "civilian arm of the Navy" to help Corpus Christi keep the Overhaul and Repair activity.

INVESTIGATORS HERE

Hanley said two investigators from Washington spent the past week here gathering information to be used in determining whether the Navy's shutdown order will stand.

The two men, a lawyer and a CPA, are investigators for the Senate Subcommittee on Preparedness, of which Senator LYNDON JOHNSON is chairman. They left Corpus Christi for Washington yesterday afternoon.

Hanley said four copies of the report have been sent to Washington. Wallace described it as a "weighty volume filled with bludgeoning facts to back up Corpus Christi's argument that the Overhaul and Repair shutdown order was a mistake."

DETAILED REPORT

The report, Hanley said, contains detailed information on the essential work being done by the Overhaul and Repair here and the high level of efficiency with which the Bureau of Aeronautics has credited the Corpus Christi Overhaul and Repair.

Among advantages pointed out for keeping the Overhaul and Repair in Corpus Christi is the strategic location—not as vulnerable to foreign attack as other Overhaul and Repair installations in the country—and shorter material and transportation lines to all parts of the Nation.

Breakdowns were given on the skills and talents of the 2,995 persons employed in Overhaul and Repair to show that they are capable of overhauling all of the latest type of aircraft, including seaplanes.

Flexibility of expansion is another advantage mentioned in the report.

GOVERNMENT EXPENSE

The report detailed the tremendous expense the Government would incur by closing down the Overhaul and Repair. This would include the cost of moving a terrific inventory of supplies already here, the expense of moving out equipment valued at $12 million and caretaker service for the buildings which are also valued at an estimated $12 million, and the cost of moving part of the personnel elsewhere for other jobs.

The terminal pay alone for discharging all the employees of Overhaul and Repair, Hanley said, has been estimated at $1.5 million.

"This order (to close down the Overhaul and Repair) is a reversal of the Defense Department's policy of dispersal of critical defense activities," Hanley said.

He drew laughs from the serious-faced audience only once when he said, "The Government may find itself in a big real estate business before it knows it."

This was a reference to the many homes in Corpus Christi and surrounding towns that are being bought by Overhaul and Repair personnel.

Still another phase of the report details the patriotism and high morale of Overhaul and Repair employees.

Figures indicate the personnel has given wholehearted support to all management sponsored programs. Virtually all are buying Government bonds on the payroll plan. They have contributed almost 100 percent to Navy Relief, the United Fund and other civic and welfare programs. The low loss of time from work due to sickness and the safety program of Overhaul and Repair were cited.

TELEGRAMS READ

Wallace read all of the telegrams that have been exchanged among Representative John Young, Senator Lyndon Johnson, and Secretary of the Navy Thomas S. Gates.

"The biggest job has been done by giving our Senators and Representatives the ammunition they need to carry on the fight in Washington," Wallace said, "but we must maintain and step up our personal contact to support them."

He said that he talked yesterday with YOUNG by telephone and that YOUNG spent all of yesterday morning at the Navy Department.

U.S. Senator RALPH YARBOROUGH said in a letter yesterday that he has contacted a number of high-ranking Naval officers in an effort to halt the cutback but that he has "not had any results."

SENT TO NYE

The letter was sent to attorney Paul W. Nye, Nueces County Democratic chairman. YARBOROUGH pledged in the letter to continue working toward keeping Overhaul and Repair running at full blast here.

Nye said that he has received letters from JOHNSON and U.S. Representative SAM RAYBURN pledging every effort to keep Overhaul and Repair in Corpus Christi. YOUNG is coordinating the Washington attack.

"I believe we will succeed in keeping the Overhaul and Repair operations," Nye said. "There are too many people really trying on this thing."

Nye said he has contacted every official possible to line up support for the continued operation of Overhaul and Repair.

KIWANIS CLUB OF SIX POINTS,
Corpus Christi, Tex., January 8, 1959.

Hon. RALPH YARBOROUGH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR YARBOROUGH: Enclosed is a copy of the resolution the Six Point Kiwanis Club of Corpus Christi passed at its regular meeting on January 6, 1959.

I know you are greatly interested in retaining at least a portion of the Overhaul and Repair Department of the U.S. Naval Air Station in Corpus Christi, and we would like to offer you all the assistance we have in retaining this installation.

Since the closing of the Overhaul and Repair would be a great blow to the economy of this entire area, I will appreciate all you can do on our behalf.

Yours truly,

BOB CONWELL,
Chairman, Public and Business Affairs Committee, Six Points Kiwanis Club.

RESOLUTION

We, the members of Six Points Kiwanis Club of Corpus Christi, in meeting assembled on this 6th day of January 1959, memorialize the Congress and the executive branch of our Government to reconsider the unwarranted and uneconomic proposal to close the Overhaul and Repair Department of the U.S. Naval Air Station, Corpus Christi.

The Navy Department has ordered a small cut in civilian employees across the Nation. Thirty percent of that nationwide cut is concentrated in Corpus Christi Overhaul and Repair. Such figures give us pause to wonder.

Our Overhaul and Repair Department is one of nine in the U.S. Navy. It employs approximately 10 percent of the total of all Overhaul and Repair employees and has a physical plant presently valued at approximately $30 million. Some 3,000 persons employing some 75 different crafts and skills are integrated into a smoothly functioning major industry of Corpus Christi, with an $18 million annual payroll. Overhaul and Repair employees comprise approximately 14 percent of the total labor force of Corpus Christi. Their sudden firing will dissipate a highly organized and specialized repair and overhaul facility, causing untold hardship for 3,000 Corpus Christi families and will make an indelible impression on the economy of Corpus Christi, which is unable to absorb so drastic a cut in its labor force. Impact on local business will be drastic, widespread, and prolonged.

But let all who hear, know, that this Kiwanis Club is not opposed to economy in Federal Government, nor do we oppose the reduction in military expenditures where our preparedness program requires it. We do not selfishly ask for the maintenance of a Federal facility for the sole purpose of supporting the local economy. We do not endorse pork-barreling or make-work Federal jobs in time of prosperity.

We believe it imperative, however, that all concerned recognize that the closing of Overhaul and Repair, Corpus Christi, is not an economy move by the Government and will not reduce Federal expenditures one iota, but on the contrary, augurs the prob-

able increase of unnecessary Federal expenditures. Our conviction is based on these facts:

1. There has been no indication of comparable reduction in the Navy's use of the particular types of aircraft, engines and engine components being overhauled and repaired at Overhaul and Repair, Corpus Christi. The same work now being done at Corpus Christi will therefore have to be done elsewhere, most probably by the expanding of Overhaul and Repair facilities at the other eight Overhaul and Repair Departments scattered across the Nation. The equipment and physical plant at Overhaul and Repair, Corpus Christi, is one of the most modern and efficient of all Overhaul and Repair Departments. The closing of Corpus Christi Overhaul and Repair will mean the elimination of the most efficient equipment while increasing the workload for the more antiquated equipment of other Overhaul and Repair Departments.

2. The Navy has continuously sought to disperse its facilities as a protective measure in the event of national emergency, and industry has been urged to vacate the populous areas of the East and the exposed areas of the North and west coast, easily accessible over the North Pole. Corpus Christi is, geographically, best situated in the event of national emergency.

3. The Navy Department has repeatedly faced the problem of potential budget cuts and has repeatedly determined that, in the event of any budget cutting, it will be best prepared for military emergencies by making a horizontal cut in its Overhaul and Repair facilities, rather than a vertical cut: that is, by reducing the operating level of all Overhaul and Repair Departments, rather than eliminating any one Overhaul and Repair Department. This permits the fastest expansion in time of need, and retains a nucleus of employees and a physical plant in readiness when the occasion arises.

This sudden reversal of long established Navy Department policy of making horizontal cuts in Overhaul and Repair Department activity, being economically and militarily unwise, cannot be attributed to aught but political expediency or false economy.

We condemn politics playing with national defense and a false pretense and a sham and a facade made of governmental economy.

Since the work must yet be done, closing Corpus Christi is a travesty on economy. Even if the total workload of all Overhaul and Repair's were to be reduced, a wiser and more economical reduction would be a horizontal cut reducing all facilities, or even reducing the less modern facilities, or the more exposed geographical locations ,or the facilities less capable of expanding, or those that have not produced the high degree of efficiency of Overhaul and Repair, Corpus Christi. From any point of view, the proposed closing of Overhaul and Repair, Corpus Christi, is uneconomical, unwise, and militarily dangerous.

We in Kiwanis condemn the proposed closing, and petition our Government to reconsider and review the essential facts and rescind the order to close Overhaul and Repair, Corpus Christi.

Passed unanimously by Six Points Kiwanis Club, January 6, 1959.

ALLEN S. LEWIS,
President.

EARL THOMAS,
Secretary-Treasurer.

RESOLUTION

Whereas it has been ordered that the Overhaul and Repair Department at U.S. Naval Air Station, Corpus Christi, Tex., be completely closed by July 1, 1959; and

Whereas a more recent order from the Navy Department has directed the firing of 1,200 employees by March 31, 1959; and

Whereas the Committee on Appropriations of the Congress did appropriate the funds for the continued operation of the Overhaul and Repair Department at U.S. Naval Air Station, Corpus Christi, Tex.; and

Whereas the production record of the Overhaul and Repair Department of the U.S. Naval Air Station, Corpus Christi, Tex., is excellent in comparison with all other Overhaul and Repair installations in the United States, and the strategic location of the U.S. Naval Air Station is of the utmost importance to the national defense; and

Whereas in the face of threatened aggression on the part of the Communist controlled countries of the world, the members of Gragg-Sherrill Post, 248, the American Legion, Corpus Christi, Tex., believe the order to abolish the Overhaul and Repair Department, U.S. Naval Air Station, Corpus Christi, Tex., to be contrary to the best interests of the national defense, and do deplore this action on the part of the officials issuing said order: Now, therefore, be it

Resolved, That Gragg-Sherrill Post, 248, the American Legion, Corpus Christi, Tex., request the support and assistance of the national security committee, Department of Texas, the American Legion, and the national defense committee of the national organization of the American Legion in an effort to have this untimely, uneconomical and unwise order rescinded; and be it further

Resolved, That copies of this resolution be immediately forwarded to the committees named and to Senators LYNDON JOHNSON and RALPH YARBROUGH and Congressmen SAM RAYBURN and JOHN YOUNG, and to Adm. Arleigh Burke, Chief of Naval Operations.

JACK E. BAIR,
Commander, Gragg-Sherrill Post, 248, the American Legion.

Attest:

MAX D. PALMER,
Adjutant, Gragg-Sherrill Post, 248, the American Legion.

NATIONAL ASSOCIATION MASTER MECHANICS & FOREMEN,
Corpus Christi, Tex., December 20, 1958.

Hon. RALPH YARBOROUGH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR YARBOROUGH: We, the members of the Masters and Foremans Association, sincerely believe no economies would result, and the security of our Nation would be impaired by the closing of Navy's overhaul and repair facility at Corpus Christi, Tex.

We know that the chief naval operation workload exceeds the combined capabilities of all overhaul and repairs by 20 percent. This work must be done somewhere, and the records will prove that Overhaul and Repair, Corpus Christi, can do it as efficiently and economically as any concern in the country.

It is inevitable that the Navy would be forced into the full-scale aircraft maintenance business in time of war. Therefore, it is both economical and practical to maintain a continuing organization which can be geared to wartime requirements quickly and efficiently, simply by expanding an established force which is trained and experienced. The utilization of already existing facilities affords long-range economies since it avoids the great expense of tooling and outfitting in the event of unforeseen future mobilization needs.

Overhaul and Repair, Corpus Christi, is a specialized plant equipped to process any type of aircraft in operation by the Navy. It is in the utilization of this Overhaul and Repair facility that the Navy achieves the maximum defense effort at the minimum cost possible.

We support and earnestly solicit your efforts in calling for a full reconsideration and justification for this decision.

Sincerely,

WILLIAM R. JOBE,
Secretary, Masters and Foremans Association.

Newspaper Advertisement Referring to "Competition for Survival"

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. BEALL. Mr. President, in today's issue of the Washington Star, one of the best newspapers in the United States, there appears a most interesting full-page advertisement with the heading, "Competition for Survival." There follow certain characters forming the Russian words which mean "Even America must be surpassed." The advertisement, which contains interesting editorial material relating to the so-called cold war, was inserted by the A. O. Smith Corp., an industrial firm engaged in the research, development, and manufacture of products ranging from residential water heaters to farm feed processing units, from line pipe to guided missile components.

Mr. President, I think that the A. O. Smith Corp. and the Washington Star deserve our gratitude for the publication of this advertisement. As the advertisement states, "A. O. Smith's research and engineering skills are ready today—to help meet the challenge of competition for survival."

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the advertisement appearing in the Washington Star of January 12, 1959.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

COMPETITION FOR SURVIVAL

(Russian words. Translation: Even America must be surpassed)

In the face of the challenge expressed by this Soviet slogan, one of our most important weapons is the power of creative production. Are we keeping this weapon sharp?

It was in the late twenties that they first started talking about surpassing America. It seemed fantastic then—fantastic that this vast, impoverished slaveland should aspire to beat us at what we do best.

TARGET FROM THE START

From the time of that first 5-year plan, the Soviets have always regarded surpassing America's productivity as the key to world domination.

They have never lost sight of the fact that our ability to produce is freedom's most potent weapon. And that is why they dream of exceeding our productive pace as a goal for totalitarian victory.

THEIR PROGRESS RAPID

Authoritative sources agree the Soviet economy is expanding at a rate roughly twice that of our own. The consumer receives less than half of total annual output.

By contrast, about two-thirds of U.S. production is in consumer goods.

Roughly, one-quarter of annual Soviet output is plowed back into expansion of heavy industries, electric power, and transportation. This rate of reinvestment is approximately 40 percent higher than the U.S. reinvestment rate.

In their all-out drive for economic mastery, the Communists have racked up notable successes. Observers report there is nothing flimsy about the Soviet industrial product, nothing haphazard about their production techniques.

OUR ANSWER: CREATIVE

Can American industry win out against the massed productivity of Soviet slave labor? Of course it can.

Creative production has always been the strength of America. Born of free competition—nurtured by recognition of the individual rights of man—this creativity thrives on challenge. Its versatile change of pace has been proved in wars, both hot and cold.

THE THREAT OF OBSOLESCENCE

In this time of competition for survival, America's creative industries are faced by the clear and present danger of obsolescence in plant and equipment.

This threat results from several factors. Increasingly high taxes and operating costs leave less and less to plow back into modernization and expansion. And the current depreciation rate is such that manufacturers often cannot write off equipment investment fast enough to capitalize on new developments. They are virtually forced to make do with outmoded production machinery.

In the face of the Soviet challenge, there's no place for withering obsolescence. Our industry has the creaative talents to push far ahead of Soviet progress. It must also get the tools to make the most of these talents.

HERE'S ONE COMPANY'S REACTION TO THE CHALLENGE

Creative production has always been the driving force at A. O. Smith. In all kinds of economic weather, this company's success has stemmed from a skillful, persistent search for a better way, a more efficient way to make products that range from residential water heaters to farm feed-processing units, from line pipe to guided-missile components. A. O. Smith's research and engineering skills are ready today—to help meet the challenge of competition for survival. Shown here are just a few results of A. O. Smith's creative search for a better way.

Mr. BEALL. Mr. President, in addition to this text, the advertisement includes several pictures showing activities of the A. O. Smith Corp., with appropriate captions.

Oil Depletion Allowances

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Minot Daily News dealing with oil depletion allowances.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MINOT OILMAN FIGHTS CHAMBER STAND FAVORING OIL DEPLETION ALLOWANCES

Jack Coughlin, of Minot, who is actively engaged in the three major phases of oil production, has taken issue with the Washington report of the U.S. Chamber of Commerce which favors continuing of oil depletion allowances.

Coughlin, vice president of the Westland Oil Co., through that company is directly concerned with distribution and retailing of petroleum products and, in the company's operation of a refinery at Williston, in the manufacture of products for market. He also is actively engaged with associates in oil drilling operations in Burke County.

Coughlin takes issue with the Chamber position that depletion allowance for oil drilling is a sacred cow that "can't stand tampering with."

In a letter to the U.S. chamber, he writes: "Times have changed since 1926 when the corporate tax rate was 13 percent instead of the 52 percent we now have. The incentive theory of depletion allowance has jumped 400 percent since that time. The depletion allowance theory was the outgrowth of a fear of oil shortage born in World War I, whereas since the 1930's we have had a period marked by overproduction which brought about proration laws.

"Your comments on the risk of oil production eight times out of nine he misses * * * are the most misleading of arguments for depletion and one that even the oil industry is dropping as being a wild statement. I don't know what rank wildcat area was used to produce those figures, but I do know that World Oil of Tulsa and other oil publications show that of the nearly 50,000 wells drilled each year the ratio is roughly 1½ producers to each dry hole. One has to be in the production business to appreciate that all dry holes are not necessary so since dry hole contributions will often make it wise to abandon a potential producer for fear of bringing in a marginal well and thus lose the dry hole money.

"I fail to see the comparison between depletion and depreciation. First of all, the producer is permitted to charge off the intangible costs of his well, which include drilling costs, geoloigcal, and engineering. In fact everything except storage tanks, pipelines, a pump if necessary, tubing, etc., which are all depreciable as a capital asset. How many other businesses can charge off most of their capital investments in 1 year or less? Having now charged off his investment, the producer is still permitted to take 27½ percent on his gross production. Not for a stated period of time, nor for a definite valuation such as depreciation, but for as long a time as the well produces and most likely many times the original cost of the well. You certainly can't say that adjusting depletion rates endangers depreciation; because they are so dissimilar.

"Why am I as an oil man opposed to the present depletion allowance?

"First. Because it is a tax loophole and subsidy and because I favor tax equality;

"Second. Because the subsidy is not being retained for production only, but is being used to subsidize marketing losses by major integrated oil companies;

"Third. Because the incentive is not needed. It is a contradiction to encourage production by tax subsidies while controlling price and production through proration laws and import restrictions; and

"Fourth. How are we going to balance our national budget when we close our eyes to a loss of about $1½ billion in tax money?

"I enjoy the fruits of depletion and drilling chargeoffs and I know whereof I write. I would continue to drill without such a large depletion allowance and I know the oil industry would, too, in spite of their protests that they wouldn't."

Frank P. Samford, Birmingham, Ala., Selected as Man of the South for 1958

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. SPARKMAN. Mr. President, each year the publication Dixie Business, under the editorship of Hubert F. Lee of Decatur, Ga., selects as a result of balloting throughout the South the Man of the South. For 1958 the one selected was Frank P. Samford, of Birmingham, Ala., president of the Liberty National Life Insurance Co.

Mr. Samford's selection was one which met wide approval. Certainly the extensive activities of Mr. Samford for the development of the South and for civic betterment fully justify his being given this outstanding recognition.

I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Birmingham News of December 16, 1958, relating to Mr. Samford's selection; also, an excerpt from "Who's Who in America" regarding Mr. Samford; and, also, quotations from different persons relating to the selection of Mr. Samford.

There being no objection, the article and excerpts were ordered to be printed in the RECORD, as follows:

[From the Birmingham News, Dec. 16, 1958]

INSURANCE EXECUTIVE NAMED MAN OF SOUTH

Frank P. Samford, president of Liberty National Life Insurance Co., has been named Man of the South for 1958.

He is the third Birmingham businessman to receive the honor. Thomas W. Martin, chairman of the board of Alabama Power Co., was Man of the South in 1946 and Donald Comer, of Avondale Mills, in 1947.

The selection is made each year by the editors of Dixie Business at Decatur, Ga., the sponsoring magazine. Hubert F. Lee, editor, said Samford has received votes for the honor from around the world each year since 1949, particularly from fellow members of Rotary International.

He was one of the South's 50 foremost leaders picked by Dixie Business in 1949. This group is now termed the South's "Hall of Fame for the Living" honor group, and is limited to 200 living southerners.

Samford was born in Troy, Ala., in 1893, and graduated from Auburn in 1914. He has been president of Liberty National since 1934.

He was first nominated in 1948 for Man of the South by Gen. John C. Persons of Birmingham. Harry Ayers, publisher of the Anniston Star, has voted for Samford nearly every year since 1949.

At one time or another, many of the Nation's leading insurance company presidents have voted for Samford in the annual poll conducted by Editor Lee.

Earlier this year, Dixie Business selected Dr. Tom D. Spies, director of the Spies Nutrition Clinic here, for the A Great American distinguished service award.

WHO'S WHO IN AMERICA SKETCHES: FRANK P. SAMFORD

Samford, Frank Park, president, Liberty National Life Insurance Co.; born Troy, Ala.,

November 1, 1893; son of William Hodges and Kate (Park) S.; student State Normal College, Troy; B.S., Alabama Polytechnic Institute, Auburn, 1914; LL.D. (honorary), Howard College; married Hattie Mae Noland, December 23, 1919; children—Lieut. Frank P. Jr. (U.S.N.R.), Ann (Mrs. Sam E. Upchurch). Deputy insurance commissioner of Alabama, 1915–19; Alabama manager, Lumbermans Mutual Casualty Co., 1919–21; secretary Liberty National Life Insurance Co., 1921–32; vice president, 1932–34; president since 1934; director, Southern Bell Telephone & Telegraph Co.; West Point Manufacturing Co.; Malone Freight Line; Birmingham Trust National Bank; Continental Gin Co.; Dixie Mills, Inc.; Columbus Manufacturing Co.; Equinox Mill; Lanett Bleachery & Dye Works, Wellington Sears Co.; Cabin Crafts, Inc. Member board, Life Insurance Sales Research Bureau, 1931–34. Member, board of directors and executive committee, Birmingham Chamber of Commerce, 1937; president, Industrial Insurer's Conference, 1938–40; president, Birmingham Community Chest, 1940–42; president, Jefferson Tuberculosis Sanitorium Society, 1942–44; president, Associated Industries of Alabama, 1941–42; member, board of directors, Institute of Life Insurance, 1944; member, executive committee, American Life Convention since 1948; president, Alabama State Chamber of Commerce 1946–49; U.S. Chamber of Commerce. President, board of trustees, Howard College; member, Alabama Polytechnic Institute; Southern Research Institute; Alumni Association, Alabama Polytechnic Institute (president 1943–44); Alpha Tau Omega; Omicron Delta Kappa. Democrat. Baptist. Mason (Shriner). Clubs: Rotary (president 1936–37; district governor 1940–41), Birmingham (Birmingham); Birmingham Country; Mountain Brook Country. Home: 2700 Mountain Brook Parkway. Office: Liberty National Life Building, Birmingham, Ala.

QUOTES FROM LETTERS RELATING TO THE SELECTION OF MR. SAMFORD

Robert T. "Bobby" Jones, Jr., Man of the South for 1953: "I am delighted to have you record my vote for Mr. Samford."

Bishop Arthur J. Moore, Man of the South for 1954: "I am happy to cast my vote for Mr. Frank P. Samford as the 1958 Man of the South."

Donald Comer, Avondale Mills, Birmingham, Man of the South for 1947: "I certainly approve heartily of the selection of Frank Samford for the Man of the South. Not only for himself but also for his family."

C. Hamilton Moses, Little Rock, Man of the South for 1948: I would be greatly pleased to see Frank Samford of Birmingham named as 1958 Man of the South. I don't see how a better selection could be made. As you know, I retired from the Arkansas Power and Light Co. 2 years ago and set up a law firm here in Little Rock with the son and son-in-law of Senator JOHN L. MCCLELLAN. It is a new experience starting over practicing law at the age of 70. Anway, we are having a big time."

Ernest L. Kurth, Southland Paper Mills, Lufkin, Tex., Man of the South for 1949: "I am most happy to cast my vote for Mr. Frank P. Samford as Man of the South for 1958."

Thomas W. Martin, Alabama Power Co., Birmingham, the first Man of the South for 1946, in telephone conversation: "I nominated Frank Samford for Man of the South for 1958. He is one of the fine leaders on your list who deserves the honor."

Reuben B. Robertson, Champion Paper & Fibre Co., Canton, N. C., Man of the South for 1950: "I am not personally acquainted with Frank P. Samford, of Alabama, but I am sure that if you and Donald Comer recommend him he is certainly worthy of recognition."

Hugh Comer, Alabama Mills, Sylacauga, Ala.: "I am mighty happy that Frank Samford has been so overwhelmingly chosen as the Man of the South for 1958. He has made tremendous contributions to our well-being."

Louis Pizitz, Birmingham: "In my opinion you have chosen very wisely in selecting Mr. Frank P. Samford as Man of the South for 1958. He has helped in every way to build a better community."

Robert Jemison, Jr., Birmingham, the world's finest example of a good realtor: "I certainly hope Frank Samford will be voted the Man of the South, as I think he is outstanding, and a very fine choice. You may use my former letter."

Federal-State Relations as Affected by Judicial Decisions

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the resolution on Federal-State relationships as affected by judicial decisions approved by the Conference of Chief Justices held in Pasadena, Calif., on August 23, 1958, by a vote of 36 to 8, with 2 abstaining and 4 not present.

Immediately following the resolution, I include the final and full text of the report of the committee on Federal-State relationships as affected by judicial decisions:

RESOLUTION ON FEDERAL-STATE RELATIONSHIPS AS AFFECTED BY JUDICIAL DECISIONS

Resolved—

1. That this conference approves the report of the committee on Federal-State relationships as affected by judicial decisions submitted at this meeting.

2. That in the field of Federal-State relationships the division of powers between those granted to the National Government and those reserved to the State governments should be tested solely by the provisions of the Constitution of the United States and the amendments thereto.

3. That this conference believes that our system of federalism, under which control of matters primarily of national concern is committed to our national government and control of matters primarily of local concern is reserved to the several States, is sound and should be more diligently preserved.

4. That this conference, while recognizing that the application of constitutional rules to changed conditions must be sufficiently flexible as to make such rules adaptable to altered conditions, believes that a fundamental purpose of having a written constitution is to promote the certainty and stability of the provisions of law set forth in such a constitution.

5. That this Conference hereby respectfully urges that the Supreme Court of the United States, in exercising the great powers confided to it for the determination of questions as to the allocation and extent of national and state powers, respectively, and as to the validity under the federal Constitution of the exercise of powers reserved to the States, exercise one of the greatest of all judicial powers—the power of judicial self-restraint—by recognizing and giving effect to the difference between that which, on the one hand, the Constitution may prescribe or permit, and that which, on the other, a majority of the Supreme Court, as from time to time constituted, may deem desirable or undesirable, to the end that our system of federalism may continue to function with and through the preservation of local self-government.

6. That this conference firmly believes that the subject with which the committee on Federal-State relationships as affected by judicial decisions has been concerned is one of continuing importance, and that there should be a committee appointed to deal with the subject in the ensuing year.

REPORT OF THE COMMITTEE ON FEDERAL-STATE RELATIONSHIPS AS AFFECTED BY JUDICIAL DECISIONS

FOREWORD

Your committee on Federal-State relationships as affected by judicial decisions was appointed pursuant to action taken at the 1957 meeting of the conference, at which, you will recall, there was some discussion of recent decisions of the Supreme Court of the United States and a resolution expressing concern with regard thereto was adopted by the conference. This committee held a meeting in Washington in December 1957, at which plans for conducting our work were developed. This meeting was attended by Sidney Spector of the Council of State Governments and by Prof. Philip B. Kurland, of the University of Chicago Law School.

The committee believed that it would be desirable to survey this field from the point of view of general trends rather than by attempting to submit detailed analyses of many cases. It was realized, however, that an expert survey of recent Supreme Court decisions within the area under consideration would be highly desirable in order that we might have the benefit in drafting this report of scholarly research and of competent analysis and appraisal, as well as of objectivity of approach.

Thanks to Professor Kurland and to four of his colleagues of the faculty of the University of Chicago Law School several monographs dealing with subjects within the committee's field of action have been prepared and have been furnished to all members of the committee and of the conference. These monographs and their authors are as follows:

1. "The Supreme Court, The Due Process Clause, and the In Personam Jurisdiction of State Courts," by Professor Kurland;

2. "Limitations on State Power To Deal With Issues of Subversion and Loyalty," by Assistant Professor Cramton;

3. "Congress, the States and Commerce," by Prof. Allison Dunham;

4. "The Supreme Court, Federalism, and State Systems of Criminal Justice," by Prof. Francis A. Allen; and

5. "The Supreme Court, the Congress and State Jurisdiction Over Labor Relations," by Prof. Bernard D. Meltzer.

These gentlemen have devoted much time, study, and thought to the preparation of very scholarly, interesting, and instructive monographs on the above subjects. We wish to express our deep appreciation to each of them for his very thorough research and analysis of these problems. With the pressure of the work of our respective courts, the members of this committee could not have undertaken this research work and we could scarcely have hoped, even with ample time, to equal the thorough and excellent reports which they have written on their respective subjects.

It had originally been hoped that all necessary research material would be available to your committee by the end of April and that the committee could study it and then meet for discussion, possibly late in May, and thereafter send at least a draft of the committee's report to the members of the con-

ference well in advance of the 1958 meeting; but these hopes have not been realized. The magnitude of the studies and the thoroughness with which they have been made rendered it impossible to complete them until about 2 months after the original target date, and it has been impracticable to hold another meeting of this committee until the time of the conference.

Even after this unavoidable delay had developed, there was a plan to have these papers presented at a seminar to be held at the University of Chicago late in June. Unfortunately, this plan could not be carried through, either. We hope, however, that these papers may be published in the near future with such changes and additions as the several authors may wish to make in them. Some will undoubtedly be desired in order to include decisions of the Supreme Court in some cases which are referred to in these monographs, but in which decisions were rendered after the monographs had been prepared. Each of the monographs as transmitted to us is stated to be in preliminary form and subject to change and as not being for publication. Much as we are indebted to Professor Kurland and his colleagues for their invaluable research aid, your committee must accept sole responsibility for the views herein stated. Unfortunately, it is impracticable to include all or even a substantial part of their analyses in this report.

BACKGROUND AND PERSPECTIVE

We think it desirable at the outset of this report to set out some points which may help to put the report in proper perspective, familiar or self-evident as these points may be:

First. Though decisions of the Supreme Court of the United States have a major impact upon Federal-State relationships and have had such an impact since the days of Chief Justice Marshall, they are only a part of the whole structure of these relationships. These relations are, of course, founded upon the Constitution of the United States itself. They are materially affected not only by judicial decisions but in very large measure by acts of Congress adopted under the powers conferred by the Constitution. They are also affected, or may be affected, by the exercise of the treaty power.

Of great practical importance as affecting Federal-State relationships are the rulings and actions of Federal administrative bodies. These include the independent agency regulatory bodies, such as the Interstate Commerce Commission, the Federal Power Commission, the Securities and Exchange Commission, the Civil Aeronautics Board, the Federal Communications Commission, and the National Labor Relations Board. Many important administrative powers are exercised by the several departments of the executive branch, notably the Treasury Department and the Department of the Interior. The scope and importance of the administration of the Federal tax laws are, of course, familiar to many individuals and businesses because of their direct impact, and require no elaboration.

Second. When we turn to the specific field of the effect of judicial decisions on Federal-State relationships we come at once to the question as to where power should lie to give the ultimate interpretation to the Constitution and to the laws made in pursuance thereof under the authority of the United States. By necessity and by almost universal common consent, these ultimate powers are regarded as being vested in the Supreme Court of the United States. Any other allocation of such power would seem to lead to chaos. (See Judge Learned Hand's most interesting Holmes Lectures on "The Bill of Rights" delivered at the Harvard Law School this year and published by the Harvard University Press.)

Third. There is obviously great interaction between Federal legislation and administrative action on the one hand, and decisions of the Supreme Court on the other, because of the power of the Court to interpret and apply acts of Congress and to determine the validity of administrative action and the permissible scope thereof.

Fourth. Whether federalism shall continue to exist, and if so in what form, is primarily a political question rather than a judicial question. On the other hand, it can hardly be denied that judicial decisions, specifically decisions of the Supreme Court, can give tremendous impetus to changes in the allocation of powers and responsibilities as between the Federal and the State Governments. Likewise, it can hardly be seriously disputed that on many occasions the decisions of the Supreme Court have produced exactly that effect.

Fifth. This conference has no legal powers whatsoever. If any conclusions or recommendations at which we may arrive are to have any effect, this can only be through the power of persuasion.

Sixth. It is a part of our obligation to seek to uphold respect for law. We do not believe that this goes so far as to impose upon us an obligation of silence when we find ourselves unable to agree with pronouncements of the Supreme Court (even though we are bound by them), or when we see trends in decisions of that Court which we think will lead to unfortunate results. We hope that the expression of our views may have some value. They pertain to matters which directly affect the work of our State courts. In this report we urge the desirability of self-restraint on the part of the Supreme Court in the exercise of the vast powers committed to it. We endeavor not to be guilty ourselves of a lack of due restraint in expressing our concern and, at times, our criticisms in making the comments and observations which follow.

PROBLEMS OF FEDERALISM

The difference between matters primarily local and matters primarily national was the guiding principle upon which the framers of our National Constitution acted in outlining the division of powers between the National and State Governments.

This guiding principle, central to the American Federal system, was recognized when the original Constitution was being drawn and was emphasized by De Tocqueville. Under his summary of the Federal Constitution he says:

"The first question which awaited the Americans was so to divide the sovereignty that each of the different States which composed the Union should continue to govern itself in all that concerned its internal prosperity, while the entire Nation, represented by the Union, should continue to form a compact body and to provide for all general exigencies. The problem was a complex and difficult one. It was as impossible to determine beforehand, with any degree of accuracy, the share of authority that each of the two governments was to enjoy as to foresee all the incidents in the life of a nation."

In the period when the Constitution was in the course of adoption "The Federalist" (No. 45) discussed the division of sovereignty between the Union and the States and said: "The powers delegated by the Constitution to the Federal Government are few and defined. Those which are to remain in the State governments are numerous and indefinite. The former will be exercised principally on external objects, as war, peace, negotiation, and foreign commerce. The powers reserved to the several States will extend to all the objects which, in the ordinary course of affairs, concern the internal order and prosperity of the State."

Those thoughts expressed in "The Federalist" of course are those of the general period when both the original Constitution and the 10th amendment were proposed and adopted. They long antedated the proposal of the 14th amendment.

The fundamental need for a system of distribution of powers between national and State governments was impressed sharply upon the framers of our Constitution not only because of their knowledge of the governmental systems of ancient Greece and Rome. They also were familiar with the Government of England; they were even more aware of the colonial governments in the Original States and the governments of those States after the Revolution. Included in government on this side of the Atlantic was the institution known as the New England town meeting, though it was not in use in all of the States. A town meeting could not be extended successfully to any large unit of population, which, for legislative action, must rely upon representative government.

But it is this spirit of self-government, of local self-government, which has been a vital force in shaping our democracy from its very inception.

The views expressed by our late brother, Chief Justice Arthur T. Vanderbilt, on the division of powers between the National and State governments—delivered in his addresses at the University of Nebraska and published under the title "The Doctrine of the Separation of Powers and Its Present Day Significance"—are persuasive. He traced the origins of the doctrine of the separation of powers to four sources: Montesquieu and other political philosophers who preceded him; English constitutional experience; American colonial experience; and the common sense and political wisdom of the Founding Fathers. He concluded his comments on the experiences of the American colonists with the British Government with this sentence: "As colonists they had enough of a completely centralized government with no distribution of powers and they were intent on seeing to it that they should never suffer such grievances from a government of their own construction."

His comments on the separation of powers and the system of checks and balances and on the concern of the Founding Fathers with the proper distribution of governmental power between the Nation and the several States indicates that he treated them as parts of the plan for preserving the Nation on the one side and individual freedom on the other—in other words, that the traditional tripartite vertical division of powers between the legislative, the executive, and the judicial branches of Government was not an end in itself, but was a means toward an end; and that the horizontal distribution or allocation of powers between National and State governments was also a means toward the same end and was a part of the separation of powers which was accomplished by the Federal Constitution. It is a form of the separation of powers with which Montesquieu was not concerned; but the horizontal division of powers, whether thought of as a form of separation of powers or not, was very much in the minds of the framers of the Constitution.

TWO MAJOR DEVELOPMENTS IN THE FEDERAL SYSTEM

The outstanding development in Federal-State relations since the adoption of the National Constitution has been the expansion of the power of the National Government and the relative contraction of the powers of the State governments. To a large extent this is wholly unavoidable and indeed is a necessity, primarily because of improved transportation and communication of all kinds and because of mass production. On the other hand, our Constitution does envision federalism. The very name of our Nation indicates that it is to be composed of States. The Supreme Court of a bygone day said in *Texas* v. *White* (7 Wall. 700, 721 (1868)): "The Constitution, in all its pro-

visions, looks to an indestructible Union of indestructible States."

Second only to the increasing dominance of the National Government has been the development of the immense power of the Supreme Court in both State and National affairs. It is not merely the final arbiter of the law; it is the major of policy in many major social and economic fields. It is not subject to the restraints to which a legislative body is subject. There are points at which it is difficult to delineate precisely the line which should circumscribe the judicial function and separate it from that of policymaking. Thus, usually within narrow limits, a court may be called upon in the ordinary course of its duties to make what is actually a policy decision by choosing between two rules, either of which might be deemed applicable to the situation presented in a pending case.

But if and when a court in construing and applying a constiutional provision or a statute becomes a policymaker, it may leave construction behind and exercise functions which are essentially legislative in character, whether they serve in practical effect as a constitutional amendment or as an amendment of a statute. It is here that we feel the greatest concern, and it is here that we think the greatest restraint is called for. There is nothing new in urging judicial self-restraint, though there may be, and we think there is, new need to urge it.

It would be useless to attempt to review all of the decisions of the Supreme Court which have had a profound effect upon the course of our history. It has been said that the Dred Scott decision made the Civil War inevitable. Whether this is really true or not, we need not attempt to determine. Even if it is discounted as a serious overstatement, it remains a dramatic reminder of the great influence which Supreme Court decisions have had and can have. As to the great effects of decisions of that Court on the economic development of the country, see Mr. Justice Douglas' address on "Stare Decisis" (49 Columbia Law Review 735).

SOURCES OF NATIONAL POWER

Most of the powers of the National Government were set forth in the original Constitution; some have been added since. In the days of Chief Justice Marshall the supremacy clause of the Federal Constitution and a broad construction of the powers granted to the National Government were fully developed, and as a part of this development the extent of national control over interstate commerce became very firmly established. The trends established in those days have never ceased to operate and in comparatively recent years have operated at times in a startling manner in the extent to which interstate commerce has been held to be involved, as for example in the familiar case involving an elevator operator in a loft building.

From a practical standpoint the increase in Federal revenues resulting from the 16th amendment (the income tax amendment) has been of great importance. National control over State action in many fields has been vastly expanded by the 14th amendment.

We shall refer to some subjects and types of cases which bear upon Federal-State relationships.

THE GENERAL WELFARE CLAUSE

One provision of the Federal Constitution which was included in it from the beginning but which, in practical effect, lay dormant for more than a century, is the general welfare clause. In *United States* v. *Butler* (297 U.S. 1), the original Agricultural Adjustment Act was held invalid. An argument was advanced in that case that the general welfare clause would sustain the imposition of the tax and that money derived from the tax could be expended for any purposes which would promote the general welfare. The Court viewed this argument with favor as a general proposition, but found it not supportable on the facts of that case. However, it was not long before that clause was relied upon and applied. See *Steward Machine Co.* v. *Davis* (301 U.S. 548) and *Helvering* v. *Davis* (301 U.S. 690). In those cases the Social Security Act was upheld and the general welfare clause was relied upon both to support the tax and to support the expenditures of the money raised by the social-security taxes.

GRANTS-IN-AID

Closely related to this subject are the so-called grants-in-aid which go back to the Morrill Act of 1862 and the grants thereunder to the so-called land-grant colleges. The extent of grants-in-aid today is very great, but questions relating to the wisdom as distinguished from the legal basis for such grants seem to lie wholly in the political field and are hardly appropriate for discussion in this report. Perhaps we should also observe that since the decision of *Massachusetts* v. *Mellon* (262 U.S. 447), there seems to be no effective way in which either a State or an individual can challenge the validity of a Federal grant-in-aid.

DOCTRINE OF PREEMPTION

Many, if not most, of the problems of federalism today arise either in connection with the commerce clause and the vast extent to which its sweep has been carried by the Supreme Court, or they arise under the 14th amendment. Historically, cases involving the doctrine of preemption pertain mostly to the commerce clause. More recently the doctrine has been applied in other fields, notably in the case of *Commonwealth of Pennsylvania* v. *Nelson*, in which the Smith Act and other Federal statutes dealing with communism and loyalty problems were held to have preempted the field and to invalidate or suspend the Pennsylvania antisubversive statute which sought to impose a penalty for conspiracy to overthrow the Government of the United States by force or violence. In that particular case it happens that the decision of the Supreme Court of Pennsylvania was affirmed. That fact, however, emphasizes rather than detracts from the wide sweep now given to the doctrine of preemption.

LABOR RELATIONS CASES

In connection with commerce clause cases, the doctrine of preemption, coupled with only partial express regulation by Congress, has produced a state of considerable confusion in the field of labor relations.

One of the most serious problems in this field was pointed up or created (depending upon how one looks at the matter) by the Supreme Court's decision in *Amalgamated Association* v. *Wisconsin Employment Relations Board* (340 U.S. 383), which overturned a State statute aimed at preventing strikes and lockouts in public utilities. This decision left the States powerless to protect their own citizens against emergencies created by the suspension of essential services, even though, as the dissent pointed out, such emergencies were economically and practically confined to a single State.

In two cases decided on May 28, 1958, in which the majority opinions were written by Mr. Justice Frankfurter and Mr. Justice Burton, respectively, the right of an employee to sue a union in a State court was upheld. In *International Association of Machinists* v. *Gonzales*, a union member was held entitled to maintain a suit against his union for damages for wrongful expulsion. In *International Union, United Auto, etc. Workers* v. *Russell*, an employee, who was not a union member, was held entitled to maintain a suit for malicious interference with his employment through picketing during a strike against his employer. Pickets prevented Russell from entering the plant.

Regardless of what may be the ultimate solution of jurisdictional problems in this field, it appears that at the present time there is unfortunately a kind of no-man's land in which serious uncertainty exists. This uncertainty is in part undoubtedly due to the failure of Congress to make its wishes entirely clear. Also, somewhat varying views appear to have been adopted by the Supreme Court from time to time.

In connection with this matter, in the case of *Textile Union* v. *Lincoln Mills* (353 U.S. 448), the majority opinion contains language which we find somewhat disturbing. That case concerns the interpretation of section 301 of the Labor Management Relations Act of 1947. Paragraph (a) of that section provides: "Suits for violation of contracts between an employer and a labor organization representing employees in an industry affecting commerce as defined in this Chapter, or between any such labor organizations, may be brought in any district court of the United States having jurisdiction of the parties, without respect to the amount in controversy or without regard to the citizenship of the parties." Paragraph (b) of the same section provides in substance that a labor organization may sue or be sued as an entity without the procedural difficulties which formerly attended suits by or against unincorporated associations consisting of large numbers of persons. Section 301(a) was held to be more than jurisdictional and was held to authorize Federal courts to fashion a body of Federal law for the enforcement of these collective bargaining agreements and to include within that body of Federal law specific performance of promises to arbitrate grievances under collective bargaining agreements.

What a state court is to do if confronted with a case similar to the Lincoln Mills case is by no means clear. It is evident that the substantive law to be applied must be Federal law, but the question remains, where is that Federal law to be found? It will probably take years for the development or the "fashioning" of the body of Federal law which the Supreme Court says the Federal courts are authorized to make. Can a state court act at all? If it can act and does act, what remedies should it apply? Should it use those afforded by state law, or is it limited to those which would be available under Federal law if the suit were in a Federal court? It is perfectly possible that these questions will not have to be answered, since the Supreme Court may adopt the view that the field has been completely preempted by the Federal law and committed solely to the jurisdiction of the Federal courts, so that the state courts can have no part whatsoever in enforcing rights recognized by section 301 of the Labor Management Relations Act. Such a result does not seem to be required by the language of section 301 nor yet does the legislative history of that section appear to warrant such a construction.

Professor Meltzer's monograph has brought out many of the difficulties in this whole field of substantive labor law with regard to the division of power between State and Federal Governments. As he points out much of this confusion is due to the fact that Congress has not made clear what functions the States may perform and what they may not perform. There are situations in which the particular activity involved is prohibited by Federal law, others in which it is protected by Federal law, and others in which the Federal law is silent. At the present time there seems to be one field in which State action is clearly permissible. That is where actual violence is involved in a labor dispute.

STATE LAW IN DIVERSITY CASES

Not all of the decisions of the Supreme Court in comparatively recent years have limited or tended to limit the power of the States or the effect of State laws. The celebrated case of *Erie R. R.* v. *Tompkins* (304 U.S. 64) overruled *Swift* v. *Tyson* and estab-

lished substantive State law, decisional as well as statutory, as controlling in diversity cases in the Federal courts. This marked the end of the doctrine of a Federal common law in such cases.

IN PERSONAM JURISDICTION OVER NONRESIDENTS

Also, in cases involving the in personam jurisdiction of State courts over nonresidents, the Supreme Court has tended to relax rather than tighten restrictions under the due process clause upon State action in this field. *International Shoe Co.* v. *Washington* (326 U.S. 310) is probably the most significant case in this development. In sustaining the jurisdiction of a Washington court to render a judgment in personam against a foreign corporation which carries on some activities within the State of Washington, Chief Justice Stone used the now familiar phrase that there "were sufficient contacts or ties with the State of the forum to make it reasonable and just, according to our traditional conception of fair play and substantial justice, to enforce the obligation which appellant has incurred there." Formalistic doctrines or dogmas have been replaced by a more flexible and realistic approach, and this trend has been carried forward in subsequent cases leading up to and including *McGee* v. *International Life Insurance Co.* (355 U.S. 220), until halted by *Hanson* v. *Denckla* (357 U.S. decided June 23, 1958).

TAXATION

In the field of taxation the doctrine of intergovernmental immunity has been seriously curtailed partly by judicial decisions and partly by statute. This has not been entirely a one-way street.

In recent years cases involving state taxation have arisen in many fields. Sometimes they have involved questions of burdens upon interstate commerce or the export-import clause, sometimes of jurisdiction to tax as a matter of due process, and sometimes they have arisen on the fringes of governmental immunity, as where a State has sought to tax a contractor doing business with the National Government. There have been some shifts in holdings. On the whole, the Supreme Court seems perhaps to have taken a more liberal view in recent years toward the validity of State taxation than it formerly took.

OTHER 14TH AMENDMENT CASES

In other fields, however, the 14th amendment has been invoked to cut down State action in many fields. This has been noticeably true in cases involving not only the 14th amendment but also the 1st amendment guarantee of freedom of speech or the 5th amendment protection against self-incrimination. State antisubversive acts have been practically eliminated by *Pennsylvania* v. *Nelson* in which the decision was rested on the group of preemption of the field by the Federal statutes.

THE SWEEZY CASE—STATE LEGISLATIVE INVESTIGATIONS

One manifestation of this restrictive action under 14th amendment is to be found in *Sweezy* v. *New Hampshire* (354 U.S. 234). In that case, the State of New Hampshire had enacted a subversive activity statute which imposed various disabilities on subversive persons and subversive organizations. In 1953 the legislature adopted a resolution under which it constituted the attorney general a one-man legislative committe to investigate violations of that act and to recommend additional legislation. Sweezy, described as a non-Communist Marxist, was summoned to testify at the investigation conducted by the attorney general, pursuant to this authorization. He testified freely about many matters but refused to answer two types of questions: (1) Inquiries concerning the activites of the Progressive Party in the State during the 1948 campaign; and (2) inquiries concerning a lecture Sweezy had delivered in 1954 to a class at the University of New Hampshire. He was adjudged in contempt by a state court for failure to answer these questions. The Suprme Court reversed the conviction, but there is no majority opinion. The opinion of the Chief Justice, in which he was joined by Justices Black, Douglas and Brennan, started out by reaffirming the position taken in *Watkins* v. *United States* (354 U.S. 178) that legislative investigations can encroach on first amendment rights. It then attacked the New Hampshire Subversive Activities Act and stated that the definition of subversive persons and subversive organizations was so vague and limitless that they extended to conduct which is only remotely related to actual subversion and which is done free of any conscious intent to be a part of such activity. Then followed a lengthy discourse on the importance of academic freedom and political expression. This was not, however, the ground upon which these four Justices ultimately relied for their conclusion that the conviction should be reversed. The Chief Justice said in part:

"The respective roles of the legislature and the investigator thus revealed are of considerable significance to the issue before us. It is eminently clear that the basic discretion of determining the direction of the legislative inquiry has been turned over to the investigative agency. The attorney general has been given such a sweeping and uncertain mandate that it is his discretion which picks out the subjects that will be pursued, what witnesses will be summoned and what questions will be asked. In this circumstance, it cannot be stated authoritatively that the legislature asked the attorney general to gather the kind of facts comprised in the subjects upon which petitioner was interrogated."

Four members of the Court, two in a concurring opinion and two in a dissenting opinion, took vigorous issue with the view that the conviction was invalid because of the legislature's failure to provide adequate standards to guide the attorney general's investigation. Mr. Justice Frankfurter and Mr. Justice Harlan concurred in the reversal of the conviction on the ground that there was no basis for a belief that Sweezy or the Progressive Party threatened the safety of the State and hence that the liberties of the individual should prevail. Mr. Justice Clark, with whom Mr. Justice Burton joined, arrived at the opposite conclusion and took the view that the State's interest in self-preservation justified the intrusion into Sweezy's personal affairs.

In commenting on this case Professor Cramton says: "The most puzzling aspect of the Sweezy case is the reliance by the Chief Justice on delegation of power conceptions. New Hampshire had determined that it wanted the information which Sweezy refused to give; to say that the State has not demonstrated that it wants the information seems so unreal as to be incredible. The State had delegated power to the attorney general to determine the scope of inquiry within the general subject of subversive activities. Under these circumstances the conclusion of the Chief Justice that the vagueness of the resolution violates the due process clause must be, despite his protestations, a holding that a State legislature cannot delegate such a power."

PUBLIC EMPLOYMENT CASES

There are many cases involving public employment and the question of disqualification therefor by reason of Communist Party membership or other questions of loyalty. *Slochower* v. *Board of Higher Education* (350 U.S. 551) is a well known example of cases of this type. Two more recent cases, *Lerner* v. *Casey*, and *Beilan* v. *Board of Public Education* (both in 357 U.S. and decided on June 30, 1958), have upheld disqualifications for employment where such issues were involved, but they did so on the basis of lack of competence or fitness. Lerner was a subway conductor in New York and Beilan was a public school instructor. In each case the decision was by a five-to-four majority.

ADMISSION TO THE BAR

When we come to the recent cases on admission to the bar, we are in a field of unusual sensitivity. We are well aware that any adverse comment which we may make on those decisions lays us open to attack on the grounds that we are complaining of the curtailment of our own powers and that we are merely voicing the equivalent of the ancient protest of the defeated litigant—in this instance the wail of a judge who has been reversed. That is a prospect which we accept in preference to maintaining silence on a matter which we think cannot be ignored without omitting an important element of the subject with which this report is concerned.

Konigsberg v. *State Bar of California* (353 U.S. 252), seems to us to reach the high water mark so far established by the Supreme Court in overthrowing the action of a State and in denying to a State the power to keep order in its own house.

The majority opinion first hurdled the problem as to whether or not the Federal question sought to be raised was properly presented to the State's highest court for decision and was decided by that court. Mr. Justice Frankfurter dissented on the ground that the record left it doubtful whether this jurisdictional requirement for review by the Supreme Court had been met and favored a remand of the case for certification by the State's highest court of "whether or not it did in fact pass on a claim properly before it under the due process clause of the 14th amendment." Mr. Justice Harlan and Mr. Justice Clark shared Mr. Justice Frankfurter's jurisdictional views. They also dissented on the merits in an opinion written by Mr. Justice Harlan, of which more later.

The majority opinion next turned to the merits of Konigsberg's application for admission to the bar. Applicable State statutes required one seeking admission to show that he was a person of good moral character and that he did not advocate the overthrow of the National or State government by force or violence. The committee of bar examiners, after holding several hearings on Konigsberg's application, notified him that his application was denied because he did not show that he met the above qualifications.

The Supreme Court made its own review of the facts.

On the score of good moral character, the majority found that Konigsberg had sufficiently established it, that certain editorials written by him attacking this country's participation in the Korean war, the actions of political leaders, the influence of "big business' on American life, racial discrimination and the Supreme Court's decision in *Dennis* v. *United States* (341 U.S. 494), would not support any rational inference of bad moral character, and that his refusal to answer questions "almost all" of which were described by the Court as having "concerned his political affiliations, editorials and beliefs" (353 U.S. 269) would not support such an inference either. On the matter of advocating the overthrow of the National or State government by force or violence, the Court held (as it had in the companion case of *Schware* v. *Board of Bar Examiners of New Mexico* (353 U.S. 232), decided contemporaneously) that past membership in the Communist Party was not enough to show bad moral character. The majority apparently accepted as sufficient Konigsberg's denial of any present advocacy of the overthrow of the Government of the United States or of California, which was uncontradicted on the record. He had re-

fused to answer questions relating to his past political affiliations and beliefs, which the bar committee might have used to test the truthfulness of his present claims. His refusal to answer was based upon his views as to the effect of the 1st and 14th amendments. The Court did not make any ultimate determination of their correctness, but (at 353 U.S. 270) said that prior decisions by this Court indicated that his objections to answering the questions [which we shall refer to below] were not frivolous.

The majority asserted that Konigsberg "was not denied admission to the California bar simply because he refused to answer questions." In a footnote appended to this statement it is said (353 U.S. 259): "Neither the committee as a whole nor any of its members ever intimated that Konigsberg would be barred just because he refused to answer relevant inquiries or because he was obstructing the committee. Some members informed him that they did not necessarily accept his position that they were not entitled to inquire into his political associations and opinions and said that his failure to answer would have some bearing on their determination whether he was qualified. But they never suggested that his failure to answer their questions was, by itself, a sufficient independent ground for denial of his application."

Mr. Justice Harlan's dissent took issue with these views—convincingly, we think. He quoted lengthy extracts from the record of Konigsberg's hearings before the subcommittee and the committee of the State bar investigating his application. (353 U.S. 284–309.) Konigsberg flatly refused to state whether or not at the time of the hearing he was a member of the Communist Party and refused to answer questions on whether he had ever been a Communist or belonged to various organizations, including the Communist Party. The bar committee conceded that he could not be required to answer a question if the answer might tend to incriminate him; but Konigsberg did not stand on the fifth amendment and his answer which came nearest to raising that question, as far as we can see, seems to have been based upon a fear of prosecution for perjury for whatever answer he might then give as to membership in the Communist Party. We think, on the basis of the extracts from the record contained in Mr. Justice Harlan's dissenting opinion that the committee was concerned with its duty under the statute to certify as to this applicant's good moral character (p. 295), and that the committee was concerned with the applicant's disinclination to respond to questions proposed by the committee (p. 301), and that the committee, in passing on his good moral character, sought to test his veracity (p. 303).

The majority, however, having reached the conclusion above stated, that Konigsberg had not been denied admission to the bar simply because he refused to answer questions, then proceeded to demolish a strawman by saying that there was nothing in the California statutes or decisions, or in the rules of the bar committee which had been called to the Court's attention, suggesting that a failure to answer questions "is ipso facto, a basis for excluding an applicant from the bar, irrespective of how overwhelming is his showing of good character or loyalty or how flimsy are the suspicions of the bar examiners." Whether Konigsberg's overwhelming showing of his own good character would have been shaken if he had answered the relevant questions which he refused to answer, we cannot say. We have long been under the impression that candor is required of members of the bar and, prior to Konigsberg we should not have thought that there was any doubt that a candidate for admission to the bar should answer questions, as to matters relating to his fitness for admission, and that failure or refusal to answer such questions would warrant an inference unfavorable to the applicant or a finding that he had failed to meet the burden of proof of his moral fitness.

Let us repeat that Konigsberg did not invoke protection against self-incrimination. He invoked a privilege which he claimed to exist against answering certain questions. These might have served to test his veracity at the committee hearings held to determine whether or not he was possessed of the good moral character required for admission to the bar.

The majority opinion seems to ignore the issue of veracity sought to be raised by the questions which Konigsberg refused to answer. It is also somewhat confusing with regard to the burden of proof. At one point (pp. 270–271) it says that the committee was not warranted in drawing from Konigsberg's refusal to answer questions any inference that he was of bad moral character; at another (p. 273) it says that there was no evidence in the record to justify a finding that he had failed to establish his good moral character.

Also at page 273 of 353d United States Reports, the majority said: "We recognize the importance of leaving States free to select their own bars, but it is equally important that the State not exercise this power in an arbitrary or discriminatory manner nor in such way as to impinge on the freedom of political expression or association. A bar composed of lawyers of good character is a worthy objective but it is unnecessary to sacrifice vital freedoms in order to obtain that goal. It is also important to society and the bar itself that lawyers be unintimidated—free to think, speak and act as members of an independent bar." The majority thus makes two stated concessions—each, of course, subject to limitations—one, that it is important to leave the States free to select their own bars and, the other, that a bar composed of lawyers of good character is a worthy objective.

We think that Mr. Justice Harlan's dissent on the merits, in which Mr. Justice Clark joined, shows the fallacies of the majority position. On the facts which we think were demonstrated by the execerpts from the record included in that dissent, it seems to us that the net result of the case is that a State is unable to protect itself against admitting to its bar an applicant who, by his own refusal to answer certain questions as to what the majority regarded as political associations and activities, avoids a test of his veracity through cross examination on a matter which he has the burden of proving in order to establish his right to admission to the bar. The power left to the States to regulate admission to their bars under Konigsberg hardly seems adequate to achieve what the majority chose to describe as a worthy objective—a bar composed of lawyers of good character.

We shall close our discussion of Konigsberg by quoting two passages from Mr. Justice Harlan's dissent, in which Mr. Justice Clark joined. In one, he states that "this case involves an area of Federal-State relations—the right of States to establish and administer standards for admission to their bars—into which this Court should be especially reluctant and slow to enter." In the other, his concluding comment (p. 312), he says: "[W]hat the Court has really done, I think, is simply to impose on California its own notions of public policy and judgment. For me, today's decision represents an unacceptable intrusion into a matter of State concern."

The Lerner and Beilan cases above referred to seem to indicate some recession from the intimations, though not from the decisions, in the Konigsberg and Slochower cases. In Beilan the schoolteacher was told that his refusal to answer questions might result in his dismissal, and his refusal to answer questions pertaining to loyalty matters was held relevant to support a finding that he was incompetent. "Incompetent" seems to have been taken in the sense of unfit.

STATE ADMINISTRATION OF CRIMINAL LAW

When we turn to the impact of decisions of the Supreme Court upon the State administration of criminal justice, we find that we have entered a very broad field. In many matters, such as the fair drawing of juries, the exclusion of forced confessions as evidence, and the right to counsel at least in all serious cases, we do not believe that there is any real difference in doctrine between the views held by the Supreme Court of the United States and the views held by the highest courts of the several States.

There is, however, a rather considerable difference at times as to how these general principles should be applied and as to whether they have been duly regarded or not. In such matters the Supreme Court not only feels free to review the facts, but considers it to be its duty to make an independent review of the facts. It sometimes seems that the rule which governs most appellate courts in the view of findings of fact by trial courts is given lipservice, but is actually given the least possible practical effect. Appellate courts generally will give great weight to the findings of fact by trial courts which had the opportunity to see and hear the witnesses, and they are reluctant to disturb such findings. The Supreme Court at times seems to read the records in criminal cases with a somewhat different point of view. Perhaps no more striking example of this can readily be found than in *Moore* v. *Michigan* (355 U.S. 155).

In the Moore case the defendant had been charged in 1937 with the crime of first degree murder, to which he pleaded guilty. The murder followed a rape and was marked by extreme brutality. The defendant was a Negro youth, 17 years of age at the time of the offense, and is described as being of limited education (only the seventh grade) and as being of rather low mentality. He confessed the crime to law enforcement officers and he expressed a desire to plead guilty and "get it over with". Before such a plea was permitted to be entered he was interviewed by the trial judge in the privacy of the judge's chambers and he again admitted his guilt, said he did not want counsel and expressed the desire to "get it over with", to be sent to whatever institution he was to be confined in, and to be placed under observation. Following this, the plea of guilty was accepted and there was a hearing to determine the punishment which should be imposed. About 12 years later the defendant sought a new trial principally on the ground that he had been unfairly dealt with because he was not represented by counsel. He had expressly disclaimed any desire for counsel at the time of his trial. Pursuant to the law of Michigan, he had a hearing on this application for a new trial. In most respects his testimony was seriously at variance with the testimony of other witnesses. He was corroborated in one matter by a man who had been a deputy sheriff at the time when the prisoner was arrested and was being questioned. The trial court, however, found in substance that the defendant knew what he was doing when he rejected the appointment of counsel and pleaded guilty, that he was then calm and not intimidated, and, after hearing him testify, that he was completely unworthy of belief. It accordingly denied the application for a new trial. This denial was affirmed by the Supreme Court of Michigan, largely upon the basis of the findings of fact by the trial court. The Supreme Court of the United States reversed. The latter Court felt that counsel might have been of assistance to the prisoner, in view of his youth, lack of education and low mentality, by requiring the

State to prove its case against him (saying the evidence was largely circumstantial), by raising a question as to his sanity, and by presenting factors which might have lessened the severity of the penalty imposed. It was the maximum permitted under the Michigan law—solitary confinement for life at hard labor. The case was decided by the Supreme Court of the United States in 1957. The majority opinion does not seem to have given any consideration whatsoever to the difficulties of proof which the State might encounter after the lapse of many years or the risks to society which might result from the release of a prisoner of this type, if the new prosecution should fail. They are, however, pointed out in the dissent.

Another recent case which seems to us surprising, and the full scope of which we cannot foresee, is *Lambert* v. *California* (355 U.S., decided Dec. 16, 1957). In that case a majority of the Court reversed a conviction under a Los Angeles ordinance which required a person convicted of a felony, or of a crime which would be felony under the law of California, to register upon taking up residence in Los Angeles. Lambert had been convicted of forgery and had served a long term in a California prison for that offense. She was arrested on suspicion of another crime and her failure to register was then discovered and she was prosecuted, convicted, and fined. The majority of the Supreme Court found that she had no notice of the ordinance, that it was not likely to be known, that it was a measure merely for the convenience of the police, that the defendant had no opportunity to comply with it after learning of it and before being prosecuted, that she did not act willfully in failing to register, that she was not "blameworthy" in failing to do so, and that her conviction involved a denial of due process of law.

This decision was reached only after argument and reargument. Mr. Justice Frankfurter wrote a short dissenting opinion in which Mr. Justice Harlan and Mr. Justice Whittaker joined. He referred to the great number of State and Federal statutes which imposed criminal penalties for nonfeasance and stated that he felt confident that "the present decision will turn out to be an isolated deviation from the strong current of precedents—a derelict on the waters of the law."

We shall not comment in this report upon the broad sweep which the Supreme Court now gives to habeas corpus proceedings. Matters of this sort seem to fall within the scope of the committee of this conference on the habeas corpus bill which has been advocated for some years by this conference for enactment by the Congress of the United States, and has been supported by the Judicial Conference of the United States, the American Bar Association, the Association of Attorneys General and the Department of Justice.

We cannot, however, completely avoid any reference at all to habeas corpus matters because what is probably the most far-reaching decision of recent years on State criminal procedure which has been rendered by the Supreme Court is itself very close to a habeas corpus case. That is the case of *Griffin* v. *Illinois* (351 U.S. 12) which arose under the Illinois Post Conviction Procedure Act. The substance of the holding in that case may perhaps be briefly and accurately stated in this way: If a transcript of the record, or its equivalent, is essential to an effective appeal, and if a State permits an appeal by those able to pay for the cost of the record or its equivalent, then the State must furnish without expense to an indigent defendant either a transcript of the record at his trial, or an equivalent thereof, in order that the indigent defendant may have an equally effective right of appeal. Otherwise, the inference seems clear, the indigent defendant must be released upon habeas corpus or similar proceedings. Probably no one would dispute the proposition that the poor man should not be deprived of the opportunity for a meritorious appeal simply because of his poverty. The practical problems which flow from the decision in *Griffin* v. *Illinois* are however almost unlimited and are now only in course of development and possible solution. This was extensively discussed at the 1957 meeting of this Conference of Chief Justices in New York.

We may say at this point that in order to give full effect to the doctrine of *Griffin* v. *Illinois*, we see no basis for distinction between the cost of the record and other expenses to which the defendant will necessarily be put in the prosecution of an appeal. These include filing fees, the cost of printing the brief and of such part of the record as may be necessary, and counsel fees.

The Griffin case was very recently given retroactive effect by the Supreme Court in a per curiam opinion in *Eskridge* v. *Washington State Board of Prison Terms and Paroles* (78 S. Ct. 1061). In that case the defendant, who was convicted in 1935, gave timely notice of an appeal. His application then made for a copy of the transcript of the trial proceedings to be furnished at public expense was denied by the trial judge. A statute provided for so furnishing a transcript if "in his (the trial judge's) opinion justice will thereby be promoted." The trial judge found that justice would not be promoted, in that the defendant had had a fair and impartial trial, and that, in his opinion, no grave or prejudicial errors had occurred in the trial. The defendant then sought a writ of mandate from the supreme court of the State, ordering the trial judge to have the transcript furnished for the prosecution of his appeal. This was denied and his appeal was dismissed. In 1956 he instituted habeas corpus proceedings which, on June 16, 1958, resulted in a reversal of the Washington court's decision and a remand "for further proceedings not inconsistent with this opinion." It was conceded that the reporter's transcript from the trial was still available. In what form it exists does not appear from the Supreme Court's opinion. As in Griffin, it was held that an adequate substitute for the transcript might be furnished in lieu of the transcript itself. Justices Harlan and Whittaker dissented briefly on the ground that "on this record the Griffin case decided in 1956 should not be applied to this conviction occurring in 1935." This accords with the view expressed by Mr. Justice Frankfurter in his concurring opinion in Griffin that it should not be retroactive. He did not participate in the Eskridge case.

Just where *Griffin* v. *Illinois* may lead us is rather hard to say. That it will mean a vast increase in criminal appeals and a huge caseload for appellate courts seems almost to go without saying. There are two possible ways in which the meritorious appeals might be taken care of and the nonmeritorious appeals eliminated. One would be to apply a screening process to appeals of all kinds, whether taken by the indigent or by persons well able to pay for the cost of appeals. It seems very doubtful that legislatures generally would be willing to curtail the absolute right of appeal in criminal cases which now exists in many jurisdictions. Another possible approach would be to require some showing of merit before permitting an appeal to be taken by an indigent defendant at the expense of the State.

Whether this latter approach which we may call "screening" would be practical or not is, to say the least, very dubious. First, let us look at a Federal statute and Supreme Court decisions thereunder. What is now subsection (a) of section 1915 of title 28, United States Code, annotated, contains a sentence reading as follows: "An appeal may not be taken in forma pauperis if the trial court certifies in writing that it is not taken in good faith." This section or a precursor thereof was involved in *Miller* v. *United States* (317 U.S. 192), *Johnson* v. *United States* (352 U.S. 565), and *Farley* v. *United States* (354 U.S. 521, 523). In the Miller case the Supreme Court held that the discretion of the trial court in withholding such a certificate was subject to review on appeal, and that in order that such a review might be made by the Court of Appeals it was necessary that it have before it either the transcript of the record or an adequate substitute therefor, which might consist of the trial judge's notes or of an agreed statement as to the points on which review was sought. Similar holdings were made by per curiam opinions in the Johnson and Farley cases, in each of which the trial court refused to certify that the appeal was taken in good faith. In each case, though perhaps more clearly in Johnson, the trial court seems to have felt that the proposed appeal was frivolous, and hence not in good faith.

The Eskridge case, above cited, decided on June 16, 1958, rejected the screening process under the State statute there involved, and appears to require, under the 14th amendment, that a full appeal be allowed—not simply a review of the screening process, as under the Federal statute above cited. The effect of the Eskridge case thus seems rather clearly to be that unless all appeals, at least in the same types of cases, are subject to screening, none may be.

It would seem that it may be possible to make a valid classification of appeals which shall be subject to screening and of appeals which shall not. Such a classification might be based upon the gravity of the offense or possibly upon the sentence imposed. In most, if not all, states, such a classification would doubtless require legislative action.

In the Griffin case, it will be recalled, the Supreme Court stated that a substitute for an actual transcript of the record would be acceptable if it were sufficient to present the points upon which the defendant based his appeal. The Supreme Court suggested the possible use of bystanders' bills of exceptions.

It seems probable to us that an actual transcript of the record will be required in most cases. For example, in cases where the basis for appeal is the alleged insufficiency of the evidence, it may be very difficult to eliminate from that part of the record which is to be transcribed portions which seem to have no immediate bearing upon this question. A statement of the facts to be agreed upon by trial counsel for both sides may be still more difficult to achieve even with the aid of the trial judge.

The danger of swamping some State appellate courts under the flood of appeals which may be loosed by Griffin and Eskridge is not a reassuring prospect. How far Eskridge may lead and whether it will be extended beyond its facts remain to be seen.

CONCLUSIONS

This long review, though far from exhaustive, shows some of the uncertainties as to the distribution of power which are probably inevitable in a federal system of government. It also shows, on the whole, a continuing and, we think, an accelerating trend toward increasing power of the national government and correspondingly contracted power of the State governments. Much of this is doubtless due to the fact that many matters which were once mainly of local concern are now parts of larger matters which are of national concern. Much of this stems from the doctrine of a strong, central government and of the plenitude of national power within broad limits of what may be necessary and proper in the exercise of the granted powers of the national government which was expounded and established by Chief Justice Marshall and his colleagues, though some of the modern extensions may and do seem

to us to go to extremes. Much, however, comes from the extent of the control over the action of the States which the Supreme Court exercises under its views of the 14th amendment.

We believe that strong State and local governments are essential to the effective functioning of the American system of federal government; that they should not be sacrificed needlessly to leveling, and sometimes deadening, uniformity; and that in the interest of active, citizen participation in self-government—the foundation of our democracy—they should be sustained and strengthened.

As long as this country continues to be a developing country and as long as the conditions under which we live continue to change, there will always be problems of the allocation of power depending upon whether certain matters should be regarded as primarily of national concern or as primarily of local concern. These adjustments can hardly be effected without some friction. How much friction will develop depends in part upon the wisdom of those empowered to alter the boundaries and in part upon the speed with which such changes are effected. Of course, the question of speed really involves the exercise of judgment and the use of wisdom, so that the two things are really the same in substance.

We are now concerned specifically with the effect of judicial decisions upon the relations between the Federal Government and the State governments. Here we think that the overall tendency of decisions of the Supreme Court over the last 25 years or more has been to press the extension of Federal power and to press it rapidly. There have been, of course, and still are, very considerable differences within the Court on these matters, and there has been quite recently a growing recognition of the fact that our Government is still a Federal Government and that the historic line which experience seems to justify between matters primarily of national concern and matters primarily of local concern should not be hastily or lightly obliterated. A number of justices have repeatedly demonstrated their awareness of problems of federalism and their recognition that federalism is still a living part of our system of government.

The extent to which the Supreme Court assumes the function of policymaker is also of concern to us in the conduct of our judicial business. We realize that in the course of American history the Supreme Court has frequently—one might, indeed, say customarily—exercised policymaking powers going far—beyond those involved, say, in making a selection between competing rules of law.

We believe that in the fields with which we are concerned, and as to which we feel entitled to speak, the Supreme Court too often has tended to adopt the role of policymaker without proper judicial restraint. We feel this is particularly the case in both of the great fields we have discussed—namely, the extent and extension of the Federal power, and the supervision of State action by the Supreme Court by virtue of the 14th amendment. In the light of the immense power of the Supreme Court and its practical nonreviewability in most instances no more important obligation rests upon it, in our view, than that of careful moderation in the exercise of its policymaking role.

We are not alone in our view that the Court, in many cases arising under the 14th amendment, has assumed what seem to us primarily legislative powers. (See Judge Learned Hand on the Bill of Rights.) We do not believe that either the framers of the original Constitution or the possibly somewhat less gifted draftsmen of the 14th amendment ever contemplated that the Supreme Court would, or should, have the almost unlimited policymaking powers which it now exercises. It is strange, indeed, to reflect that under a constitution which provides for a system of checks and balances and of distribution of power between National and State Governments one branch of one government—the Supreme Court—should attain the immense, and in many respects, dominant, power which it now wields.

We believe that the great principle of distribution of powers among the various branches of government and between levels of government has vitality today and is the crucial base of our democracy. We further believe that in construing and applying the Constitution and laws made in pursuance thereof, this principle of the division of power based upon whether a matter is primarily of national or of local concern should not be lost sight of or ignored, especially in fields which bear upon the meaning of a constitutional or statutory provision, or the validity of State action presented for review. For, with due allowance for the changed conditions under which it may or must operate, the principle is as worthy of our consideration today as it was of the consideration of the great men who met in 1787 to establish our Nation as a nation.

It has long been an American boast that we have a government of laws and not of men. We believe that any study of recent decisions of the Supreme Court will raise at least considerable doubt as to the validity of that boast. We find first that in constitutional cases unanimous decisions are comparative rarities and that multiple opinions, concurring or dissenting, are common occurrences. We find next that divisions in results on a five to four basis are quite frequent. We find further that on some occasions a majority of the Court cannot be mustered in support of any one opinion and that the result of a given case may come from the divergent views of individual Justices who happen to unite on one outcome or the other of the case before the Court.

We further find that the Court does not accord finality to its own determinations of constitutional questions, or for that matter of others. We concede that a slavish adherence to stare decisis could at times have unfortunate consequences; but it seems strange that under a constitutional doctrine which requires all others to recognize the Supreme Court's rulings on constitutional questions as binding adjudications of the meaning and application of the Constitution, the Court itself has so frequently overturned its own decisions thereon, after the lapse of periods varying from 1 year to 75, or even 95 years. (See the tables appended to Mr. Justice Douglas' address on "Stare Decisis," 49 Columbia Law Review 735, 756–758.) The Constitution expressly sets up its own procedures for amendment, slow or cumbersome though they may be.

These frequent differences and occasional overrulings of prior decisions in constitutional cases cause us grave concern as to whether individual views as to what is wise or desirable do not unconsciously override a more dispassionate consideration of what is or is not constitutionally warranted. We believe that the latter is the correct approach, and we have no doubt that every member of the Supreme Court intends to adhere to that approach, and believes that he does so. It is our earnest hope which we respectfully express, that that great Court exercise to the full its power of judicial self-restraint by adhering firmly to its tremendous, strictly judicial powers and by eschewing, so far as possible, the exercise of essentially legislative powers when it is called upon to decide questions involving the validity of State action, whether it deems such action wise or unwise. The value of our system of federalism, and of local self-government in local matters which it embodies, should be kept firmly in mind, as we believe it was by those who framed our Constitution.

At times the Supreme Court manifests, or seems to manifest, an impatience with the slow workings of our Federal system. That impatience may extend to an unwillingness to wait for Congress to make clear its intention to exercise the powers conferred upon it under the Constitution, or the extent to which it undertakes to exercise them, and it may extend to the slow processes of amending the Constitution which that instrument provides. The words of Elihu Root on the opposite side of the problem, asserted at a time when demands were current for recall of judges and judicial decisions, bear repeating: "If the people of our country yield to impatience which would destroy the system that alone makes effective these great impersonal rules and preserves our constitutional government, rather than endure the temporary inconvenience of pursuing regulated methods of changing the law, we shall not be reforming. We shall not be making progress, but shall be exhibiting that lack of self-control which enables great bodies of men to abide the slow process of orderly government rather than to break down the barriers of order when they are struck by the impulse of the moment." (Quoted in 31 Boston University Law Review 43.)

We believe that what Mr. Root said is sound doctrine to be followed towards the Constitution, the Supreme Court and its interpretation of the Constitution. Surely, it is no less incumbent upon the Supreme Court, on its part, to be equally restrained and to be as sure as is humanly possible that it is adhering to the fundamentals of the Constitution with regard to the distribution of powers and the separation of powers, and with regard to the limitations of judicial power which are implicit in such separation and distribution, and that it is not merely giving effect to what it may deem desirable.

We may expect the question as to what can be accomplished by the report of this committee or by resolutions adopted in conformity with it. Most certainly some will say that nothing expressed here would deter a member or group of members of an independent judiciary from pursuing a planned course. Let us grant that this may be true. The value of a firm statement by us lies in the fact that we speak as members of all the State appellate courts with a background of many years' experience in the determination of thousands of cases of all kinds. Surely there are those who will respect a declaration of what we believe. And it just could be true that our statement might serve as an encouragement to those members of an independent judiciary who now or in the future may in their conscience adhere to views more consistent with our own.

Respectfully submitted.

Frederick W. Brune, Chief Judge of Maryland, Chairman; Albert Conway, Chief Judge of New York; John R. Dethmers, Chief Justice of Michigan; William H. Duckworth, Chief Justice of Georgia; John E. Hickman, Chief Justice of Texas; John E. Martin, Chief Justice of Wisconsin; Martin A. Nelson, Associate Justice of Minnesota; William C. Perry, Chief Justice of Oregon; Taylor H. Stukes, Chief Justice of South Carolina; Raymond S. Wilkins, Chief Justice of Massachusetts.

"'Campy' Goes Home"

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial which appeared in the New York Times of November 9, 1958. This great athlete has been a courageous and fine patient and his gallant fight back from tragedy should be an inspiration to all who are physically handicapped:

"CAMPY" GOES HOME

After 9 months in the hospital Roy Campanella has gone home. He isn't entirely well yet and will have to go on with his therapy. But he has made the first big step back on the road to recovery and to the resumption of his life as a useful citizen.

The Campanella case has more than its immediate significance. Roy is something of a symbol, now, to all those who are fighting their way back from seemingly overwhelming disaster. He has shown that it can be done. He is a personal symbol, of course, because of his great good humor, his magnificent courage, and his record as an outstanding athlete. Tragedy struck a man who was already much in the public eye and high in the public esteem.

But there is more to it than that. The magnificent treatment that saved his life in the first place and that now has placed him on the way to fuller recovery is part of a great program of rehabilitation that is steadily expanding. What was done for "Campy" at Bellevue Center can be done for others, both there and throughout the world.

It is doubtful that the doctors will often get as good a patient as Roy. They will never get a better one. But they and he, working together, have demonstrated how greatly valor can be the better part of wisdom. Miracles can happen. Brave men can still live if they have the will. "Campy" has gone home, and he has come home to all of us.

Nation Pays Tribute to All War Veterans

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a speech given by Judge David B. Williams, national commander of the Disabled American Veterans, on the occasion of Veterans Day in Boston, Mass.

Judge David B. Williams, national commander of the Disabled American Veterans, led the ceremonies in behalf of all veteran groups at Boston, Mass., on Veterans Day. This year, the rites at Boston were sponsored by the Disabled American Veterans.

Leo W. Lalley, State commander, DAV, was in charge of the ceremonies. Charles N. Collatos, Massachusetts commissioner of veterans' services, was master of ceremonies. The highlights of the day was the laying of wreaths by the State commanders of all veterans' organizations.

TEXT OF WILLIAMS TALK

Up until 4 years ago all of us called November 11 each year by its familiar name—Armistice Day—but, in 1954, the Congress officially gave this date a much broader meaning, and now this date is known as Veterans Day.

With the full approval of our most distinguished veteran, the President of the United States, citizens everywhere are asked to pause on November 11 to salute our fellow Americans who have exemplified the highest tradition of citizenship by serving in defense of this Nation.

While this salute is merited, we who are veterans, and disabled veterans at that, feel that this day is a solemn occasion in which all of us dedicate ourselves anew to the cause for which we fought, for which we were disabled, and for which so many of our comrades died. And while we look back to great sacrifices, we must at the same time look forward to the goals we all desire.

If we can demonstrate to ourselves that our children and grandchildren will live to know the honorable peace for which we all struggle, then we can feel assured that we merit the salute you are asked to give us on Veterans Day.

Yes, the very theme of Veterans Day—the permanent slogan—is "Peace With Honor." And unless we have and maintain peace with honor all will have been in vain.

Few can match veterans in their experienced understanding of what America truly seeks in the determined effort to achieve peace with honor. Few can match disabled veterans in their personal knowledge of the suffering that modern warfare brings.

They know that peace with honor lies at the very heart of our American principles. Americans have always wanted peace. But we have never been willing to accept it when it meant dishonor.

CONSIDER HISTORY

This is a good day for inventory—for reevaluation—let's look back into our history just a bit:

Long before there was a Declaration of Independence, determined men of New England were dumping tea in the harbor of Boston. It represented taxation without representation. For them it was the bitter tea of dishonor. They wanted peace. They wanted to live in friendship with the mother country overseas. But they were not willing to buy peace and friendship at the cost of their rights as free men and women.

It took a terrible war to bring to those colonists a peace with honor. But the men of America were not afraid to pledge their lives, their fortunes, and their sacred honor. And out of that war came an independent nation, with a peace that free Americans could accept and approve.

When the war was over, our fighting men returned, as veterans, to their homes, their shops and their farms. As our war veterans have done ever since, they settled down to hard working, peaceful life. They turned their minds and hearts to the creation of a strong and stable country for their children, and for those to come after them.

Their warlike deeds against superior odds had thrilled the world. But in the years that followed the war they outdid their victories in war by their peacetime development of the boundless resources of our land. Their productive skills rolled back the frontiers beyond the Alleghanies.

But peace with honor is not something that, once earned, remains of its own accord. The new Americans found that out when their sailing clippers entered the waters of the Mediterranean on legitimate business—and fell afoul the Barbary pirates.

Our sailormen were told: "Pay us annual tribute or we'll scuttle your ships and make slaves of you."

The proudest and strongest nations of Europe had accepted that blunt ultimatum. To pay tribute was easy; it was relatively cheap; it avoided bloodshed. But it also was dishonorable. And our forefathers knew that peace without honor is a bad investment that pays no dividends.

America's answer was presented in person by our sailors and marines. The Barbary pirates quickly saw the point. Our fighting men enforced peace with honor. Then they came home as veterans. Like the men from Saratoga and Yorktown they turned—as mechanics, merchants, doctors, lawyers, and teachers—to the peacetime development of our rapidly expanding young nation.

Once again, within a few short years, the march of events made it clear that peace with honor comes only to those who earn it and remains only with those who are willing to defend it when the need arises.

Busy in her world struggle with Napoleon, and careless of the basic human rights of others, Britain halted our ships on the high seas. She seized our sailors. She ignored our protests.

As before, America's answer was delivered in person. When the final statement was made at New Orleans by the fighting men of Andrew Jackson's command, the point became very clear indeed to our opponents. They accepted our thesis that peace with honor was America's minimum requirement—against them or anyone else.

Again our fighting men had earned the proud title of veterans. They went back to their homes and shops, and they went to work. And our country grew and spread to the westward. The steamboats and the railroads came. And we prospered.

Then came the greatest tragedy in our history. Brother against brother. A civil war—with the preservation of our Union at stake.

Much has been said—much always will be said about the most terrible of our wars. But the central point must always remain clear: In 1861, for North and South, peace with honor had become impossible. The final dreadful recourse to arms was the price we had to pay for our earlier mistakes and our earlier compromises.

But in the end, the words and deeds of men of good will prevailed. Peace with honor came to our land.

OUR COUNTRY GROWS

The fighting men returned to their homes. America's security and wealth grew as veterans turned their attention to the ways of business, industry, and commerce. As the decades passed we developed into a world power.

Through all of these changes our watchword remained as before: Peace with honor. The whole world had come to accept it as our basic American way of life. And we and the world prospered, until—in the second decade of the bloody 20th century—there was massed against our friends and allies—a vicious combination of armed power, with new threats and new aggressions.

Many books have been written about World War I. Many things have been said about America's entry into World War I, after enemy submarines began their unrestricted undersea warfare against every ship afloat on the high seas. But one fact remains clear: The terms arrogantly offered to us to remain neutral, peaceful, and safe were dishonorable.

And so, as in the case of our fathers, our grandfathers, and those before them, we had to call on our fighting men. We called on the sons of veterans of earlier days to fight for the only sure basis of our national existence as a free people—peace with honor.

They proved that when freedom is judged to be not worth fighting for, free men are left with nothing that's worth living for.

They proved that peace with honor is more than just a slogan to men and women who have been described accurately for all time, by one of our greatest Presidents, Abraham Lincoln. He said our Nation was "conceived in liberty."

They proved it anew—our fighting men, our veterans—on land, on sea, and in the air—when the challenge to peace with honor was flung down, even more brutally than be-

fore, by enemies of mankind who made good their mad promise to engulf the world in World War II.

They proved it—our fighting men, our veterans—on the bare and zero-cold mountains of Korea. They proved it, when to have hesitated in the will to oppose aggression would have been to betray the deepest qualities that make us Americans.

SPEAKS FOR DISABLED

In closing, I want to point out that there is one group of veterans who need your special attention and should be brought into special focus on this day of observance.

Bruce Catton, famous American author and editor, state it so eloquently that I would like to read you his words, rather than attempt to express any thoughts of mine that might not do justice to what I want to say. Mr. Catton said in a message written for the DAV:

"November 11 is Veterans Day: a day set aside by act of Congress and Presidential proclamation, to honor the memory of those who served in war. It has particularly reference to the living—for it is on Memorial Day that we pay our tribute to the men who never came back—and unless the day is to be a complete mockery it must include a renewed awareness of our obligation to the disabled ex-soldier. The Disabled American Veterans—the DAV—aptly points out that the disabled serviceman is asking for nothing more than a fair chance to make his own way in the world.

"He doesn't particularly want tears, and he is not demanding huge appropriations from the public treasury. What he does want is the kind of sympathetic understanding and the active support that will make it easier for him to resume his place, in spite of physical handicap, as a regular member of society. That is not too much to ask, and it is assuredly the very least that we can give.

"If we feel a sense of continuing obligation for services rendered, and make it a point to discharge that obligation in the attitude that we carry over into our regular workaday routine, life for the disabled veteran will be a good deal easier, and happier."

Yes, ladies and gentlemen, as Mr. Catton points out, there could be no better time than Veterans Day for us to renew our awareness of what we owe the veteran who took wounds in battle—for us.

Francis E. Walter, Chairman of the Special International Meeting on Refugees Held in Geneva, Switzerland

EXTENSION OF REMARKS
OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. ASPINALL. Mr. Speaker, during my most recent visit in Geneva, Switzerland, I was extremely happy to attend, on November 20, 1958, a special international meeting on refugees held by representatives of 29 governments immediately upon the termination of the ninth session of the Council of the Intergovernmental Committee for European Migration—ICEM.

Mr. Marcus Daly, the director of ICEM, stressed that the meeting convened at the suggestion of the U.S. Government for the purpose of exploring the present status of those refugees in Western Europe who, for a variety of reasons, have been so far unable to find new homes in the countries of resettlement.

I am informed that the result of the debates held in Geneva, as well as the results of the studies presently in progress, will be the subject of a special report to the House. Such report will be submitted at a later date, I understand, when the studies and statistical compilations are available. At the present time, however, it gives me great pleasure to submit to the attention of my colleagues that part of the proceedings of the special international meeting on refugees which pertain to the nomination and the unanimous election to the chair of our colleague, the gentleman from Pennsylvania [Mr. WALTER].

Under leave to insert my remarks in the RECORD, I hereby submit the verbatim transcript of the pertinent part of the Geneva proceedings.

Upon the conclusion of Mr. Daly's opening remarks, the delegate of Australia obtained the floor:

Mr. JOCKEL (Australia). Mr. Director, gentlemen. As you said, Mr. Director, this is a meeting of a very special character, called by the United States or, rather, suggested by the United States, to take advantage of the presence of the representatives who are here in Geneva. It is not in the formal sense an ICEM meeting and indeed when we look around the room and we see the Governments assembled, the United Nations High Commissioner's Office, the Voluntary Agencies, rather would they be considered as representing a community of countries and organizations interested in refugee work. In this room this morning we have many men with special responsibilities in their governments for migration and refugee questions and among such a group of top-level and influential people a discussion of the remaining refugee problems and an assembly of the facts and information relating to these problems can do nothing but good in sustaining and expanding international effort.

Among us this morning we have a very distinguished gentleman who is especially well equipped by knowledge, experience and authority to direct these deliberations. It is indeed our good fortune to have with us Congressman FRANCIS E. WALTER, the chairman of the United States congressional delegation to the just-concluded ICEM Council. We believe we should take advantage of his presence and his interest in this work and it is my pleasure to nominate Congressman WALTER to preside over this meeting. The United States Delegation has kindly offered to make his services available for this purpose.

It is not necessary for me to dwell upon the contribution that Congressman WALTER has made to the work of ICEM, which has, itself made such a contribution to the solution of refugee problems. He continues to be a tower of strength to the organization and my country is by no means the least to appreciate what his support means for ICEM and in related matters. I feel I should, however, place before you some indication of Congressman WALTER's unflagging work in the refugee field in the last decade. For every United States legislation concerning refugees and migrants since the war, Congressman WALTER, in Congress, has been the author and the pilot. This extends from the Displaced Persons Act in 1948, through which 460,000 persons were admitted to the United States, the Refugee Relief Act providing for a further 110,000 admissions, right down to recent legislation for the admission of Dutch expellees. It includes also the 1957 legislation providing for the liberalization of the entry laws in immigrant cases involving sicknesses and diseases, thereby facilitating family reunions and the admission of refugees.

Generous ideas and practices have a way of spreading; the example of what the United States is doing and has done in this area is not lost on other Governments and indeed there has seldom been a period of such constructive general effort in the refugee field. I am sure that you will all agree that to appoint as chairman today one of the greatest architects of this international work would be the best basis we could, in this meeting, have for further fruitful effort. Thank you, Mr. Director.

Mr. HAVEMANN (Netherlands). Mr. Director, it is a great privilege to me to support the proposal just made by the Australian representative. All of us know how much we owe to Mr. WALTER in the field of refugees and migration. With his great prestige and political leadership he has very successfully directed his efforts to helping many countries, many groups of refugees and innumerable individuals to alleviate or to solve their problems. It is right that we should ask him to take the chair, not only as an expression of our gratitude but still more because we badly need his guidance in our endeavors to deal effectively with the refugee problem. As a leading and outstanding politician, Mr. WALTER is not always easy to convince; he has a sound dose of skepticism which prevents him from believing in what he is accustomed to call international social workers pipe dreams. But I have already noted many times that once Mr. WALTER is convinced of the urgency of a matter he kneads the circumstances like wax until the solution he has in mind is reached. For this reason I hope the nations represented here will call on Mr. WALTER to act as their leader and may be in a later stage their trustee. I am certain that we can then hope to reach a solution of our problems pretty soon. Thank you.

Mr. DE LIERA (Spain) (translation from Spanish). Mr. Chairman, I wished to address the meeting for the express purpose of supporting the proposal of the representative of Australia but my colleague, the delegate of the Netherlands, anticipated my intention. I should now like to associate myself with that proposal by saying that I consider that the background and exceptional ability possessed by Mr. WALTER make him the most suitable person to preside over the meeting called for this morning. Thank you, Mr. Chairman.

Mr. RIVAS (Venezuela) (translation from Spanish). Mr. Chairman, the delegation of Venezuela has very great pleasure in supporting the proposal made by the representative of Australia, seconded by the representatives of the Netherlands and of Spain, that Congressman WALTER should be chairman of this special meeting on refugees.

In point of fact, my delegation is well acquainted with the efforts made by Mr. WALTER not only on behalf of expellees, but also on behalf of all the migrants in order to help them to build up a prosperous existence at the same time to contribute to the development of many countries which need the cooperation offered by these human resources. Thank you.

Mr. FALCHI (Italy) (translation from French). Mr. Chairman, I should like to give my wholehearted support to the proposal just made. The Director has told us of the importance of this meeting; we are most interested in this problem and we hope that the discussions which are about to take place will be successful. I firmly believe that there is no one who is better qualified than Mr. WALTER, by his experience and authority to preside over our work and to strengthen our hopes of achieving concrete results. In consequence, I associate myself wholeheartedly with the pro-

posal which has been made to entrust the chair to Mr. WALTER.

Mr. DALY. I would like to thank the delegates for their remarks. Are there any further remarks? Has any other representative the wish to put forward another candidate for the office of chairman? (No response.) It would appear to be the wish of this meeting that Congressman WALTER be, and he is, unanimously elected to be chairman. [Applause.] I should like to introduce our new chairman, Congressman WALTER.

Mr. WALTER (delegate of the United States). Gentlemen, in the first instance I wish to state that I deeply appreciate the very nice things that have been said about me and may I add, I trust that they will not go unnoticed by my potential political opponents in some forthcoming election campaign back home. In a more serious vein, I assure you that the purpose of this meeting is one that should stir all of us to attempt a solution of a problem that will become increasingly difficult unless solved early.

Up to now ICEM has been successfully dealing with the results of the failure to recognize a problem caused by overpopulation. I am sure that the nations of the world that are participating in an attempt to bring about a solution to that problem recognize the fact that there is another one which must be dealt with as intelligently as this great organization of ICEM dealt with the one presented to it in Brussels in 1951 when the organization was created.

I am sure that all will realize that this is merely, may I say, an exploratory meeting. First, I think it is extremely important that we know exactly what the problem is and the extent of the problem before us. After we realize just exactly what that is, then, of course, whatever steps must be taken can be taken intelligently.

I am sure that all of us are very much in the dark as to just exactly what the size and the nature of the "residual refugees" problem is, and I am sure that this informal meeting, attended by everyone who has exhibited an interest in this matter, will bear fruit. The Chair recognizes the representative of the United States to explain the position of the United States. Mr. O'Connor.

Why Do Reds Have Privileges Denied to Underworld Crooks?

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of November 17, 1958:

WHY DO REDS HAVE PRIVILEGES DENIED TO UNDERWORLD CROOKS?

You can hardly pick up your newspaper nowadays without finding new proof of a double standard of ethics that favors Moscow's fifth column. Governor Harriman, of New York, recently had this to say about some hoodums: "These people have got to be forced to talk." His emotions can be approved, but if he had said that about uncommunicative Communists, he would have been denounced from coast to coast as a witch hunter.

During the McClellan Committee's hearings, Counsel Robert F. Kennedy said to the Teamsters' president James Hoffa, "Are you frightened? You're not tough enough to get rid of these people." Chairman JOHN L. MCCLELLAN repeatedly attacked Hoffa during the hearings. Senator IVES told one of Hoffa's underlings, Robert (Barney) Baker, that he was an inveterate liar.

These comments were presumably justified, but suppose similar statements had been made about Communists by members of the House Un-American Activities Committee or the Senate Internal Security Subcommittee. How the country would have rung with outcries against the witch hunters. Actually, the Communist-investigating committees are notably mild. Nobody shouts epithets at the hapless and helpless Red witnesses. Instead, the Reds often shout epithets at Senators and Representatives. It is they who do the taunting and assailing, backed up by laughing and clapping Communists in the audience. Too often the press has chuckled approvingly.

A number of delegates to the gangland convention at Apalachin, N.Y., a year ago were jailed by State judges because they took the fifth amendment when asked questions by a State investigating commission. The commission promised that if they answered the questions, they would be immune from prosecution in State courts; but the witnesses pointed out that this wouldn't protect them from Federal prosecution.

Nevertheless, one judge pailed some of these men after a 3-minute hearing. Another judge said: "What went on at Apalachin that day I don't know. But the people have a right to know. * * * Organized society has at least as much right as organized crime." True enough, but hasn't society also as much right as organized communism?

The Apalachin delegates refused to become informers. The liberal press says it is monstrous to demand that Communists be informers. The gangland code is wicked for ordinary gangsters, but noble for the Communist gang. A double standard is applied to favor members of the Soviet fifth column. At a time when their masters in Moscow are whetting their knife for the throat of the United States, we give the Communists privileges which we deny to punks and union racketeers. Why?

Richard Cardinal Cushing

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address of welcome to Richard Cardinal Cushing, of Boston, by Rev. James F. Cunningham, C.S.P., rector of His Eminence's new Titular Church, on Friday, December 19, when the Cardinal "took possession" of the church, which appeared in The Pilot on December 20.

The address follows:

NEW ENGLAND PAULIST GREETS HIS EMINENCE

Your Eminence, welcome to Santa Susanna's.

On behalf of the American colony here in Rome, the Santa Susanna Guild, the Cistercian nuns who, unseen, are attending this ceremony in their chapel adjoining the High Altar, on behalf of the Paulist Fathers and their parishioners, may I say you are most welcome. If I dare speak for the many friends who have joined you in this visit to the Eternal City, may I say that all of us rejoice to have you accept the title and "take possession" as Titular Cardinal of the Venerable Church of Santa Susanna.

While making history yourself, you are following in historical footsteps. Cardinal Aiello became our first recorded titular in the year 494. His successors were eminent and many—Pope St. Sergius I. Pope Leo III who was crowned Pope in the crypt of this church, Pope Nicholas V, and Pope Paul V—all were your predecessors. To list the long file of cardinal titulars is to review the history of Rome—the power and the glory of names like Barberini, Corsini, Borghese, Valentini through Barnabo and Bonzano. Your name will be joined to them and to the prelates of many nations who have acknowledged Santa Susanna as their church—Portuguese, French, English, Italian—and in 1875 one of your illustrious forebears whose origin speaks for itself bore the name of Patrick Cardinal Moran. Cardinal Bonzano, papal delegate to the United States in 1925, and the late Cardinal Mooney in 1946 rounded out a list of memorable churchmen who as you are doing today "took possession" of Santa Susanna.

I am quite sure that Cardinal Rezzonico, assuming the title of Santa Susanna's in 1776, shook his head many times on hearing of the goings on in the independence seeking America. Undoubtedly he felt it a deplorable waste of good tea when your civic minded predecessors donned war paint and introduced the world to iced tea—out of Boston Harbor. Yet in all of his fears and prayers for the future I doubt very much did he anticipate a day when an American cardinal from Massachusetts would be welcomed to an ancient and venerable church in Rome by another New Englander from the neighboring State of Connecticut. Today an American pastor in Rome for probably the first time in Roman history welcomes an American cardinal to his titular church with great joy. Accepting this title and with the "taking of possession" you become one of the Rome clergy upon whom the Pope relies for assistance and counsel; by accepting this obligation you become an elector of those who follow in the chair of Peter.

I hope we will not embarrass Your Eminence if we liken you for a moment to St. Paul. St. Paul, Roman citizen, had looked forward to Rome for many years. Here was the infant church, here was Peter and through those long journeys through the Mediterranean area he longed for the day when he might join the church in the Eternal City. Finally he came to Rome, but as a prisoner bound for Caesar's judgment seat. Long delayed on his voyage, founding the apostolic see of Malta on his way, he arrived one day at the foot of the Via Appia—an old man, a prisoner in chains. But here, for the first time in a magnificent career, there were friends, Christians, enthusiastic Christians to greet him. His eyes glistened like those of an angel as he began the march up to Rome—and then at the Three Taverns, the halfway mark another group, this time of the older people whose zeal to greet him could not match the speed of their younger contemporaries—but here they were waiting to welcome him. St. Paul, an interprid missionary, an evangelist without peer—is welcomed home. And Holy Scripture says that Paul gave thanks to God, took courage and came on to Rome—home.

Today we give thanks that you are here among friends. There are those who came with you many more thousands of miles than did Paul's, but you have some 35 Cistercian nuns who await your visit to their convent. Their prayers are the most powerful I've ever known—they are your hidden arsenal of strength day and night before the Blessed Sacrament praying for you. Here in

the church—Romans all—are the parishioners of Santa Susanna's—the Santa Susanna Guild. Why do I mention these ladies? Is it because Pope Pius the XII a few months ago granted them a private audience and commended them on their apostolic spirit? Yes—because he particularly mentioned their devotion to the Church of Santa Susanna. As Your Eminence looks at the walls of the sanctuary and the paintings of our 400-year-old roof—this new—so the nave of the church, so too the chapel of St. Lawrence where you knelt in prayer on your way to the sanctuary. The ladies have provided the funds which have made these repairs possible—the crypt where Santa Susanna, her father Gibinius, and St. Felicitus lie buried—newly restored, a new furnace which at the moment is giving some heat—a rare thing in a Roman church. A courtyard restored and, lastly, a 400-year-old roof this year repaired and renewed. The ladies of the Santa Susanna Guild and their husbands form a working crew of 60 that many a church in the United States could envy. The Paulist Fathers, already so much in your debt, are always at your service. One of your friends is not present, but I am sure looking down from heaven completely satisfied and happy at the honor accorded you is Father Gillis. I know of no other single factor which could give him more happiness than that the Paulist Fathers were able to welcome his outstanding friend and exemplary prelate—Your Eminence.

The late Cardinal Stritch, upon his return to America some years ago, told of a young priest at his side as the ship came into New York Harbor. The young man had been many years abroad and suddenly as he looked up at the Statue of Lady Liberty he realized he was home. There was silence and the Cardinal realized the young man wept. "She may have her faults, Your Eminence," he said, "but she is the best there is." Today, welcoming you as our titular cardinal, we see no faults—but we are most happy and highly honored that His Holiness has bestowed upon us a titular like yourself, a citizen of no mean city, a prelate of no mean stature, a man of God—the best there is.

A Deserved Commendation of the FBI and Its Director, Hon. J. Edgar Hoover, Sunday, January 4, 1959

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. ROONEY. Mr. Speaker, the Federal Bureau of Investigation's assistance to local police in probing the recent wave of synagogue and school bombings is "reducing the threat of continued bigot-inspired violence," B'nai B'rith, the Jewish service organization, said today.

A statement by Philip M. Klutznick, of Park Forest, Ill., president of the 400,000-member organization, cited the FBI and its director, J. Edgar Hoover, for their deep concern with the bombings and threats of bombings. "Through the availability of the FBI's cooperative services, State and local law enforcement agencies have received strong support in meeting their responsibilities," it said.

Reference to the Federal law enforcement agency was embodied in Mr. Klutznick's yearend report to B'nai B'rith's board of governors.

The statement commended Mr. Hoover's initiative in having the FBI sponsor a series of law enforcement conferences to explain to police officials how to meet these assaults upon our free way of life.

Declaring that problems of enforcing the rule of law are a continuing issue of transcendent importance to the welfare of the Nation, Mr. Klutznick said that "the investigative efforts, training assistance and scientific services of the FBI have been a tremendous value in improving the efficiency and performance of law enforcement agencies in all parts of the country."

"They have had the salutary effect of strengthening law enforcement and reducing the threat of continued bigot-inspired violence that in recent months had intruded on good community relations in several parts of the Nation," the B'nai B'rith president said.

In recognizing the FBI's resolute measures to safeguard the rights and privileges of all people, Mr. Klutznick said that B'nai B'rith and others in the Jewish community have cause to appreciate that in troubled times such as these the Nation possesses an effective public servant in Mr. Hoover and the agency he heads, the FBI.

The full statement from Mr. Klutznick's report follows:

Since its founding 115 years ago, and as a natural parallel to its concern for the freedoms and the cultural and spiritual advancement of its members and their coreligionists, B'nai B'rith has been actively dedicated to the welfare of the general American community.

One continuing issue of transcendent importance to the common welfare that has been dominant these past 12 months is that of law enforcement—the challenge of domestic and foreign forces to the American concept of the rule of law as distinguished from the arbitrary rule of man.

In the strengthening of our democratic processes nothing is more important than to support unreservedly the forces of law and order. Our way of life depends on justice which must rest on an adequate appreciation of law and the orderly process of enforcing law within the meaning of the Constitution and the Bill of Rights.

In this connection, we have reviewed with interest the activities of the Federal Bureau of Investigation as set forth in the report of its distinguished director, Mr. J. Edgar Hoover, to Attorney General William P. Rogers. It presents in detail the accomplishments and resolute measures of the FBI to safeguard the rights and privileges of all people.

Over the years B'nai B'rith has carefully followed the work of this Federal law enforcement agency. Invariably, in our contacts with it, we have noted the steadfastness of Mr. Hoover and his associates to protect the liberties of all individuals, without distinctions of race or creed. Nothing can be more representative of the institutions of democratic government at work.

Of particular interest to B'nai B'rith is the deep concern of the FBI with the recent wave of bombings and threats of bombings involving religious and educational institutions. Mr. Hoover, typical of the skillful leadership he has brought to the law enforcement profession, took the initiative in having the FBI sponsor a series of law enforcement conferences to explain to police officials throughout the Nation how to meet these assaults upon our free way of life.

Through the availability of the FBI's cooperative services, State and local law enforcement agencies have received strong support in meeting their responsibilities. The investigative efforts, training assistance, and scientific services of the FBI have been a tremendous value in improving the efficiency and performance of law enforcement agencies in all parts of the country. These activities helped to promote the traditions of democratic justice by protecting the innocent while safeguarding the interest of the citizenry against the criminal and subversive.

In an area of special concern to B'nai B'rith, they have had the salutary effect of strengthening law enforcement and reducing the threat of continued bigot-inspired violence that in recent months had intruded on good community relations in several parts of the Nation.

B'nai B'rith and others in the Jewish community therefore have cause to appreciate that in troubled times such as these the Nation possesses an effective public servant in Mr. Hoover, and the agency he heads, the FBI. Their proven record is a guarantee that those civil liberties which have made our Nation great will continue to command respect and observance in the years to come.

H.R. 209 and H.R. 210

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include the column by Ed Wimmer in the Cincinnati Inquirer of January 5, 1959. Mr. Wimmer is vice president of the National Federation of Independent Business, which has the largest individual membership of any business organization in the United States. His column is one of the widest read columns in this area of interest in the United States. I am happy to inform my colleagues that H.R. 12879 and H.R. 12878, which I introduced in the 85th Congress have been reintroduced in the 86th Congress as H.R. 209 and H.R. 210, and have been reported to the Committee on Banking and Currency. Tremendous interest in this proposed Housing legislation is being shown all over the country and I trust that the Banking and Currency Committee will schedule early hearings on the bills. Mr. Wimmer's column follows:

CONGRESS GIVEN BILLS TO HALT RESIDENTIAL BLIGHT

(Ed Wimmer)

A result of studies made by the Shinner Foundation, Chicago, were two bills introduced in the last Congress, that could send this Nation well on the road to solving the national housing problem, and at the same time start a sizable boom.

One of the bills, H.R. 12879, calls for establishment of a Housing Conservation and Rehabilitation Finance Agency to provide loan funds for conservation and rehabilitation of existing housing, while H.R. 12878 seeks to amend the Internal Revenue Code of 1954 to allow the taxpayer to treat expenditures for

modernization or improvement of residential property (paid by him or incurred during the taxable year) as expenses which are not chargeable to capital account.

In making his case for such legislation, Congressman O'HARA used statistics compiled by the foundation which showed hundreds of thousands of neglected housing units in the United States that are passing annually from acceptable classes into undesirable categories. Mr. O'HARA said:

"Housing is America's number one investment—over $500 billion—which is three times the investment in agriculture; more than five times the value of all life insurance companies, and literally dwarfs our huge industrial empires.

"We have poured fantastic sums into slum clearance projects these past 6 years, for example, and if the same pace was maintained, it would take us 160 years to lick the problem as it now exists. In fact, the slum problem will never be licked if we continue to pour our dollars into cures and our dimes into prevention.

"What we've got to do, is to put our emphasis on conservation and rehabilitation to bring our total housing effort into balance by arresting the further expansion of slums and blight, and this can be done only by maintenance and restoration of what is still sound. Our approach to this problem is to make it worthwhile and possible for private owners to do the bulk of the job, which is the way it should be done under our American system.

"It is time we abandon the overly optimistic view of some public housing officials that this Government can and should tear down and replace every rundown housing structure."

According to Mr. O'HARA, H.R. 12879 would provide the Conservation Agency with capital subscribed by the Federal treasury. The Agency's power would be to make loans for conservation and rehabilitation; issue debentures against or guarantee and sell outright, mortgages obtained from original capital which thereby would renew available loan funds." It would also have the power to insure private loans for the purposes mentioned.

Countless owners of residential properties in the areas hit by residential property deterioration, are unable to obtain funds to halt the blight of their buildings. They are enmeshed in antiquated ordinances. Many rental property owners say: "Why should I restore my properties to decent standards if the community stays below standard?" Then there are those who profit most on the worst kind of slum conditions.

If city ordinances are brought up to date and enforced, and if repair and modernization costs could (at least in part) be deducted from tax returns, a new wave of private enterprise spending would snowball over the Nation, and as the Shinner Foundation says:

"For every tax forgiveness of $250 million out of a $1 billion investment in modernization and conservation, there would be created no fewer than 80,000 man-years of work, and a demand for at least $500 million in materials."

The Foundation also noted that tax returns from all this activity would be greater that the suggested allowable deductions, saying nothing of the enormous social gains.

Consider that 18 million people now live in slum or semislum areas (much of which is created by the people themselves), but if these conditions are allowed to spread, more millions will be driven into already overcrowded areas and into the suburbs—creating new blight to further weaken the fabric of American family life.

Such a program as suggested in the O'Hara bills would save hundreds of thousands of small businesses involved in the supply of materials, and greatly strengthen private capitalism by putting private initiative to work on the widest possible front.

Annual Convention Banquet of Veterans of World War I, Springfield, Ill.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LANE. Mr. Speaker, I wish to include herein my remarks made to the annual convention banquet of the Veterans of World War I, which was held at the Hotel Leland in Springfield, Ill., on Tuesday, September 16, 1958, as follows:

It is a happy choice that our first national convention, under a Federal charter, is taking place in Springfield, Ill.

As a native of Massachusetts, I am proud of the fact that many of the early settlers who built their own homes on this new land near the "River of Men," came from such places as Salem and Springfield in Massachusetts.

On this, my first visit to the capital city of Illinois, I am aware of this historical process at work. Those of us who traveled here from New England, are impressed by the beauty and charm of Springfield, but, even more, we sense the invisible presence of the man whose immortal spirit brought unity to our Nation.

It was many, many years ago that Abraham Lincoln rose to greatness, during a critical period in our history. It was almost midway between the Revolutionary War and the cold war of 1958.

And then, before his work was done, he came home to his last resting place in the midwest. His remains are embraced by the good earth of Oak Grove Cemetery, the national shrine at Springfield, Ill.

He understood the agony that divided our Nation through four years of civil strife. Each furrow in his brow, each deepening line on that tragic face, bore witness to the pain and sacrifice that he suffered to bring freedom through that first and most awesome test of its young manhood:

Lincoln had compassion for the men in blue and the men in gray.

If death had not stilled his generous heart, just as it closed the life of another President in our own day, and in each case just before the final victory, I am sure that he would have made plans to provide for the Civil War Veterans during the sunset years of their earthly journey.

It was in the final paragraph of his second inaugural address that Lincoln said: "Let us strive * * * to care for him who shall have borne the battle, and for his widow, and his orphan."

A little known fact to Americans of today, is the time and study and lengthy debate given to the question of providing compensation and pensions for war veterans from the 1st Congress up to the 85th which adjourned in August of the present year.

As far as we who gather at this convention are concerned, that debate goes on.

In the 86th Congress, which convenes in January of 1959, we shall work toward our objective, which is the enactment of a $100 pension per month for all honorably discharged veterans of World War I who are over 62 years of age.

And providing that the pension to which a person is entitled under this proposed legislation shall be in addition to any compensation to which such person may be entitled for service-connected disability.

As change is the law of life, the policies of the Federal Government toward the veterans who have served it so well in the various wars, have been shaped by many experiments and many experiences.

From disability compensation to a pure pension is a rough and twisting road where many Congresses have lost their way as they tried to find the right program for the aging veterans.

Public attitudes toward veterans as a whole, have gone through quite a transformation since the end of the Revolutionary War.

The first national pension law was passed by the Continental Congress on August 26, 1776. Every officer, soldier, or sailor losing a limb in any engagement or being so disabled in the service of the United States as to render him incapable of earning his livelihood, was promised half pay for life, or during disability.

The Revolutionary Service Pension Law of 1818, introduced a new principle into this field of legislation. Before this time, disability was the firm requirement for the payment of any pension. With the new law, mere service in the Armed Forces, together with poverty, became the basis for entitlement.

Congress adopted a pure service pension schedule for the Revolutionary War survivors, on June 7, 1832. This Act granted full pay for life to veterans who had served a minimum of 2 years.

The Mexican War Pension Act of 1887, granted a pension, if the veteran was suffering from disabilities to a pensionable degree. Veterans 62 years of age or older were entitled to a pension, regardless of any disability.

The trend was plain to see. Congress was becoming more liberal with the experience of each successive war.

In the debate on the Mexican War pension act, Senator Hoar of Massachusetts, pleaded for uniformity, for consistency of action on the part of Congress. He explained that if the Government were bound, as a matter of principle, to pension soldiers or sailors who do not need the pension, and who are under no disability, then it is a universal principle, and as such, the veterans of all wars are entitled to the pension. Enactment of the bill, said the Senator, would very shortly compel the Congress to take the next step—a pure service pension for the Civil War veterans.

The Mexican War pension act was debated for 3 years.

But the arguments in favor of it finally overwhelmed the opposition, and Congress passed the bill in January 1887.

The Dependent Pension Act of 1890 was a service-pension law. Pensioners, however, were required to demonstrate their inability to perform manual labor as a means of supporting themselves.

This law spawned many abuses, and gave rise to much dissatisfaction.

Widespread agitation led to the act of May 11, 1912, setting up a formula whereby the Civil War veteran must have served at least 90 days in that conflict, and that he must be 62 years of age or older. The amounts provided for on a graduated scale according to length of service, have been increased from time to time since 1912.

The act of June 5, 1920, was entitled "An act to pension soldiers and sailors of the war with Spain, the Philippine insurrection, and the China relief expedition."

It provided that any such person who has reached the age of 62 years, shall, upon making proof of such fact, be placed upon the pension roll.

As for pure service pensions, the Spanish American War still remains our most re-

cent conflict for which pensions have been authorized by the Congress.

Obviously, the veterans of World War I are next in order.

When Congress passed a bill to provide adjusted compensation for the veterans of 1917–18 it was vetoed by President Harding on September 19, 1922. In the message explaining his action, the President was looking to the future when he said that it is inevitable as the years pass that pension provision for World War veterans will be made, as it has been made for those who served in previous wars.

That prophecy was made 36 years ago.

When we average out the length of time that the veterans of the five wars in American history, up to and including the Spanish-American War, had to wait before service pensions were authorized, we find that it takes nearly 43 years.

We, of World War I with 40 years behind us are close to the time of our entitlement.

When we consider that our good friends, the Spanish-American War veterans, only had to wait 22 years for their pensions, it would appear that favorable action on our claim cannot be delayed much longer.

In the last session of the Congress, when my bill to provide a Federal charter for our organization was being debated, there were a few who opposed the bill. They insisted that our group was organized for the sole purpose of "lobbying through Congress a general penssion bill that would provide $100 monthly to all World War I veterans regardless of need or length of service."

We have never concealed the fact that this is one of our objectives.

There is nothing sudden or revolutionary in such a proposal 40 years after World War I and following a precedent that was established long ago.

We believe that the veteran who is 62 years of age or older is entitled to a pension of $100 per month upon proof of age and honorable service.

We are certain that this is the simplest and fairest method by which the Nation's obligation to the aging veterans of World War I will be honored.

In the school of practical experience we have learned that few people in positions of leadership and influence showed any interest in pensions for the veterans of World War I, until our organization was founded. Its astounding growth within the past few years has opened the eyes of our legislators, and is reminding a grateful but sometimes absent-minded Nation that the pension issue is approaching decision day.

As we have found unity, and strength, and inspiring comradeship through our membership in the Veterans of World War I of the U.S.A., Inc., we have come to realize that only by such mobilization of our forces, directed toward the goal of a pension for all veterans of that conflict, can we win to our side, the public support that is necessary to achieve victory in this campaign.

But this is not the single and exclusive purpose of our organization.

If that were so, our reason for being, and our rediscovered community of interest would melt away as soon as the pension battle is won.

We have other objectives, as well.

For the veterans of World War I of the U.S.A. have a mission to uphold the Constitution of the United States, and the individual States of the Union, and to foster the spirit and practice of true Americanism.

We must fight unceasingly for our national security in order to protect Americans from enemies within our borders, as well as those from without, to the end that our American way of life be preserved.

We are the senior veterans of our country, inheriting the responsibilities of those who preceded us.

As guardians of the home front we must be alert and positive concerning the needs of our country today in its struggle with a foe who employs unseen weapons to confuse us, and hypnotize us, weapons that are difficult to counteract if they should dull the minds and the will of the United States and its people.

The veterans of World War I fought on the field of battle, where we came to grips with the enemy, and finally defeated him after much pain and sacrifice.

Since the end of World War I, new aggressors have come to power, threatening the peace of the world. They are much more cunning in their methods. And much more dangerous.

First there was fascism, and now communism.

The evil that was hatched in Moscow and that spread over a number of independent nations before the free world took steps to contain it, wages war constantly, even while it is shaking your hand.

In the First World War, aggressors depended almost entirely upon military power. Espionage was in its infancy, largely limited to a few individual agents.

Psychology was a new word that only professors understood.

The man who was able to support a telephone in his home and an automobile in the one-stall garage that was located in the backyard was looked up to as a person of distinction.

The airplane was a fragile, one-man flying machine of doubtful speed and range.

As for radio and television, they were just dreams.

In the past 40 years, as these techniques and inventions became commonplace facts, the free nations developed them for peacetime use, and as aids to a more abundant life for their people.

The dictatorships, however, applied this knowledge to serve the aggressive purposes of the all-powerful state.

Communism, because of its long experience in conspiracy, saw the possibilities of using this new knowledge to extend its control over the minds and lives of mankind.

And so the Communists developed the cunning weapons of indirect aggression; infiltration, subversion, propaganda, and brainwashing.

While fomenting trouble in Korea and Indochina, and diverting some of our strength and attention to those areas, they were making their plans to provoke unrest elsewhere.

They are aiding and abetting Nasser in his ambition to become lord and master of the Arab world and to become a tool of the Communists, although he does not seem to realize this danger as yet. You may be sure, at this very moment, while our attention is focused on the problems of one area, the Communists are sowing the seeds of confusion and turmoil in some other area. All for the purpose of bewildering the free world, causing it to react impulsively with too little and too late, keeping us always on the defensive with jabs that are intended to wear us down.

The Communists know how deep is the yearning for peace, and so they start a so-called peace offensive, calculating that many sincere people will be taken in by the mere repetition of the word "peace." In the process, the Communists make headway on their real, though hidden, purpose. They seek in this manner, to weaken the will of the free nations, to beguile them into a reduction of expenditures for defense by appealing to individual selfishness, and to spread the fatal belief that it is somehow possible to coexist with them. Even though the record proves that this tyranny will betray anything and everything to reach its goal of world conquest.

They know that people forget.

Less than 2 years ago, they sent their armed forces into Hungary to crush the brave people who had overthrown the Red government that had been imposed upon them. Only a few months ago, they announced the execution of those who led the freedom fighters, whom they had seized in violation of a safe-conduct pledge.

This summer, they self-righteously protested the arrival of American troops in Lebanon, and British troops in Jordan, in spite of the fact that these military units were invited by the duly constituted governments of those small nations, to protect them from indirect aggression.

On the face of it, the Russian demands for the immediate withdrawal of the allied forces was a flagrant example of Red hypocrisy.

How could they protest our peaceful and temporary intervention, in the light of their bloody invasion of Hungary that wiped out its newly won independence and while their troops still occupy that unhappy land in defiance of the United Nations?

Their brazen contempt for reason, and justice, and world opinion is based on their assurance that people forget.

Unfortunately many do forget.

The Communists know that if they press their initiative and keep repeating such attractive words as "peoples' republic," "democracy," and "peace" over and over again, the ignorant and the innocent alike will be deceived by slogans into believing that: "Well, maybe we can do business with them after all."

That is exactly the response that the Communists want.

The intended victims do not realize that anyone who trusts the Communists and let's down his guard is halfway into the trap with its bait to lure the unwary and its barked wire that prevents their escape.

Never forget that it took only a handful of Bolshevik conspirators, who knew what they wanted, to secure control of Russia, when the long-suffering Russian people, further drained by military defeats, forced the abdication of Czar Nicholas.

The majority of Russians with moderate views could not get together on an effective program.

While they argued among themselves as to what they should do, the ruthless minority of Bolsheviks confused and tricked the debaters, while the Red strong-arm squads took over the war ministry, the police stations, and the communication centers.

That was in 1917.

Since then, they have built up a system of tight control over the Russian people. Mixing propaganda and terror, they have channeled and driven the energies of the Russian people in a tremendous effort to build up heavy industry, and military power.

Not content with that, they have reached out and have absorbed into their empire, a number of neighboring nations.

Operating from Moscow, communism has agents and dupes trying to subvert many other nations around the globe.

With fanatical zeal, communism has developed from a small band of conspirators in 1917, until now it is a present danger to every free nation in the world.

Back in that same year, 1917, the United States became a world power.

Since the beginning of our nation we had lived a protected existence, with two wide oceans that separated us from the problems in the rest of the world, while we concentrated on our internal growth and progress.

It was the maturing power and idealism of the United States that won victory for the Allies in World War I.

From that point on, even though we did not realize it, the burden and the responsibility of leading the free world was on our shoulders because there was no other nation

with the faith backed by the material resources, to do the job.

Many of our people, including some in high places, closed their eyes to this fact.

The pacifism of the twenties, the neutrality of the thirties—these were the symptoms of our retreat from international realities.

That is why we were unprepared, both in our thinking and in our ability to defend ourselves on December 7, 1941.

Then we had time to recover from the blow.

Now, we have none, because intercontinental missiles with hydrogen warheads will soon be able to leap across the oceans that had isolated us from direct attack in the past.

There is no turning back to the un-complicated days of our nation's adolescence.

Communist Russia is determined to forge ahead in every field, and there is disturbing evidence that the Reds have gained the lead in two critical areas: in the number of engineers, technicians, and scientists that they graduate each year; and in their development of the powerful rockets that will be the key to military supremacy, and to the control of outer space.

If our national reaction to this is a business-as-usual attitude, instead of vigilance, look-ahead policies, and extra effort, we shall find ourselves on the road to inevitable defeat.

We have some responsible leaders of government who are aware of this danger. There are competent officers in the Pentagon; and the scientists who are working on our rocket and space exploration programs are among the world's best.

All this, however, is not enough.

I am thinking of Abraham Lincoln, who would walk miles to get a book and study it by the uncertain light of the fireplace in his log cabin, to prepare himself for the time when the nation needed him.

I am thinking of the American initiative that opened up the West; that ventured into the unseen and the unknown because it was not afraid to advance beyond comfort and security in order to dare and do.

In this wonderful land of ours, with all the blessings we enjoy, there are too many people in 1958 who want to play it safe and to avoid the hard thinking and the resolute actions without which there is no leadership.

The vision, courage, and effort of the people, as it was in Lincoln's time, is required to animate our Nation.

How can our Federal Government make up its mind and go forward toward the solution of international problems, and to discover the new worlds of outer space in freedom's name, unless it hears from us?

As the Declaration of Independence states: "Governments are instituted among men, deriving their just powers from the consent of the governed."

This does not simply mean the form and organization of government; the laws which define and limit its authority; and the routine services it performs for us.

Far more important is the confident mandate that it must receive from the people to embark on those programs that are imperative if freedom is not to mark time, and fall behind the dynamic drive of communism.

That clear call for constructive action, welling up from the people of the United States sounds but faintly in Washington today.

It must speak up and it must be heard.

Demanding that we strengthen our allies and strengthen the United Nations, but, let's fact it, in the uncertain world of today, the fate of freedom depends on the leadership, or lack of leadership, of the United States and its people.

On January 23 the Preparedness Subcommittee of the U.S. Senate issued a unanimous report stating that the Soviet Union is ahead of us in missiles and in submarines. Experts testified that our competitors are producing scientists and technicians at a rate substantially greater than our own.

On August 28, American educators pointed out that Russian is putting 10 to 15 percent of its total income into educational channels, while Americans are spending only 3 to 5 percent on education.

Unless we get going, the Reds will not only catch up with us; they will overpower us.

If such should come to pass, it will do no good to think that we are far ahead of the Russians in the number of automobiles, ranchhouses, bank accounts, and insurance policies. These, together with our schools and universities, our churches and our free press, our labor unions, and our industries, would be seized, controlled, and used by the dictatorship that is communism. Such voluntary groups as the World War I Veterans of the United States of America would not be tolerated.

Our organization has the rare opportunity, because it is new, to dedicate itself to the task of rousing our Nation from its complacency.

I take the liberty of suggesting that our organization, by the united effort of our barracks that network the Nation shall organize and energize a drive to alert America.

We must have the most modern defense system; one that is constantly improving its efficiency under the realistic leadership of such men as the late Gen. Billy Mitchell, General Gavin, who recently resigned from the Army that he loved, so that he could tell the truth to the American people and Admiral Rickover, who overcame many service obstacles to develop a nuclear-powered submarine fleet.

To achieve this, and the economic system to sustain it, we must give top priority to education. For everything depends on applied knowledge; putting freedom to work, and putting science to work. We need to give more of our resources, more of our encouragement, and more of our honors to education. The old idea that education is completed by the award of a high school diploma, or a college degree, is one of the most dangerous of illusions. To keep ahead of the Russians it will be necessary for Americans, grownups as well as youngsters, to keep on learning, under an expanded educational system that will discover new ways and methods to bring forth the best in all.

Our Nation must also do a better job in reaching the peoples of this world with the truth concerning our principles and our policies. Within the United States, we have succeeded in developing the art of communication to a degree that is mutually beneficial to our people, to the economy, and to the free exchange of ideas. For some strange reason, we have not been able to communicate as effectively with our neighbors in other countries.

There is a powerful ferment at work throughout this world, as desperately poor and backward people are waking up and are reaching for the better life that should and can be theirs.

So far it is a peaceful revolution that the United States, above all nations should understand and assist.

If we fail them in their hour of need, they will have no other choice but to follow the siren call of communism.

Our Nation cannot rest upon its past.

It cannot close its eyes to new horizons if it is to be true to itself and to the submerged peoples who look to the United States for leadership.

We have the means but lack the firm and steady purpose.

This is the very heart of the problem.

We need the spirit of Paul Reve and the response of the Minutemen at Concord and Lexington. We need the humanity and courage of Abraham Lincoln. We need to measure up to the searchers in the wagon trains, the dauntless homesteaders who crossed the Mississippi to open up the unknown West.

Reviving, bringing to life within ourselves, the ability to make forward decisions.

For the rest of the world will not wait.

We have the last chance to create the most productive educational system in the world.

We have a short time left to find the serious purpose, and to start the bold actions that will lead the hunger of mankind toward the discovery of freedom and progress.

I sound the warning not to panic, but to wake up.

And I say to you, my comrades of World War I, that this is our opportunity and responsibility.

For here, in this hall, we feel close to the Great Emancipator.

With the wisdom of eternity, He is calling upon us to give the greatest service to humanity at a fateful hour in the life of man.

Out of this wealth of mind and soul, rising up from our membership, we must develop the program and the dedicated purpose that will inspire America to pioneer again.

Negroes: Big Advances in Jobs, Wealth, Status

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include an article which appeared in the November 28 issue of "U.S. News & World Report" entitled "Negroes: Big Advances in Jobs, Wealth, Status." This article points out how the segregation problem has overshadowed the tremendous strides the Negroes have made in both the social and economic fields and the even bigger gains which are expected in the years to come.

The article follows:

NEGROES: BIG ADVANCES IN JOBS, WEALTH, STATUS

In spite of all the furor about segregation—records show that Negroes have made tremendous progress in recent years. New and better jobs are opening to them. Economically, Negroes are gaining on the whites.

A Negro, Marian Anderson, recently was sworn in as a U.S. delegate to the United Nations. Ralph Bunche, a Negro, is an Under Secretary of the U.N. The U.S. Minister to Rumania, Clifton R. Wharton, is a Negro.

In the 1958 world series, one of the stars was a Negro, Elston Howard of the New York Yankees. Althea Gibson, a Negro, is the world's tennis champion among women.

In Washington, J. Ernest Wilkins, a Negro, was, until recently, Assistant Secretary of Labor. One out of four Government jobs in the Nation's capital is filled by a Negro. One-sixth of these Negroes hold supervisory posts.

In Detroit, Negroes are moving into sales jobs behind the counters of that city's biggest, most fashionable department store. In Maryland, an aviation company has begun to hire Negro engineers. Atlanta, for the first time, recently elected a Negro to its school board. A few weeks ago, a Negro

was nominated to be a municipal judge in Newark, N.J.

BIG ECONOMIC PROGRESS

A furor over integration of the races in schools of the South has created a widespread impression that the U.S. Negro is not sharing in the Nation's well-being. Yet quietly, almost unnoticed, America's nearly 19 million Negroes are making economic gains that would be hard to match anywhere in the world.

Says Dr. Joseph H. Douglass, a Negro sociologist who holds down a top job in the U.S. Department of Health, Education and Welfare:

"In the last 18 years, the Negro has come further than he did in three quarters of a century after the Civil War."

In 1940, just before the U.S. became involved in World War II, the census showed four out of five Negroes lived in the South. One in three lived on a Southern farm. Negro income, per capita, was only 30 percent that of whites.

Then came the defense boom. A manpower shortage opened up jobs to Negroes as never before.

Now population reports show that only two out of three Negroes live in the South. Only one out of eight lives on a farm.

Studies by the U.S. Bureau of Labor Statistics reveal this: Since 1940, the median wage of U.S. whites has gone up about three and one half times—but the median wage of Negroes has gone up five times. Negro income, on an average per capita, has moved up to 55 percent of that of whites.

Many Negroes who have gone North have entered industry. They have moved into skilled trades, white collar job and—at times—into the professions.

Before World War II, only one Negro in 10 held a so-called good job in the crafts or professions. Now the figure is one in five.

RISE OF NEW CLASS

In that process of change, sociologists say, a sizable middle class is developing among Negroes. About 40 percent of U.S. Negro families own or are buying their homes. You find Negro neighborhoods that duplicate those of whites—down to split-level dwellings with late-model cars parked in the driveways. Luxury neighborhoods for Negroes feature landscaped homes costing anywhere from $30,000 to $100,000.

A study conducted by the Birmingham News and the Birmingham Post-Herald gives detailed information concerning the economic status of Negroes in the Alabama city. It shows this:

About 20 percent of all Negro families in Birmingham now are earning $4,000 or more annually. Fifty percent own, or are buying, their own homes. Forty-one percent own automobiles, 96 percent own mechanical refrigerators, 76.2 percent own washing machines, and 80 percent own television sets.

SOME COMPARISONS

Today, America's Negroes own more automobiles than are found in all of Soviet Russia with its 200 million people. Negro enrollment in colleges exceeds the total college enrollment of West Germany. Negro purchasing power in the United States is said to be bigger than that of Canada's 16 million people.

Negroes are getting more and better paying jobs in industry and construction as labor unions lower their racial bars. Since 1940, Negro membership in unions has gone up three times and now comes to more than 2 million. Even in the South, a majority of union locals are biracial. A substantial number have at least one Negro officer.

At one time, many unions barred Negroes from membership. And it is still true that Negroes, in practice, are restricted to inferior jobs by some unions. Barriers still exist in railroad jobs, except for porters. On New York's waterfront, few if any Negro longshoremen draw favored assignments.

Even so, the overall picture is changing rapidly. Only a few unions still maintain bans against Negro membership. There are many instances of management opening up promotion lists to Negro candidates.

Today, according to the U.S. Department of Labor, there are three times as many Negro foremen and craftsmen as in 1940. In some places, such as the automobile plants in Detroit, Negroes are found supervising white workers.

The number of Negroes in white collar jobs has gone up even more—eight times since 1940. One reason for this growth is set forth by the director of a Los Angeles employment office. He says:

"A few years ago it was almost impossible to place a Negro girl as a secretary. Now it's getting harder to find really good secretaries, so employers are beginning to ask us for anyone who can do the job well—regardless of color."

Airlines have started hiring Negro girls as stewardesses. The Federal Reserve Bank of Chicago not long ago began hiring Negroes as bank clerks. In big cities everywhere, Negroes are getting jobs as sales clerks, food demonstrators, typists, receptionists, telephone operators and in similar white-collar positions.

ROLE IN GOVERNMENT

The Department of Labor says that three times as many Negroes now hold jobs in Federal, State, and local governments as was the case in 1940. Recently Secretary of Labor James P. Mitchell said that more than 300 Negroes have been appointed to responsible posts in the executive branch of the U.S. Government since 1952.

From the Department of Defense, you get this picture: About 250,000 Negroes are serving in the armed forces. Of these, an estimated 5,000 are commissioned or warrant officers. The Air Force has a Negro brigadier general. Two Negroes hold the rank of colonel in the Army. Two, in the Navy, are commanders. Eight Negro cadets are enrolled at West Point, and 11 Negro midshipmen at the Naval Academy.

In the political field, four Negroes are Members of Congress and there are Negro lawmakers in at least 15 State legislatures. A Negro justice sits on the New York State Supreme Court. An estimated 15 Southern cities have Negroes on their city councils.

Over the past 18 years, the number of Negro professional and technical workers has doubled. Today, in any big city, you find Negro doctors and lawyers—and, often, Negro chemists, engineers, architects and newspapermen.

Dr. Percy Julian, a Negro, helped develop methods for synthetic production of drugs and then set up his own laboratory in Chicago. Thurgood Marshall, counsel for the National Association for the Advancement of Colored People, is ranked among the Nation's top lawyers. Dr. Peter Marshall Murray recently served as president of the New York County Medical Society. A Negro newsman, Carl Rowan, won the Pulitzer prize for reporting. Paul R. Williams of Los Angeles is an internationally known architect.

ATHLETES AND ARTISTS

Sports and entertainment are opening up new avenues of wealth to Negroes. Major-league baseball was desegregated just after World War II. Now 15 out of 16 clubs have Negroes on their rosters. Negroes also appear on the rosters of most professional football and basketball teams.

The world of boxing is dominated by Ray Robinson, Archie Moore, and Floyd Patterson. Louis Armstrong, Harry Belafonte, and many other Negroes pack theaters wherever they appear. Negro singers now are appearing on the stage of the Metropolitan Opera.

Much of the Negro's growing income is finding its way into Negro-owned business and finance. At present, there are 14 successful Negro-owned banks in the United States, with combined assets of $40 million. One such bank, in Atlanta, is a member of the Federal Reserve System. Negroes own 62 life insurance companies with more than 1 billion dollars' worth of policies in force. They also own 150 newspapers, including a daily in Atlanta, and 3 radio stations.

Such firms still do 90 percent of their business with Negroes. But some are building up white clienteles, too. Out in Los Angeles, for instance, a Negro has developed the largest paint-preservative business on the west coast

AHEAD: BIGGER GAINS

Economists foresee even bigger gains for Negroes in the years ahead. They point to Labor Department records showing that about 200,000 Negroes now are attending college or professional schools—a three-fold increase since 1940. The number studying engineering and architecture has multiplied 10 times.

Dr. Lewis K. Downing, dean of the school of engineering and architecture at Howard University, a predominantly Negro institution, says:

"There are probably 2,000 Negroes studying these subjects now in American colleges and universities. It's a new source of supply for employers—and they're exploiting it. Despite the recession last spring, about 40 industries sent men to interview our 1958 graduates."

With all their gains in recent years, U.S. Negroes still lag behind whites in earning power. Negroes continue to account for a heavy share of the Nation's unskilled labor, unemployment and relief rolls. In times of recession, the complaint is still heard that Negroes are "last to be hired, first to be fired."

Even so, America's nearly 19 million Negroes are moving up the economic ladder. And they are moving up at a pace far beyond anything foreseen a few years ago.

A Bill That Offers an Effective Way To Make This a Nation of Better Homes

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. MACK of Washington. Mr. Speaker, on the opening day of Congress I introduced a bill—H.R. 196—which, if enacted, would grant to an American taxpayer an income tax deduction of up to $2,000 on money he spends during a calendar year to repair or modernize his owner-occupied home.

Under my bill the first 3 percent of income spent for such home repair and modernization cannot be claimed as a deduction. Everything expended on such work above this 3 percent, up to $2,000 in any one year, is deductible.

The citizen with a $5,000 gross income would obtain no deduction on the first $150 spent on such work. The person with a $10,000 gross income would obtain no deduction until after he had spent $300. The amount spent above the $150 or $300, as the case might be, would be deductible but not more than

$2,000 by any one taxpayer in any one year.

This deduction is similar to that now allowed taxpayers on medical and hospital bills.

The obvious purpose of this proposed legislation is to speed up and increase home repairing and home modernization by homeowners. There are 6 million dwellings in the Nation that are rundown, dilapidated, and in desperate need of repair and modernization. The allowing homeowners tax credits for funds spent in improving their dwellings should encourage an enormous amount of home improvement and thereby make the Nation better housed.

How much would such a program of tax credits for home repair and modernization, as my bill proposes, cost in lost tax revenues. My reply is very little or perhaps nothing at all.

The tax credits granted, of course, will decrease the inco[illegible] taxes paid by the home owner. However, this loss in revenue quickly would be offset by creating many sources of additional income tax revenue.

First. The repair and modernization program this legislation would generate would provide tens of thouands of additional jobs for building tradesmen of all kinds—carpenters, plumbers, electricians, painters, brick masons and others—and these, because of their increased earnings, will pay more taxes.

Second. Businessmen and corporations which deal in building materials of all kinds at the manufacturing, wholesale or retail level, all, will enjoy larger sales and profits. They as a result of this program will pay more income taxes into the treasury, in the case of corporations, as much as 52 percent of their increased profits.

Third. The increased employment a great home repair and modernization program will create will lessen the drain on unemployment reserves.

Fourth. Improved homes also mean increased real estate values and automatically more tax revenues at the local level for States, counties, cities, and schools.

Fifth. The increased sales and profits and the increased employment and wages generated by such a program for the building industry and its employees will raise the general level of prosperity for all businesses which also then will pay more taxes into the treasury.

The increased revenues created by such a program from all five of these sources will in large part or entirely overcome any loss of income tax revenues the Government would experience from this tax exemption.

Most of all the program would provide millions of Americans within a very few years with better, more beautiful, and more healthy homes. This intangible benefit may be far greater and more lasting even than the financial one.

I urge that home building contractors, members of the building trades unions, and dealers in and producers of building materials of all kinds give careful study to my bill. If they believe the idea sound and desirable, I urge that they discuss this bill—H.R. 196—with their associates and through their associations and unions pass resolutions urging enactment of this bill—H.R. 196—by the present 86th Congress. I, as Congressman, will use such resolutions to promote support by Congressmen of my bill. Such resolutions, or letters, I assure you, will be most helpful in obtaining enactment of this bill, which if enacted I am sure will help add materially to the prosperity of the Nation as well as providing the American people with a vast number of better homes.

The Rehabilitation Act of 1958

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. FOGARTY. Mr. Speaker, I have introduced H.R. 1119, entitled "The Rehabilitation Act of 1958." I wish to make a few comments about this bill and about the rehabilitation program in general.

As you know, I serve as chairman of the Labor-HEW Subcommittee of the House Appropriations Committee. In this capacity, I have reviewed the appropriation requests of the Office of Vocational Rehabilitation and have become intimately acquainted with the operations of the State-Federal program of rehabilitation. I have great confidence in its leadership on both State and Federal levels and in the general integrity of the program. Each year shows a greater number of handicapped persons completing their rehabilitation, 74,000 in 1958, and the quality of services is also improving, particularly for the severely handicapped.

At the same time, however, I have been conscious of the weaknesses in this program and have, from time to time, spoken out on this subject. My chief concern has been that some of the most severely handicapped persons are being denied services because such services do not appear to be feasible for them under the definition of rehabilitation found in present legislation. The present act, Mr. Speaker, is a vocational rehabilitation act. For a handicapped person to be served under this act there must be a reasonable expectation that he will be employable following services. There are many severely handicapped persons in this country who could profit substantially from rehabilitation services but who must be denied such services because of his restricted definition. This also means that many borderline cases may be rejected, because the chances of failure may be greater than the chances of success. The bill I have just introduced has been designed to correct some of the weaknesses which have been described above.

EVALUATION SERVICES

An adequate evaluation service is essential for all rehabilitation applicants, but particularly so for the most severely disabled. This evaluation is medical, psychological, social, and vocational. It takes time and is expensive, but it is essential if there is to be an adequate understanding of the rehabilitation potential of the individual. At the present time, there is no one place in most of our communities, or no one agency, which has the responsibility for providing an adequate diagnostic service for all handicapped adults. My bill would provide Federal assistance to the States to enable State rehabilitation agencies to establish such comprehensive evaluation services.

INDEPENDENT LIVING

One title of this bill sets up a program of independent living rehabilitation for severely handicapped people for whom there may not be a reasonable expectation of employability at the time they make application, but who can achieve a degree of independence which will enable them to dispense with the need for expensive institutional care or an attendant at home. This will mean that rehabilitation agencies may begin services for people who may not appear to be employable following services. Actually, experience has shown that many such individuals do achieve vocational rehabilitation.

REHABILITATION FACILITIES

At the present time, there is a program of rehabilitation facilities under the Hospital Survey and Construction Act, commonly called the Hill-Burton Act. This program has been useful in establishing, in the main, medical rehabilitation facilities. Under this act it is not possible to assist in the establishment of rehabilitation workshops or many other rehabilitation facilities. As a result, there are many badly needed rehabilitation facilities for which there is no Federal assistance at this time. My bill sets up in the Office of Vocational Rehabilitation of the Department of Health, Education, and Welfare a program of rehabilitation facilities which would be used to establish workshops for the mentally ill, mentally retarded, cerebral palsied, and many other severely handicapped individuals; speech and hearing centers; rehabilitation centers for the blind, and many other types. Provisions are made for the coordination of this program with the Hill-Burton program, so as to prevent any possibility of duplication.

PRESIDENT'S COMMITTEE

One of the provisions of my bill would increase the appropriation authority for the President's Committee on the Employment of the Handicapped from $225,000 to $300,000. The President's Committee is an organization of private individuals and voluntary organizations dedicated to increasing employment opportunities for physically handicapped individuals. The Federal Government makes an appropriation annually to support a small staff which guides this voluntary activity. In my judgment, the committee is doing an excellent job in creating a climate favorable to the employment of the handicapped. The small increase in appropriation authority will take care of necessary increases in costs and provide for a modest expan-

sion of services during the next 3 or 4 years.

Mr. Speaker, in this bill I have tried to fill the most significant gaps in present rehabilitation legislation. The bill provides for Federal assistance for a centralized, comprehensive evaluation system for all handicapped adults. It extends rehabilitation services to individuals for whom there cannot be at the beginning, a reasonable expectation of employability. It provides for a supplementary program of rehabilitation facilities under which will be built the many facilities which are needed to rehabilitate the handicapped. Finally, it increases the appropriation authority for the President's Committee on the Employment of the Handicapped. I sincerely hope that the House Committee on Education and Labor will conduct hearings on this legislation at an early date. The passage of this legislation will do much to increase rehabilitation opportunities for our most severely disabled citizens.

Address by George E. Stringfellow, Imperial Potentate, A.A.O.N.M.S., Wichita Falls, Tex., November 22, 1958

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. IKARD. Mr. Speaker, it is an honor and a distinct privilege to pay a well-deserved tribute to Mr. Walter D. Cline, Sr., a fellow Texan and a longtime resident of my hometown of Wichita Falls, Tex. It is not an exaggeration to say that Walter Cline is one of the most distinguished men in the United States as his many accomplishments indicate. Mr. Cline married his childhood sweetheart, Miss Ella Pipes. Five children were born to the Clines, four of whom are still living. The Clines came to Wichita Falls first in 1913, and except for a 5-year period when they lived in Burkburnett, they have made their home in Wichita Falls since 1918. When Walter Cline came to Wichita Falls he started on a career of civic and fraternal service matched by few men in the Nation. Being a highly successful businessman, he served as first president of the Texas-Louisiana Mid-Continent Oil & Gas Association; president of the Wichita Falls Chamber of Commerce; president and director of the West Texas Chamber of Commerce; president of the Wichita Falls Rotary Club; member of the Wichita Falls Welfare Council; first potentate of Maskat Temple, and imperial potentate of the Shrine. He was the founder and director of the first community chest in the South; represented the Wichita Falls Boy Scouts on the Scouts regional council; was organizer of the local chapter of DeMolay; chairman of the board of trustees of the YWCA and a generous contributor to the YWCA building fund in Wichita Falls. He is an honorary Blackfoot Indian chief and a member of "Who's Who in America." He holds an honorary degree of doctor of laws from Centenary College, and was decorated by King Albert of Belgium and by King George V of England. Walter Cline says:

I've lived a full, rich life; sure, I've had some disappointments but on the whole, life has been very good to me. And all through it, I've tried to live by one philosophy; I'd rather be wrong than nothing.

The following address by George E. Stringfellow, Imperial Potentate, A.A.O.N.M.S., was made on November 22, 1958, at Wichita Falls, honoring Walter D. Cline, Sr., which sets out other interesting facts concerning this remarkable man who I am proud to call my friend:

One of our greatest imperial potentates began his annual address, 18 years ago, with these words:

"My long experience in public activities and the field of business has convinced me me that many times the simple statements are the most convincing."

These words of wisdom were uttered in Memphis, Tenn., on July 11, 1940, by Imperial Sir Walter Dearing Cline, whom we honor today.

Walter D. Cline has been described as an inspiring leader, an authority on oil, an authority on sports, a great soul, a superb public speaker, an entertaining companion, a loyal friend, and a rugged individualist.

He is, in my opinion, the embodiment of all those attributes and many more.

After earning his way through college, Walter Cline helped educate his younger brothers and subsequently served as president of Centenary Alumni Association. In later years he was awarded an honorary degree of doctor of laws.

Starting at a salary of $30 per month he worked as a muleskinner, a roustabout, a derrick man, a pumpman, a digger, and a driller.

Working as a driller Walter Cline was blinded several times. He saved the life of W. S. Farish, a fellow worker who was overcome with sulphur fumes, who later became chairman of the board of directors of the Standard Oil Co. of New Jersey. During the early days, Walter Cline suffered a broken arm, a fractured hip, and numerous minor injuries.

Early in life Walter Cline learned two lessons which guided him in the years that followed: First, people will do just about anything if they know that you expect them to do it and that you have confidence in them; and, second, people are innately honest.

Forty-nine years ago Walter Cline engaged in the oil business. He made fortunes without boasting and he lost them without whimpering.

Walter Cline gave to others.
He gave to his community.
He gave to his county.
He gave of himself.
He gave of his intelligence, his wisdom, his counsel, his interest.
He gave of his energy.
He gave of his ability.
He gave of his fortune.

Walter Cline subscribes to the philosophy that we should give cheerfully and quickly, as we receive; for there is no grace in a benefit that sticks to the benefactor's fingers.

Walter Cline served his communities as president of the volunteer fire department, as a member of the school board to which he gave the site for a new high school, as first mayor under a new charter of a city government which he had helped to prepare, and as mayor in another city he offered to buy the property of any person who felt that his property had been unjustly appraised.

He was not called upon to buy a single piece of property.

Police and fire protection was improved, a modern sewer and water system established, and streets paved.

Walter Cline found time for baseball, golf, fishing, and a little loafing.

Thirty-six years ago he organized the first community chest in the South.

Walter Cline has been described as a master money raiser. His greatness is due to the fact that he gave unselfishly, generously, and magnanimously of himself and substance, often anonymously.

In addition to serving his community Walter Cline worked for the welfare of his State and his Nation. While his contributions have been numerous, I shall call to your attention a few of them.

1. He was a leader in bond drives during World War II.
2. He served as a member of the Federal Fuel Advisory Board.
3. Was director of Red Cross and a regional director of Federal housing.
4. He organized the West Texas Chamber of Commerce and the Texas Centennial Exposition.
5. Served as president and district governor of Rotary International.

He was one of Maskat Temple's ablest illustrious potentates.

Walter Cline has been designated the "Most valuable citizen of West Texas." He has been honored by the king of Belgium. He has been the guest of King George V of England.

Time does not permit of more than a casual reference to Walter Cline's fine cultural background, his many personal attributes, his appearance and affability, his excellent library, his art treasures, his flowers, and his grandchildren.

Beneficiaries of his goodness, his greatness, and his generosity are legion.

Walter Cline's devotion to Freemasonry is exemplary and his achievements on behalf of our fraternity are enduring.

I am happy to pay tribute to this man of character; God-fearing, home-loving, community-serving, dedicated to the highest ideals of Americanism, carrying in his heart the spirit of the Shrine, and exemplifying good fellowship in his daily life.

A man who is a credit to the glorious State of Texas, an honor to our great Southland, and a cherished son of one of the finest Nations in the history of mankind.

Walter Cline's modesty is equal to his valor, and that surpasses the power of any language I possess.

Walter, I bring you the greetings and best wishes of the A.A.O.N.M.S. for which you provided sterling leadership almost a fifth of a century ago.

It is the fond hope of your friends, who are legion, that the great Architect of the Universe will further reward mankind by leaving you with us as long as you want to stay.

Right-To-Work Laws—The Results Do Not Justify the Trouble

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include an article which appeared in the November 24, 1958, issue of Time maga-

zine on the subject of right-to-work laws. This article presents some very interesting facts as to the effect of these laws in States which now have these statutes. It would appear from this article that right-to-work laws have little or no effect on the size, strength or growth of organized labor except in some cases where they have tended to weaken the smaller unions by driving members to the larger unions.

The article follows:

RIGHT-TO-WORK LAWS—THE RESULTS DO NOT JUSTIFY THE TROUBLE

In the recent elections, right-to-work laws went down to defeat in five of the six States where they were proposed. But they are far from a dead issue. Already, unionists are getting set for a drive in Congress to outlaw State laws that forbid the union shop. The arguments over such laws have ranged all the way from the position of Labor Secretary James Mitchell that they do more harm than good to the stand of General Electric chairman Ralph Cordiner, who says his company takes right-to-work laws into consideration as a plus factor when locating new plants. But the debate has been more emotional than factual. The big overlooked question: How do right-to-work laws work in the 18 States that have them?

In Florida, which passed the first right-to-work law in 1943, the law has had little effect; it has no teeth and is largely disregarded. The building-trades unions, biggest in the State, do not protest the law simply because they fear that if they get it revoked they might get a law that would hurt them. In four other States—South Carolina, North Dakota, Georgia, and Arizona—the situation is much the same; the laws have had virtually no effect on union or labor relations. There are many ways to get around them. In Virginia unionists in the building trades have found a simple way to defeat the anticlosed-shop provisions of the State law: when a nonunion member shows up on a construction job, union members just get "sick" until he is fired. Union growth has hardly been hampered. Since the Virginia law was passed in 1947, union membership has grown from 100,000 to 150,000. There are other dodges to get around the restriction on the closed shop, such as the agency shop in which nonunion employees pay union dues.

While union leaders in Texas complain that the law has hurt them, they are hard put to find figures to prove it. Ed Burris, executive vice president of the Texas Manufacturers Association, cites union membership, which has grown from 110,500 before World War II to 400,000 today. He feels that the law has not inhibited the growth of unions or their functions as bargaining agents. Unionists charge that the law has had other bad effects. Jerry Holleman, head of the Texas AFL–CIO, says the law has weakened union discipline, causing more wildcat strikes, and that the union must take many more grievance cases, often trivial ones, to arbitration lest the union members withdraw from the local on grounds that they are not being ably represented.

Perhaps the biggest effect of the laws has been to hamper organizing by weak unions. In Iowa, says Federation of Labor President Ray Mills, "it has become almost impossible to organize areas where workers are in an especially weak position." In Utah, which has probably the only right-to-work law with real teeth in it, unionists complain that it is hard to organize workers at all. In fact, there has not been an organizing strike or picket line for the last 3 years.

Many a unionist feels that the prime purpose of most of the laws, which was to curb the power of big unions, has had the opposite effect. Some of the weak unions, said Gordon Preble, president of the Nebraska AFL–CIO, have been broken up in Nebraska and the members have joined the strong unions. Thus, says he, the effect has been to make the strong unions stronger. The strong unions have also had to mend their fences, become more responsive to their members. It has knit them together.

Whether a right-to-work law helps lure industry to a State, as proponents claim, is also debatable. Backers of the law in Indiana cite the fact that the State has gained 85 new industries since the law was passed last year. But industries were entering the State at almost the same rate before then. Moreover, 16 industries have decided to leave since the law went into effect, e.g., Chrysler Corp. will move its Evansville plant to Missouri, which has no right-to-work law.

In almost all the right-to-work States, unionists agree that where labor and management got on well before the law, they still get along well. Those who fought unions before have tried to use the laws to kill unions or to knock down union pay standards. Says Edmond McGoldrick, president of the big, active Reno local of the Musicians' Union: It is helping the chiselers.

In sum, the statutes have had little effect on labor or on business, but a considerable effect on the Republican Party's election losses. Said John W. McConnell of the U.S. Mediation and Conciliation Service: Right-to-work laws are at best symbols of the conflict between organized labor and organized management. They do not improve the organization and responsibility of labor; and make no fundamental contribution to the rights of workers or to industrial peace.

Latin Americans Not Only Our Good Neighbors but Our Best Friends

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. ANFUSO. Mr. Speaker, during part of November and December 1958, I visited several South American countries, notably Argenina, Brazil, Uruguay, and some of the West Indies islands, in connection with my resolution to establish a Pan American Parliamentary Association—PAPA—to help unite the Western Hemisphere for its own well-being and security. On previous occasions I had visited other Latin American countries, that is, Mexico, Panama, Venezuela, and Cuba. In these countries I met with top government officials and parliamentary leaders with whom I discussed the aims and purposes of my resolution, and I also had the opportunity to familiarize myself with conditions there and with some of their pressing problems.

I came away with a feeling stronger than ever that the idea proposed in my resolution is not only most timely, but that its realization is most urgent. I am now revising and expanding the resolution on the basis of my findings durings these Latin American trips, and I plan to introduce the revised version in the very near future.

You may recall, Mr. Speaker, that the original resolution which I had offered before the closing days of the 85th Congress had been approved in principle by 12 of the 20 Latin American countries, with not a single objection. Furthermore, I was encouraged by our State Department to visit South America and discuss the proposal further with legislators of those countries. I am now pleased to report to you and to all my colleagues of the House that my resolution and its central purpose was very well received in the countries I visited.

The chairman of the foreign affairs committee of Argentina's Chamber of Deputies, Juan Lopez, was extremely enthusiastic about my plan, as was also President Ranieri Mazzilli of the Brazilian Chamber of Deputies. Mr. Lopez made a public statement in which he said about the proposed Pan American Parliamentary Association:

> It could mean a new stage in the relations among our countries, a new era of good friendship.

Remembering how strained relations had been between Argentina and the United States during the Peron regime and Argentina's recent $100 million loan deal with the Soviet Union, the words of Deputy Lopez were welcome indeed.

The major fault which the Latin Americans have found with us is that we have not dealt with them as equals. You must remember that Latin Americans are a very proud people. They do not want any charity from us, but neither do they desire to be looked down upon. Argentina is a striking example of this national pride. Although Peron milked the country dry, so to speak, and completely emptied its treasury before he fled, Argentina today will not accept anything from the United States or from any other country unless it be on a straight business basis.

We have been hearing a great deal in the past year regarding Communist inroads into the Latin American countries. I have found that the people of those countries do not want communism; in fact, they are very much opposed to it. Christianity is too strongly embedded all through Latin America. Those countries will take Communist help only as a last resort—that is, if we should turn our backs on them and refuse to recognize their legitimate aspirations and their desires for equality and mutual respect from their brother-Americans of the North.

There is a feeling among many of the Latin American leaders that in certain instances the United States had taken unilateral action in matters where they should have been consulted. They feel that our policy decisions have been formulated in such a way that only U.S. interests and the security of the United States alone appear to be the primary objectives, rather than the interests and the security of the whole Western Hemisphere. In seeking to promote our own self-interests, they say, we have given little or no regard to the government heads nor to the form of government of the Latin American countries. If it suited our purpose, we promoted or allowed to prosper oppressive dictators.

In such cases where we have been guilty of these practices we must revise

our thinking and refuse to deal with, or give aid and comfort to, dictators who suppress human rights. This latter course would be more expressive of the true feelings of the people of the United States. It would also prevent the exploitation of our Latin American neighbors by the communists. A policy which places the aspirations of all peoples of Latin America on a par with our own achieved goals of freedom and equal opportunity for all human beings, regardless of race, color, or creed, would be as successful in Latin America as it must be in any part of the world.

There is no doubt in my mind, based on discussions with leaders of the countries I visited, that they are strongly in favor of multilateral inter-American action against any possible foreign aggression. Furthermore, it is my sincere conviction that our neighbors to the South will enter into any agreement with us to help stem the tide of communism in the world and to join with us in any action aimed to enforce such agreement, provided it is arrived at by the joint and fair contributions of each of the participating nations of the hemisphere.

It is for these very reasons—equal treatment, fostering of human rights and joint participation—that my proposal to establish a Pan American Parliamentary Association has been not only welcomed but actually hailed by Latin Americans and called by them "the key to improved relations of the future." In PAPA each legislator will have an equal voice in the organization, whether he be a representative from the United States or from Uruguay, the smallest country in South America. This free exchange among the legislators of the Americas on all matters affecting their security, their cultural development and their economic well-being is the kind of recognition and mutual respect which they have always sought, but seldom obtained, from the United States.

In summarizing my views, I want to stress the following:

For the past few decades we have come to regard the Latin Americans as our good neighbors. But they are more than that. They are also our best friends. In Latin America today the United States has a golden opportunity of regaining much of the ground we have lost in other parts of the world, because of our failure to give due recognition to the aspirations of independent nations and by not hitting hard enough against colonialism.

The United States has a glorious chance to enhance its prestige and moral position in the eyes of all Latin Americans in becoming the champion of human rights, democratic principles, and true independence for all nations. But this must not be merely lip service. We must cooperate with them as brother-Americans and as friendly neighbors to assist them in their hour of need.

May I also offer the suggestion that in our dealings with Latin America we take advantage of the help which our very strong and devoted ally Italy can render in this direction. Latin American countries are heavily populated by people of Italian origin. The strongest influence in Brazil, Argentina and Uruguay is Italian in nature. Italians occupy very important offices in these countries and are leaders in industry, business, commerce, and other phases of national life. São Paulo, Brazil, a city of 3,500,000 people—probably the fourth largest in the whole Western Hemisphere—is more than one-third Italian. This is also true in similar measure of Buenos Aires, the capital of Argentina, and Montevideo, the capital of Uruguay. The Speaker of the Chamber of Deputies of Brazil, Mazzilli, and the President of Argentina, Frondizi, are born of Italian immigrant parents.

It would seem most logical to utilize this friendly influence in the interests of democracy, and most especially in helping to cement the most cordial relationship among the nations of the Americas in a spirit of real neighborly cooperation. I might add that we should also extend the practice of utilizing our allies in other parts of the world where they are more familiar and in a better position to deal with certain problems in such areas affecting the United States and our allies, as well.

I now wish to cite some specific examples concerning Brazil, Uruguay, and Argentina—in the order that I visited them—where assistance would be appreciated, how such assistance could be most helpful, and how it would serve to achieve genuine friendship and inter-American cooperation.

BRAZIL

This is the largest country in all of Latin America, almost the size of the U.S., with a population of approximately 62 million.

Brazil has rich natural resources, which, if properly explored and utilized, could make her one of the wealthiest nations in the world. Its president, Juscelino Kubitschek, recognizes this fact and is exerting all his efforts to encourage his people to move out from the eastern areas and settle the Brazilian west, that part of the country which is today almost totally uninhabited. It is a fact that 93 percent of the Brazilian population inhabits only 36 percent of the country's territory, with their backs to the deserted hinterland. This is the area where the soil is richer than that presently explored and settled. Gold, crystals, diamonds and gems are hidden there. Throughout Brazil are also to be found rich deposits of iron ore, manganese, nickel and zinc.

In order to encourage Brazilians to leave the congested environs of Rio de Janeiro and São Paulo, Kubitschek is moving the national capital, which will be called Brasilia, from Rio de Janeiro to the interior in the hinterland. He is confronted by inadequate transportation and power, as well as many other obstacles, but present indications are that he will succeed in this effort if he obtains the necessary financing and technological assistance.

Here, then, is a country which hates communism so much so that up until this day Brazil has refused to have diplomatic relations with Soviet Russia. How long this situation will last depends largely upon our actions. Without any financial sacrifice on our part, we can help this country become self-sufficient and economically independent through reasonable loans from the International Bank for Reconstruction and Development, as well as by the proper exercise of our own Public Law 480, known as the Agricultural Trade Development and Assistance Act of 1954.

In 1958 Brazil had a 50 percent shortage in her production of wheat. At the same time, we have wheat bulging from our warehouses and rotting away. We could easily enlarge our Public Law 480 program for Brazil to make available to her some of our surplus wheat, corn, tobacco, cotton, and other commodities which we have in surplus. A large part of Public Law 480 funds could be used by Brazil to improve her transportation, power and communications systems. Thus, her settlement of the western areas and her goal for self-sufficiency would be realized.

URUGUAY

Here is the smallest country on the South American continent with a population of only 2,200,000. Of significance to us, however, is the fact that Uruguay has recognized Soviet Russia, is doing business with the Communists and allows them to mainatin an Embassy there which is the largest in South America, much larger than our own. The Soviet Union maintains a personnel force in Uruguay of 72 people—all spies. Obviously, their interest in not merely Uruguay. Russia uses Uruguay as a base through which she hopes to penetrate Brazil, Argentina and other Latin American countries. In this respect, she is aided and abetted by the Embassies of the other iron-curtain countries in Uruguay. It is common knowledge that the Communists have complete control over the waterfront in Montevideo and that they can tie up transportation at any time.

It may be asked: Do the people of Uruguay want communism? It is significant that in the recent elections held there the Communists polled less votes than they did in previous elections. At the present time there are only 2 Communist deputies out of a total of 99 in the Chamber of Deputies. But the control of the waterfront by the Communists and their strength in labor circles, in addition to their use of Uruguay as a port of entry for the penetration and infiltration of all of South America, presents a very serious threat which we must recognize and with which we must deal immediately.

Here again it takes only sympathetic understanding of the problems facing Uruguay and simple honest dealing to check the Communists and to nullify their influence. Let me give you several examples where we have failed in our relations with this tiny country and where the Communists utilized these incidents to their advantage:

I. In 1949, under GATT—the General Agreement for Trade and Tariffs—the United States concluded an agreement with Uruguay for certain reciprocal reductions in import duties. The U.S. Government postponed action in proclaiming these duty reductions because

Uruguay was not yet formally a member of GATT. When Uruguay's membership in GATT was ratified in 1953, the Uruguayan Government also ratified the duty reductions promised by Uruguay. By that time, however, it was more difficult for the United States to put certain of its promised duty reductions on canned and preserved meats into force because U.S. producers of meat were not prospering as much as they had been in 1949. The United States, therefore, put into effect the other duty reductions it had agreed upon but did not proclaim the following duty reductions which were the ones most desired by Uruguay:

First. A reduction from 20 to 15 percent in the minimum ad valorem duty on corned beef.

Second. A reduction from 7½ cents per pound to 3¾ cents per pound duty on meat extract.

Third. A reduction from 20 to 10 percent in the minimum ad valorem duty on pickled or cured beef and veal.

The delay in proclaiming these duty reductions agreed upon in 1949 has now been the longest delay in any such pending action by the U.S. Government.

II. In 1953 the U.S. Treasury Department applied an 18 percent additional duty against Uruguayan wool tops—the longer, higher grade wool which has been combed out of the raw wool, leaving behind the short fibers or noils. The reason for this additional duty, which was called a countervailing duty, was that the combers of wool in the United States had protested that the Uruguayan Government was giving assistance to the exporters of Uruguayan wool tops by granting them a rate of exchange for their product that resulted in their receiving more pesos per dollar than the exporters of most other Uruguayan products. A calculation of this exchange benefit showed that the rate for export of wool tops provided, in fact, 18 percent more pesos than the weighted average of exchange rates on all other Uruguayan exports and imports. This is the only countervailing duty applied by the United States because of a subsidy granted by a foreign government through special incentive exchange rates.

A few years ago, the countervailing duty was decreased to 6 percent because the Uruguayan exchange rate incentive was calculated to have decreased to that amount. We now expect that it may soon be demonstrable—when certain new exchange rates are announced—that the incentive has been eliminated as compared with the average rate on all other Uruguayan exports and imports. The Treasury Department has indicated that, when that can be demonstrated, the countervailing duty will be abolished. It is the opinion of our Embassy officials in Montevideo that this measure, which the Uruguayan Government and public have considered to be discriminatory, has been prejudicial to U.S. relations with Uruguay to such an extent that serious question may logically be raised as to whether the maximum U.S. interest has been served by applying this isolated measure against Uruguayan wool tops.

III. For several years there has been in effect in the United States a tariff quota governing the importation of various classifications of textiles into the United States. The tariff quota for woolen textiles provides that a certain total quantity of these materials may be imported from all sources of supply at a 25-percent ad valorem rate of duty; when that quota is filled, which is usually in June of the calendar year, the rate of duty goes up to 40-percent ad valorem. Very good quality woolen suiting materials are manufactured in Uruguay, and since this product is made entirely out of Uruguayan raw material, it would seem to offer more hope than any Uruguayan manufactured product of finding an increasingly large market abroad with resulting obvious advantages to the Uruguayan economy. Uruguayan exporters, however, complain that they have difficulty in marketing their woolen suiting materials in the United States because their buyers can never be quite certain of the exact cost throughout the year in comparison with domestic sources of supply.

President Eisenhower requested, a year or so ago, that an interdepartmental committee be formed to determine upon a more workable system for governing the duty of this type of imports because of complaints about the tariff-quota system. It would be very beneficial for the Uruguayan economy if the tariff system could be arranged in some way that would provide some modest preference for this unique Western Hemisphere source of supply of woolen suiting materials. In fact, it would not seem unreasonable to exempt Western Hemisphere sources entirely from the higher ad valorem rate of duty on woolen textiles. Uruguay would be the only country that would profit from this and the quantity of material that could be imported from Uruguay, even with a very large increase, would probably not noticeably disturb the market for domestic manufactures of competitive materials in the United States.

Fourth. The largest Uruguayan export is wool, usually about 55 percent of total exports. The largest buyer of this wool is now the Soviet Union. In return, the Soviet Union offers crude petroleum at a bargain price—about 50 cents less per barrel than the same petroleum would cost in the regular world market. The Soviet Union has also recently sold a cargo of cotton to Uruguay—presumably cotton which Russia obtained from Egypt. The Uruguayans do not like to depend upon the Soviet Union as a market for their products, or even as a source of supply for essential imports, such as petroleum, because, first, they know that the market or the source of supply can be closed off arbitrarily at any time; second, they know that they are likely to be asked for cooperation of other kinds as a quid pro quo for continuation of this trade; and third, they do not wish to encourage the kind of relationships that naturally follow trading relationships. However, with the Soviet Union now purchasing about 20 percent of their total wool exports, and with other purchasers buying slowly at present prices and with greater demand for quality, the Uruguayans feel that they are trapped by the necessity of trading with the Soviet Union.

It has been suggested by Uruguayans that the U.S. Government might solve this problem by purchasing wool for stockpiling. Since there is no provision for such stockpiling, another possibility might be a reduction in the U.S. duty on raw wool. However, the extensive repercussions from such a measure would be obvious, and it would not seem logical to consider such a difficult solution until it has been demonstrated that the much simpler problems outlined in the preceding paragraphs can be solved.

ARGENTINA

Argentina is about half the size of the United States and has a population of approximately 20 million. It is more of a melting pot than any other Latin American republic and its population is based on European immigration rather than on indigenous people. In contrast to most Latin American countries, 96 percent of Argentina's population is Caucasian. The country is predominantly Catholic and the literacy rate is about 85 percent—the highest in Latin America.

Argentina inherited serious economic problems from the Peron regime. Dictator Peron left an empty treasury which has stagnated economic growth and real per capita income, decapitalized industrial plants, deteriorated transportation networks, and has caused a serious domestic inflation of its currency. Argentina is not to be sold short, however. It still has one of the highest per capita gross national products in Latin America, the best average level of living in the area, and the largest middle class. Agriculture is still the chief source of wealth and provides about 90 to 95 percent of the country's export earnings. Chief products are meat, grains, vegetable oils and wool.

Argentina's basic problem, at present, is one of reconstruction and rehabilitation. Perhaps the basic requirement in this situation is the securing of capital to finance here needed rehabilitation and development program. I discussed this matter with our very able Ambassador to Argentina, the Honorable Willard L. Beaulac, and I gathered from such talks that our State Department was au courant with the situation in Argentina and sympathetic to the problems of the new administration of President Frondizi. I was happy to learn, immediately after my return to the United States, that Argentina is to receive a $329,000,000 loan from the U.S. Government, from the International Monetary Fund, and from 11 private banks in the United States and Canada in order to carry out sweeping economic reforms and its development program. In my opinion this is a great forward step.

President Arturo Frondizi, whom I had the pleasure of meeting at his resi-

dence, although he was supported by the Peronists in the general elections of February 23, 1958, shows no inclination of following Peron or encouraging anything for which the latter stood. He is an ardent foe of communism and gave me the impression of being desirous of maintaining the friendliest relations with the United States.

We must always remember that the Argentineans, perhaps more than any other Latin American people, are an extremely proud people. They want loans at reasonable rates to develop their potentially wealthy oilfields and to otherwise strengthen their economy. But they want these loans with no strings attached. In this respect they are behaving like all proud, freedom-loving peoples. We would be no different. If we recognize this fact and treat the Argentineans—as we must treat all peoples—fairly and squarely as equals, they can prove to be among our best friends in Latin America.

We have lost many friends in the Western Hemisphere and elsewhere in the world by giving the impression at times that we were a superior people, or by trying to outsmart in business and otherwise those whom we regarded as inferior. The sooner we correct these impressions, the better for all concerned.

From my conversations with President Frondizi and with Dr. Federico F. Monjardin, President of the Argentine Chamber of Deputies, I got the distinct impression that the Argentines have a strong admiration for their brother Americans in the United States, but they have a high regard for themselves, too. They want to join us as partners, not as servants to a master. In my estimation, they are most fitting partners and brothers as well. If we help Argentina now we risk nothing, but we shall have gained a very strong ally and a very valuable friend.

Finally, it should be understood that as the benefits of independence and economic self-sufficiency grow and continue to increase in the Latin American countries, they will want to align themselves—not with the Soviet Union—but with the United States, in order to protect their economic gains, their political freedom, their national independence, and the security of the whole Western Hemisphere. We have a marvelous opportunity here, let's not fritter it away.

To me, the race to better all mankind and life as we know it here on earth is far more important than the race to conquer other worlds. I believe that if world opinion were permitted to properly express itself, it would compel the search into the unknown, into other planets, to be directed by the combined efforts of all nations on this earth. In this way, the benefits or losses from such exploitation could be proportionately shared without unduly wasting the resouces, human and material, of the earth.

ACKNOWLEDGMENTS

In conclusion, I wish to express several acknowledgments of appreciation for the cooperation and assistance given me during my trip to South America. I am happy to report that our diplomatic representation in the countries visited is of the best. Ambassador Ellis O. Briggs in Brazil, Ambassador Willard L. Beaulac in Argentina, and Ambassador Robert F. Woodward in Uruguay are all careermen, each with an excellent background and understanding of Latin American affairs.

I also wish to acknowledge the inestimable assistance which I have received from the Moore-McCormack Lines, on whose ship, steamship *Brasil*, I made the trip, for allowing me to use their facilities in and out of ports in South America. Without their excellent cooperation, much of this simple report would not have been possible.

Address by George J. Feldman, Director and Chief Counsel, Committee on Astronautics and Space Exploration, U.S. House of Representatives, Before the Federal Bar Association, in New York City, October 9, 1958

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a splendid and informative address made by George J. Feldman, director and chief counsel of the House Select Committee on Astronautics and Space Exploration on October 9, 1958, in New York City before the Federal Bar Association. Mr. Feldman is a dedicated American who, at a great sacrifice to himself, made marked contributions to the success of the House Select Committee on Astronautics and Space Exploration.

The address follows:

JURISDICTION IN OUTER SPACE

We live today in a wondrous age where people and governments, and not just science fiction writers, talk of traveling to the Moon, to Mars, and elsewhere in the vast infinity that stretches all around us.

What was yesterday the figment of men's imaginations, of Jules Verne and the comic strips, bids fair today to become soon the world of reality.

Manmade satellites are orbiting around the earth, plans are underway to land an expedition on the Moon, and scientists tell us that a flight to Mars is feasible within the near future.

As satellites, space platforms, space ships and other astronautical bodies begin catapulting above us, what legal position shall be taken by the governments and peoples concerned?

The space above us is a veritable legal jungle. On Earth there is some international law. In outer space, there is none. Shall each nation decide for itself where it shall hold legal sway? Where does one nation's sovereignty begin and another's end in the limitless void above us? Will man battle one day for supremacy in the black, icy stillness, as he once did on the high seas, or will he this time peacefully agree in advance upon a set of rules to govern each nation's conduct in outer space?

These are some of the things I would like to discuss with you at this time.

The United States has recently enacted what I believe to be the world's first statute dealing with astronautics. The National Aeronautics and Space Act,[1] signed by the President on July 29, creates a new agency of government known as the National Aeronautics and Space Administration. In addition to planning and conducting both aeronautical and space activities, the new agency is directed to arrange for scientific observations and measurements, like those of the International Geophysical Year, and to promote the spread of scientific knowledge relating to outer space. Top policy and overall coordination will be provided by the President himself, with the advice of the National Aeronautics and Space Council, over which he presides, and which consists of high-level Government officials and distinguished private citizens. The new agency is authorized to engage in a program of international cooperation, in the interest of scientific progress and world peace. The act declares it to be the policy of the United States that activities in outer space shall be devoted to peaceful purposes for the benefit of all mankind.

Although the National Aeronautics and Space Administration is not given regulatory powers, the appropriate committees of Congress contemplated that it would conduct legal and related research with a view to domestic legislation and regulation as well as international agreements governing the use of outer space. Witnesses before the House committee agreed that the legal regime of outer space would be the primary problem confronting the new space agency.[2] At any rate, it seems clear that space law must be developed in order to prevent anarchy in the use of outer space. The problem is grave and urgent because of the military potentialities of missiles, satellites, and space vehicles.

What is the nature of the legal problem which the new space agency will meet in considering the international control of outer space?

Flight through outer space is not expressly governed by international law. The only generally accepted international flight agreement is the Chicago Convention on International Civil Aviation (1944) to which the United States, though not the Soviet Union, is a party. The Chicago Convention provides that: "the territory of a state shall be deemed to be the land areas and territorial waters adjacent thereto," and that, "every state has complete and exclusive jurisdiction over the air space above its territory."

Similar language is used in the domestic legislation of many countries, including the United States and the Soviet Union.[3] But the term "air space" is not defined in the Chicago Convention, nor is any equivalent term such as "air" or "atmosphere." Although not defined in the Convention itself, the related term "aircraft" is defined in later annexes in language adopted from the Paris Convention of 1919 as "any machine which can derive support in the atmosphere from the reactions of the air."

Most writers on the law of outer space have taken the position that the definition of "aircraft" contained in the Chicago Convention does not apply to satellites or other space vehicles.[4] This view is usually based either on a lateral interpretation or on the argument that the Chicago Convention was not intended to regulate anything but conventional aviation. Whatever the intention of the draftsmen or signers of the Chicago Convention may have been, it seems unwise to fit its definition of "aircraft" mechanically (even if literally applicable) to new and then unforseen devices and situations.

Footnotes at end of speech.

There are two reasonable analogies for space law: Air law and the law of the sea. It will be worth while to examine these parallels a little more closely. Furthermore, the discrepancies between rights of passage at sea and in the air suggest conclusions for the law of outer space.

In the 15th century, when international law was taking shape, freedom of the seas was by no means a universally accepted principle. Many claims of sovereignty were made to regions of the sea as well as to the newly discoveerd lands. Gradually, the principal maritime nations accepted the view that some exercise of dominion was necessary to sovereignty over terra nullius. In "Mare Liberum," Grotius made the converse argument that the seas must be free because they are not susceptible of dominion.

In the early 20th century, opponents of absolute air sovereignty borrowed this mare liberum argument. Their position has been questioned [6] on several counts.

1. Grotius himself later, in "Jure Belli ac Pacis," abandoned this argument on the ground that dominion can in fact be obtained over regions of the sea—for example, by fleets or coastal guns.

2. Certainly dominion can be exercised over portions of air space, even though the air cannot be occupied.

3. If sovereignty is nothing more than power, then might makes right and international law is a mere delusion.

4. The decisive consideration should be the common social and commercial interests of the international community. Though some may call this view utopian, it commends itself to commonsense and is confirmed by the historical development of maritime law.

In the end the high-seas analogy was not applied to airspace. Article 1 of the Paris Convention of 1919 recognized the complete and exclusive sovereignty of every state in the airspace above its territory.

The chief reason for applying different rules of passage to ships and aircraft appears to be the factor of national security and defense. Because of their greater speed and mobility, aircraft present a greater military threat to national territory. This consideration applies to space vehicles a fortiori.

A secondary reason historically may have been economic protection, a policy of excluding the competition of foreign airlines. In the near future, at any rate, this consideration is not likely to apply with much force to space vehicles.

No doubt these reasons for not applying the law of the sea to aircraft were sufficient. Even in their absence, however, certain difficulties would remain. The law of the sea is not a simple matter of freedom of the high seas together with a right of innocent passage through territorial waters. It recognizes a diversity of zones and regions for different conditions and purposes. Freedom of the seas is a qualified freedom. The right of innocent passage does not, for example, include freedom from reasonable rules of navigation. Furthermore, although the United States is committed to a 3-mile limit for its territorial seas, it has long claimed jurisdiction for customs purposes in a contiguous zone extending up to 12 miles from the coast.[4] The basis of jurisdiction in the contiguous zone is the right of a state to regulate and control conduct occurring entirely outside its territory which may have direct effects within its territory.[7] Such jurisdiction is not territorial or spatial but causal. On similar reasoning, defense identification zones in contiguous airspace or waters beyond the limits of the territorial sea are justified by the right of self-defense. The principle involved in customs zones and defense identification zones could well be invoked to support a claim of jurisdiction in contiguous outer space.

In this connection, it should be said that none of the various proposals for purely spatial solutions to the problem of jurisdiction and sovereignty in outer space seems to be appropriate. For example, some writers have postulated a zone of sovereignty extending into outer space from the center of the earth through the land boundaries of each State and the limits of its territorial sea.[8] It is evident, however, that with the movement of the earth and other astronomical bodies such zones of sovereignty would overlap and their content in outer space would constantly change. Other writers have proposed to divide airspace and outer space into static zones based on physical properties such as aerodynamic lift or drag.[9] Although such static divisions would at least be logical, they do not appear to be pertinent to the problem.

Another difficulty in extending the law of the sea to air space and outer space is that the terms of the analogy are not always specified. If the air space is regarded as the counterpart of territorial waters, standing in the same relation to outer space as territorial waters do to the high seas, the legal implication is that the sovereignty of a state would not be violated even by the passage through outer space above its territory of a strictly military satellite or space vehicle. A Soviet writer has in fact likened the legal status of a satellite in outer space to a vessel on the high seas.[10] In general, however, the analogy is probably intended to be more modest, implying that outer space, while not free like the high seas, is subject to a right of innocent passage.

Like the proposals for the division of outer space and airspace into static zones with different legal regimes, the crude spatial analogy with the high seas and territorial waters seem inappropriate and largely irrelevant to the problem. It is reasonable to conclude that security considerations alone are likely to preserve the principle of national sovereignty in airspace, and to prevent the use of outer space above national lands and waters by foreign vehicles except for peaceful purposes.

The acquiescence of nations to the passage of scientific satellites through outer space above their territories implies that consent to such flights is either unnecessary or has been given. It is true that other interpretations are possible. At least one deserves to be mentioned as a matter of interest. A Soviet writer has explained that the passage of satellites above national territory is not caused by the movement of the satellites but is due to the rotation of the Earth.[10] It seems fair to compare this statement with the defense of a hunter, arrested for shooting ducks out of season, that he had not shot at the ducks at all, but the ducks had flown into his bullets.

To repeat, therefore, there are only two likely explanations for the failure of nations to object to the passage of satellites through outer space above their territory: consent to such flights is either unnecessary or has been given. It is tempting to accept the first explanation,[11] which would appear to mean, for example, that President Eisenhower's open-skies proposal is an accomplished fact. However, any such assumption would be premature and unjustified. Probably no nation would agree that it has waived its right to object to the passage of every kind of satellite above its national territory at any future time. Even though the law of outer space has not yet taken definite shape, there is wide agreement that freedom of space flight is subject to some restrictions in favor of the states below.

The present satellite flights appear to be sanctioned by an implied international agreement based on the acquiescence of other governments in the announcements by the U.S.A. and the U.S.S.R. that satellites would be launched in connection with the International Geophysical Year. This agreement is evidently limited to the types of satellites contemplated in those governmental announcements (i.e., scientific and peaceful satellites) and (as to launching) to the duration of the International Geophysical Year.

Is it at present desirable, or for that matter possible, to broaden this temporary and limited agreement into a code of law for outer space?

Such a development seems desirable, not only for reasons of national security but in order to establish reasonable uniformity of navigational aids, radio codes, routes, landing procedures, and similar matters.

On the other hand, it has been argued convincingly that not enough facts are yet known about outer space to justify the formulation of a body of governing law.[12] Even if we accept this argument as to comprehensive international agreements, however, it does not follow that limited agreements on the uses of outer space either cannot be reached or would not be observed. In fact it is likely, for reasons of urgency, that explicit agreements will play a larger part in the historical development of space law than they have played in that of maritime or air law.

At the same time, care should be taken not to enter into international agreements (a) without adequate preparation or (b) which are more comprehensive or explicit than our present knowledge warrants.

What kinds of limited agreement might be reached in the near future is a matter for astronauts and diplomats as well as lawyers. Certainly I cannot speak for our Government, and my views on this subject are purely personal. Certain possibilities are nevertheless obvious on even brief reflection.[13] The most promising possibility is simply to continue the International Geophysical Year or some form of international cooperation similar to that. Next, it should be possible, to a greater extent than in the past, to exchange tracking data and navigation and signal codes. Agreements could be made on the use of radio frequencies. Some international projects, such as relay or postal satellites or missiles, could be undertaken bilaterally or multilaterally or by an existing or newly created international organization. The next step might be an agreement for advance notice and coordination of launching schedules. Such notice might include information on flight plans, contents and proposed activities of the satellite or space vehicle, and ultimately involve consent to international inspection prior to launching.

In addition to making such operating agreements as have just been described, the nations of the world could greatly contribute to the rule of law in outer space by announcing their adherence, as our Government has done,[14] to the twin principles of freedom of outer space for nonexclusive peaceful purposes and the prohibition of military uses, including, particularly, atomic and nuclear warheads.

It is true that the rigid enforcement of such principles would be very difficult. However, reasonably effective control could be exercised by a system of international prelaunching inspection, together with worldwide surveillance by orbiting space stations and the willingness and ability of two or more nations to destroy on sight any satellite, missile, or space vehicle that had not met the requirements of notice and inspection prior to launching.

To say that such operating agreements and principles as have just been described would be both possible and desirable is not to imply that they would be sufficient. In time, however, they might develop into a code of international space law or perhaps an explicit comprehensive agreement by accretion from particular agreements and practices. Under present world conditions, furthermore, they would constitute at least a good beginning toward the rule of law in outer space.

Our Policy in Europe

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks in the Appendix of the RECORD, I wish to include the text of an article by Henry Hazlitt which appeared in the December 8, 1958, issue of Newsweek entitled "Our Policy in Europe." Mr. Hazlitt presents some interesting ideas on our foreign economic aid program and suggests that we should add some self-respect to the European recovery program by adopting a policy of freer trade in place of economic aid. The article follows:

OUR POLICY IN EUROPE

(By Henry Hazlitt)

A visit to seven European countries in a total of 8 weeks is apt to produce kaleidoscopic impressions, but one or two stand out clearly. The first is a striking growth in prosperity compared with 10 or even 5 years ago. Everywhere people are better dressed. Almost everywhere there is an astonishing amount of new building. This is most impressive in West Germany; but almost as remarkable is the new building in Belgium and in the northern half of Italy.

This new building has gone on in spite of—and even partly because of—rent control. All seven countries (except Belgium) have retained some sort of rent control. This usually takes the form of rent control on old houses and freedom from it on new ones. The result is increasing disrepair in old housing but some incentive to new housing, to which is commonly added the incentive of direct or indirect state subsidies. Where, because of the extent of inflation, rent control is most out of line with realities, as in France, the dilapidation of old housing and comparative lack of new housing is most noticeable.

BRANDS OF SOCIALISM

What stands out is not the differences in the economic policies of the various countries of Europe but the similarities. This applies even to Spain, which is under a dictatorship and still seems in large part cut off from the rest of Europe. Though all of Europe has been moving in the last 5 or 10 years toward a relaxation of controls, most European economies are still marked by a continuation of socialism, protectionism, deficits, and inflation. While European democratic leftists have for 20 years been denouncing the reactionary, dictatorial, and Fascistic policies of Franco, it is hard, economically, to distinguish between their policies and his.

It is not easy to describe the difference, for example, between Italy's socialism of the left and Franco's socialism of the right. The Italian Government, through its holding company, Instituto per la Ricostruzione Industriale, popularly known as IRI (pronounced Erie), controls or owns stock in most large Italian industrial companies. The Spanish Government owns or controls large industries through a similar agency, Instituto Nacional de Industria, the INI. Both organizations came into existence because of an alleged emergency, but neither government seems in any haste to sell its securities back to private hands. If Italian industry has forged ahead faster than Spanish it is partly because IRI makes more effort to emulate the principles of private enterprise than INI, and partly because Italy does not put the appalling obstacles in the way of new private industry that Spain does.

WHAT WE COULD DO

Yet what is most puzzling in Europe is American policy. Why, for example, do we give our actual support and blessing to the proposed six-nation common market? This would discriminate against American goods, make it more difficult on net balance for American exporters to sell to the countries involved, divide Europe into rival trade blocs, and tend to increase and perpetuate bureaucratic controls and protection rather than to move toward free trade. Why do we in Spain (or anywhere else) pour in American aid that obviously goes to subsidize foreign socialism and to prolong government controls, which in turn retard rather than promote economic growth and freedom?

There are two main things that we could do, in the economic sphere, for Europe and the rest of the world. The first would be to keep the dollar strong and beyond suspicion, a hitching post and a model for other currencies until they are restored to soundness. The second would be to open our markets to European goods, to encourage European industrial growth through the self-supporting and self-respecting method of trade, not aid. We are doing neither. At home we are pursuing policies of inflation, undermining the integrity of the dollar. In trade we are moving toward more protectionism, exclusionism, and quota systems. Abroad we are subsidizing, at the expense of the American taxpayer, exchange control, socialism, and inflation. Our so-called foreign economic policy is in need of thorough reform.

Final News Release of Congressman Charles A. Wolverton

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. CANFIELD. Mr. Speaker, we of the New Jersey congressional delegation miss the comradeship of, counsel and good works of the Honorable Charles A. Wolverton, of Camden, N.J., who retired at the close of the 85th Congress after 32 years of distinguished service to his constituency and the people of the United States. We are glad, however, to welcome as his able successor the Honorable WILLIAM T. CAHILL, former member of the New Jersey State Legislature and prominent member of the New Jersey bar.

There recently came to my attention a copy of Mr. Wolverton's final congressional news release of January 3, 1959, which read as follows:

FINAL NEWS RELEASE OF CONGRESSMAN CHARLES A. WOLVERTON

JANUARY 3, 1959.

Frankly, as I write this, my last official news release, there is a feeling of sadness that the end has come to a long and treasured relationship that has existed for 32 years between the constituency of the First Congressional District and myself as I have served as a Member of Congress representing this congressional district.

However, there is also a feeling of happiness in the knowledge that my service has proved acceptable to the people whom it has been my privilege to represent. The expressions of satisfaction I have received with respect to the service I have rendered, together with expressions of regret that I have relinquished my duties as a Member of Congress, are most gratifying. My remembrance of these kind expressions of good will upon my leaving the office of Congressman will ever remain a pleasing memory through all the years that may remain to me. The fact that these friendly expressions have come from every section of the congressional district, and without regard to political affiliations, increases my pleasure.

My task has not always been an easy one. The problems that have arisen have at times been serious and difficult to solve. I have endeavored, as God gave me light, to solve

each with no other thought in mind than to do what was best for the people whom I represented and the Nation at large. I am conscious of the fact as I close my congressional career that at no time have I permitted my action to be dictated by political partisanship or any other unworthy motive.

My task, however, has been made easier by the helpful assistance that has so graciously been given to me by letters and words of counsel and advice, not only from my close personal friends, but also from individuals in my constituency whom I did not always have the privilege of knowing personally. These expressions have been most gratifying because underlying each, although at times differing with my own thought, there was an acknowledgment that whatever my action had been, or would be, I was sincere and honest in whatever action I took. This attitude of confidence in my having right motives has been a source of great strength to me in the performance of the many and varied activities that I have had to participate in. I am most grateful to one and all.

In this connection, I conisder it appropriate that I should also acknowledge my indebtedness to the faithful, efficient, and conscientious service rendered throughout my entire congressional service by those who have served in my secretarial force. This applies to all without any exception. Whatever success I may have had was in no small part due to their loyal and highly capable service. The quality of service that a Member of Congress, particularly a new Member, can render to his constituency can be greatly enhanced or hindered by the presence or absence of qualified secretaries, both locally and in Washington. I have been greatly helped and blessed in having this type of secretaries.

To my successor in office, the Honorable WILLIAM T. CAHILL, I extend my best wishes. The problems, both domestic and foreign, that face our Nation are numerous and important. It is my hope and prayer that each will be solved in a manner that will promote the welfare of the people and bring peace to this troubled world.

In concluding this, my final official message as your Congressman, may I again express my deep and sincere appreciation of your kindness in permitting me to be your Congressman for these many years, and be assured of my continuing interest in all that pertains to your welfare and a willingness upon my part to be helpful whenever you may call upon me for any further service that is within my power to render.

As God has richly blessed me during all my service by His helpful guidance, may He likewise give each of you His richest blessings. Au revoir.

Under date of Saturday, January 3, 1959, the Camden Courier-Post printed as a lead editorial the following editorial tribute to Mr. Wolverton captioned "Great Congressional Career Ends":

GREAT CONGRESSIONAL CAREER ENDS

With the end of the 85th Congress, a distinguished congressional career unprecedented in the history of New Jersey also comes to an end.

Charles A. Wolverton has retired from the political scene after 32 years as Representative of New Jersey's First Congressional District at Washington, the longest period of time any Jerseyman has ever served in either the House or the Senate.

Wolverton's service is notable and will always be remembered not merely for its duration but for its accomplishments. As a colleague has said, he "has contributed much to the history of our times." For many years he has been one of the outstanding members of Congress and one of the most influential on both sides of the aisle despite his quiet ways and his genuinely modest, unassuming personality.

The record shows how Wolverton first went to Washington in 1926 and how he was reelected time and again, as regularly as he submitted his candidacy to the people. It shows how he won overwhelming personal triumphs in years when the Democrats swept all else before them. The record is the best proof of the esteem in which its people have held him, the confidence they have had in his judgment and ability—esteem and confidence that were fully justified and which redounded to the enduring benefit of the First District and the Nation.

"I like to think," said Wolverton a short time ago, "that the people recognize me as an individual who was seeking to represent them in their best interest without regard to political affiliation."

Wolverton can be certain that the people did so recognize him. They knew that, as he says, he "never considered the party label on a bill—if it was good for the people I was for it." Democrats joined with his fellow Republicans at election after election to demonstrate their knowledge of these facts and enable him to set his historic 32-year record of service at the Nation's capital.

Early in his career at Washington Wolverton obtained assignment to the Interstate and Foreign Commerce Committee because he felt he could better serve his constituency on that committee than on any other. His judgment was correct, as usual, and for many years he was either chairman of the committee when the Republicans controlled the House, or ranking minority member when the Democrats controlled it. In either role he was one of the hardest working and most invaluable Members of Congress and received the unstinting admiration of his colleagues.

As one colleague has said, as chairman or ranking member of the committee, Wolverton "has left his firm and constructive imprint on some of the most important legislation ever to be enacted into law." At the same time, he "established a reputation unsurpassed for independence, integrity, and solid legislative accomplishment."

Former Speaker MARTIN is authority for the statement that "Mr. Wolverton is without a doubt one of the best legal minds in this country." That was obvious long before he went to Congress. While he will be mainly remembered as a Congressman, he was as able and brilliant a prosecutor as Camden County ever had. Those not old enough to know that of their own knowledge will readily accept the statement when they recall Wolverton's great flair for congressional investigations and the leading part he played in the recent probe of the Federal Communications Commission during his closing months in Congress.

One of the finest aspects of Wolverton's character is his sincere solicitude for younger persons, his eagerness to aid them. This is manifest in both his public and private life, and the number of younger Members of the House who arose in its closing sessions last summer to pay tribute to the aid he gave them as neophytes in Congress is a striking testimonial to the fact.

Wolverton sponsored or played a leading part in enacting legislation in so many fields that no effort will be made to list them here. But it is probable, as more than one colleague has suggested, that his activities in the field of health legislation, his share in such things as the creation of the National Science Foundation and the National Institutes of Health, are most truly representative of him and have given him his greatest satisfaction. Certainly the good that he has done in this field will live long after him, the Nation will be grateful to him for it, and his name will be forever associated with it.

It is ironic that just at this time, in the midst of the honors and tributes being bestowed on him, Congressman Wolverton should have suffered a deep and irreparable personal tragedy. He and Mrs. Wolverton, both ardent travelers, expected to have the opportunity to travel more extensively in the next few years than ever before. At the very moment when pleasurable anticipation was about to become realization, she has been taken from him in sudden bereavement.

No words of sympathy can temper such a blow. Suffice it to say that Congressman Wolverton does have the profound sympathy of all his constituency and his friends, just as he has their wholehearted love and affection. They at least have the consolation of knowing that he is in vigorous health, that his mental powers are at their peak, and they pray that he will be spared to us for many years. For we shall not soon see his like again.

Address by Commissioner Robert T. Bartley

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a very interesting and informative address made by Commissioner Robert T. Bartley of the Federal Communications Commission, made in Boston, Mass., on October 15, 1958, before the Massachusetts Broadcasters Association, Inc.

The address follows:

Boston is renowned the world over as an educational center, but it has particular significance to me. It was here that I got my start as a practical broadcaster. It must have been amusing to have sat on the sidelines and watched but, believe me, I had some uncomfortable moments. For here I was working directly with John Shepard 3d who knew all there was to know about broadcasting, and I knew nothing about broadcasting except that it seemed that the programs I liked didn't have ratings. Shepard had a way of letting you get yourself all fouled up and enjoyed watching you try to get untangled, that is, if it didn't cost him any money. If it cost money—that was stupid—and the method of conveying the message to you was not smoke signals nor sign language but it had both heat and motion.

But we all loved the guy and broadcasting is a better service because he was a part of it. His influence is still felt not only here in New England but across the land from coast to coast. He was Mr. Broadcaster in my book and we all owe him tribute.

Most places I go to visit with broadcasters, I try to leave a message. If the area is a little weak on local news, I try to stimulate that activity. If they seem a little timid in their approach to controversial issues, I urge them to take an editorial position on matters of local importance, being careful, of course, to so label it and being fair in providing equality of exposure to opposing views. Where they are lagging a little in their cooperation in Conelrad, I explain its value as a public service and why from even a selfish standpoint they should participate. If the station is in a particularly significant area to the system, I might even resort to a little of the lifted eyebrow technique. The newest wrinkle on this is, of course, the use of Conelrad alerting for weather warning. This, incidentally, is growing like wildfire, Boston being one of the earliest to adopt it.

Then there are some of the experiences I've been pretty close to that I sort of let slide by or intentionally ignore. Like the time the eager young news hawk looked up the address in the phone book of a man charged with a robbery. Well, he had the right name, all right, but the wrong address. The upshot was that the man with the same name, but at the wrong address, had some extra income tax to pay that year. We simply settled out of court. We were like the accommodating Negro down home—I call Texas home, too. A newly employed, young and eager constable working overtime found Rastus in Widow Brown's chicken-house. The young constable wasn't too impressed with Rastus' explanation that he was simply being neighborly, that he was gathering up the eggs for Widow Brown who was feeling poorly. So, he threw Rastus in the jug. The next morning, Rastus explained the whole thing to his friend, the judge, who asked how he wished to plead. Rastus, sizing up the situation, replied, "Well, Judge, I pleads guilty and waives the hearing."

The judge quizzically asked, "What do you mean, Rastus, you waive the hearing?"

"Seeing's as how the way things look, Judge, I just don't want to hear any more about it."

I don't talk too much to them about how we laid a license on the line in the great tradition of freedom of speech in taking an editorial position and came within a gnat's hair of losing WAAB in the famous—or infamous—decision, the Mayflower case. Well, we won renewal but the dicta in the case handcuffed broadcasters for years until the Commission reversed that position in its very worthy report "Editorializing by Broadcast Licensees." You ought to make it a point to read it at least once a year.

I don't say too much either about the dither that was caused in one region when an unidentified plane set off Conelrad. There were no casualties and we got a fine exercise out of it. As soon as we get a couple of more ulcers cured, all will be back to normal.

Nor do I say much about that snow in New York the other day when it was 80 in the shade. Well, there's one boy who won't punch the wrong button again.

I don't need to tell you Massachusetts broadcasters how to make section 315 of the Communications Act work for you instead of against you. It was right here that I learned—the hard way, to be sure—that if you plan ahead for political campaigns you can make much smoother sailing for yourselves. If the candidates know the rules of the game ahead of time, they will be reasonable, and it pays to treat them right. Remember, one of them will end up an incumbent. There's just one thought I would like to leave with you on this. Don't be carried away when the networks, Broadcasting magazine, and the NAB campaign for repeal or changes in 315. Think for a moment what 315 means to you as a shield against pressures for favored treatment. It merely says treat all candidates for the same office alike. What could be fairer than that? By the way, we have just republished a notice entitled "Use of Broadcast Facilities by Candidates for Public Office." That, too, I can recommend as required reading every year, before the campaign gets under way.

Well, if I don't have a message, why did I accept this invitation? It's very simple. In the relatively short time I was here, I made many lifetime friends and I wanted to feel young again. Though many of them have gone along, I still feel their presence—people like John Shepard. Then I remember Major Armstrong and Doc Pickard upon Mount Washington when we were pioneering FM—that was 20 years ago to you who weren't around yet. I remember how gallantly they tried to tell me the difference between how FM worked and AM. Up to then, I thought AM was before noon. Then there was Ted Hill over at Worcester, Al Moffatt, and many who are still around like many of you here—also, Paul de Mars and Sam Waite. Sam and I built an entirely new air castle of broadcasting. We had FM doing binaural. Now they've fixed it so I can't pronounce it—stereophonic. While people were sleeping, we delivered their morning newspaper by FM—facsimile.

Well, here 20 years later, stereo is the hottest subject on the dealers' shevles and we are running out of FM assignments; so, we are having to hold comparative hearings for FM stations. And, I still believe facsimile will become practical sooner than most of you think.

Yes, I came up here to be with some friends. If one depended on the newspapers and other publications, congressional reports, newsletters, and so on, one might gain the impression that it would be foolish if not downright dangerous for an FCC Commissioner to appear in public. After all this adverse publicity, who would have any friends left?

Well, I've got some Dutch in me, some English, some Scotch (left over from last night), a lot of Texas and New England, and a little bit of Irish. But, I'm not going to take Pat's advice.

Pat, it seems, was on his death bed and the Father had been summoned.

"Pat, you must renounce the devil."

"But, Father, I'm feeling a wee bit weak."

But the Father kept insisting that Pat should renounce the devil. Finally, Pat, in a rather weak response said, "Father, at this late date, I'm in no condition to start making new enemies."

Well, I can't take that tack. I'm in public life and I well recall the day some 6 years ago when Senator McFarland attended my inauguration as a member of the FCC. I was brought up in the tradition that it was an honor for one to be selected to serve his fellow man. For the inauguration, there was a gathering of pretty prominent Washington officialdom. I was proud to become a member of the Federal Communications Commission. When the ceremonies were over, Senator McFarland, who had been in public life for many, many years, said to me, "Bob, you're more popular today than you will ever be again."

No truer words were ever spoken. I knew something of the job I was taking on. I wasn't out to win any popularity contest. I just wanted to do a good job with a job somebody had to do.

Our Founding Fathers had amazing wisdom in their concepts of government. Evidently, this wisdom of theirs derived from the fact that they were more experienced in the abuses of governmental power. They lived in times of monarchy, feudalism, military dictatorships, colonialism, and, yes, even anarchy.

They devised a constitution which provides for all the powers necessary to govern and yet leaves that power in the hands of the governed. Our Government has been termed one of "checks and balances." Its powers are entrusted to three branches, executive, legislative, and judicial.

Our Founding Fathers did not believe it wise to entrust the regulation of commerce to the executive branch of Government but lodged such authority as close as it possibly could as a practical matter to the people. So, the Constitution provides that the Congress shall have power to regulate commerce, that is, to prescribe the rules by which commerce is to be governed.

Well, that was all right in the early days, but commerce expanded and became so complex and changed so rapidly that it became unworkable for Congress to revise the laws rapidly enough to keep up with changes in industry or for the courts to render decisions fast enough.

How, then, was Congress to exercise its responsibility in this field? Well, after thorough deliberation and sound thinking it created a series of independent commissions. The ICC lays claim to being the first of these alphabetical agencies. It was created in 1887, 71 years ago. The stewardship of the ICC was such that the pattern was followed by Congress in establishing the FTC, FPC, SEC, CAB, and, of course, the FCC. They were to be independent of the Executive. They were to have legislative authority in the sense that they could implement the law passed by Congress by the adoption of rules to carry out the intent of the law. And they were to adjudicate cases involving complaints by users against the regulated industry, or decide between contenders for a certificate of convenience and necessity or select among applicants for licenses to engage in the service affected with the public interest. The Congress provided that the courts could reverse any action of one of these agencies which was arbitrary or capricious.

And, finally, and of immense importance was the concept that these independent agencies should be bipartisan. Congress wanted the benefits of our two-party system. It had rejected the idea of delegating these powers to the Executive or an executive department or to a single administrator. These commissions were to be composed of an uneven number (like the Supreme Court—and for the same reason—to avoid tie votes). No more than a majority of one to be from the same political party. The concept is that the commissions should have the benefit of conflicting viewpoints in order that their decisions and actions reflect not partisan political convenience, of whatever party happens to be in power, but that their decisions should be based on the merits as reflected in a record developed through bipartisan participation—just as laws are enacted by Congress. Members of these commissions are appointed by the President with the advice and consent of the Senate for fixed terms.

The six commissions which I named earlier are in daily contact with every corporation of any size in the United States. These commissions regulate the interstate rates and services for such mammoths of industry as the railroads, bus and truck land transportation, aviation, and power and gas. And practically every other corporation of any size comes within the purview of the laws administered by the Federal Trade Commission and the Securities and Exchange Commission.

With respect to the FCC, our rate and service jurisdiction encompasses the world"s largest corporation, the American Telephone & Telegraph Co., and its interstate subsidiaries, the Western Union's domestic landline system, and the several international communications carriers.

And, would you believe it, there are more than a million licensed radio transmitters.

For the regulation of these industries in the communications field, we have approximately 1,100 employees. One-third of these employees are stationed at monitoring stations throughout the country for the purpose of seeing that users of radio operate in such a manner that they do not interfere with other stations. That leaves around 700 people outside the Commissioners' offices, to handle the application processing, to carry on hearings and investigations, and advise the Commission with respect to short-term and long-term policy matters.

So far as the Commission's budget for its activities is concerned, I have in the past referred to it as the plugged nickel, which means simply this. The budget for FCC's operations amounts to less than 5 cents per annum per person in the United States. With that plugged nickel, the Commission is supposed to "regulate interstate and foreign commerce in communications by wire and radio, so as to make available so far as possible to all the people of the United States

a rapid, efficient nationwide and worldwide communication service with adequate facilities at reasonable charges for the purpose of national defense, and for the purpose of promoting safety of life and property through the use of wire and radio communication." That's lawyer language for saying "the public is entitled to fast, cheap communications service."

It is only natural that the regulator would be unpopular with the regulated—if the regulator is doing an effective job. We Americans just naturally react unfavorably to being told "No," even when we understand that must be the answer for the good of all.

One complaint against us, though, is legitimate and gives us great concern. That complaint relates to the delays encountered by the parties in securing decisions.

Remember, one of the reasons for the creation of commissions was to avoid the long delays experienced in court. Now, for a long time, these agencies were able to operate in such a way that interested parties received answers expeditiously and the public was, I believe, better served. Remember, too, that even then actions of the commissions which were arbitrary were reversible in court. But that was not enough for those who lost cases or who, for one reason or another, wanted an impending unfavorable decision delayed. So, gradually over the years, we have seen a whittling away of the powers of these commissions in providing expeditious service to the public.

Now, one of the reasons for these delays lies in the fact that the personnel force provided for these agencies has remained about the same as before the war; whereas, some of the industries regulated have doubled and trebled in size. Indeed, in the case of television, a completely new complex industry has been born, an industry in which the public has invested some 13 billions of dollars in 40 million television sets. To help us execute our duties with respect to the 4,500 standard, FM and TV stations, our Broadcast Bureau operates on a budget of approximately $1 million with only 160 people. This simply is not an adequate force to handle the innumerable problems in this field with expedition.

Another contributing factor for delay is the recent increase in the laws providing for more "due process".

Let us see how this has come about.

Back in 1938, after Congress had set up a whole administrative pattern of independent regulatory commissions, attempts were made to break down this pattern. James Landis wrote a book entitled "The Administrative Process," in which he pointed out:

"Only a year ago (meaning 1937) a distinguished group of scholars, reporting to the President of the United States—in language hardly indicative of academic restraint—described the independent administrative agencies of the Federal Government as constituting a headless fourth branch of the Government, a haphazard deposit of irresponsible agencies and uncoordinated powers, whose institution did violence of the basic theory of the American Constitution that there should be three major branches of the Government and only three."

Although this frontal attack on independent commissions was defeated, a pincers movement succeeded some years later and resulted in the enactment of the Administrative Procedure Act. I believe Congress was seeking to remedy abuses which had arisen in the functioning of certain agencies within thte executive departments which led primarily to this statute—not from abuses in the six agencies I am discussing.

But, even when early bills preceding the Administrative Procedure Act were being considered, there were warnings raised against attempting to remedy abuses by general legislation affecting all administrative agencies. And these cautions were spoken not by partisans of the agencies themselves, but by eminent judges experienced in judicial review of administrative matters, and by members of the bar practicing before administrative agencies. For example, the Association of the Bar of the City of New York, whose committees on administrative law was then headed by John Foster Dulles, put itself on record as disapproving the bills. Its report pointed out that administrative law is an intricate field encompassing numerous agencies dealing with a variety of diverse subject matters; and that no one procedure is adequate or appropriate for the handling of all these different fields.

In summation—what does all this add up to?

We have seen that Congress set a statutory course for independent commissions to follow. It established what it presumed would be a fair and qualified group of people to administer an act on a bipartisan basis. For a long time, and without interference from the executive department, it provided these commissions with adequate funds and personnel to operate effectively. It prevented the courts from interfering with the decisions of the commissions on matters of judgment by limiting the power of review to those cases in which the commission had acted in an arbitrary or capricious manner.

But, what has happened in recent years?

The basic intent of Congress in creating independent commissions is slowing but surely being defeated, in my opinion, by the following factors:

First. The executive department has been extending its influence upon independent commissions in a crippling manner through restricting their budget and personnel justifications before Congress—and has been encroaching upon the important functions of certain administrative agencies. In addition, the independent regulatory agencies are required to secure prior approval from the executive department before they submit to the Congress their views concerning legislation affecting their respective agencies and the laws entrusted to them by Congress. Moreover, in certain important situations, the independent agencies must secure the prior approval of the principal legal officers of the executive department in order to petition the United States Supreme Court to review court decisions made against such independent agencies.

Second. The judiciary, through restrictive and hampering interpretations of the law and requisite procedures, has hamstrung the expeditious handling of cases and has apparently indicated in certain decisions an intent to exercise its judgment in place of the Commission's. In this connection, it is interesting to note that the Supreme Court has had occasion in a recent case to remind the lower court that the Communications Act must be read as a whole and with appreciation of the responsibilities of the administrative body charged with its fair and efficient operation. The Court also pointed out that the growing complexity of our economy induced Congress to place regulation of businesslike communication in specialized agencies with broad powers; and that courts should be slow to interfere with the agency's conclusions when they are reconcilable with the statutory directions.

Third. And, finally, Congress itself has made it difficult for the independent commissions to function effectively. Through certain basic procedural restrictions (such as the APA) and crippling amendments of the basic statutes (1952 amendments), Congress has followed a trend of removing from members of commissions their latitude of action and exercise of discretion and judgment—which tools, I believe, are essential to a fair and expeditious handling of the complex matters with which we have to deal.

Through these three means—the intervention of the Executive, the courts, and through legislative acts themselves, it has become more and more difficult for these arms of Congress to carry out efficiently, effectively, and expeditiously the very policies which Congress itself delegated to them.

The public has a direct and vital interest in the effective functioning of the FCC. All of our actions have a direct impact on the public—from the institution of service by a new local radio or television station—right through the efficient operation of your police and fire departments, public utilities, and industrial companies through the use of radio—all the way to the rates you pay for interstate and foreign telephone and telegraph service.

It is rare, however, with the exception of public utility rate cases, that the public participates directly, or voices its opinions before the Commission. Therefore, as I see it, the Commission must itself represent the public interest in its deliberations. It must, in fact, be an affirmative defender of the public's right to the best possible communication service, in carrying out the mandate of Congress in this branch of commerce.

Currently, more and more Members of Congress are becoming concerned with the declining prestige of the independent commissions and with their declining efficiency. It is interesting to note that a recent report by a House Small Business Subcommittee made five recommendations after studying the activities of independent commissions. They take a column in the CONGRESSIONAL RECORD of March 20, 1957, since they are written in legal language, but basically this is what they say:

1. Authority to name the chairman of these Commissions should be placed in the Commissions themselves instead of with the Executive. For years, the ICC and Federal Trade Commission rotated the chairmanship among their members and this arrangement worked very well.

2. That these agencies should not have to clear their requests for appropriations with the Bureau of the Budget.

3. That they should not have to clear their requests for information from the industries they regulate with the Bureau of the Budget.

4. That they should not have to clear their legislative proposals with the Bureau of the Budget.

5. They should be allowed to seek Supreme Court review of lower court decisions without having to go through the Solicitor General.

Subsequent to this report, Congress appropriated $250,000 to its House Committee on Interstate and Foreign Commerce to make a study of the manner in which these agencies operate.

These are the basic questions being studied by the House Committee on Legislative Oversight. But the public is not being made aware of these important matters. You'd think from reading the newspapers that all the Harris committee is doing is playing cops and robbers.

Now, I would be less than candid if I did not admit that all this adverse publicity has hurt and has interfered to some extent with our efficiency but let me tell you this. I have never seen seven harder working, more conscientious men, than now make up the FCC.

These men are all dedicated public servants. They are in their prime of life. They average 53 years of age and have an average background of 22½ years in Government service.

As you know, I was recently reappointed for another 7-year term, and it was gratifying to me—after all this adverse publicity—to find the spontaneous general acceptance by, it seems like everybody. It made me proud to be a member again.

All the present members of the FCC are proud to be members and we intend to make the people of our country proud of the FCC.

Statement by Hon. Walter H. Moeller of Ohio

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. MOELLER. Mr. Speaker, on this, the second time that I have been present on the floor of the House as a Member of this distinguished body, I think it fitting to give voice to a few of the sentiments which have been in my mind and heart during the past few days, sentiments which I hope and pray will color and in a sense guide my future actions as the elected Representative of the people of the 10th Congressional District of Ohio.

First and foremost I am deeply grateful to Almighty God for having been granted the honor and entrusted with the solemn duty of helping to guide the destiny of this great Nation in these epochal times. With His constant help I shall do my utmost to prove myself worthy of that trust and to redeem the pledge that I have given to my constituents and to the whole people of the United States.

I feel also a strong sense of obligation to the voters and indeed to all of the citizens of the 10th Ohio District. I take this moment to assure each and every one of them that my door and my heart will always be open to them. Their legitimate concerns and their problems, great or small, will come first with me, either at home or here in the Nation's Capital. I ask only that they not spare me the opportunity to serve them.

I reflect also on the high privilege of being one of the chosen few to occupy these Chambers, dignified by history, by time, by the distinguished and even illustrious Members of years past, and made even more distinguished by the spirit of generations past, present, and to come which we feel in the atmosphere about us. Without thought of sacrilege I can honestly say that it is almost as though I were experiencing a second ordination. Only my life's calling as a member of the clergy can be said to have made me feel the depth of emotion and the feeling of consecration to a holy cause which now hold me, in my head and in my heart. Pray God that this spirit will abide with me always and that I do not lose it in the days and months to come.

Mr. Speaker, I do not wish to trespass upon the patience of my colleagues with more than these few words. I have spoken from a full heart and I pledge that whatever I may say from this floor in the future it will always be said in the same Christian spirit and with the same respect for truth and for the rights and feelings of my colleagues, my constituents, and the whole of humanity of whatever color or creed.

Omnipotent State No Guarantee of Security

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. SCHERER. Mr. Speaker, Mr. Ed Wimmer, vice president of the National Federation of Independent Business, in an informative and well-reasoned article appearing recently in the Cincinnati Enquirer, sets forth in no uncertain terms that the omnipotent state is no guarantee of security. I feel that the Members of the House and Senate should have the benefit of his observations at the beginning of this 86th Congress.

The article follows:

OMNIPOTENT STATE NO GUARANTEE OF SECURITY

A monthly investment letter circulated by Cincinnati's Westheimer & Co., expressed the opinion that regardless of any definitions given the words "Republican" and "Democrat," the last elections indicated no return to orthodox economics or fiscal sanity in the next year.

"We can expect to live," the letter states, "with a hybrid capitalism in which high taxes, unbalanced budgets, unrestricted labor unionism, rising production costs, and mounting farm surpluses, will be considered normal and continuing."

This view is shared by a startling number of people who are trying to be realistic, but they are not shared by those of us who see in the rising ground swell of public resentment against brink-of-war headlines; against staggering deficits; broken promises; labor racketeering; confiscatory taxation; destruction of small business; and unparalleled industrial greed—the deeper interest that exists in any proposal which could lessen these evils.

It is true that much of this interest is generated by fear, but most of the greatest reforms in history were born of fear. Today people know that a dollar that loses 50 percent of its value in 20 years, can lose more of its value every year under present inflationary trends. They are waking up also to the mounting threat of monopoly power building up in the huge chainstore systems, in colossal corporate combines, power-crazed labor unions, and overcentralized Government.

In meeting this challenge, I think our first big job is to prove that the omnipotent state is absolutely impotent when it comes to guaranteeing the freedom and security of the individual. Consider that 40 million people last year received checks paid out of tax money, with more than $11 billion going to Federal employees alone, yet all this outpouring of money didn't contribute a dime's worth of economic freedom or political liberty—to the future.

Alfred Friendly, editor of the Washington Post, put it in a nutshell when he said: "Never has an older generation had less valuable counsel to offer a younger one."

Like the Soviet Union, our whole effort, our whole life is being mobilized for military and industrial goals, and like the Soviets, we find justification for whatever loss of individual independence that may incur. This emphasis on mass production geared to militarism; on mass distribution; mass communication; mass unionism and m sive government, is the direct opposite philosophy to the emphasis on self-reliance and independent enterprise which made our country great.

It would, therefore, seem unarguable, that our second or "twin" obligation is to set in motion any force that encourages the development of an economic climate in which all persons of sound mind and body are provided a fair chance to create their own security.

According to the dictionary, capitalism is a system that "concentrates wealth and power in the hands of the few," which, of course, dooms the system. So, how else can we preserve the system and perpetuate it except through the widest possible independent ownership of farm, home, and business enterprise (wherever practical and possible), with local control over local affairs in government?

When capitalists (which includes anyone who owns anything privately) understand thoroughly this Jeffersonian approach to economic freedom and political liberty, the "power groups" who are mopping up in the corporate field, in banking, and in the labor movement, will be turned back. No other objective is more important in the New Year that lies ahead.

A Word About Charley

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LEVERING. Mr. Speaker, I feel that it is fitting for me as the Representative of the congressional district in which Charles F. Kettering was born and reared, to speak a few words today in his memory and to draw the attention of my colleagues to an editorial about his life and works.

Incidentally, this editorial was written by one of my good friends, Ken Woodman, who has captured some of the spirit of Mr. Kettering in this eulogy.

In some respects, it is superfluous for me to try to add to the fame and name of Charles F. Kettering, for his was a unique genius which manifested itself in countless ways for the benefit of our industrial economy and, in fact, for the whole world. For decades, the name of Charles Kettering has been known internationally for his management skill, his inventive and creative mind, for his many philanthropies, and for his humanitarianism.

The folks in our area, who remember him as a youngster, still refer to him as a "queer duck," for his genius, even in his youth, led him to make experiments and to wear his clothes and to act in ways that caused others to smile. They did not realize, and perhaps did not appreciate, the workings of his marvelous mind in those days. But, of course, as he became famous, they understood why he had seemed to be eccentric to them.

Under leave to extend my remarks, I include the following editorial from the November 26, 1958, issue of the Mansfield (Ohio) News-Journal:

A WORD ABOUT CHARLEY

(By Ken Woodman)

The trouble with Charley was he believed a person could do almost anything he set his mind to.

Just because a rule said something wouldn't work, didn't mean there wasn't a

way to make it work. You just had to find a new way.

Another trouble with Charley was he wouldn't hurry.

He had weak eyes and he suffered from splitting headaches but he figured if he took his time that wouldn't prevent his studying. He was kind of slow in school but he plugged along until he had enough training to be a schoolteacher. On the side he studied Greek. By the time he was 28 he managed to graduate from Ohio State University.

Charley was born on a farm near Loudonville. There were no I.Q. tests in those days to warn that Charley had a mind that was something special. He was just a lad with a slow way, a big sense of humor, and curiosity you couldn't crush.

While teaching school he spent evenings hanging around a drugstore, tinkering with chemicals and electricity.

That was another thing about Charley. He loved to tinker.

His headaches forced him temporarily out of Ohio State at the end of his sophomore year. He got a job with a telephone company and started tinkering and ignoring rules and came up with a central battery system that took the resistance out of old-time phone lines.

The National Cash Register Co. heard about this and invited him to come with it as an inventor after he left Ohio State University.

Well, Charley said, "Let's get rid of that crank." And he did. Within 5 years he had produced the first electric cash register and a complex accounting machine.

Of course, he had to do a little tinkering on the side. He did it in a hayloft with a couple of other fellows and they figured out a way to improve auto ignition systems. Cadillac Motor Co. showed interest and in his own good time Charley came up with the first self-starter for automobiles.

United Motors, which later was to become General Motors, bought out Charley's hayloft project for $9 million, which was quite a chunk for a Loudonville farm boy in those days.

Charley sort of sold himself along with the deal—but on condition that he be permitted to do his own tinkering. In his deliberate way it wasn't long before he had devised the Delco-Light farm ignition plant which brought electric lights to thousands of rural areas which had depended on kerosene lamps and lanterns for a generation.

Then Charley got to puttering around with electric refrigerators, trying to make them better. That meant he had to look into chemistry a bit. Before you could say, "What have refrigerators got to do with automobiles?" Charley's chemical puttering had produced the first ethyl gasoline to take the knock out of motors. He had the help of a young engineer named Thomas Midgley on this.

Charley was now a big wheel with General Motors. He bought a yacht. The "durn" diesel motor didn't work right. Charley got to tinkering with it and came up with ideas that made GM a leader in the diesel engine field.

Every once in a while Charley would come back to Loudonville and Ashland. He would put up the money for a hospital or a college building—provided others dug in and worked a little bit too. He liked to talk with old friends.

He built himself a summer home near Loudonville overlooking the beautiful rolling country which he called Ohio's Alps. He had a private plane in which he flew up from Dayton and which he complained cost too much money.

He served on a score of boards of directors for industry and colleges. He kept right on taking ideas that wouldn't work and making them work until he had an almost uncounted list of useful inventions to his credit.

Charley took sick Sunday at his home in Dayton. It was the end.

Everywhere typewriters flew into action hailing the stupendous accomplishments of Charles Franklin Kettering, known more familiarly as "Boss Ket."

Charley would have chuckled good-naturedly at that. It would have been just like him to say, "Don't those fellows have anything better to write about?"

He once inaugurated a complicated telephone system with the jest: "Well, I guess she's gonna work." Which, when you come to think of it, was a much profounder and more practical speeech than most inaugurals.

That was the thing about Charley. He had a way of seeing through the shell to the meat of the nut.

Charley was one of the greatest geniuses of our times and it didn't faze him one bit. God rest his wondrous soul.

Reduction of Premium Rates for FHA Insurance

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. HOLTZMAN. Mr. Speaker, since February of 1955 I have had legislation before the House of Representatives providing for a reduction of the premium rates for FHA insurance on cooperative housing to one-fourth of 1 percent.

In June 1955 the Housing and Home Finance Agency reported unfavorably on my bill, H.R. 4443 to the Committee on Banking and Currency; and again in August of 1957 the Agency recommended that the bill, H.R. 8674 not be enacted.

At that time I had pointed out that it was obvious that the 213 cooperatives were in serious financial difficulty because of circumstances over which they had absolutely no control. Section 213 of the Housing Act was originally designed to alleviate critical shortage of housing for the middle-income group—to fill the gap between public housing for the low income group and private homes and luxury apartments for the higher income group.

Unfortunately, inflation has also affected the operation of the 213's. Heavy increases in carrying charges have occurred over the years, and these increases have forced many of the tenant-stockholders, most of whom are veterans, to vacate their apartments because of their inability to meet such increased charges. There have been practically no foreclosures of section 213 cooperatives and thus the fund created by the mortgage insurance premiums has not been touched. Section 213 cooperatives have proven to be excellent insurance risks in the past, and there is no reason to believe that this condition will not continue in the future. These people are entitled to every possible consideration, and a reduction in the mortgage insurance premiums would be a tremendous help to the tenant-stockholders.

I am reintroducing this bill in the House again today. Several years have elapsed since there has been anything done and it would be particularly bad to keep accumulating this money when it would give many people who need the help, the benefit of it.

I am very happy to see that the Committee on Banking and Currency has just announced that it would now be in favor of such a reduction in the FHA insurance premium, and agrees with my efforts to reduce the premium to one-fourth of 1 percent. The committee has stated that the FHA now has reserves more than ample to weather a real estate crisis even as serious as the great depression.

Such a position by the committee certainly would indicate that we can finally look forward to some favorable action by the Congress on this legislation which I have been advocating for the last 4 years.

I urge my colleagues to join with me in passing this legislation promptly so that we can correct a basic inequity and thus discharge our obligations and responsibilities to the people.

He's Spent 50 Years in Post Office

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. IKARD. Mr. Speaker, in July of last year, Mr. George Washington Weaver marked 50 years of outstanding service with the postal service in Denton, Tex. He is deserving of recognition for his fine and long record of service. On July 7, 1958, the Denton Record-Chronicle, in an article written by Mr. Jim Neal, recognized Mr. Weaver's half century of service to the citizens of Denton. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include this article paying tribute to Mr. Weaver's postal service. It follows:

HE'S SPENT 50 YEARS IN POST OFFICE

(By Jim Neal)

Half a century of service to Denton residents and to students of what's now TWU.

That's what George Washington Weaver of 305 West Sycamore passed Sunday. The superintendent of the Denton Post Office's TWU substation, he's spent 50 years helping Dentonites and university students get their mail on time.

To celebrate the occasion, which falls on the 75th anniversary year of the Nation's civil service, Weaver's fellow civil-service employees gave him a surprise party today in the Denton headquarters of the region 5 Federal Civil Defense Administration office. Both the FCDA and the TWU substation are housed in the same building.

When he was invited upstairs for a cup of coffee, Weaver was busy trying to clean up some work so he could take some annual leave. He said later he thought it was odd that he should be invited upstairs for coffee when the TWU pub snack bar is located in the basement of the building with the substation. He had no inkling of the surprise party.

Questioned about his early days in the Denton Post Office, Weaver recalled that in

1908, all the mail coming to Denton was brought from the train station to the post office in a wheelbarrow.

"It took just two loads, one incoming and one outgoing," he said. On an average day in 1958, the Denton Post Office gets in about 250 sacks of mail and sends out about the same amount.

During his 50 years in the Denton Post Office, he's seldom missed work because of illness. He said he had accumulated a total of 1,700 hours of sick leave during that time.

Asked about his future plans, he said he just didn't know. "I have several propositions in mind. But one thing's for sure—I'm not planning to retire at the moment. There's a bill before Congress now that may allow postal employees to get paid for unused sick leave. I don't intend to quit till I know what they're going to do with that bill," Weaver chuckled.

LETTER

At the informal surprise party, Weaver was given a letter of congratulations and appreciation for his cooperation with the FCDA. The letter was signed by FCDA Regional Administrator Welcome W. Wilson.

Now 68, Weaver was 18 when he was employed as a substitute mail carrier by the Denton Post Office on July 6, 1908. Before the year was out, he had become a full-fledged carrier, a position he held until 1916 when he became a postal clerk.

In 1918 he went into the Army, but the armistice was declared before he got overseas, and he was back at his old duties in the Denton Post Office within 3 months. In 1925 he was appointed a special clerk, and 2 years later he was assistant postmaster.

During his 50 years with post office, Weaver served under seven postmasters, including John B. Schmitz, A. L. Banks, Howard Fenton, C. A. Scott, B. W. McKinzie, Ray Bishop, and M. D. Penry, the present postmaster.

"The Post Office Department considers Weaver one of its topflight men," Penry said. "He's about the only postal employee I know in Denton who's ever received a grade of 100 percent on a post-office inspection."

It was in 1934 that he was appointed station superintendent of the TSCW (now TWU) substation. He's been there ever since.

And according to students and faculty members, he's made a success in the position. The students, for example, dedicated their 1950 yearbook to him.

It came as no surprise to anyone that the students thought so much of Weaver. During the 24 years he's been there, he's helped Tessies with a number of problems—including the searching out of postage stamps whose colors won't clash with the students' specially hued stationery.

It was also Weaver who took care of another problem at the TSCW substation several years ago. When a letter from a lonesome Texas A. & M. student arrived bearing the address, "To Just Any Tessie," Weaver personally took charge of delivery.

The result led to wedding bells.

Review of U.S. Unemployment Insurance

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. MADDEN. Mr. Speaker, John W. Vandercook, ABC commentator, has some constructive thoughts regarding improvement of our unemployment insurance law.

Under leave to extend my remarks in the RECORD, I include his article as follows:

VANDERCOOK SAYS

Twenty years have now passed since the legislative act establishing U.S. employment insurance became more or less operative. Twenty years and a couple of wars, a couple of booms, and several recessions later, we can now gain an intelligent perspective on that vitally important law—or, rather, hodgepodge group of laws.

What has been the most remarkable result of our having established an unemployment compensation system has been the truly phenomenal effect it has had on the stability of the whole American economy. Unemployment compensation was intended to lessen misfortune's load on the shoulders of individuals who had lost their jobs.

No one, until the 1957–58 recession, had imagined how astonishingly the distribution of jobless compensation checks would lessen the recession's impact upon the whole economy.

Yet, at the human, private level, experience has taught us that the present scale of unemployment benefits, in almost all States, is grossly inadequate, both in amount and in duration.

But one major fault stands out in the operation of our unemployment insurance program.

With the best of intentions, it was established that companies with good records for steadily maintained employment—to put it simply—were to get back most of the sums they had paid into unemployment insurance funds.

In the light of 20 years of practice, there's now reason to think that maintained employment in any given firm is not so much a proof of virtue as it is an accident of the economy; that perhaps we have been recklessly open-handed in rewarding corporations for circumstances over which they turned out—under the pressure of harder times—not to have as much control as they pretended.

More money, obviously, has to go into the unemployment pot. More of it, the next Congress may decide, will therefore have to come from previously favored companies.

Legislative Program of Affiliated Young Democrats of New York

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to insert the legislative program of the Affiliated Young Democrats, Inc., of New York State for the year 1959. This program, which undoubtedly will be of particular interest to similar groups throughout the country, was adopted at a meeting of the organization's State executive committee on December 27, 1958. The Honorable Harold R. Moskovit, State president of the organization, presided. Following is the text of legislative program:

NEW YORK STATE LEGISLATIVE PROGRAM OF THE AFFILIATED YOUNG DEMOCRATS, INC., FOR 1959, ADOPTED AT A STATE EXECUTIVE COMMITTEE MEETING ON DECEMBER 27, 1958

This legislative program will be introduced in the 1959 State legislature by their members, of which there are 17 in the State senate and 31 in the State assembly.

The Affiliated Young Democrats pledge ourselves to devote every effort to the enactment of the following program. We have always stated clearly and without equivocation our position on the vital issues, and we do so now.

1. Reapportionment: We support the enactment of legislation reapportioning both congressional and legislative seats in fair proportion to population, so that all segments of our State may be fairly represented both in Albany and in Washington. Only by such reapportionment can the popular will be effected.

2. Primary elections: The Democratic Party is irrevocably committed to the proposition that government belongs to the people, and that the people should have the fullest possible participation in the selection of those who fill high public office. The State of New York is today one of the few States in which candidates for U.S. Senator, Governor, and other offices filled by statewide election are not selected in primaries. The confusion which has existed with respect to the selection this year of a candiate for U.S. Senator demonstrates the wisdom and need for selecting the candidates for such offices in primary elections. We advocate the speedy passage of legislation permitting statewide primaries.

3. Presidential primaries: 2 years hence the Democratic Party will surely have the responsibility for selecting the next President of the United States. The Democratic voters in the State of New York under present law will be one of the few segments of our party who wil be unable to participate directly in that process of selection. We support the enactment of legislation permitting presidential preference primaries permitting the voters in each party to indicate their preference for candidates for President and Vice President of the United States, and to elect delegates committed to the nomination of such candidates.

4. Presidential vote: We favor the abolition of the electoral college and the election of a President and Vice President by popular vote. Pending such amendment to the Federal Constitution, and in order to achieve an equitable division of the electoral vote, we urge the enactment of legislation at Albany permitting the allocation of the State's electoral vote among the candidates for President and Vice President in direct proportion to the popular vote.

5. Voting machines: We favor the mandatory use of voting machines in all primary elections in which there is a contest.

6. State offices: We favor a clarification of the law so as to eliminate any question of the power of the Governor to fill vacancies in the office of attorney general or in any other State office.

7. Lieutenant Governor: We favor revision of the State constitution so that separate votes may be cast for Governor and Lieutenant Governor, and to permit a vacancy in the office of Lieutenant Governor to be filled at next election following the vacancy.

8. Eighteen-year-old vote: We again urge that the right to vote be given to those 18 years of age.

9. Election laws: We favor the establishment of a permanent spring primary, the mandatory direct election of district leaders, and simplification of election petition procedure.

10. Board of elections: We favor a revision of the manner in which the board of elections of the city of New York is constituted, so that its members will be selected on a nonpartisan basis, and so that residents of Queens, the Bronx, and Staten Island may be eligible for membership.

11. Board of regents: We urge that the selection of the board of regents be placed on a nonpartisan basis, so that all segments of

the population may be represented in the educational system of the State.

12. City income tax: We favor the abolition of all legislative authority permitting the imposition of an income tax by the city of New York or any other municipality.

13. Court reorganization and simplification: We favor a continuation of the program for court reform, and intensified efforts to bring about its enactment.

14. Family court: We favor the establishment of a family court in the city of New York and in other communities throughout the State so that all actions relating to the family will be centralized in a single court with adequate resources and judges of special competence and qualifications.

15. Education: We favor a substantial increase in State aid for education so that the city of New York and other municipalities will receive a fair share of the taxes paid by their residents, thus enabling them to meet the enormous shortages in adequate school facilities and teaching staff.

16. New York City Charter Commission: We urge the passage of enabling legislation permitting the appointment of a New York City Charter Commission which can submit its recommendations directly to the people.

17. Discrimination in housing: We support a bill to extend the ban on racial discrimination in housing to all multiple dwellings and to one or two family houses throughout the State.

18. Child care: We advocate a program of State aid for child day care in the public schools.

19. Rent control: We favor the extension of rent control throughout the State, and to strengthen the law by requiring landlords to provide services and maintenance equal to that provided in 1951.

20. Subway fare: We favor maintenance of the present 15-cent subway fare by requiring the State to contribute its fair share to the cost of operating the subway system.

21. Fair Sabbath law: We favor the enactment of a law permitting the city of New York to enact a fair Sabbath law. We further favor and support a policy of permitting the city of New York home rule, and ceasing efforts to govern the city from Albany.

22. Legislature: We again advocate that a printed record be published and made available to the public of the full proceedings of the legislature, including the names of all persons employed in the legislative establishment and the amount of compensation received by them, so that the public may be fully informed of what goes on in Albany and so that the abuses recently disclosed may be eliminated.

23. State taxes: We favor a reduction of State taxes to the greatest extent compatible with a solvent State government.

24. Public health: We advocate encouragement of prepayment plans for meeting the cost of medical care, by giving aid to sound voluntary plans now in existence, and stimulating the development of new plans; the development of centers for the rehabilitation of the physically handicapped; a program of State aid for the training of medical and nursing personnel to meet the shortage of physicians, nurses, and technicians; establishment of State programs for the care of the chronically ill; and expansion of the State's facilities for the mentally ill.

25. Securities dealers: We believe that persons engaged in the investment of other people's money should demonstrate affirmatively their qualifications for such responsibility by examination, and to this end we advocate the establishment of a State licensing system for securities dealers and investment advisers.

26. Juvenile delinquency: We favor vigorous continuation of the programs to combat juvenile delinquency. The State's facilities for the handling of delinquent boys and girls must be expanded, and additional funds must be made available for the probation bureaus of the criminal courts. State aid should be made available for the so-called 600 schools. We also favor an expanded rehabilitation program for young people in correctional institutions.

27. Motorists: We support the exclusive allocation of funds collected from gasoline taxes and motor-vehicle licenses to the development of the State highway system. We also support an extension of the gasoline tax to industrial users of gasoline to the same extent that it is now imposed on motorists. We favor examinations of all motor-vehicle operators to be given every 3 years to help curtail automobile accidents.

28. Science colleges: Urge a new State science college be built to meet the new advances in science.

Address by Lt. Gen. Arthur G. Trudeau

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. McCORMACK. Mr. Speaker under permission to extend my remarks I include a very informative address made by Lt. Gen. Arthur G. Trudeau, Chief of Research and Development of the Department of the U.S. Army, at the opening ceremonies, solar furnace dedication, Quartermaster Research and Engineering Command at Natick, Mass., on September 30, 1958.

The address follows:

Today we gather here in Natick, Mass., to dedicate a great solar furnace marking another step in man's attempt to provide new sources of power and energy for his betterment. This, along with similar efforts being made elsewhere, should teach us eventually how to harness the unlimited energy of the sun for mankind's use.

The worship of the sun by the ancients and by many peoples even today in outlying areas of the world is well known to all of us. The essentiality of its life-giving heat and light have been known to men of all ages. In the fifth dynasty of ancient Egypt, as early as the year 2500 B.C., its capital was called Heliopolis and the god it worshipped, peculiar as it may seem, was named Atum Re. The existence of this fact when associated with the brilliance of atomic explosions today is indeed one of interest, if not significance.

If we search through the history of man's development we can pick out many, but particularly several significant steps in increasing his power beyond that provided by his own muscles. The lever, the wheel, the use of draft animals, development of hydraulic power from the natural fall of streams, the development of the steam engine, the employment of electricity, and the extensive development and use of internal combustion engines and fossil fuels mark but seven of these steps.

Today we are faced with many more possibilities as mankind approaches new thresholds in scientific achievement. The employment of the atom for peaceful purposes to provide nuclear power is well underway. A companion development, using fusion instead of fission, seems likely within the foreseeable future. The scientific investigation of further energy developments through the use of chemical, thermal, electromagnetic, and thermal-ionic sources is proceeding apace. The harnessing of the energy available from the heat in the bowels of the earth and the movement of the sea from wind and tide is still to be accomplished but the massive amounts of energy available therein will undoubtedly be utilized to some greater degree in the coming decades and centuries.

In the sun, in particular, we have an obvious source of tremendous energy and most of us are convinced that substantial amounts can be harnessed for mankind's use

The need for a breakthrough into new sources of energy other than those obtainable from fossil, hydraulic, and hydrocarbon sources is readily apparent. With each passing year, the world's reserve of economically recoverable fuels is being depleted at an ever-increasing rate. Estimates have been made that maximum production of oil and gas in the United States may quite likely be reached by 1970 and that coal production in this country will peak prior to 1990. With the projected increase in our energy requirements and consumption by the turn of the century to 10 times what it is today, we are faced with a very disturbing prospect. Other nations of the world face similar problems to varying degrees. It is estimated that all fossil fuels will be exhausted within 100 years and, while such estimates are usually pessimistic, it still points up our need to develop the vast energy sources existing in the sun and the sea and the earth. Even with respect to uranium and other fissionable materials, it is estimated that within the next century projected population increases and pyramiding power requirements may consume practically all of these materials that can be made economically useful.

We have reached, therefore, in this solar furnace being dedicated here today, another milestone in man's effort to advance himself and his progeny. While this furnace has been placed here for specific purposes in connection with military uses, it need not be confined to such uses and it is my hope that it will be utilized to the maximum extent practicable for the advancement of American science and industry as well as in the interests of national defense.

This furnace will stand as a monument not only to American science and technology, but to the Army and its Quartermaster Corps which has had the vision to proceed with this important project. The value of military developments to our people as a whole is well known. The acceleration of development in the motor industry, in the aircraft industry, and in the electronics industry, including radio, television, and radar, has been a product of military necessity in earlier conflicts. Many great medical advances, including the advanced surgery of today, are also a result of military necessity. Many of the developments we are seeking today will have similar impacts on our health, economy, and way of life in the future. Two developments for which we can pay tribute to the Quartermaster Corps today are the food irradiation plant which is underway on the Pacific coast and will provide new knowledge and new techniques to our food industry as well as to the military in the handling of produce from our great agricultural resources and this solar furnace here on the Atlantic seaboard which we have the privilege of seeing unveiled today.

I am pleased that this will also serve as a focal point for those of you in science and technology who have joined us here today and who will have further deliberations regarding the important subject of solar energy during the next 2 days. I hope that you will be encouraged by our efforts here to stimulate further activity in the field of solar energy.

So while this solar furnace marks a goal, its real measure may be in its service as a

stimulus for greater breakthroughs and achievements in widely different scientific fields.

In these perilous days with our survival at stake, we need a greater sense of urgency and boldness to overcome the complacency and fear so prevalent in many circles. Accustomed as we are to the comforts and blessings we enjoy, we fail to gauge the thinness of the veneer that bonds our own civilization to the struggling mass of mankind. The cracks in the highly polished surface are widening as the stirring demands and promises of demagogs generate explosive temperatures beneath the surface.

In all the fields of science and technology we need to make vast and rapid strides as time is not on our side. The release of dangerous pressures by enlightened management of human relations and substantial improvement toward a better distribution of food and other basic essentials for sustaining life more adequately among the suffering masses of mankind is certainly as vital as the production of destructive devices in this critical period. The harnessing of the God-given rays of the sun offer great hope that in the social sciences as well as in the physical sciences we may be looking to new horizons.

I believe that one of the greatest advances in this regard will occur shortly when we attain a real capability to convert the salt water of the sea to pure water usable to meet human requirements and, particularly, to develop the wasteland on much of the world's surface to a point where it can produce the food essential to sustain the world's rapidly expanding population. The recovery of the great mineral wealth available in the oceans will not only be of real value toward meeting our industrial requirements, but will also greatly offset the cost of converting and distributing the waters of the seven seas to a thirsting and hungry mankind in the arid land areas of the world.

I am honored to be here today and to have this small part to play in the dedication of the Army's first solar furnace. May it serve America well.

Thank you very much.

"Theodore Roosevelt"—An Address by Judge Filbert L. Rosenstein

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. CANFIELD. Mr. Speaker, the year 1958 marked the 100th anniversary of the birth of Theodore Roosevelt.

Among the personal friends and admirers of the great Teddy is former judge and Rotary governor, Filbert L. Rosenstein, of my home city of Paterson, N.J. Late last year Judge Rosenstein made seven addresses before Rotary clubs in connection with the Roosevelt centennial year, one of them before the New York Rotary Club, the members of which gave him a rising ovation of several minutes. After this address, the Reverend Norman Vincent Peale, who was present, called the address one of the most magnificent he had ever heard.

"I was thrilled both by its content and manner of presentation," he said. Mr. Peale went on to say that "Theodore Roosevelt was and is the great political ideal of my life."

Judge Rosenstein in his New York speech spoke as follows:

Theodore Roosevelt was born 100 years ago, on October 27, 1858. In that year, human slavery was still lawful in this land of liberty. But before he was 7 years old, it had been forever abolished. Thus, his earliest years beheld the striking of a mighty blow at the then free enterprise system—a system by which some men—white in color—were free to keep in slavery certain other men—black in color. Undoubtedly, this experience left a deep impress upon the future social and industrial reformer.

Of this career of reformer, however, his earliest years gave little forecast. For Theodore Roosevelt was born into the conservative family of a merchant-banker of New York City. Moreover, he was sickly as a child and timid, nervous and short-sighted as a boy. But, in his 14th year, he resolved to have a strong body, and so, he took up boxing, and later wrestling and horseback riding, with the result that, in manhood, he was able to live that strenuous life which he constantly preached "Better to wear out than to rust out."

The timid, nervous boy also grew into the fearless man. Thus, while living the life of a ranchman in the Dakotas, he personally brought in two horse thieves. At the the age of 39, he served as a volunteer in the Spanish-American War. In 1909, he went to Africa to hunt big game. In October of 1912, as he left his hotel in Milwaukee, during his campaign for President, he was shot pointblank. His friends entreated him to go to the hospital. He refused, because he was scheduled to make a speech. And make it he did. Only after he concluded, did he go to the hospital. In 1913, he went to Brazil to explore the jungle. There he discovered the River of Doubt and almost lost his life because of jungle fever. At the age of 58, he offered to raise and lead a division in France in World War I.

Roosevelt was not only a man of action, but also a man of intellect. While at Harvard, he was a member of the boxing team and of Phi Beta Kappa, national college scholastic society. He was both an omnivorous reader and an author of note. Shortly after graduation from college, he published his "Naval History of the War of 1812" and later, "The Winning of the West." And, yet this omnivorous reader and author was that same soldier who faced fire in the field in Cuba. And this soldier, in turn, won the Nobel Peace Prize in 1905 for having successfully mediated the Russo-Japanese War.

He was a born preacher. As he himself said, "My problems are moral problems, and my teaching has been plain morality." He wrapped up his whole political and social philosophy in a moral phrase—the square deal. He thundered against race suicide, corruption in government, waste of natural resources, and monopoly and greed in industry.

Yet, moralist though he was, he was always marked by a strong sense of reality. Thus, in 1897, he wrote of Russia, that, if she "chooses to develop purely on her own lines and to resist the growth of liberalism * * * she will sometime experience a red terror which will make the French revolution pale." Twenty years later came the Bolshevik Resolution to turn prophecy into reality.

However, with it all—moralist and realist that he was—he was always intensely human, a devoted family man, a man of many sides, gay and warm, full of the zest of life. Theodore Roosevelt was a composite of morality, reality, virility.

He was still a young man when he entered public life. He was only 23 years old when he was elected to the Assembly of his native New York. There, he soon attracted stateside attention by his independence and courage. Then, in 1884, in his third year in the assembly, tragedy struck him a double blow—his mother and his wife both died on the same day. Grief-stricken, he left politics and went out to the Dakotas, to live the life of a ranchman.

Two years later he returned to New York City to run for mayor, but he was defeated. In 1889, President Harrison appointed him to the United States Civil Service Commission. In 1895 he returned to New York City to serve as president of the police commission, and did much to improve a force suffering from corruption by saloonkeepers, gamblers, and prostitutes. Frequently, at midnight, the tireless police commissioner would prowl the streets of the great city to make certain that his patrolmen were on their beats.

In 1897, President McKinley named him Assistant Secretary of the Navy. With the outbreak of the Spanish-American War, he resigned in order to raise and lead the famous Regiment of Rough Riders.

Upon his return home, he was a national hero, and, in the fall of 1898, he was elected Governor of New York. In 1900, he was elected Vice President of the United States. In September of 1901, after only 6 months in that office, he became upon the assassination of William B. McKinley, President. He was only 42 years old, and he was at the top—the youngest President the United States has ever had.

The country, which had always respected him for his sincerity and independence in public life, soon came to respect him even more for his readiness to fight powerful forces opposed to the public good. And the country, which had always admired the pluck that had turned a sickly child into a vigorous man, now came to love him for his humanness. He showed himself equally at home with prizefighters and authors, cowboys and Phi Beta Kappa men, industrialists and labor leaders, military men, and statesmen. People were delighted with the President who led panting diplomats on long walks over the rocks and hills and through the fields around Washington. They were fascinated by a President who ordered Army officers on 50-mile horseback rides, because he thought they were out of condition, and then, when they grumbled, went on a 100-mile horseback ride himself.

And then, too, he was so colorful in his speech. When pleased, he was "dee-lighted." Any achievement was "bully." He created his own club, the Ananias Club, and elected to it those whom he meant thereby to call liars. He scorned alike, muckrakers, mollycoddles, and malefactors of great wealth.

When Roosevelt came to the Presidency in 1901, the country was facing, even as it is today, a time of great change and perplexity. However, the country was not long in learning that, in him, it had a leader who led.

At home, our natural resources were being dissipated at an alarming rate. Immediately he threw himself into the battle to stop exploitation of our mineral and timber resources and our waterpower. So hard and so successfully did he fight, that, when he left the White House, conservation of natural resources was a firmly fixed national policy.

An even greater domestic problem was the rise of great and powerful monopolies and the feeling of angry frustration on the part of labor. Roosevelt had entered public life as a conservative. But, soon after he finished his term as Civil Service Commissioner, he realized that mere improvement in political conditions by the removal of corruption from Government was not enough. For now he began to sense that all labor was crushable and in need of protection. Moreover,

business had become so powerful that laws were needed additionally against unfair competition, monopoly, and restraint of trade. And, noting that such regulation and control of corporations could not be done effectively by the States, because the very corporations that needed regulation all did business across State lines, he urged that the Federal Government must undertake the required regulation.

Almost immediately upon becoming President, Roosevelt embarked upon his crusade for social and industrial justice, and when he left the Presidency, he had completed a historic readjustment in the relation of government and industry. He instituted the first successful suit to break up a monopoly and went on to earn for himself the title "Trustbuster." In the fall of 1902, he entered a bitter, long-drawn-out coal strike, that was threatening the Nation with disaster, and forced a settlement. And this was at a time when the Federal Government had no recognized general authority to intervene in labor disputes.

During his 7½ years as President, he secured passage by Congress, often over great opposition, of many laws regulating industry. These included the law creating the Department of Commerce and Labor, with a Bureau within it to investigate the operation and conduct of corporations; the Hepburn rate bill, which gave the Interstate Commerce Commission power to fix the rates that railroads could charge; a Federal employer's liability law; a Federal meat inspection law; pure food laws and a District of Columbia child labor law.

By his acts and pronouncements as President and by his later preachments as ex-President, Theodore Roosevelt, because of his deep hold upon large segments of the population, largely prepared the way for the New Deal. Thus, in 1910, he said, "I stand for the square deal. But I mean not merely that I stand for fair play under the present rules of the game, but that I stand for having those rules changed so as to work for a more substantial equality of opportunity and reward." He advocated, in 1910, an income tax and an inheritance tax. He advocated price control in extreme cases of regulating corporations, such control to be similar to that of the Interstate Commerce Commission over railroad rates. In the Progessive Party platform of 1912, he advocated insurance against the hazards of old age—what we now call social security. For years, he favored collective bargaining for labor.

Theodore Roosevelt was not only the father of the Square Deal—he was also the grandfather of the New Deal.

On the international scene, the country was likewise facing change and perplexity. Long before most of his countrymen, Roosevelt realized clearly that the day of isolationism was gone forever. Accordingly, he emphatically preached preparedness. He more than doubled the U.S. Navy and sent the battle fleet around the world. No other fleet of like size had ever done it before. He thoroughly reorganized the Army and created the general staff. He settled the Alaska boundary dispute. He built the Panama Canal.

Theodore Roosevelt was only 60 years old, when, weakened by the fevers of Cuba and Brazil and the bullet in Milwaukee, worn by a lifetime of strenuous exertion, and weighed down by grief over the recent death of his youngest son, Quentin, in aerial combat in World War I, he died in the dark hours of the early morning of January 6, 1919.

And now, in this, the centennial year of his birth, we bring our tribute to the memory of this great and gallant American, even as we draw inspiration from his memory for our own times.

If we wish the strength to overcome the perils we face, let us follow his example of subordinating personal interest to service for the common welfare. The challenge he flung to his own generation is still valid in ours. Practical efficiency is common and lofty idealism not uncommon; it is the combination which is necessary and the combination is rare.

If we are distressed by the treatment of the Negro in some parts of our country today, let us recall his act in inviting Booker T. Washington to the White House. It was the first time a Negro had ever dined there other than as a menial. The South fulminated with rage. But the moral of Negro equality had been pointedly and eloquently preached to the Nation by the President of the United States.

If labor's right to collective bargaining is now firmly secured and, if industry is largely regulated by the national Government, as he desired, let us remember that he was also firmly opposed to carrying the reforms to the extreme of socialism. It is not the affair of the Government to run industry, he said, but only to see that it is run in the interest of all the people. Against his strong opposition to government by a plutocracy, he set up the counterweight of equally strong opposition to government by the mob.

If we seek guidance in the conduct of our foreign affairs, let us remember his admonition to "speak softly and carry a big stick". And never forget his passionate Americanism. In his day, he lashed out against hyphenates with their dual loyalties. Today it is not a matter of hyphenates in the literal sense that it was in his day. In certain American Communists and their sympathizers, we have people today, who are ready to advance the interests of Soviet Russia over those of America. We quarrel with no man over a difference of opinion. But we do demand of them, as we demand of every American citizen: One Nation, one flag, one language, one loyalty.

And lastly, let us follow his example of sublime courage. This is not the first time America has faced a crisis. Indeed, there have been times in the past, when our country was far weaker than she is today. And yet she triumphed, for she faced those other crises with courage, and courage is faith—faith in ourselves and faith in our destiny. And our destiny was marked with brilliance at the very birth of the Nation, for, when this Nation was brought forth, it was brought forth in a pattern that was to be a pattern of freedom for all nations, because it was a pattern wherein the rulers are selected for prescribed terms in free elections by majority vote of all the people.

Let us, then, take heart from the flaming words in which Theodore Roosevelt left to America a lasting testament of faith: "We know there are dangers ahead, as we know there are evils to fight and overcome, but, stout of heart, we see, across the dangers, the great future that lies beyond, and we rejoice, as a giant refreshed, as a strong man girt for the race. The greatest victories are yet to be won, the greatest deeds yet to be done. There are in store for our people and for the causes we uphold grander triumphs than have ever yet been recorded."

Send that message to the men in the Kremlin and bid them make the most of it.

Bombing Lawlessness Must Be Stopped

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. ANFUSO. Mr. Speaker, on Wednesday, January 7, the opening day of the 86th Congress, I introduced my first bill of the new session. It is a bill calling for the most severe penalties for anyone bombing or attempting to bomb a house of worship, a school, a community center, or any other public building. I consider the recent wave of bomb terrorism a most serious situation which we cannot afford to tolerate, and for this reason, I feel we should adopt the most stringent means to prevent and to stop such terrorism in the future.

In October of 1958, when this wave of bombings of churches, synagogues, and schools began, I announced that I would have a bill ready for introduction at the beginning of the 86th Congress which would provide severe punishment for such crimes. The bill I introduced, if enacted into law, would amend title 18 of the United States Code relating to crimes and criminal procedures by adding a new section to chapter 39 which would provide for the following:

Whoever uses, or attempts to use, an explosive which has been imported into the United States, or which has been introduced, delivered for introduction, or transported in commerce, to damage or destroy a church, synagogue, school, community center, or other public building without the consent of the owner thereof shall be punished by imprisonment of not less than 20 years or by death.

The United States is the showcase of the world. The means of communication are such today that what we do here, good or bad, is reflected all over the world. If a synagogue or a church is bombed in any State of the Union, the criticism is directed not against the particular State for its refusal to abide by the law of the land but against the United States as a whole.

Dictators and tyrants all over the world use the incident to justify their own misdeeds, while the Communists play it up as a breakdown in law enforcement in America, as hypocrisy and insincerity toward freedom of religion, and as a clear demonstration that we are not to be trusted with the moral leadership of the world.

Recognizing the fact that one of the major differences between communism and the free world is over the issue of religion, we cannot afford to weaken our cause as the chief advocate of freedom of worship by failing to take all necessary precautions to prevent all such incidents in our own country.

While most crimes of this nature can be prevented or discouraged by long prison sentences, the right of the courts to impose the death penalty whenever warranted will act as a strong deterrent when dealing with fanatics and otherwise distorted individuals who are perfectly sane in the eyes of the law.

I strongly advocated and supported legislation calling for the death penalty in kidnaping cases and those involving dope peddlers who, for all intents and purposes, were killing children addicts of the drugs. The passage of death penalty laws to deal with such cases greatly reduced the extent of these crimes.

I feel certain that the passage of a similar law applicable to persons who place bombs in a church, synagogue, school, or other public building, endan-

gering the lives of not one but of many people, will help put an end to this new form of lawlessness and direct attack on all free institutions.

Textile Industry

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter I received from the general president of the Textile Workers Union of America, together with a pamphlet relating to the need for Federal action to restore the industry to prosperity and stability:

TEXTILE WORKERS UNION OF AMERICA,
New York, N.Y., December 19, 1958.

Hon. THOMAS J. LANE,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE LANE: The facts of life in the textile industry underline the pressing need for Federal action to restore it to prosperity and stability. They also demonstrate that the industry, on its own, is unable to cope with its many, complex problems which cast a long shadow directly upon the lives of nearly 1 million textile workers and the hundreds of communities in which they live.

The Textile Workers Union of America maintains that when management cannot act effectively to save a basic industry, the Federal Government has an obligation to provide help in the interest of the general welfare.

During the recent special investigation of textile industry problems by a Senate Interstate and Foreign Commerce Subcommittee, our union proposed the creation of a Federal Textile Development Agency to expedite a program to rebuild and stabilize the textile industry.

The enclosed pamphlet spells out that proposal. I am taking the liberty of sending you a copy not only to acquaint you with its details, but also in the hope of enlisting your support in its behalf.

Sincerely yours,

WILLIAM POLLOCK,
General President.

TEXTILES: A DIAGNOSIS

Under our private-enterprise system, the problems of industry should be met through private initiative. This, of course, is the theory or ideal; but even our most prosperous industries depend heavily upon the Government for encouragement.

In the case of textiles, there has been none. Moreover, textile millowners have not demonstrated the ability, nor even a concerted willingness to cope with their complex problems.

If the textile industry operated in a vacuum, there might be some justification for labeling it "expendable" and letting it sink or swim without Government intervention. But the textile industry's ills cast a long shadow directly upon the lives of many hundreds of thousands of Americans.

Entire areas become stagnant when it is in distress and the impact is felt regionally in New England and the South. In short, the textile industry presents a problem to the Nation as a whole.

Thus, the Government cannot remain indifferent to its plight. It has a clear responsibility. In a case such as this, where management cannot act effetcively to save the textile industry, the Government must move to protect the general welfare.

The Government has a further obligation to do so because many of the basic problems which plague the textile industry stem from Government policy and action. This is not merely a case of indifference.

TARIFFS, TAXES AND RAW-COTTON PRICING

Government policy has had a depressing effect upon the textile industry in at least three areas: tariffs, taxes, and raw-cotton pricing.

In general, U.S. tariffs are aimed at promoting a liberal foreign-trade policy. The Textile Workers Union of America recognizes that need, but we see neither justice nor practical gain from a policy that singles out a basic industry as a sacrifice on the altar of foreign trade.

Even where safeguards appear in the law, they are so loosely administered that their effect is nullified. Our foreign-trade policy must take into account the difficulties faced by basic American industries, as well as the need to provide markets for foreign producers. It is not in the national interest to destroy the jobs of hundreds of thousands of textile workers to achieve such an end.

A more sensitive approach to tariff policy can help to revive and rebuild the textile industry.

As our tax laws now stand, they contain a variety of loopholes which serve as incentives for the liquidation or relocation of textile mills.

Abuses permitted under the capital-gains tax and under provisions for tax-loss carryovers permit speculators to reap much greater rewards from closing down plants than from continuing to operate them.

The exemption from taxation of interest on municipal bonds helps to provide bait for communities in luring textile mills to new locations.

Not only are workers the victims of such maneuvers, but taxpayers in general must assume the burden of making up this loss of revenue to the Treasury.

Closing up these loopholes can drive speculators out of the textile industry and stop such evasions of taxes.

Despite the objections of cotton farmers, the textile industry and our union, the Federal administration continues to support domestic raw-cotton prices at an artificial level. At the same time, it subsidizes the export of cotton at world price levels 6 cents to 8 cents a pound lower than the domestic price.

This policy has deprived domestic cotton plants of much of their market at home as well as abroad because they must compete with foreign producers who not only have the advantage of lower wage scales, but also of lower raw-cotton prices.

An end to this double standard would revive demand for domestic cotton products and help to rebuild the industry.

We are not suggesting that these steps, in themselves, would solve the textile industry's dilemma. While Government policy and indifference have contributed to the decline of the industry, many of its problems are of management's own making.

Demand for domestic textile goods has been sagging steadily. A smaller and smaller portion of the consumer dollar is going to textiles. Management has lost many markets to substitute products devised by rival industries. It has failed to meet these challenges.

It has not reacted to changes in household and industrial needs by developing new products and new uses for textiles. It relies largely upon other sources for primary research when it should be devoting an increasing portion of its capital and energy to this activity.

It has neglected new advertising and sales-promotion techniques. Even where it can otherwise hold its own with foreign competition, it often fails to initiate fashion-setting trends of its own. Domestic competition is largely a case of large textile combines waiting for smaller firms to fall by the wayside.

There is no sign of traditional American enterprise. No concerted steps have been taken to usher in a new era of growth and expansion. The trend is not to develop new techniques to meet these challenges; it appears to be largely a matter of simply riding out the storm, and that storm has yet to end.

This managerial failure has caused great suffering among the workers who rely upon the textile industry for their livelihood. To compound their dilemma, management continues to pursue a feudalistic labor policy.

It works constantly to deny its employees the right to self-organization. It resists collective bargaining, the cornerstone of labor relations in all stable and progressive industries. And, more than any other group, it employs the Taft-Hartley Act and right-to-work laws to implement this policy.

The end result is to keep wages and working conditions depressed.

Whether it realizes it or not, management is paying a dear price for this negative approach to labor relations. There is a steady drift of skilled workers from textile plants into more rewarding industries. And there is a genuine reluctance on the part of technicians, so essential to textiles, to cast their lot with an industry which is so backward in its relations with its employees.

Full acecptance of collective bargaining would provide labor-management cooperation in solving the industry's problems.

Teamwork to revive and rebuild textiles is essential, but a third ingredient is needed—the active encouragement and participation of Government in such a program.

The Textile Workers Union of America has devoted considerable thought and energy to the role Government can and should play in this direction. We long ago had proposed a Federal investigation of the textile industry's problems. This is now a reality. During the course of this study we have called upon the Government to set into motion a plan to redevelop the industry and stimulate its growth.

Our proposal calls for the establishment of a permanent Federal Textile Development Agency.

It should be an official body, with representation for industry, labor and the public.

Its members should be appointed by the President with congressional approval.

Its activities could be financed by a small levy upon the industry's products.

It could sponsor a continuing study of economic and technical developments in the industry.

It could make an annual survey of textile problems and recommend action by Congress, by the administration, or by private industry.

It could promote basic research with reference to technical and economic problems.

This could be angled at household and industrial needs, with emphasis upon consumer purchasing habits; and it could investigate the possibility of adapting textiles to such needs and habits.

It could establish a fabric library and design centers to spur the promotion of a variety of textile products.

Such facilities would stimulate textile consumption by focusing the attention of designers and decorators upon textiles in their constant search for innovations.

It could publish literature to promote textile consumption.

It could collect and distribute statistics on production, inventories, and prices so necessary to the efficient operation of the industry.

It could organize conferences to promote mutual understanding between manufacturers, suppliers, industrial users, workers, and consumers.

It could administer special legislation to help the industry and its workers.

For example, textile workers stranded by mill closings deserve protection similar to that which railway workers get under the Transportation Act of 1940. The Agency could distribute severance pay and direct retraining of these workers for new jobs.

The foregoing is but a partial index to the role such an agency can play. Its potentialities are much greater, and we intend to spell them out in detail as a formula develops to halt the contraction of the industry and usher in a new era of growth and expansion.

But beyond the establishment of such an agency, the crisis in the textile industry demands positive legislation and administrative action.

We have already set forth our proposals in the area of tariff, tax, and cotton-pricing legislation. But other measures are needed.

Surplus textiles should be distributed on a larger scale as part of our foreign-assistance program; by the same token, such goods should also be distributed to the needy at home.

Federal contracts should be allocated to distressed areas. The administration must stop blocking area redevelopment legislation.

THE MANPOWER SURPLUS CRISIS

There is a critical surplus of manpower not only in the textile industry, but in textile areas. This situation calls for a direct attack on unemployment and short time.

New production techniques are steadily eliminating jobs in the textile industry, leaving tens of thousands of workers stranded. What we actually are witnessing is a preview of what automation can do to the jobs of workers in all industries.

Technical progress is fine, but it is meaningless, and worse, if it creates unemployment and hardship. Increased man-hour productivity must be reflected in shorter hours as well as lower prices and higher wages.

THE SOLUTION: 35-HOUR WEEK

We believe an economic adjustment must be made now to deal with a situation that may grow entirely out of control, once the effects of automation are felt in all industries.

The textile industry offers an ideal starting point. The times call for serious consideration of the establishment of a 35-hour week at 40 hour's pay for textile workers.

TWUA ASKS YOUR SUPPORT

The textile industry is basic to our economy; it is essential to our national defense and to the necessities and comforts of all Americans.

We are convinced that the program we have outlined can restore this industry to full health. We do not regard it as the perfect solution. We offer it, rather, as a base upon which to develop the ultimate formula.

In that very same vein, we earnestly ask you to support this program. You can help immeasurably by enlisting the aid of your community leaders and of your State and Federal legislators in its behalf.

Given such support, the textile industry will once again take its place as a dynamic force in our Nation's economy.

Sam Rayburn Philosophizes on Election Aftermath in Congress

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. THORNBERRY. Mr. Speaker, here is an editorial which appeared on November 7, 1958, shortly after the general election, in the Austin Statesman, of Austin, Tex., Texas' second oldest daily newspaper, which points out so splendidly why our beloved Speaker is held in such high esteem everywhere.

Under unanimous consent I include the editorial in the Appendix of the RECORD. It is as follows:

SAM RAYBURN PHILOSOPHIZES ON ELECTION AFTERMATH IN CONGRESS

That very wise and experienced majordomo of legislation in the House, Speaker SAM RAYBURN, has reminded the country of the good old American political tradition that finds all campaigns, even sometimes the most bitter, ending in a show of good sportsmanship and fair play.

"Mr. SAM" expects no bad blood between the President and Congress as a result of the excesses of the recent campaign.

In some campaign speeches, RAYBURN sadly noted, the President "had gone pretty far in accusing us of being radicals and left-wingers." But he made it clear that that would not affect the harmonious pattern of relations between the White House and Capitol Hill, which have been established in the last 4 years of Democratic control of Congress. Now that control has been greatly broadened by the Nation's voters.

RAYBURN says that 85 percent of the President's program was just an extension of Democratic principles. He ticked some of these off as being foreign aid, reciprocal trade, and a strong defense, the three prime legislative aims of the President's program. Differences, where they occurred, were, in extent and method, not in principle.

Most Democrats accept the President's campaign stance, even when it referred to them as radicals, as a part of his obligation to his party. Some of the President's most partisan utterances rankle and may imperil, from some Democrats, the President's goals in the last 2 years of his term. Vice President NIXON will be a particular target in the next 2 years.

The individual winner in the congressional election was Speaker RAYBURN, whose district, with Bonham his home, reelected him to his eighth full term in Congress and insured his position as Speaker. This is an all-time record.

Since RAYBURN was elected by his colleagues to serve out the term of the late Speaker William B. Bankhead on September 16, 1940, he has been continuously the Speaker when his party was in control, the Democratic House leader when the Democrats were in the minority.

RAYBURN long ago passed the only other man in the Nation's history to serve more than four terms as speaker, Henry Clay, of Kentucky. Before RAYBURN, Clay held the record at six terms.

Texans, depite occasional differences over party issues, hold a deep and deserved affection for "Mr. SAM." He is one of its finest "public institutions."

Private American Capital Must Be Encouraged To Go Abroad

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks which I made before the National Foreign Trade Council on "U.S. Taxation of Foreign Source Income" on November 19, 1958:

In examining the subject of this discussion, I think we can accept the fact that it is the policy of the United States to promote the economic growth of the free nations of the world and to do all that is prudently possible to help the less developed nations to achieve that momentum of progress in agriculture and industry to make it possible for them to look forward to substantial economic growth. It would seem equally clear that it is the policy of our country to contribute to and assist our friends in the world to the largest extent possible by encouraging the unhamptered operation of our dynamic free enterprise system.

All agree that this can best be accomplished by providing incentives for private American capital to go abroad and take with it the vitality, the skill, and the imagination that has made our system the strongest economic system in the world.

Private investment of American funds abroad is preferable to Government spending for many reasons. Not the least of which is the fact that such investment assures the most economic use of limited U.S. resources. The plain truth is that the need for capital by the free nations of the world is far larger than the amounts which our taxpayers can reasonably provide. For this reason alone private American capital must be encouraged to go abroad and take upon itself the task of preserving in the world the free system which we earnestly believe deserves to be fostered and preserved.

The foreign aid program is day by day losing favor both at home and abroad. So it becomes even more essential if we are to meet the full thrust of the Soviet economic offensive to create a favorable climate for intelligent and active free enterprise abroad. The socially conscious businessman must, in a sense, supplant the bureaucrat.

The concern of the President of the United States for the free nations of the world in this regard was most recently expressed in his address to the Colombo Plan conference. I was pleased to note the great emphasis that he placed on the necessity for encouraging private United States investment abroad. Considerations such as those underlining the President's address before the Colombo Plan conference prompted the membership of the subcommittee on foreign trade policy of the Committee on Ways and Means to announce public hearings on the subject of United States private foreign investment beginning on December 1, 1958, in Washington, D.C.

We felt the need to provide a forum in which the issues involved could be fully discussed by competent witnesses and information accumulated with which to guide possible legislative implementation of the public policies which I have alluded to. In this connection the impact of United States taxation of foreign source income is of the greatest importance, and will be of great interest to the subcommittee. We of the subcommittee have come to know as a result of our studies and travels that foreign trade policy cannot be divorced from other aspects of United States foreign economic policy. We have also been impressed with the fact that uppermost in the minds of those considering private foreign investment is the impact of U.S. tax policy on foreign source income.

Among other things the subcommittee expects that the December hearings will develop information, views and recommendations with respect to the following types of questions:

What are the facts about United States private foreign investment?

What are the reasons American capital goes abroad?

What forms does such investment take?

What are the effects of such investment on the host country?

What contribution does such investment make to the development of foreign trade with the United States and other countries?

What are the effects of such development on the economic development of underdeveloped countries?

What are the obstacles that stand in the way of new and expanding investment, both here and abroad?

What are the factors that condition the climate for investment abroad?

What is the proper concern of the U.S. Government in this field?

What types of governmental programs are appropriate in the light of our national interests?

What modifications in the tax systems of the United States as well as foreign countries are indicated?

What has been the effect of existing governmental programs in this field?

These questions are by no means the only ones pertinent to our hearings. They are merely illustrative of items of specific interest in the foreign investment field. You will agree, I am sure, that this inquiry is needed and that the findings will be helpful.

As a member of the committee of the Congress which is charged with the primary responsibility of formulating the tax laws of the United States, I am particularly aware of the need for a searching review of our revenue laws as they apply to foreign-source income. A most charitable appraisal of the Internal Revenue Code as it applies to such income would find it to be capricious in result, formalistic in impact, and difficult to administer, understand, and apply. I know no one who is familiar with taxation who does not believe that a thoroughgoing legislative overhaul is long overdue and badly needed not only as a technical matter but as a matter of policy as well. How this can best be undertaken will be one of the chief concerns of my Subcommittee on Foreign Trade Policy.

In considering ways and means to encourage private American investment abroad we must, of course, be mindful of the fiscal condition of the United States. We will begin our hearings in December at a time when the United States is facing a potential $12 billion deficit for the fiscal year 1959. If statements of some administration officials can be taken at face value, we can expect that there will be proposals during the next Congress for increasing taxes upon some segments of the domestic economy. Further, in light of recent administration pronouncements, we cannot expect the existing level of Federal expenditures to decline. Reforms here can be made, however, in my opinion, without loss of revenue. Over the long pull, there should be substantial gains in revenue from these sources. Perhaps more important than the facts of Federal fiscal life in appraising the chances for effective implementation of a policy of encouraging private foreign investment is the incomprehensible bias found in many quarters against foreign-source income. I do not understand this bias. It arises from a lack of public education, from a lack of understanding. It is not unusual to pick up a newspaper or magazine and find an article on "Foreign Tax Havens." The gist of such stories often lumps a reputable American business with modern-day Al Capones and implies, if not fraud, at least evasion of U.S. taxes.

It is in this context which we must view the possibility of providing needed incentives for the encouragement of foreign private investment. It portends an uphill fight and behooves us, if we have the interest of the United States at heart, to at least begin by considering recommendations which, though they may not go as far as we believe and know to be necessary, have a chance of adoption. There is strong evidence to support the principle of territoriality in taxing foreign source income (which would tax foreign-source income only in the country in which is situated the principal establishment to which such income is properly allocable) or at least a rate differential such as the 14-point differential considered in connection with the 1954 code. Nevertheless, it may be necessary in the light of existing conditions for organizations and individuals who are interested in spreading the doctrine of free enterprise throughout the world to consider all approaches for achieving this end in addition to those which have received prominent attention in the past. In this regard, among other things, I would think it wise for those who have skill and competence in the field of the taxation of foreign-source income to direct their attention to the proposal of deferral of U.S. tax on foreign-source income until it is severed for domestic use. This proposal has already received some attention.

You are, of course, aware of the possibilities for the deferral of U.S. taxes on foreign-source income which now exist under the Internal Revenue Code. But the benefits of such deferrals through the utilization of foreign subsidiaries or foreign-base companies are not available except at great price in many instances. The historical development of the statute and the rather fragmentary gloss which has been placed upon it by administrative and judicial interpretation has effectively denied the benefits to many companies. Consider, if you will, two companies manufacturing similar products. Company A at great risk embarked upon the unknown of foreign investment in the 1920's. The legal advice then available to it was, by present standards, poor because of lack of experience and interpretations. The attitude of the U.S. Treasury Department was then certainly far different from now. There were few regulations or rulings to guide it. Accepting the best advice available, company A organized its foreign undertaking in the form of a subsidiary incorporated in, say, Brazil. The vision of company A has been rewarded by success. The risks have proved worthwhile. The market was there. The demand for American ingenuity and products was there and company A has known for some time that similar markets existed in Argentina, Peru, South Africa, and elsewhere. One would think it a simple matter for company A to transfer a part of its hard-earned foreign-source earnings to any one of the countries named and establish a similar successful venture for the ultimate benefit of the United States and the countries involved. We know it is not.

Now take the case of company B which manufactures a product similar to that of company A. For years company B watched the experience of company A and, convinced of the wisdom of such foreign investment, decided to move into the foreign field in 1953. It established a base company and by utilizing this third country arrangement is developing the markets in, say, Argentina, Peru, and South Africa which should be available to company A as well. Its accumulated earnings and profits in any one of these countries may be transferred without the imposition of U.S. tax to the subsidiary where they are most needed. Additional benefits accrue to company B such as the averaging of foreign tax rates for the purpose of achieving the maximum benefit of the U.S. foreign tax credit. And it may achieve many tax savings on branch or other agency operations because its base company is not subject to U.S. tax jurisdiction.

Surely if we were proceeding de novo no one would suport such an inherently unequitable and discriminatory result as exists in the case of company A. Yet we today condone it by inaction and thus prepetuate precisely this situation. History is responsible for the genesis of the laws which make this result possible, of course, but they seem to be perpetuated by an overdeveloped concern for the bare possibility of tax avoidance in some cases.

I have reference, of course, to the operation of what is today known as section 367 of the Internal Revenue Code and which began in less difficult times as section 112(K) of the Revenue Act of 1932 in a campaign against foreign personal holding companies which were then being utilized for the purpose of avoiding the U.S. capital gains tax. Section 367, as you know, applies only to exchanges which involve an inherent gain and provides that, in determining the extent to which gain shall be recognized, a foreign corporation shall not be considered as a corporation for purposes of most of the important sections of subchapter C unless, before any exchange is undertaken, it has been established to the satisfaction of the secretary or his delegate that the exchange is not in pursuance of a plan having as one of its principal purposes the avoidance of Federal income tax. Of course, with tax rates what they are today it is not difficult for the Treasury Department and the Internal Revenue Service to find that a purpose of a contemplated exchange is the avoidance of Federal income taxes. Deferral is so deemed. Of course, referring again to the example, company A has no desire to avoid the payment of U.S. tax. It simply wishes to compete with equality under U.S. law with company B for foreign investment opportunities. This it cannot do because section 367 has fixed not only company A but perhaps a majority of the primary companies in the field of foreign investment in the cement of organization inflexibility. Business decisions cannot prevail and are frustrated, efficiency is denied. We are thus confronted with the absurdity of a nation that prides itself in having developed the greatest industrial and commercial complex in the world denying to its entrepreneurs the fruits of their imagination and initiative because of a reluctance to rid the Internal Revenue Code of deadwood.

Even if we were to assume that rare thing which is the Commissioner's approval of an exchange involving a foreign corporation, company A is by no means out of the woods. Subchapter C of the Internal Revenue Code was framed with domestic business problems in mind. It does not take into account the vagaries of foreign law and the policy of many foreign countries requiring a high percentage of ownership therein. Thus, even assuming that company A can overcome what is almost the irrefutable presumption of section 367 it may, nevertheless, find itself unable to invest where investment is needed because of a statute which should have as one of its principal objectives neutrality of impact between similarly situated taxpayers.

It may be that we were unaware of the existence of many of the problems confronting the businessman who wishes to invest abroad when first we framed these provisions of the Internal Revenue Code. This is no longer the case. We have been informed of the existence of the problems and the manner in which the Internal Revenue Code is distorting business decisions and preventing our American system from being carried abroad by our businessmen. We must do something about this situation.

In reflecting upon these problems to which I have so briefly alluded, I have devoted some attention to the possibilities inherent in deferral of U.S. tax on foreign source income. I have wondered why it is necessary for us to force our businessmen to seek out countries such as Liechtenstein, Monaco, and Panama to achieve a business result. I have

come to the conclusion that no reason for forcing them to do so exists. It is within our power to provide the means of organizing base companies for the conduct of foreign business operations in the United States itself. We have the example of Canada's 4-K companies and Britain's overseas trade corporations. As a matter of fact we have the example of practically every other trading country in the world before us to follow.

Enactment of a law permitting the creation of a unique class of domestic corporations organized for the conduct of business abroad would achieve a great deal and do much to provide incentives to foreign investment. Such companies would be in a position to utilize the earning derived from their foreign operations for the expansion of their activities in the free countries of the world without the immediate payment of U.S. tax and would permit maximum efficiency and economy in conducting foreign business operations. Such corporations would pay U.S. tax on their foreign source income only when such income was severed from the foreign operation by a distribution to shareholders. Such corporations, and I shall refer to them hereafter as U.S. base companies for want of a better term, could and should be permitted to carry on all operations now conducted by foreign base companies. I wish to emphasize that exporting activities should in my opinion be included within permissible activities.

Provision for U.S. base companies would not in my opinion require any change in existing law providing for Western Hemisphere trade corporations. Additionally, I see no reason for not permitting any company desiring to do so to continue to operate abroad through a branch operation.

In discussing the possibilities of deferral and of establishing a special class of U.S. base companies for the purposes of achieving deferral I wish to make it clear that no member of the Subcommittee on Foreign Trade Policy or the Committee on Ways and Means has a fixed mind on the subject of how best to provide the incentive which we all believe necessary to encourage foreign investment. I have merely attempted to explore one or two proposals that have been put forward that seem to me, at this stage, to have considerable merit. If tax policy affords an appropriate device for providing incentive, and I believe that it does, we have an open mind as to how best the tax system can be utilized to provide an incentive. I welcome your advice and suggestions. I have mentioned the possibilities of deferral and the potential benefits of permitting the establishment of U.S. base companies only because I believe that deferral has been neglected in much of the thinking of people concerned with this field.

It is fair to state that the present fiscal condition of the United States should make deferral attractive to those in the executive department who are responsible for securing the revenues with which to meet the Government's bills. Deferral involves no loss of U.S. revenue since by hypothesis every dollar of foreign earnings would be subject to tax when repatriated to the United States and severed from the base operation by distribution to stockholders.

Another reason why deferral and the establishment of a special class of U.S. base companies should be considered by the Treasury Department lies in the possibilities for better administration which such companies would present to those charged with enforcing the tax laws of the United States. For example, it might be provided that such companies file an annual return setting forth the results of the foreign operation for the year. At present a foreign corporation is under no obligation to inform the United States Treasury of its operation with the result that many problems are encountered in computing the proper amount of accumulated earnings and profits from the foreign operation and the amount of foreign taxes paid and creditable. These costly administrative problems could be avoided.

From the investor's point of view the benefits to be expected from such companies are so obvious that I do not need to catalog them. Suffice it to say that not the least of them arises from the fact that the stability of United States law would be available and to a degree at least it would no longer be necessary to attempt to divine the law of a foreign country in selecting a base.

If the laws of Liberia, Luxembourg, Tangiers, and Liechtenstein pose problems of understanding for the businessman and even for legal specialists, this is understandable. After all, we expect problems when we deal with other languages and peoples of diverse customs and ways of doing business. But the paucity of information available to the American businessman contemplating foreign investment from our own Government about our law is not understandable. The regulations promulgated for the purpose of implementing those provisions of the Internal Revenue Code which provide for the taxation of foreign source income are less than full. This, along with the fact that the Internal Revenue Service has issued few public rulings in the field makes it difficult for even the tax specialist to advise in this area. Here, as perhaps nowhere else, certainty is a prime requisite. It is not fair to expect a businessman to feel his way into a situation which may rob him not only of the fruits of his foreign endeavor but of his domestic profits as well. I hope, therefore, that some attention will be devoted during the course of our hearings by both administration and public witnesses to the possibility of making more information available to the public as to the policies which are guiding the Treasury Department and the Internal Revenue Service in administering these statutes.

It has not been my purpose this afternoon to exhaust or even to mention all the tax problems confronting those engaged in foreign business activities nor even to touch on the many ways in which the tax system of the United States affects foreign operations. My purpose has been to impress you with the seriousness of my belief that something must be done, whether through the tax system or otherwise, to encourage American capital to go abroad and to make the slogan "trade not aid," meaningful. It has also been my intention to convey to you an awareness of the fact that we in the Congress of the United States know that you have problems and our sincere desire to do something about them. I would like to impress upon you the necessity of being your own advocate; to let you know that while I appreciate all that has been done by this and other organizations, which exist for the purpose of carrying our way of life abroad, that nevertheless a great deal more has to be done by you, both at home and abroad, to create an understanding of the contributions of American business not only to the United States but to the free world; and that herein lies the world's best answer to Communist imperialism.

Thank you.

America's Answer to the Soviet Bloc's Economic Warfare

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following remarks which I made before the International Management Division Briefing Session on "Preparing the Country for Soviet Trade Strategy in World Markets; Terms and Procedures for East-West Trade" at the Hotel Savoy-Hilton, New York City, November 5, 1958:

AMERICA'S ANSWER TO THE SOVIET BLOC'S ECONOMIC WARFARE

At the close of the 2d session of the 85th Congress, Congressman Timothy Sheehan and I introduced identical bills to create a U.S. Trading Corporation in order to cope with the Soviet Union's declaration of war upon the United States in the peaceful field of trade. The formal declaration of war was made by Nikita Khrushchev on October 19, 1957.

We would be foolish, however, to look at this declaration of war in the field of peaceful trade as confined to the field of private enterprise trading. Indeed, in a totalitarian state there is no firm line drawn between economics and politics. It is perfectly true that economic laws cannot be repealed by political action, but it is certainly true that economic mistakes can be socialized, that is absorbed by the full society rather than born by the specific segment of the economy where the mistake has been made. Likewise deliberate economic losses may be accepted in one segment of the economy and born by the full economy in order to achieve certain defined economic or political goals of the totalitarian society. Indeed, short run economic losses may be financed by the totalitarian state in an economic sector in order to destroy competition and then have the losses recouped in the same sector by raising the prices once the competition has been destroyed. This was a familiar bit of economic strategy the United States experienced in its private enterprise sector toward the end of the 19th century and brought about the passage of the Sherman antitrust law.

I believe that a calm appraisal of the private sector of our economy will reveal that strong as some of our industries are they are not strong enough to combat the concentration of economic and political power of Soviet Russia if it is directed to their area of economic endeavor.

I also believe that it is politically naive to think that American industries when confronted with this sort of threat will fail to make their situation known to those in the political government in Washington, D.C., in order to gain assistance. Indeed, there are sufficient examples both in the past and in the present where this kind of assistance has been both sought and obtained. In the past this operation at times has extended to the ultimate—a declaration of war.

I believe it is important that assistance be granted to American industries when they are being attacked by the full weight of the Soviet totalitarian state under circumstances which we would define as unfair competition, or which I should prefer to describe as uneconomic competition. That is competition which is uneconomic to the extent that it produces economic losses which are absorbed outside the particular economic segment engaged in the competition.

However, I believe that this assistance should not be granted in camera by our Federal Government based upon no fixed set of standards or rules of procedures as is presently the case. It is entirely too easy for an industry confronted with strong competition to classify this competition as "unfair" when in actuality it is fair economic competition and all that is required is for the industry involved to look into its own internal affairs to bring about needed reforms for efficiency and increased productivity. On the other hand, it is entirely possible that an industry may not know it is being attacked or from

whence it is being attacked in international trade war while the United States Government through its State Department and other intelligence sources not only can know but does know of the attack. Finally the manner in which a segment of our economy which has been placed under unfair economic attack is to be helped should be such that the competing industries within that segment can remain competitive with each other. Lack of proper standards and procedures can easily result in one competitor being favored over another within our own economy.

It is for these basic reasons that I have proposed a U.S. Trading Corporation be set up which would only come into the economic fray when certain well-defined principles of fair economic competition have been violated or are about to be violated by Soviet Russia and it would come with the fray only to keep the competition equal. Once this objective has been achieved it would retire and let competition prevail. In other words, if Soviet Russia plans to concentrate her totalitarian powers in the economic and political fields on selected areas or segments of international trade we should be ready to match such a concentration with sufficient concentration of our own economic and political powers to equalize the situation. I am satisfield if Soviet Russia knows we are set up to do this we probably will only have to demonstrate our ability to do it once or twice. That will be the end of this kind of trade war I am certain Russia contemplates.

After having introduced the U.S. Trading Act bill I have become quite disturbed about the favorable reception it has received from many prominent groups in the United States. The favorable reception has come with an accentuation on the concentration of political and economic power ensuing to the Federal Government and a minimizing, indeed an ignoring, of the basic checks I believe must accompany such a creation of power. If this power is not accompanied with strict rules setting up the circumstances under which it will apply and strict procedures for the establishment of the fact that these tests have been met, then it may indeed become a Frankenstein's monster.

I am particularly disturbed about the favorable reception this proposal has received from groups which in my opinion have viewed the Russian threat hysterically rather than realistically. I think Russia is a threat, or I would not have proposed this legislation, but I certainly do not believe it is the threat, for example, that is posed in the recent book "The Ruble War" by six top CBS news correspondents.

There are always those who will resort to "bogeyman" tactics to get through their own preconceived notions of what needs to be done to reform our society or merely to push our society ahead. For example, our regular military establishment, Army, Navy, and Air Force have found the Russian threat a very handy weapon to get appropriations out of the U.S. Congress over a period of many years. Having studied the military appropriation bills with considerable care over a period of years and the statements before congressional committees by their spokesmen as well as their public statements, I state without equivocation that there has been a deliberate and gross overplaying of Russia's military might which has damaged our own defense posture and assisted Russia in the game of bluff she has been playing with her satellites and the smaller neutral countries.

Certain groups of our scientists recently have resorted to the same tactics in order to push ahead their particular ideas of where we need more rapid scientific advancement. Just recently the most dangerous venture of all in this game of "bogeyman" has been started by some of our leaders in education. Education is the most dangerous field in which to play fast and loose with the truth. We have so much to lose. Essentially we have a system of education much superior to Russia. We can badly damage it through hysterical action instead of action stemming from healthy self-criticism. After all we have achieved something no large society has ever achieved before, a fairly close approximation of mass education. The fact that having concentrated on this goal so extensively we have somewhat neglected the important goal of quality education, should be no great cause for alarm. We seem now to be aware of the neglect and the concentration we are now making on quality should bring us into proper balance. After all the hard job was quantity and indeed quality depends upon sifting great quantities. I see no problem in having both quantity and quality education and I am satisfied we will be the first society to achieve or approximate this dual goal if we keep our heads and persevere with enlightened self-criticism.

Certainly Russia has advanced in military power, in economic power, in scientific achievement and in the field of education and it is important that we do not minimize these achievements. Indeed, it is important that we carefully appraise them. But we can do great damage, as I have suggested, by overestimating them and using this overestimation as a weapon to whip our people and the Congress into hastily conceived plans and actions. And I suggest the Congress under the lash of bogeyman techniques has badly overestimated the achievements of Russia in all of these areas.

Furthermore, it is important to see what else is happening to Russia and to the form of its society as it moves forward in economic, scientific, military, and economic achievement. Can anyone believe that these achievements can be made without changing radically the rigid and self-defeating straitjacket of political and economic communism? The straitjacket of the totalitarian state where there is no separation of economic and political powers? Can anyone believe that these achievements can be made without a separation of the powers embodied in the field of religion from those powers embodied in the field of politics and economics, no matter how hard the totalitarian state may try to hide the fact that its subjects have, as all human beings must have, a religion, a set of beliefs, a faith? As the Russian people advance in the fields of economics and education, indeed they also must advance in politics and religion and accordingly become less of a threat to a nation such as ours which is dedicated to peace through justice.

However, it is not my desire to dwell further on the subject of whether we presently are overestimating or underestimating Russia's achievements in economics, education, science, and military power. My plea is for honest appraisal of Russia's achievements. The U.S. Trading Corporation can be a bane to our society if dishonest appraisals are made of Russia's prowess, particularly her economic prowess.

Three years ago I was so disturbed about the loose talk concerning Russia's economic status and the dearth of objective information on the subject, I requested our staff of the Joint Economic Committee to have an objective appraisal made. This was done with the help of the scholars in the Legislative Reference Service of the Library of Congress and was published by the Economic Committee in 1955. This document was checked with people in and out of other sections of our Government for accuracy. Read realistically it is no cause for hysteria or the extreme statements that are constantly being made about Soviet Russia's economic development. Anymore, I might state than is the book "Soviet Professional Manpower," by Nicholas DeWitt of the Russian Research Center, Harvard University, which was published in 1955, a cause for hysteria or the extreme statements that have been made about Soviet Russia's advancement in the field of education.

I would like to revert back to the trade area. During the recent hearings by the Ways and Means Committee on the subject of the extension of the reciprocal trade agreements I asked the witnesses representing our various departments of the executive branch of Government if they did not have some suggestions for new tools they might need in the event that Soviet Russia's declaration of war in the peaceful field of trade was serious. From the State Department down through the Department of Commerce the witnesses all testified that they did not need any more powers.

I think the few cases we have had proved them to be wrong. I cited the case of Iceland, a country with population of only 160,000 people and an annual income of only $130 million based almost entirely upon the fishing industry. Under the most-favored nation clause in the reciprocal trade laws any attempt we make to treat with Iceland specially in regard to fish creates the same treatment for all other nations dealing in that fish. We have only a few weapons aside from trade treaties to assist Iceland. One is through direct aid by the U.S. Government, the other is by loans through the International Bank. These are all inadequate to keep Russia from making an uneconomic deal with Iceland to buy all her fish, absorb the economic loss in her totalitarian political economic society, in exchange for the political and military advantage of tying this strategically located island to its orbit.

Here is how the U.S. Trading Corporation could come into play. The American importers of Icelandic fish cannot meet the high uneconomic price Russia will pay to Iceland for its fish. The U.S. Trading Corporation, however, could go to them and let them bid for their customary purchases of fish and meet Russia's uneconomic price and then permit them to market the fish at their tradtional margin of profit based upon what a fair competitive price for the fish would be and make up the difference between the actual cost and the fair economic cost. As I stated, I do not believe it would be necessary to meet Russia in this area very often once Russia gets the idea her tactics can be countered. Our major difficulty will be to be certain that certain countries do not play us off against a fictitious Russian play.

A second illustration is the Sudan a few years ago straddled with an unexpectedly large cotton crop. Russia was unsuccessful in her attempts to move in with uneconomic offers for this crop, but the United States was certainly limited in its ability to meet this thrust by a lack of trade weapons at her command. The U.S. Trade Corporation could have easily met the threat.

A third illustration was the threat Russia made to undersell the aluminum market of Europe. Our aluminum companies are certainly strong companies but I doubt if they could win out in an economic war with the Russian state aluminum industry if Russia really decided to make the economic sacrifice to grab this market. In this instance the U.S. Trade Corporation could meet the uneconomic selling price of Russia by making up the differential between a fair price our aluminum companies could offer their customers and the undercut price Russia was offering.

From this latter illustration I believe the dangers of abuse by our domestic companies which I referred to can be visualized. However, if we carefully set up the standards which must be met before the U.S. Trading Corporation can act and the procedures under which these standards are found to be met, then I believe this difficulty can be minimized.

I cannot leave the subject of international trade without saying a few words for my proposal for a system of flexible tariffs designed to measure economic differentials as opposed to rigid tariffs designed for protection. If we had adhered to a system of flexible tariff differentials in the past we would be in a much easier position to administer the type of U.S. Trading Corporation I am speaking about, because we would have established considerable knowledge of economic costs of production. We would have a great store of information on the techniques of political governments subsidizing and assisting the private sectors of their economies. We would have a great store of information on the techniques of cartels and state trading devices. As it is we have little information and what we have is not assembled or sorted out.

As a matter of fact, I proposed to this administration, in order to realistically grapple with the problems involved in international trade, that they sponsor legislation for the establishment of a Department of Foreign Trade in the Cabinet where all the factors which bear on the problems involved in foreign trade could be assembled instead of having them scattered through the State Department, the Departments of Commerce, Interior, Labor, and Treasury, and only coordinated by the ineffective inter-Cabinet Trade Policy Committee. I believe that world peace is inseparably bound up in the problems of international trade and that to solve these problems we must treat them with greatly increased study and attention. A Department of Foreign Trade is the way both to do it and also to dramatize its importance to our people and the peoples abroad.

The tariff is the most unrestrictive form of trade barrier among the many kinds of trade barriers that exist in international trade. Licenses, quotas, monetary exchanges, health restrictions, subsidies, etc., are the most illiberal method of restricting the flow of trade. This rests on a very simple reason; these forms of trade restrictions depend upon bureaucratic administration. The economic unit which can present and argue its case before the Bureau is the one which will win the race. This places a premium not upon economic achievement but rather upon political achievement. Economic achievement enters only to the extent that it can be proven by words and figures which the bureaucrat will believe and understand. Even then it depends upon the bureaucrat's ability to conform his administrative action to economic laws. The tariff, on the other hand, is set for all economic units to see and abide by. Once the tariff is set, the economic units are on their own to compete with each other as best they can.

It is the setting of the rate of each tariff that becomes the crucial thing, not the tariff as a device. The tariff rate should be set to measure only economic cost differentials resulting from political actions. I suggest that these cost differentials can fit a general pattern. They can be limited to those costs which result from the imposition of certain business standards by the Government for what are deemed to be good social reasons. For example, the minimum wage law imposes certain standards upon American producers because we have felt that this is good for the entire society. So we impose health regulations, fair-trade practices, antitrust laws, and a variety of other laws designed to promote the general welfare. Many of these restrictions impose costs which must be borne by our domestic producers. If we believe these social laws are important we must be ready to reflect to some degree the added costs they create in a differential tariff imposed upon foreign producers who do not have these costs. It need not be the exact cost by any manner of means, because if our social theory is correct, that the society benefits from these standards, then our producers can do a more efficient job of production than in a society which lacks these standards. The differential need only meet the margin necessary to permit fair competition with those foreign producers who have no standards or who have lower standards. The tariff rate should be flexible so it automatically goes down as the foreign producers approximates the domestic standards.

Through this process our trade would indeed become a great weapon for raising the wages and living standard of the people abroad who want to sell this produce in our great domestic market. As their living standards rise they will find that their own domestic market will increase, as we have proved already in our own economy. This will give their producers greater markets and give our producers greater markets, too.

Only by raising our minimum wages and living standards did we develop our own great domestic market. I am satisfied that in this formula of flexible differential tariffs we will find the long-range solution to the bulk of our trade problems. At the same time, we will find world peace quite close and attainable.

Remarks of Homer Thornberry Before the Democratic Caucus of the House of Representatives of the United States, 86th Congress, in Nominating Hon. Sam Rayburn as the Candidate of the Democratic Caucus for Speaker, January 6, 1959

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. VINSON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I incorporate therein the remarks of the Honorable HOMER THORNBERRY before the Democratic caucus of the House of Representatives, 86th Congress, in nominating Hon. SAM RAYBURN as the candidate of the Democratic caucus for Speaker, January 6, 1959.

Mr. Chairman and my colleagues, I am afforded at this moment the greatest honor which has ever been bestowed on me, and that is the privilege of placing before you the name of the man who will be our candidate for Speaker and who on tomorrow will be elected our Speaker by one of the largest majorities ever given a candidate for Speaker in the history of the House.

There is little I can say here about him that is not already apparent to you, my Democratic colleagues.

Having served longer as Speaker of the House of Representatives of the United States Congress than any other man and having a longer record of continuous service in the House than any other man in history, he is recognized as the superb parliamentarian and is known as the foremost legislative leader throughout the free world.

No one can equal his devotion to the Democratic Party. He has through his leadership of our party insisted that we here conduct ourselves in an orderly, responsible manner and that we provide a legislative program not only responsive to the needs of the people but also one which will deserve and receive the confidence of all of the people of this Nation. As devoted as he has been to his party, he has in every crisis in this Nation's history risen above the political and partisan differences of the moment to fight with courage for the security of our country and the enduring freedom of men, women, and children throughout the world.

He has walked with kings and notables in high places and never lost the common touch.

He has talked to crowds and never lost the simple dignity which has earned for him the affection, admiration and devotion of all of us who have the privilege of being associated with him.

I have the happy privilege and the high honor on this his birthday to place before you as our candidate for Speaker of the United States House of Representatives the name of that noble American with a thoroughbred heart, the Honorable SAM RAYBURN of Texas.

I'm From Iowa

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. SCHWENGEL. Mr. Speaker, when the State University of Iowa convincingly won the Rose Bowl game on January 1 this year it capped a long string of triumphs which has made the Iowa Hawkeyes the outstanding team in the country. Naturally all of us are proud and we search for words to express this pride so that others will know how we feel about this great State. An editorial from the Burlington Hawkeye Gazette of January 2 speaks eloquently for all Iowans and under leave to extend my remarks, I include it in the RECORD. The editorial follows:

I'M FROM IOWA

Who breathes in this prairie land, with her lush fields, her golden heritage, her lovely rivers and lakes, her wonderful people—who here but doesn't feel a glow in saying, "I'm from Iowa."

It was a great day for Iowa.

Sure, the university won the Rose Bowl. It was a delightful romp, foreordained from the moment Forest Evashevski's disciplined troops took the field at Pasadena. The boys were superb. What Iowa has known all along—that the Hawkeyes have the fleet legs of gazelles, the precision of a ballet troupe, the spirit of lancers—was stunningly revealed for the biggest national audience of them all.

There was more.

In the morning, despite the carping of the smalltime critics, despite the fear of spending a dollar that might be saved, despite the inferiority complex that sometimes makes us less than bold, Iowa paraded Colorado Boulevard in Pasadena in a happy show of a great State.

There was the band, the finest. The Scottish Highlanders, unique and colorful. The Big Ten float, in a tribute to the University of Iowa. And finally, the Iowa show, lovely, warm, an emblem of a growing community.

There are those who say a problem with our State is that we have made too great a thing of such coliseum affairs as the Rose Bowl.

We can sympathize with their viewpoint, but at the same time we can bask in the glory.

For what Iowa needs is love, a love of home that brings an outpouring of both af-

fection and selflessness. The path toward any love is recognition of worth, and in at least one field, Iowa found that yesterday.

And what about the others? If we can be so good on the playing fields, may we not also be good as a strong segment of the national economy, as a producer of scholars, financiers, poets, musicians, salesmen, butchers, farmers, writers?

The answer is obvious. We can, and we are.

But the problem is whether we recognize our own strength. I suspect we don't. I suspect we are so intimidated by the cautious, by the miserly, by the Neanderthals, that we fear to move ahead into the future that is ours if we but have the courage to grasp it.

Well, we saw yesterday that greatness is within our grasp.

The reference is not alone to a football game, which after all the sentimentality, remains just a football game.

No, the lesson of this New Year's Day has been that Iowa can lead, if she only will, and that within our borders is the imagination and the strength to provide that leadership.

Defense Will Not Win

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I would like to call to the attention of the House an article by Henry Hazlitt which appeared in the December 15 issue of Newsweek entitled "Defense Will Not Win." In his article, Mr. Hazlitt stresses the need for the United States to take the offensive in the cold war, especially with regard to the barrage of brazen propaganda pouring out of Russia today which is going throughout American press unanswered.

DEFENSE WILL NOT WIN
(By Henry Hazlitt)

During the Second World War there appeared a book called: "Defense Will Not Win the War." Its chief importance lay in the title, which stated a self-evident truth. No war is ever won by defense alone.

This applies also to a so-called cold war. We are in the present cold war whether we want to be or not; it is being persistently and relentlessly waged against us. And if we lose it, through appeasement, retreat, or by trying to pretend that it is not going on, we shall surely lose the total war if it comes or be forced to surrender before the mere threat of such a war.

The present Berlin crisis is new, and yet depressingly familiar. We accepted an arrangement in 1945 that enables Russia to put the squeeze on Berlin at any time it sees an advantage in doing so. It did so in 1948. Why were we taken by surprise by the new threats? Why did we act as if we were improvising an answer to a totally unexpected move? Why, above all, was our answer (until recently) merely defensive, and in at least one statement by Secretary Dulles, even ambiguous?

If we had warned Russia immediately that we meant to stand by our obligation to defend and maintain the status of Berlin against any breach by threat or force; if we had replied at the very beginning that we would be willing to discuss a peaceful change in the status quo in Germany but proposed that this should consist in a free and unintimidated vote of the East Germans as to whether they wanted to reunite with West Germany, much needless anxiety might have been saved.

ANSWER EVERY LIE

We might even have used the occasion to suggest that Russia keep her treaty agreements to allow free and secret elections in Poland, Rumania, Hungary, and Bulgaria for governments of their own choice. If Russia were shown that her diplomatic and propaganda offensives might boomerang, she might be less quick to try them.

This need to take the offensive in the cold war, for our own ultimate peace and safety, was emphasized by George F. Kennan in a lecture last year. Speaking of the way in which we often dismiss Soviet lies as just propaganda, he said:

"I'm always startled at the phrase 'just propaganda.' Why just? Is not propaganda a serious and important force in world affairs? * * * A wise Western policy will insist 'no single falsehood or distortion from the Soviet side should ever go unanswered.' This will be tiresome. We do not like repetition. But we cannot afford to dispense with it. Truth does not win over error on its merits. It, too, has to be assiduously propagated.

"I have asserted that there is nothing that could be said to Soviet leaders in the space of a few days that would change their strangely corrupted mentality. But there are things which could be said every day over the course of years which would exert a useful discipline upon them, would make it harder for them to ignore the distinction between the real and the unreal, and would place limitations on their use of falsehood as a weapon of political policy."

ABSURD OUTPUT CLAIMS

To apply this to the particular purview of this column, in recent months a flood of nonsense has been pouring almost unanswered through the American press and through scores of speeches in which increasingly absurd claims of Communist Russia and Communist China regarding not merely military, but over-all civilian production, are solemnly accepted as fact. The effect of this nonsense is to condition people to assume that the terror, force, and regimentation of communism can increase production and even living standards faster than the freedom in choice of jobs and the free consumer choice of capitalism. Many officials of our own Government seem to accept these claims at face value. Their real duty is to check the evidence, or lack of evidence, for every such claim, whenever made, and constantly present the enormous counterevidence. It is important to determine the truth about Russian military production. It is no less important not to be taken in by the brazen propaganda about production miracles and soaring living standards in Russia or Communist China.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a copy of my newsletter "Keenotes" issued on January 5, 1959, as follows:

KEENOTES
(By Representative ELIZABETH KEE)

I want to preface this issue of Keenotes by extending my heartfelt thanks for the hundreds of Christmas greetings and messages which I received from friends throughout the district. It will be impossible to thank each of you personally but I want you to know that I deeply appreciate your taking the time, in the midst of a busy holiday schedule, to think of me.

Your thoughts at this time of the year are comforting and inspiring. Your confidence in my ability to represent the Fifth Congressional District in Congress makes me feel proud of the trust imposed in me and grateful for the opportunity to serve you. I trust that my actions as your Representative will never lead you to the belief that I have betrayed your confidence and trust.

As our country once again enters into a new year, it is an appropriate time for me to renew my pledge to serve all the people of the Fifth District to the very best of my ability. Our country faces many grave problems. These are indeed perilous times. It is my wish for the new year that I can contribute, in some smaller manner, to the easing of the tensions which grip the world and a lightening of the burdens which our people are called upon bear.

It is a time, too, for us as a Nation to restate our determination to carry on in a manner befitting the most powerful and wealthy Nation in history. We cannot turn our back on the rest of the world, even if we should choose such a course. History has projected the United States onto the center of the world stage. We have to keep in mind, during 1959 and the years ahead, that what we do—or fail to do—can change the course of history, that it can determine whether freedom prevails in the world.

This role of world leadership is not an easy one. Nor is it free of danger. We are facing a mighty adversary, armed with every terrible weapon known to man. We face a vigilant enemy, one who is content to work patiently over the years to have its way. Should we falter, communism could well sweep the entire world.

It is terribly expensive to develop and build new weapons and to see that nations outside the Iron Curtain are kept out of the Communist camp. No doubt we have made costly mistakes and have tried programs that were wrong.

But I firmly believe that the rest of the world is beginning to realize that our motives are unselfish. We do not want world domination or control. We desire only to create world conditions under which people can live in peace and freedom. Right now, we are the only free Nation with the substance to provide the leadership so desperately needed. I hope that in the year ahead our great country and all its people will keep this in mind.

Our people have to pay high taxes. These are burdensome. The cost of Government is high. But it would be dishonest for me to assure you, at the beginning of this new year, that the cost of Government or taxes can be substantially reduced in the year ahead. After all, it still takes about 50 cents out of every dollar paid in taxes to support the kind of defense establishments we must have.

But to say this is not to turn one's back on sincere and genuine efforts to tighten up on administration of Government, to stretch each dollar as far as it will go and to effect savings wherever possible. This is one pledge I do make for the new year—to help wherever I can to bring about sound fiscal policies.

It is not necessary, in the interest of economy, to end or stifle sound Government pro-

grams which promote the country's growth and, in the long run, help all of our citizens. For example, our area desperately needs a sound program for aiding areas with chronic unemployment. We need a sound research program to bolster the great coal industry and more research for finding new markets for farm products.

These and other things can be done within the context of a sound fiscal policy. And I pledge myself to work for them.

Nineteen hundred and fifty-six promises to be a fateful year. I hope it will be a happy and prosperous one for all of you.

We Send Hubert Scudder Our Thanks and Best Wishes

EXTENSION OF REMARKS
OF
HON. CLEMENT W. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. CLEMENT W. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Rafael (Calif.) Independent Journal of January 6, 1959:

WE SEND HUBERT SCUDDER OUR THANKS, BEST WISHES

Today, 47 years of public service are coming to a close.

Since 1912, when he was first appointed superintendent of the Sebastopol water system and the town's fire chief, Hubert B. Scudder has devoted most of his life to public service. Now he retires, and a new man takes his place in Congress representing this First California Congressional District.

There is much on which Congressman Scudder can look back with pride and a feeling of accomplishment. He served his town as councilman and mayor. He served his district in the State Assembly. He served the State as its real estate commissioner. He served the Nation as a Member of Congress for 10 years.

Hubert Scudder never ran for a public office he didn't win and he never was defeated while seeking reelection.

But just winning elections and holding political jobs are not in themselves the major ingredient of a successful career. Something must be accomplished as well.

There is hardly an area in the counties of his district where tangible evidences of Scudder's public service are not in evidence.

You can see it in the big Coyote Dam near Ukiah, which will help end the damaging Russian River floods and provide water for Mendocino and Sonoma Counties, possibly even Marin. It is visible in the breakwater up north at Crescent City and in dredged Humboldt Harbor at Eureka, where more and more ocean steamers are stopping and contributing to the economic welfare of the Redwood Empire.

Here in Marin it is visible in the huge bay model the Army engineers are building at Marinship; in the dredged San Rafael Canal; in flood control studies by the engineers in many localities; in schools, cities, and districts which have won Federal lands with his aid, and many other things.

He has championed an accelerated Federal highways program, with the basic premise that gas taxes should go to highways, not elsewhere. He helped establish the principle that schools in areas where Federal activity has substantially increased enrollments should receive Federal funds. He has been stanch in support of private home building programs, veterans' benefits, adequate social security, to name just a few.

Hubert Scudder has done a fine job for the people of Marin and this district. He has reason to be both proud and satisfied.

We have much to thank him for as we wish him and his wife, long life and every happiness as they retire to their Sebastopol hilltop.

A Tribute to Col. Joseph Harvey Long

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. HECHLER. Mr. Speaker, one of the foremost citizens of Huntington, W. Va., Col. Joseph Harvey Long, died on December 28, 1958. Colonel Long was 95 years of age at the time of his passing. He was the dean of West Virginia newspapermen. As chairman of the board of directors of the Huntington Publishing Co., publisher of the Advertiser, and chairman of the board of radio and television stations WSAZ and WSAZ–TV, he was a towering figure in the communications field.

It is interesting to reflect that the year of Colonel Long's birth—1863—was also the year of West Virginia's birth. Of West Virginia's growth and development, part of it he saw and much of it he was. With his bare hands he forged new standards in journalism.

Many words will be written about what Colonel Long accomplished in the many fields to which he turned his able hand. But the quality I admire most is the quality of the pioneer. Only he had no road maps but his own vision.

With no tools but his own determination, he overcame obstacles which would have discouraged a lesser man. His life is a monument to the free enterprise system.

Mr. Speaker, under unanimous consent I include excerpts from an editorial in the Advertiser dated December 29, 1958:

JOSEPH HARVEY LONG

As a trained pressman with a native talent for mechanics, whenever need arose, he would take off his coat, roll up his sleeves, and join mechanical employees in repairs and adjustments. Throughout his career he was always also interested in acquiring the latest equipment for improving the quality of the paper.

When the Associated Press was organized as an agency for the collection and dissemination of worldwide news, he became one of the earliest members. His Advertiser was one of the first papers in this State to install an engraving plant for the reproduction of news pictures. It was also one of the early subscribers to AP Wirephoto service, receiving news pictures by wire and radio from every part of the world.

Although maintaining constant supervision over the operation of his business, Colonel Long also found time through his busy life for many outside activities.

He was one of the organizers of the company that built the Huntington-Chesapeake Bridge across the Ohio River. He was an organizer of the Ohio Valley Bus Co. and for several years served as its president. After erecting the modern building at Fifth Avenue and Tenth Street and moving the Advertiser into it in 1924, he joined with Samuel G. Biggs in leasing land on which the Keith-Albee Theater was erected.

In politics he stood high in county and State councils of the Democratic Party and attended many national conventions for closer observation of the party's leaders.

Under the administration of the late Gov. Howard M. Gore, he served as a member of a special commisison for studying and improving West Virginia's tax structure. Many of the important tax laws on the statute books today are traceable to the work and recommendations of the Gore Commission of which Colonel Long was an earnest and influential member.

Because of his devotion to good government he was honored by appointment as a colonel on the staff of the late Gov. William E. Glasscock.

When the young publisher arrived here, Huntington was a small river and railroad city feeling its growing pains and needing energetic leadership toward cleaner politics, moral advancement, civic improvement, and business and ihdustrial expansion.

Undeterred by organized opposition and sometimes threats of physical violence, he threw the weight of the Advertiser and his own personal influence into the endeavor of substantial citizens not only to enlarge but to improve the growing community. His interest and efforts in that direction continued until the last.

As chairman of the good roads committee of the chamber of commerce for many years, he was instrumental in building and improving most of the principal highways leading into the city.

He later served five terms as president of the chamber. During that time he directed efforts to acquire right-of-way and obtain Government funds for Huntington's extensive flood-wall system. The wall, erected after the disastrous flood of 1937, has already saved the city many times its cost of $8,500,000.

While serving as president of the chamber, he also took the lead in bringing about approval of a previously defeated bond issue for modernization of the physical equipment of the county school system, including the erection of East High School.

Colonel Long's interest in the community and its people also led to substantial help to its other institutions. He served as a member of the board of Morris Memorial Hospital at Milton. He had contributed substantially to Huntington galleries and to churches besides his own, the First Congregational, whose members sought his assistance.

His gifts to individuals, although numerous, were always strictly private. After the 1937 flood he asked his employees whose homes had been invaded by the water to give him an estimate of their losses. As each estimate was presented, he wrote a personal check for the amount.

Whenever sickness or misfortune overtook the family of an employee, Colonel Long always found out about it and presented a gift in proportion to the need.

His door was never closed even to the most lowly resident of the community seeking help.

As a consequence of his interest and activities, he numbered his friends among many classes. None were closer nor warmer than those of every department with whom he was associated in the publishing business.

From editors and publishers of metropolitan papers to the man who daily filled the thermos pitcher in his office with water he

was held in high esteem. Those wrestling with the same problems in the publishing business respected his judgment and not infrequently came to him for advice and instruction in operating procedures.

People who knew him best will recall that he was one of those rare men who counted it a compliment to be asked for a favor.

So while others are paying tribute to an eminently successful publisher, an indefatigable leader in community, State, and national betterment as well as the dean of West Virginia journalism and a grand old man, employees of the Huntington Publishing Co. will feel the loss of a loyal friend and counselor.

The will realize, however, that Colonel Long will never leave Huntington.

The monuments he help build during a long and active life will remain unmarred by time. Younger men whose careers and characters he helped shape will continue his work of community betterment.

His vigorous spirit and sound judgment will continue to help direct through others the policies of the business institution he joined in founding.

Voting Trends Versus Voting Myths

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. MASON. Mr. Speaker, the average Congressman seeking reelection thinks he must be liberal in his attitude toward legislation desired by farm groups, labor groups, veteran groups, retired groups, and so forth, if he is to capture the majority of the voters in his district. That is a political myth that has been built up by both the New Dealers and the Modern Republicans, a myth that has no basis in fact nor past election returns.

I personally believe that the great majority of American voters—Democrats and Republicans alike—are still fairly conservative, still believe in private initiative as the basis of our American life, American economy, and American prosperity. When the issue is made clear-cut, most American voters will vote for the conservative candidate in preference to the so-called liberal candidate—liberal with other people's tax money.

In support of this belief I include as a part of these remarks an editorial carried in the Richmond Times-Dispatch on December 7, 1958, a Democratic newspaper of Richmond, Va.

A STRONGLY BACKED ARGUMENT THAT MODERN GOP CAN'T WIN

Notions that only modern (rather than old-line) Republicans can win elections, that organized labor was the chief factor in the Democratic sweep last month, and that the farm vote goes to the party which promises farmers the most from the Federal Treasury, are all challenged strongly by Rogers C. Dunn, of McLean, Va., whose Dunn Survey we have cited before.

Mr. Dunn gives chapter and verse to buttress his beliefs. Not only so, but his contentions are hard to refute.

An idea of his prescience can be gained from the fact that he said as long ago as last March: "We expect Vermont to commence to register a disintegration of Republican strength"—which is exactly what happened. At the same time he declared that Americans "opposed to socialism * * * should be encouraged by a general Republican setback" (in November 1958), "in spite of the inclusion of perhaps a few grievous casualties."

Over against the glib assumption that, in order to win, the Republicans have got to try to outdo the Democrats in handouts to voting blocs, and in favoritism to organized labor, Mr. Dunn argues that since 1948, when the Republicans went New-Fair Deal, "only a handful of Republicans who openly embraced the 'liberal' party line have been chosen by the voters to represent them in Congress or in other high office."

President Eisenhower ran in 1952 as a conservative Republican, and didn't go in for large Federal deficits until after his inauguration in 1957. His influence has declined ever since.

Nelson Rockefeller's astonishing victory last month in New York State is cited by many as evidence that that only a "modern" Republican has any hope of winning in the big populous areas. But the Rockefeller sweep may not prove anything much, except that he was personally magnetic and popular, and that Averell Harriman wasn't. Besides, the Democrats were split into bitterly warring factions.

In an analysis of the labor vote, captioned "The Great American Hoax," the Dunn survey points out that, entirely contrary to the popular impression, Democratic votes in labor's strongholds have not increased as rapidly as Democratic votes in the country as a whole. Here is a paragraph from his study:

"Comparison of recent off-year elections for Congressmen, 1950, 1954, 1958, reveals that the number of Democratic votes in the entire country increased 29 percent between 1950–58: and in the great labor leader citadels of Detroit, Pittsburgh, and New York increased 13 percent."

Going back to 1936, Mr. Dunn finds that between that year and 1956:

"The number of Democratic votes cast for Congressmen in the entire country increased 21 percent: in the giant industrial and labor leader citadels of Detroit, Pittsburgh, and New York City, the number of Democratic votes for Congressmen increased 12 percent."

The foregoing is true, he points out, although labor union membership grew from 4.7 million in 1936 to about 16 million in 1956, the unions were far less active politically in 1936, and the population of the three cities in question, especially of Detroit, has grown.

The Dunn survey also shows that votes by Senators and Congressmen for the Taft-Hartley Act did not handicap these lawmakers in their bids for reelection.

As for the farm vote, the survey has analyzed the balloting in 96 of Iowa's 98 counties. Its conclusion follows:

"For 20 years the vote of Iowa farmers for President and Congressmen has moved away, in growing numbers, from the administration providing Government farm subsidies and controls 1936 through 1956.'"

This is documented with actual figures. The survey says that "Republicans who bid 'high' for the farm vote fared no better than Republicans whose bid was 'low.'"

Despite such demonstrations, the Republican National Committee has been stressing modern Republicanism for years, on the apparent theory that this is the only basis on which elections can be won.

The committee might well consider whether it hasn't been proceeding in exactly the wrong direction. A political theory shown in the past to be sound is that when the voters of the United States want liberal government, they vote Democratic. Hence if the Republicans become mere carbon copies of the Democrats, they aren't likely to go anywhere much.

They'd better stay conservative, and thus give the people a real choice. Once it is made clear to the electorate that we'll be heading straight for inflation, continued deficit financing and socialism under the Democrats, there may be a nationwide revolt against such policies. The best way for the GOP to capitalize on such a revolt is to stand for fiscal sanity and private enterprise.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include copy of my newsletter "Keenotes," issued today, as follows:

KEENOTES

(By Representative ELIZABETH KEE)

The opening of a new Congress is always an inspiring occasion. On January 7, 1959, I was privileged for the fourth time to be on hand for the time-honored ceremonies which date back to the founding of our beloved country. Legislative veterans, men who have served as many as 15 or 20 terms, tell me that regardless of the number of times they have participated in these ceremonies, they are always thrilled and humbled.

The oath of office, administered every 2 years, is always a reminder of the great honor it is to serve in the House of Representatives. Nothing can make one more humble than to realize that, as a Member of the House, he must speak and act for thousands of his fellow citizens. It is a responsibility that simply cannot be taken lightly.

When the 86th Congress convened at 12 noon on January 7, the country embarked upon what promised to be one of the most eventful periods in history. You will recall that in January of 1958, when lawmakers returned to Washington for the 2d session of the 85th Congress, our country was facing the threat posed by the Russian conquest of space. Greeting the new Congress this year were further Russian achievements, notably the lifting of a tremendous missile out of the range of the earth's gravitational pull and placing it in orbit around the sun.

This fact places squarely before Congress one of the most pressing problems it must face. How are we doing in the race with Russia for conquest of space? Here we are dealing with a highly complex and technical question. None of us are experts, but all of us can, I am convinced, detect a sense of uneasiness on the part of the people and a feeling that perhaps we are not doing as well as we should.

This year both the House and the Senate have permanent committees on outer space. We are in a much better position to deal with this problem than we were last year. One of the first orders of business will be for the space committees to take a look at what we have done—which is considerable, incidentally—and try to spur the executive department on to greater effort and achievement.

Also facing the 86th Congress is a tremendous national debt and the outlook for a further deficit during the fiscal year ending on June 30. The business recession brought about the deficit. Tax revenues from both business and individuals took a sharp dive.

Yet the Government had to step into the breech in certain areas—and this cost money. I am convinced that without extension of unemployment insurance benefits and other positive antirecession measures voted by Congress, the recession would have deepened. We are making good economic recovery. No doubt tax revenues will greatly increase during the year.

There will be a battle over the budget. Democrats have been classified as spenders. But I hazard the guess that the coming months will see an exhibition of fiscal responsibility by the Democrats that has been unequaled in recent years. Our record on this score during the 85th Congress was outstanding. Remember, we increased defense appropriations but reduced the overall budget by about $600 million.

Many people are worried about our defenses. They feel we are permitting the Russians to narrow the gap and threaten the superiority which we still retain on an overall basis. I am sure Congress will insist that we not skimp on defense. After all, money saved at the expense of national security is not true economy.

The Oppressed People

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a splendid, in fact, a living sermon, "The Oppressed People," given by Most Reverend Patrick A. O'Boyle, D.D., Archbishop of Washington, at St. Matthew's Cathedral, Washington, D.C., on Sunday, December 28, 1958, a sermon, with its clear and correct analysis of communism and its purposes, which should be read as widely as possible.

The sermon follows:

"Be on the watch, stand fast in the faith, be the man, be full of courage. And let everything you do, be done in the spirit of charity." I Corinthians 16: 13, 14.

In the midst of this joyful Christmas season, the Catholic Bishops of the United States request us to pray for and not to forget the persecuted peoples of the world. I quote from the bishops' statement:

"The persecution of the church of God continues with undiminished savagery in the lands of atheistic materialism. Our Catholic brethren are denied the freedom to profess and to practice their religion. In some countries even the right to exist has been taken from them and they are being hounded to death in a grim, silent war of extinction.

"Many of them, only God knows how many, have already died for their sacred convictions. Many more are imprisoned and subjected to the most revolting tortures in order to force them to abjure their faith.

"In sober truth, this is the worst persecution in the 2,000 years of Christianity. * * * The enemy would cover this horror with a mantle of silence. But no Catholic may forget the long-drawn-out passion of these fellow followers of Christ. Nor may we, as we raise our voices against all other forms of injustice, allow these our suffering brethren to be consigned to oblivion."

This message speaks for itself. We are of the family of the church. Our brothers and sisters, children of the same Almighty Father, suffer today as few in recorded history have suffered. The early persecutions of the Roman emperors were indeed cruel. Yet their victims were numbered in the tens of thousands. The victims of Communist tyranny are numbered in the hundreds of millions. The Romans persecuted Christianity as a strange religion, but in a distorted and imperfect way they acknowledged the authority of a Supreme Lord. But the persecutors of today acknowledge but one allegiance: the Communist Party and the organs under its control.

The despots of old would act in a passion of fury, but then they would often forget and become preoccupied elsewhere. But the diabolical persecution of today is total, unceasing, and systematic. Our early martyrs suffered physical torture, but the refined tortures of today aim at breaking man's spirit and poisoning his soul. There are terror and threats today, but even worse is the all-pervading poison of propaganda and lies. The Christian today behind the Iron Curtain is condemned to live in an unreal world, a world of evil fantasy, without mercy, without truth, without justice.

In the Soviet Union two entire generations have lived in darkness. Since the beginning of World War II, the military power of the Red armies has trapped almost a billion people. You remember what happened in Latvia, Estonia, and Lithuania? You remember what happened to Czechoslovakia, to Hungary, to Rumania, to Bulgaria, to Yugoslavia, and to Poland? You recall that half of Germany was crucified. And the hundreds of millions of China, ripening for the harvest sown by Christian missionaries, were plunged into a barbarism so savage that even European Communists quail at its excesses.

In each instance, the pattern was similar. First, there was military conquest and the ruthless extinction of all who openly opposed their loss of freedom. Next there was prison and even death for those who might be suspected of possibly leading an opposition. Then there was the leaden blanket of Marxist conformity: propaganda in the radio, in the press, in books and plays, and in the schools. Here was an unrelenting effort to form generations of robots. Communist scientists openly and admittedly tried to fashion human beings to act like the dogs in Pavlov's experiments, trained to respond to controlled stimuli of their masters.

But their special hatred was reserved for any church, and especially for the Catholic church, that dared to be independent of the all-embracing state. The pattern of persecution has varied from time to time. There were times when temporary toleration could be purchased at the price of total submission to state control. But, with the possible exception of Poland—and even here to a limited degree—no Communist state has tolerated a church that insisted that the law of God and not the decrees of man must come first. And the first victims of such persecution were the bishops and priests. "I will smite the shepherd, and the sheep of the flock will be scattered." (Matthew 26: 31.)

In the past 2 years, we have seen examples of cruelty that are almost beyond belief. First, there was the treacherous, bloody, and murderous crushing of the Hungarian revolt. This was so barbarous that even hardened Russian soldiers had to be withdrawn and replaced because they refused to mow down women and children. More recently, we have witnessed the atrocity of the commune system in China. Here entire families are separated and forced into communal barracks. Children are taken from their mothers, husbands from their wives. The old are torn from their family ties and forced to live their declining years, if indeed they are allowed to live, as cogs in a gigantic machine for production. Everyone is compelled to do physical work: Women as well as men, and even schoolchildren before and after school hours. Here is slavery in its most literal sense, and upon a scale unparalleled in history.

The victims of communism suffer almost beyond the power of human endurance. Yet we may add to their sufferings by our own conduct. We do this in two ways. First, we can betray them by forgetting their agony. Sympathy and understanding can make bearable the cruelest pains. And, in the wisdom of God, He has given us the power to help through our prayers, our penances, and sufferings those martyred souls whose names we may never know. But if we fail them, they have the added sorrow of knowing that they are forgotten, alone in the face of monstrous tyranny. And the bitterness of loneliness is as gall and vinegar.

Secondly, we can betray them by weakening in our devotion to truth, to liberty, and to the rights of man. Nearly 200 years ago, a group of courageous Americans issued a Declaration that electrified the world. They said: "We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed." They concluded this historic document with these words: "And for the support of this Declaration, with a firm reliance upon the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

Jefferson said that "The God who gave us life, gave us liberty at the same time." Patrick Henry asked: "Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery?" Daniel Webster told us: "God grants liberty only to those who love it, and are always ready to guard and defend it." Another American, William Allen White, stated well our historic position: "Wherever a free man is in chains, we are threatened also. Whoever is fighting for liberty is defending America." Contrast, if you will, these noble sentiments that express the soul of our Nation with the cynical remark of Lenin: "It is true that liberty is precious—so precious that it must be rationed."

What great American statesmen expressed in ringing words, other Americans expressed in immortal deeds. At Valley Forge, Chateau Thierry, and Iwo Jima there was heroism that symbolized beyond the power of words our devotion to freedom. This is the America we have learned and loved. But questioning voices arise today to ask if there is another America, one sunk in indifference, apathy, and the pursuit of special interests? Two weeks ago a respected American, who has given much to his country, posed this question. Bernard Baruch asked why so many people have lost the capacity for indignation. He noted that "There are too many special interest groups in America today and not enough groups interested in America." He asks: "Have we grown so apathetic that we will not rouse ourselves before some terrible tragedy overwhelms us? In time of peril, apathy is the unforgivable sin, the irredeemable error."

At the same time, a distinguished Washington clergyman, Chaplain of the United States Senate, gave an example of this apathy. Dr. Frederick Brown Harris referred to those who believe that we must yield before the blackmail of Red China. He quoted a delegate to a religious convention who said: "The Chinese will soon number a thousand million. We had better make peace with them." And Dr. Harris' reply was: "Shame. When did the Christian church ever quail before mere bulk?"

Contrast, if you will, this desire for peace at any price with the plea of our holy father at his most recent consistory:

"Would that all upright men were able to hear the cries which pierce our ears. They pour forth from the lips of persons who, oppressed but not broken by most bitter trials, seek to manifest their love and fidelity for the Roman pontiff. Not for the sake of their bodies, but for the sake of their souls, do they request prayers and supplications, and by their plaintive sighs they bear witness that, no matter what happens, they will truly, sincerely, and tenaciously preserve unblemished to their dying breath their fealty to the vicar of Christ."

The Pope testifies to the courage of those who bear the cross of persecution. Is this courage to be greeted by indifference and apathy on our part? I do not wish to enter into a discussion that could be termed political. I realize that leaders of government may at times seem to be faced with a choice between evils. But surely, when the desire to stand for principles, to stand fast against tyranny and to proclaim the value of freedom for all men, they should be supported and not be undercut by the timorous and faint-hearted so-called liberals.

In this regard, our Secretary of State only last month stated moral principles that all of us can and should follow. Mr. Dulles said in Cleveland:

"We oppose international communism for its creed and practices are irreconcilable with the principles of our faith. Our faith is that each individual has his origin and destiny in God and thus has a spiritual nature and personal dignity. Therefore we must oppose the treatment of the individual as merely an animated bit of matter to be used to promote the organization of the world in accordance with materialistic principles.

"Our faith is that the basic guides of human action derive from the love of fellow man, the self-control and self-restraint imposed by the moral law. Therefore we must oppose the extension throughout the world of an iron rule that would enslave the minds and bodies of men and seek to break their spirits.

"There are some who seem to feel that, because international communism is a powerful and stubborn force, we should give way before it. Nothing could be more dangerous than to operate on the theory that, if hostile and evil forces do not readily change, it is always we who must change to accommodate them.

"Communism is stubborn for the wrong; let us be steadfast for the right. A capacity to change is indispensable. Equally indispensable is the capacity to hold fast to what is good."

These are courageous words. They express high principles that should ever be our guides when we deal with the Communist world. In expressing our unyielding opposition to communism and to its evil principles, we are not being merely negative. Much less are we indifferent to the need for firm and enduring peace in the world.

The peace we seek must be real, and it must be based upon justice. We seek not the peace of the tomb, which we can readily obtain by passivity before the threat of world communism. Nor do we seek the peace of appeasement and betrayal. Our peace is the peace of Christ. It means the law of love in place of the law of force. If we work for, and insist upon such a peace, then the world can again experience the fruits of right living under the moral law.

In such a peace, the home and the family will be safe from war and destruction. The energies of science will be channeled to bring economic abundance, physical and mental health, and a high level of culture for all peoples. Peoples then will kneel, not in submission to the conqueror, but in thanks to the Almighty giver of all good gifts. Our only wars will be wars against poverty, disease, and ignorance.

Surely the prospect of such a peace is worth our prayers and our struggles. Indeed, we may trust that, if the Communist world once realizes what true peace can bring, it too may turn from the insane path that could lead to war and world destruction. If such a hope is to be real, then we must convince the Communists that there is but one choice: we offer them true peace, or unrelenting opposition. Apathy, indifference, and lack of moral principles will only spur the aggressor. Blackmail begets blackmail and compromise begets compromise. To have real peace, we must be resolute in our principles, courageous in their application. Let us all pray to God that we may live up to the text announced at the beginning of this sermon: "Be on the watch, stand fast in the faith, be the man, be full of courage. And let everything you do, be done in the spirit of charity." (1 Cor. 16, 13, 14)

In conclusion, may I address in your name these words to those suffering peoples:

"Dearly beloved brothers and sisters, it is our hearts' desire that you believe and know that we of the free Catholic world are daily praying for your deliverance from savage slavery, and that once again you may know the blessings of liberty and peace. We pledge to you our continued, constant prayers and efforts to save you—a pledge of devotion as changeless as our changeless faith. Far greater and more precious even than our professed prayers and strivings to help you, more precious still, we say, than all our earthly efforts, is the glorious truth that Mary, Queen of Martyrs, is your constant companion in suffering and grief, your devoted intercessor with Christ, her Saviour Son, who died to redeem all men, black and white, yellow and brown, and with God our Father, looks into the soul of man."

The Plight of American Agriculture

EXTENSION OF REMARKS
OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. ROGERS of Texas. Mr. Speaker, my voice has been heard in this Chamber on many occasions concerning the plight of American agriculture. It has long been my contention that the problem has extended, and will further extend itself, into sociological as well as economical facets of our society. Many approaches have been made to the problem, none of them with any marked degree of success. I have recently heard from my good friend and constituent, Mr. John H. Harnly, a farmer near Miami in Roberts County, Tex., with several suggestions relative to the situation. I request unanimous consent to insert herein Mr. Harnly's communication that all Members may have the benefit of his excellent viewpoint, as follows:

MIAMI, TEX., *December 18, 1958.*

Congressman WALTER ROGERS,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: I have been giving considerable thought to the position of us farmers in the present day economy and what I see has no future to it. I take pencil and paper and set down my costs of operation on one side, which comes out an average cost per acre of $12, then on the other side I set down my average expected income based on average yields per acre and present prices, and I find myself losing money without any compensation for my time. I find the average income per acre to be $17 of which one-third goes to pay rent. This is today's picture and tomorrow's looks even darker, as they are already posting 5 percent increases on farm machinery, and our local taxes are to take another jump next year. The present plan seems to be that of lowering still more the support prices under our products. The picture is indeed gloomy from where I sit.

Let us then look at the other side of the picture—that of the taxpayer. He is supporting an agricultural budget of $5 billion a year plus an investment of $7 to $8 billion in surplus commodities trying to help us farmers achieve equality of income. Since the Department of Agriculture's budget is creeping upward year by year, as is the mounting surpluses, it is no wonder that the general public is becoming disgusted with the farm program.

We would conclude then that the present efforts on the part of the Government are a failure since the farmers income is still inadequate, and the taxpayers' costs are mounting. What then can be done? We think that we have a plan whereby the farmer can obtain parity of income and the cost to the Government can be reduced.

Approximately five-sevenths of the cultivated lands of this country are devoted to raising small grains, soybeans, cotton, peanuts, and tobacco. This accounts for about one-third the annual income to farmers. Part of this income of course comes from the livestock, dairy, and poultry industries, as considerable of the small grains are fed on the farm and thus never reach the cash markets in their own form. For example: One summary shows corn sold for cash to be only 2$^{8}/_{10}$ percent of the gross farm income instead of the 14$^{7}/_{10}$ percent when you figure the total corn crop harvested for grain times the average price. The difference, of course, is reflected in the income from livestock, dairy, and poultry.

You, WALTER, are well aware of what I am going to explain next, but your colleagues from the cities are not. We read and have impressed upon us daily that the farm population is shrinking, thus the problem of equality of income becomes less of a political issue since it represents a shrinking portion of our population. Due to mechanization we no longer employ as many people directly on our farms, but when you think of the invisible man who produces our machines for the farm, the invisible man who produces the fuel and oil for these machines, the invisible man who produces the repairs to keep this equipment rolling, the invisible man that finances through loans much of these operations, the invisible man that insures these operations, the invisible man that services these farm operations from local communities you have increased this population to a rather important percentage of the the total. Many of our small communities exist solely on income derived from agricultural activities. These small communities in turn help support the economy of the large cities.

When the general economy is booming along this income of the farmers is not felt or recognized, but let me point out to you what it did this year to our economy. Due to exceptionally good weather conditions the farmer produced the biggest crop on record from the fewest acres and this at a time when our general economy was lagging. Because of this many manufactures of farm equipment that had been idle or on restricted production started producing full time. This gave a shot in the arm so to speak to the general economy and help start us on the way to recovery. Had the farmer been receiving parity for his products as well as the increase in production

it would have helped the economy that much more. We are trying to point out that the welfare of our city cousin is still dependent upon our farm prosperity.

Sure, we farmers made some money this year due the large per-acre yields but when you average this year's crops into that of the past 10 years you find that we are still operating at a loss.

You ask me then what I would do about the farm problem? First I would put it on an equitable basis for all involved. The present and past programs have not given the same treatment to all producers alike. For example, anyone planting less than the 15 acres of wheat does not have to have an allotment, and yet this type of farmer, so I am told, produces nearly one-fourth of our total wheat supply. True, he is not eligible for support loans but he does benefit from the price set by these loans. Next the acreage allotted to the growing of wheat varies from State to State and county to county. When you operate farms in two counties and have a 40-percent wheat allotment in one and a 60-percent in the other you wonder at the fairness of the program. In order to insure fairness to all I would first throw out the present historical method of determining acreage controls and would substitute the following plan: I would have each farmer go to his or her farm office and designate how many acres of each crop he would like to grow on his farm. The total of these crops could not exceed the total cultivated acres of this farm. The acreages of the various crops would then be compiled and sent to Washington where they would be totaled thus giving us the acres to be produced by each of these crops. This acreage would be binding for a period of years. We would suggest 5 as a proper period at the close of which the acreage would be redetermined in the same manner as above. Any person wishing to place additional land in these crops would have to wait the expiration of this 5-year period, then he could place his acreage in the program and receive the same treatment as the rest.

The Department of Agriculture would then figure the expected yields from the acreages of the various crops using past averages with possible improved yields from new seed, fertilization, weather cycles, etc., to determine the production of the various crops. Next the Department would determine the probable market totals for each crop, taking into consideration domestic as well as export demand. Taking the ratio between this demand and the total expected production would give us the number of acres needed to maintain our present needs. Since we have large surpluses of these crops on hand it would be well to reduce this allotment of acres to where this surplus could be worked off during the next 5 to 10 years. We would decline surplus only that quantity above the needed carryover to protect the country in case of emergency.

The acreage taken out of production would be retired for the entire base period of 5 years in the same manner as now applied to soil bank land. This would prevent its rotation in the farming operation with the resultant increase of per-acre yields. We have never had a total crop control program but rather a diverted acreage program that only added to our problems. We certainly cannot solve our problem by continuing to produce more than we can use. Anyone that farmed in the late twenties and early thirties knows the fallacy of continued surplus production.

This plan of acreage control would be equitable to all concerned. It would not be hard to administer for the machinery is present from our current program. It would assure a reduction of present surpluses. It would not be as arbitrary a program as the present because the farmer could make his own plans every 5 years instead of being forced to take the past history of the farm as the base. It is also flexible in that as the needs of the country change this program will change.

Now we have reduced production to an equitable basis within the needs of the country. We must next figure out a way to bring the farmers' income up to parity with the rest of the economy. In order to do this we would classify all small grains that can be used for livestock feed into one price class. This would include corn, wheat, barley, oats, grain sorghum, etc. Since corn is the basic feed crop we would use it as a basis for our price-support program. We would price each crop on the relative feed value that it has to corn by the pound. The following is compiled from figures given by the Doane's Agricultural Service.

Corn at $1.80 per bushel at 100 percent parity equals $3.22 per 100 pounds.

Wheat at 105 percent of feed value of corn, $3.38 per 100 pounds.

Barley at 92 percent of feed value of corn, $2.96 per 100 pounds.

Grain sorghums at 90 percent of feed value of corn, $2.90 per 100 pounds.

Oats at 85 percent of feed value of corn, $2.74 per 100 pounds.

These figures would then be used to insure the farmer 100 percent of parity if he were producing all his acres. Since part of the acres would be taken out of production he would have to receive more to get his full share. In order to do this we would add to this price the percentage of acreage reduction. If we reduced the acres by 20 percent we would add 20 percent to the parity price. Corn would then be supported at $3.86 per hundred. It is obvious from this that wheat would still not receive its full share of parity as the figures show it to have a parity value of $2.50 per bushel compared to that of corn. About 500 million bushels of wheat goes into foodstuff for human consumption. If total acres of wheat asked to be planted indicated a total crop of 1,500,000,000 bushels then the domestic human consumption price of the wheat should figure out $4.12 per bushel. We used the following formula to arrive at this price: XY plus (100–Y–Z) C equals A.

X equals price of wheat for human consumption.

Y equals percentage of total production of wheat for human use.

Z equals percentage of acres taken out of production.

C equals parity price of feed wheat after allowing for reduction.

A equals parity price for full production.

Wheat would then receive $2.40 per bushel for that part used as livestock feed and export and $4.12 per bushel for that wheat used at home for human consumption. Any wheat exported under this price of $2.40 per bushel would be subsidized by the Government.

We would have to apply a two-price system to wheat in order to make it work. Each farmer of wheat would receive certificates of interest equal to the difference between support price for wheat as feed and the price for human consumption on his share of the crop raised for human consumption. This share would be figured on a bushel allotment basis and would be fixed for the 5-year base period.

Let us see how this would work applied to my own farm. Say I have 1,150 acres in cultivation and I put it all into wheat production. The average yield per acre is 10 bushels. I expect to raise 11,500 bushels of wheat at parity of $2.50 per bushel, the gross income should be $28,750. I leave out 20 percent or do not produce 2,300 bushels of wheat. I have a bushel allotment of 3,833 bushels at $4.12 or $15,790.

The balance of 5,367 bushels would bring $2.40 per bushel or $12,880. Thus I would have a total income of $28,671 or very near my parity income. Figured on a cost basis of $12 per acre to produce and one-third rent to the landowner that would leave me with a margin of $4.67 per acre for my labor and risk. This would give me an income of $5,370 per year which is not high at all for these times. Land here is valued at $80,000 per section and this farm operation includes two sections so that the gross return on the land is less than 6 percent.

Cotton has a problem all its own. It has competition from synthetics which will not allow an increase in price to compensate for reduction in acres. It would need a lower support price to meet competition and a direct subsidy to bring the income up to parity. This is justifiable in that cotton is a war material and we need a healthy production system to insure ample supply in case of war.

Rice can use the same plan as that used for feed grains and wheat only using a support floor equal to the world price of rice and a domestic price high enough to bring the total income up to parity levels.

It might be well to add here that the certificates of interests would be bought from the Government by the processors as they processed the wheat or rice. The producer would cash his certificates at the bank.

This program would add about 20 percent to the prices of the processed food items. This is justifiable in that when labor gets an increase in wages it is passed along in the price of the product that he produces.

We would go further and eliminate all Government payments that are capital improvements such as terracing, tank building, brush eradication, seeding, etc. We would do away with all soil-bank payments. We would not furnish any more drought-relief payments. The above program would insure adequate income to the farmer based on average production figures that take into account drought.

Whether we like it or not a program as outlined above is the only type of farm relief that will actually accomplish the purpose of any such program and that is parity of income.

Sincerely,

JOHN H. HARNLY.

Vice President Nixon's Trip to England

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. SPRINGER. Mr. Speaker, on last Friday I inserted in the CONGRESSIONAL RECORD the speech of Vice President NIXON on the occasion of his speaking before the English-speaking Union of the Commonwealth on November 26, 1958, in London.

The results of the Vice President's trip to England were most gratifying and some of the editorial comments following that visit are appended hereto. The value which we place upon the friendship between us and Great Britain is readily attested to by the following editorials from newspapers in both countries. It is good to know that people in England are seriously interested in our viewpoint as I know we are in theirs, especially in the field of international affairs where all of our resources and ingenuity have time and again been put to a test. These editorials are appended herewith in full:

[From the Daily Telegraph (London, England), Nov. 26, 1958]

American money helped to revive the free nations, and American strength is now their shield. Yesterday, Vice President NIXON, making his first speech in London, gracefully turned the coin to show inscribed on its reverse the record of America's debt to ourselves: the free democratic institutions that are the foundation of her strength were a heritage from Britain, and—as Mr. NIXON might have added—the United States owes other debts of energy and enterprise to streams that have fed her from other countries, now also her allies. In the public relations of the alliance, sometimes ill-managed, nothing is more important than to emphasize this interdependence of tradition and ideals no less than of armed strength. This between friends. Lest others should draw false conclusions from some external similarities, Mr. NIXON did well to warn them that the recent setback of the Administration party denoted no wavering of Americans in their determination to resist aggression.

[From the Financial Times (London, England), Dec. 1, 1958]

Although the Vice President disagreed, with characteristic vigor, with the Labor Party on disengagement and with the majority of his hosts on China, one had the impression that his view on these topics had none of the principled rigidity of some other American leaders, and that he would be prepared to reconsider his position should the changing situation alter the balance of the argument. Even though the visit may not have set all doubts at rest, it has confirmed the impression that at a time when President Eisenhower is showing a growing obsession with the single issue of a balanced budget, Mr. NIXON represents the main influence inside the administration for a broader approach to both domestic and international problems.

[From the Daily Telegraph (London, England), Nov. 29, 1958]

He has treated us as friends and partners, entitled to understand the difficulties experienced by the United States as well as to realize that our own difficulties are not discounted by his countrymen. Britons and Americans share the same interests, much of the same outlook, most of the same policies. The fact that they share the same language may, in spite of Mr. NIXON'S eulogies, tend rather to misunderstanding than to perfect accord. It is always disconcerting to find that someone who uses the same words as you do possesses different categories of thought. But every sensible person in the United States realizes that they need us, and every sensible person here realizes that we need them.

The Daily Mail (London, England), Nov. 29, 1958, heads its comment "Helpful Visit." The paper emphasizes the need to maintain a firm and constant Anglo-American unity. It says that there has been a big improvement in the past year or two with London and Washington showing themselves more ready to listen to each other's points of view. Mr. NIXON'S visit should have helped in that direction. The Daily Mail writes:

"In recent months, he has rivaled Mr. Dulles in his determination to see for himself what is going on in the world. He has shown in London that these travels have broadened his mind and opened his eyes. He has in the course of the next 2 years an opportunity to influence American thinking. He can strengthen the Anglo-American Alliance and do something to strengthen his own reputation as well."

[From the Decatur (Ill.) Herald and Review, Nov. 27, 1958]

BRITISH EDITORS ON MR. NIXON

English newspapers discuss editorially the visit of Vice President RICHARD NIXON.

The News Chronicle (Liberal) feels that Mr. NIXON'S visit should be useful to himself and to Britain. The truth about Mr. NIXON, says the paper, is that he is an unknown quantity under a cloud. Unknown because he is still developing politically, and under a cloud because the mid-term election success of his fellow Republican, Nelson Rockefeller, has spoiled what looked like a near certainty for the presidency.

The Manchester Guardian (Liberal) writes:

"Vice President NIXON is welcome to Britain. We are happy to receive him not merely because he represents an ally to whom we are bound by warm friendship and respect as much as by gratitude and political necessity, not merely because of the greater understanding and confidence between our governments that may result from his visit, but also because we want to get to know him. At present he is a puzzle to us."

"At any minute he may become the leader of the non-Communist world—one of the two or three people on whom the destinies of all of us seem to depend.

"Few people in Britain would pretend that this prospect allures them. Many, indeed, have the same sinking of the heart as the idea of Mr. Bevan as British Foreign Secretary is said to bring about among many Americans; but our misgivings are certainly due in part to ignorance. In fact, most of America's allies, as well as the uncommitted nations, have reason to be grateful to Mr. NIXON. In recent years, his ideas on foreign policy are what we—actuated by self-interest—would call enlightenment."

The Daily Express (Conservative) comments on the visit of the United States Vice President, Mr. NIXON, to Britain. It says that he is a vigorous politician—intelligent as well as ambitious. He was the first member of Eisenhower's administration to recover from the American hysteria over Suez. In his own country, adds the Express, Mr. NIXON—a strong partisan—inspires mixed feelings; here he will have a warm reception from all sides.

[From the Washington (D.C.) Post, Dec. 2, 1958]

MR. NIXON'S CONQUEST

From all accounts Vice President and Mrs. NIXON were extremely effective ambassadors on their visit to England. Mr. NIXON is at his best when talking responsibly about national policy and foreign affairs, and he seems to have won the admiration of British officials and a considerable section of the previously distant British press. The fact that Mr. NIXON can be charming, candid, and courageous on such occasions does not, of course, mean that there is no basis for the misgivings about the other side of his personality that sometimes emerges during election campaigns. But these misgivings ought not to becloud the Vice President's exemplary conduct in Britain and his well-chosen efforts on behalf of the Anglo-American alliance. Although formal visits seldom afford an opportunity for really balanced appraisals, it is well that the British public has had this chance to see a possible future President at first hand. Despite the Republican reverses, he remains a formidable practical politician whose potential is by no means eclipsed by the difficult decisions he faces on just where to chart his course.

[From the Washington (D.C.) Evening Star, Dec. 1, 1958]

GETTING TO KNOW HIM

Returning from his trip to England, Vice President NIXON told reporters he thinks NATO's position has been strengthened by the Berlin crisis. Whatever the fact as to this, it seems clear that Mr. NIXON definitely strengthened his own standing with the British, some of whom have been among his severe critics.

Thus, as Mr. and Mrs. Nixon took their leave after a 4-day visit, the Daily Telegraph pronounced him a "frank and engaging character." According to this journal, the Vice President "has done a good deal to cement the Anglo-American alliance." Another British paper, the Daily Mail, concluded from Mr. NIXON'S conversations in London that the Washington administration "has learned a lot about the international facts of life."

This favorable impression was not registered on the press alone, however. The Associated Press reports from London that "politicians—both Conservative and Socialist—seemed impressed with Mr. NIXON'S air of sincerity." And, again according to the AP, Labor Party Leader Hugh Gaitskell came away from two exposures to Mr. NIXON "praising him extravagantly."

None of this, we suppose, will make the slightest impression on Mr. NIXON'S dedicated and relentless critics in our own country. They will continue to portray him as a kind of subhuman embodiment of all that is evil in public life. But, for those who prefer to appraise this controversial man objectively rather than subjectively, the British reaction will confirm an already strong impression—that RICHARD M. NIXON is one of the ablest if not the ablest spokesman for the Republican Party.

C. Melvin Sharpe

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. AUCHINCLOSS. Mr. Speaker, I am very pleased to receive the permission of the House to insert in the RECORD a few thoughts about the late C. Melvin Sharpe, a lifetime resident of Washington who died on Christmas Day last. The people of the District of Columbia have lost a great and useful citizen in his death. While it was not my privilege to know him well, his devotion to the Capital City and his pride in doing what he could for its welfare was evident to all who met him. Everyone, whether they knew him or not, had the most profound respect for his sincerity and his character. Those who were in disagreement with his views frequently revised their thinking because of the aggressive and logical arguments he would put forth in support of them. He was a good fighter who made few enemies and a loyal and warm friend. His influence for good will long be felt in this city and his devotion to its welfare will never be forgotten.

He well deserved the eulogies expressed in the following editorials:

[From the Washington Evening Star, Dec. 27, 1958]

C. MELVIN SHARPE

Many Washingtonians came to know C. Melvin Sharpe best during the 18 years of his service as a member, and for half that time as president, of the Board of Education. His death on Thursday, at the age of 77, followed his retirement from the board by about a year and a half.

But an older generation of Washingtonians will remember that Mr. Sharpe's service on the Board of Education was a mere postscript to a busy and active life in Washington, first as a Federal employee, using his persuasive abilities in behalf of civil service retirement legislation, and later as an executive and public relations adviser for the old Washington Railway and Electric Co., and the Potomac Electric Power Co. In the latter capacity he became involved in numerous community organizations and undertakings, and was a man-about-town known for his delightful gift of anecdote and his shrewd judgment of human nature.

He was appointed to the Board of Education a few years before he reached retirement age at Pepco, and in 1949, when he became president of the board, he promised to bring to an end the small bickering and misunderstandings which hampered the school system. Whatever small bickering he may have had in mind, it must have seemed small indeed compared with what followed within a few years. For in his term as president the school system, quickly conforming to the Supreme Court's edict against segregation, underwent the most profound and spectacular changes in its history. That "Mel" Sharpe survived them with grace, and that retirement found him still in possession of the good will of the people of this city, are no mean tributes to his capabilities. He lived a full and useful life.

[From the Washington Post and Times Herald, Dec. 27, 1958]

C. MELVIN SHARPE

C. Melvin Sharpe, who died Thursday at the age of 77, spent most of his years in Washington with the Potomac Electric Power Co., but he will be remembered for his conscientious civic service on the board of education and the Committee of One Hundred on the Federal City. Unlike most men who jealously guard their retirement years for themselves, Mr. Sharpe used his to serve his adopted community. He was both president of the board of education and chairman of the Committee of One Hundred after he retired from Pepco. As head of the board of education when District schools were desegregated in 1954 he helped to plan for this difficult transition. His devotion to Washington ought to set an example for other men.

[From the Washington Daily News, Dec. 27, 1958]

C. MELVIN SHARPE

It is a tribute to C. Melvin Sharpe that District public schools, which he labored so long and so hard to improve, were able to forge ahead on their own, without his leadership, when he retired as president of the school board last year.

His death Thursday, at the age of 77, is a great loss to the city he loved, but there is every indication that public education in the District will continue to advance along the trail he blazed in 16 years of active service on the board.

He was one of the world's kindliest men, true to himself and his convictions, and a tireless and selfless worker. He did not favor desegregating the schools, but he accepted the Supreme Court's decision as law and did nothing to impede the orderly process of carrying it out.

He was greatly respected by Congressmen, business leaders, teachers (he was never too busy to hear their problems) and parents—particularly those with handicapped children, which became his special concern. He was largely responsible for obtaining the new health school, which now bears his name.

He will be sorely missed.

Why United States Will Not Recognize Red China

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the text of an article taken from a recent address by Secretary Dulles which appeared in the December 12 issue of U.S. News & World Report. The Secretary clearly restates the administration's position with regard to the recognition of Red China and the reasons behind this policy. I strongly agree with the Secretary's statements and believe that to give political recognition to the Chinese Communist regime would be truly a disheartening and almost fatal blow to the non-Communist governments in the Far East as well as a danger to the political, economic, and security interests of the United States:

WHY UNITED STATES WILL NOT RECOGNIZE RED CHINA

(Pressure is on once more for U.S. recognition of Red China. But it isn't going to happen. Secretary of State Dulles tells why in a restatement of U.S. policy.)

Developments make it ever more clear that, if we were to grant political recognition to the Chinese Communist regime, it would be a well-nigh mortal blow to the survival of the non-Communist governments in the Far East. Such recognition, and the seating of the Chinese Communists in the United Nations, would so increase their prestige and influence in the Far East, and so dishearten the free nations, that the Communist subversive efforts would almost surely succeed.

Contrary arguments come largely from two sources. There are those who argue that, since the Chinese Communist regime exists and has power in mainland China, we ought to accord it political recognition.

There is, however, no principle of international law to this effect. Recognition is a privilege which can be accorded or withheld. There are several de facto regimes in the world that we do not recognize. We act in this respect, as our national interest dictates.

The Chinese Communist regime is bitterly hostile to the United States. It is dedicated to expelling us from the Western Pacific. It is determined to take over the free peoples and resources of the area. It violates all established principles of international law and of civilized conduct.

Why should we give aid and comfort to such a regime and to such policies? Some think we should recognize the Chinese Communist regime in the hope that large and profitable trade would follow. That is an illusion. The mainland of China has never been a large customer of the United States, and its trade is even more closely regimented under Communist rule.

The United States today is exporting to the non-Communist countries of the Far East at the rate of over $2.5 billion a year. This excludes the value of military items exported under our mutual-security programs.

We may be sure that, if the Communists should take over these free nations of the Far East, our trade with them would drastically shrink, as has been the case with our trade with the Soviet Union and its European satellites. We must also recall that, because Communist nations look on trade primarily as a political instrument, it has rarely been possible for citizens of free nations profitably or safely to engage in such trade.

Should we, then, in the quest of a few millions of dollars of unreliable trade with Communist China, jeopardize exports of $2.5 billion?

We deal with the Chinese Communist regime whenever that is expedient. We do not pretend that it does not exist. We have been in almost constant negotiations with it for particular purposes, at Panmunjom, at the Geneva Conference on Indochina, in bilateral negotiations at Geneva, and now at Warsaw.

But it is certain that diplomatic recognition of the Chinese Communist regime would gravely jeopardize the political, the economic and the security interests of the United States. The Pacific, instead of being a friendly body of water, would in great part be dominated by hostile forces and our own defenses driven back to or about our continental frontiers.

There is currently a specific threat to free-world trade in the Far East. That is the "dumping" practice of Communist China. The Chinese-mainland people desperately need for themselves all that they are capable of producing. But they are denied, so that the rulers may prosecute their expansionist designs.

When millions of Chinese are dying of starvation, rice is exported for political purposes.

Goods manufactured in China are being dumped in Southeast Asia at prices that disrupt normal trade. These include textiles, bicycles, sewing machines, fountain pens, and the like. This is particularly a threat to the trade of Japan in South and Southeast Asia. This problem as it arises in the Far East is one phase of the economic offensive now being initiated by the Sino-Soviet bloc. Your Government is intensively studying this problem. We have asked business people to study it. There is no doubt in my mind but what concrete measures will be needed to assure that, in the face of this unfair competition, free enterprise will continue to play its full role as a dynamic and expanding force in developing the economies of the free-world nations.

If the non-Communist nations hold fast to policies which deter armed aggression; if they prevent subversion through economic and revolutionary processes; and, above all, if they demonstrate the good fruits of freedom, then we can know that freedom will prevail.

A Trojan Horse

EXTENSION OF REMARKS

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. SPRINGER. Mr. Speaker, many of us on both sides of the aisle have en-

joyed the Sunday weekly column of Dr. Frederick Brown Harris, Chaplain of the U.S. Senate, in the Washington Star.

It can always be said that Dr. Harris is never afraid to take a stand on an issue on which he feels strongly. I attach, in full, his very thoughful article of Sunday, December 14, 1958.

A TROJAN HORSE

(By Dr. Frederick Brown Harris)

From the time of the Greek siege at Troy, a Trojan horse has been the symbol of conquest from within by smuggled foes. The Communist conspiracy has used the Trojan horse technique as its most potent method of aggression. Now, from an unexpected direction—a church conference on world order, whose members belong to 33 denominations—a Trojan horse is trotted out in the name of world understanding. Of course, the architects of concord who built it did not construct it for that purpose—just the opposite—but a Trojan horse it is, planted within the lines of the free world.

No wonder the recommendation of these churchmen has been received with pained incredulity at home and abroad. No wonder anguished cables are coming from officials and missionaries in free China and free Korea asking the meaning of such an unbelievable attitude to the mounting Red peril. Of course, it ought to be made clear that these religious leaders speak only for themselves, and have no mandate to commit the various churches to their point of view. It already is evident that multitudes—especially laymen—belonging to these same churches are violently opposed to any such betrayal of the solemn trust committed to America's hands in this day of destiny. Those who know the grim facts of the international situation listen to this "message to the churches" with the feeling Paul expressed when he asked fellow Christians, "O foolish Galatians, who hath bewitched you?"

One is reminded that in spite of Churchill's warning, "Arm! Arm!" it was because equally sincere church leaders mobilized the pacifist forces of England that Britain was unprepared when the mad dictator struck. In her finest hour she paid an awful price, largely because of church leaders who had zeal without knowledge.

Now, those in the forefront of the Cleveland conference group express the hope that our Government will listen to this message and change its firm and "inflexible" policy in dealing with the Red menace. The mood of these leaders through all their discussions seemed to be critical of America's defenses rather than of the offenses of the Red terror. It is because this "message to the churches," with all its pious verbiage, betrays the very principles which by black paganism are being denied and derided that this column joins the outraged voices of religious leaders in all parts of the country in crying out against any serious consideration of what is proposed. Spires are perpendicular—never bending—and are symbols of divine sovereignty, human dignity, and spiritual verities, of justice and morality.

From the standpoint of Spires of the Spirit, the Cleveland proposition is a Trojan horse because, first, it would make the U.N. a travesty and a mockery. The U.N. Charter defines its objective as the "furtherance of fundamental human rights." It supports the "dignity and worth of the human person." It gives a guarantee of "equal rights for all nations, large and small." In this very year, 1958, Red China, in an official publication, declared that "such bourgeois ideas must be made to thoroughly stink and must be thoroughly burnt." The very year when the most diabolical device of all, the communes, are turning continental China into one vast concentration camp, a Christian church group recommends that it be admitted to the U.N. The fact is that any person in Red China today who dared profess belief in the Charter of the U.N. would be either brainwashed or executed. Second, it is a Trojan horse because it refers to the present regime as an "effective" government. Effective. Do they not know that in response to Mao's "hundred flower" invitation, people in all walks of life by the hundred fervently berated the Communists?

Has anyone who voted for this pronouncement read the report of the chief of Red security, dated January 4 of this year, in which he admits that during the past 2 years 370,000 counterrevolutionaries surrendered, and 100,000 new ones were discovered, and that 18 million workers were undergoing investigation for anticommunism, 5,000 of these inside the Communist Party, some in "highest, inmost organs"? In a number of places excited mobs have plastered the walls with pro-Taiwan posters. The significance of all this is stupendous. Third, the Cleveland message to the churches is a Trojan horse because in addition to being a boon to Red China and a blow to the U.N., if carried out it would be a devastating breach of faith with Taiwan, whose sacred task it is to guard, preserve and perpetuate the ancient China culture which, on the mainland, is now being ruthlessly ground into the dust.

What will this message to the churches do to the growing assurance in Formosa that the hour will strike when the economic miracle under freedom that is happening there will be welcomed by millions on the enslaved mainland? Then what of Korea, one of the most promising missionary fields in all the world, half of whose sacred territory Red China still holds as an invader? An apostolic American missionary writes: "To ignore Korea and sit in the council of nations with its bitterest enemy would be an insult to all that Korea has fought and bled for since 1950." It seems to be forgotten that Red China, still unrepentant, is under condemnation for aggression by the very organization now urged to accept it as a defiant, yet equal, member. And what of the Philippines, who would regard such action as treachery? And what of the 12 million Chinese, mostly anti-Communist, scattered across Asia? If such a betrayal should take place and Red China made respectable, these valiant millions would be tempted to bow the knee to the Red Baal. All this and much more is concealed inside this Trojan horse. Out of it could come a resounding victory for the powers of darkness which plot the destruction of our liberties.

But we are grateful that already there is an American Committee of a Million Against the Admission of Red China. Its roster contains the names of thousands of churchmen in all public and private walks of life—perhaps as great a galaxy of eminent names as ever graced an organization. They also have a message to the Christian churches. We prophesy that by leaps and bounds that committee will now swell to 10 million plus, declaring in no uncertain tones, "We are set as a fint against this great denial." From all over the Nation last week men in high positions were hastening to Valley Forge for the annual meeting of Freedom's Foundation.

One of the Cleveland delegates, a layman, apparently with trembling knees, was heard to say, "The Chinese will soon number a thousand million. We'd better make peace with them." Shame. When did the Christian church ever quail before mere bulk?

There is a message to the churches in this crisis, mirrored in a recent scene in a crowded Washington church, when, at the close of the morning worship, the President of the United States, the Secretary of State, the Secretary of the Army, and scores of others high in the Government councils joined the multitude in singing heartily:

Ye that are men now serve Him against unnumbered foes;
Let courage rise with danger, and strength to strength oppose.
Stand up, stand up for Jesus, ye soldiers of the Cross;
Lift high His royal banner,
It must not, it must not suffer loss.

Silent Weapon of the Cold War

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to call to the attention of the House the following article which appeared in a recent issue of the Saturday Evening Post entitled "Silent Weapon of the Cold War." The author, Mr. Demaree Bess, presents an interesting and arresting account of how Russia has used economic warfare in the past to gain control of certain countries such as China and Hungary, and how it is now relentlessly waging this same type of warfare against the United States. The author feels it is vital at this time to use all possible measures to stem the tide of inflation and keep this country on a sound economic and financial basis:

SILENT WEAPON OF THE COLD WAR—A POST EDITOR'S GRIM WARNING OF A DEADLY VIRUS WHICH THE REDS USE AS A TOOL: RUNAWAY INFLATION, WHICH CAN DEVASTATE A NATION

(By Demaree Bess)

Inflation can be one of the most tiresome subjects in the public domain, as a swarm of economists have demonstrated in Washington during recent months. The disputes of these specialists about inflation have shown why economics is sometimes called the dismal science. Economists have managed to make their controversy seem dull and dreary, despite the fact that it directly concerns every American, for good or evil.

For a long time inflation has fascinated me because I have seen so much of it, not as an economist, but as a foreign correspondent. During several decades of reporting abroad I had closeup views of the whole range of inflation—from the creeping type to the runaway variety—in many countries of Europe and Asia. The two aspects of inflation which have impressed me most have been largely ignored in current Washington debates. The first is inflation's shattering effects upon individual human beings. The second is the use of inflation as a frightful weapon in economic warfare—in some ways as frightful as any of the new military weapons which are getting so much publicity.

This article will undertake to show how inflation has become a major factor in the Soviet-American cold war, and how it can break the human spirit as completely as famines, earthquakes, wars or revolutions. In France I have watched creeping inflation inexorably undermine a great people's confidence in themselves and in democratic government, thus weakening their will to resist external and internal foes. In eastern Europe, after World War II, I saw runaway inflation cause a sort of universal paralysis, when Moscow deliberately permitted it to get out of control. Runaway inflation wipes out almost overnight every kind of security for

the individual: insurance, pensions, annuities, savings bonds, bank accounts, even cash. What we call "solid citizens" are hardest hit. It was runaway inflation which cleared the way for Communist rule in China after World War II, just as it had previously done in Russia, after World War I.

Up to now, Americans have been lucky about inflation because we have had so little recent experience with it. Only twice in its history has the United States known runaway inflation: Once during revolutionary days for the whole country, and later for the people of the Confederacy after their currency became worthless. While inflation has ravaged many countries since World War II, our creeping inflation has been held within comparatively narrow bounds. But Soviet strategists have given notice that they expect our luck to change, partly because of our own indifference to economic matters in general and to inflation in particular; partly because of the Kremlin's planned economic warfare against us.

Two recent developments have dramatized the fact that the cold war has reached a major turning point. First of these was the Russian sputniks and second was the recession. For several months after the original sputniks roared into space, the American press concentrated its attention almost exclusively upon military innovations, notably earth satellites and guided missiles. Washington was the chief source of this verbal outpouring, as it is of most news and comments nowadays. The administration and congressional committees consulted hundreds of scientists and other specialists working on the arms race. Nuclear physcists and spacemen got more public attention than ever before. Because the arms race also affects many kinds of vested interests, platoons of press agents and lobbyists helped Washington correspondents to keep the news flood flowing.

But then, after months of this, the uproar over sputniks and space weapons subsided almost as abruptly as it started. Now the recession dominated every news channel, as it brought to Washington a prolonged parade of economists and financial experts to advise the President and Congress about means for dealing with it. These experts sharply disagreed about almost everything connected with the recession. Some predicted that it would last for years. Others insisted that it was almost over before most people had noticed it. Some argued that big tax cuts would cure it. Others prescribed massive additional taxes. Some urged the Government to spend its way out of the recession by piling up ever-growing deficits. Others recommended wholesale Government economies. With the November elections coming, both political parties naturally were looking for vote-catching projects.

But it was inflation which most sharply divided the economists. The only unanimous agreement was that inflation has cut away more than half the purchasing power of the dollar since 1939, and whittles off more of the dollar's real value every year. That could not be disputed, although almost everything else about inflation was left in doubt. Some economists detected danger of further inflation in almost every one of the projects proposed to tide over the recession. They even warned that more inflation already is inevitable, because of the mounting demands of the arms race. But other economists pooh-poohed these warnings, and insisted that budget deficits could safely be multiplied, and should be.

The man caught in the middle of this crossfire among disputing economists was President Eisenhower, who does not pretend to be a financial expert. Disagreement among his advisers may have confused him as much as it did the rest of us, but no President of the United States can afford to admit being confused. He must keep on making the big decisions which nobody else can make for him. Moreover, under the American form of government the President's decisions do not necessarily settle issues, especially in financial controversies. Congress holds the power of the purse, and can upset plans made in the White House.

So Mr. Eisenhower has done what any President could be expected to do in this situation. He has tried to give equal attention to the controversies about inflation and about the arms race. He has stopped, looked, and listened. While he has been compelled to recognize that, under existing conditions, there is no immediate hope of balanced Federal budgets, he has vigorously opposed proposals to speed up the arms race recklessly without regard to inflationary effects. He has heeded the warnings of some of his most respected advisers that inflation could become one of the greatest threats to the security and well-being of our country.

But when Washington's news spotlight shifted so abruptly from weapons scientists to economists not one of the controversies about the arms race had been definitely settled. They only got shoved into the news background by the recession. On the surface it looked as if the recession had compelled the American Government to concentrate upon domestic affairs rather than world affairs. Some commentators even detected a return to isolationism. It was already apparent, even before the Middle East exploded again, that the men in Moscow were not going to let us off that easy.

Almost unnoticed by the American press and public, the nature of the Soviet-American conflict had been undergoing a profound change. The cold war, which had featured the arms race ever since Russia exploded her first atom bomb in 1949, has taken on a new aspect in 1958, or more accurately, revived an old one. While American eyes were still fixed on the arms race, Soviet leaders quietly stepped up economic warfare. The sputniks dramatized the fact that the arms race war more or less stalemated, at least temporarily, because both superpowers possess the means to destroy each other. But not until the recession monopolized American attention did anybody in Washington publicly recognize that Moscow's main attention had shifted from the arms race to economic warfare.

This shift has been no surprise to Americans familiar with Bolshevik policy. Even before the Russian revolution the father of Soviet communism, V. I. Lenin, predicted that economic warfare would do much more than armed force to promote Communist worldwide revolution. Ever since they seized power in 1917, Russia's Bolshevik leaders have been carefully studying economic weapons, among which inflation ranks tops. Having utilized runaway inflation to achieve their original victory in Russia, the Bolsheviks have found it equally useful in all subsequent conquests. In fact, Communists never have succeeded in entrenching themselves anywhere without the help of large doses of inflation.

As a reporter in Russia, I first learned what great importnce Soviet leaders attach to economic warfare. Almost every morning, for years, it was my painful duty to read Soviet newspapers, which rarely let a day pass without boasts of the superiority of their economic system. Even the Russian grammar I used in Moscow based its lessons upon the great American depression of the 1930's. In my efforts to learn the Russian language I had to read over and over again about how life was becoming more joyous every day for Soviet citizens while millions of Americans were allegedly living on the verge of starvation in slum cities they had built of tar paper and packing cases. That grammar was prepared for Soviet citizens studying English, not for Americans living in Russia. Its propaganda became a sad joke for us, as we watched our Soviet acquaintances frantically scrambling to supply themselves with the barest necessities.

Nevertheless, during those prewar years in Russia I decided that the Kremlin's professed faith in economic warfare was not just propaganda or wishful thinking. The Soviet creed is fashioned upon the basic belief that communism will sooner or later stand triumphant upon the ruins of rival economic systems which have been bankrupted by a combination of their own financial irresponsibility and unreelnting Soviet pressures against them. Time and again during the 40-odd years of Soviet rule in Russia, Moscow has reasserted its faith in economic warfare. As long ago as May 1921, Lenin told an assembly of foreign Communists: "Today we Russians exercise our main influence on the internationa rlevolution by our economic policy. * * * It is to this arena that the struggle has been shifted on a world scale. If we solve this problem of economics, we shall win on an international scale, decisively and permanently." Two years later, in a speech entitled "The Prospects of World Revolution," Lenin declared: "Our best forces are working on the stabilization of the ruble (Russian money), and we attach decisive importance to it. If we succeed in stabilizing the ruble for a long period, and then permanently, we shall have won."

Just before Lenin died the Soviet Government did stabilize its currency by redeeming outstanding paper rubles at the rate of 50 billion for 1 gold ruble. Those paper rubles once had been equal to gold rubles, and the appalling rate of conversion, revealed dramatically how completely the savings of thrifty Russians had been wiped out by inflation. The Czarist Government, by adopting wildly inflationary measures to pay for World War I, had started the ruble on its road to ruin before the Bolsheviks seized power. The Bolsheviks merely continued to print worthless paper money until they had won their civil war and established themselves in power. But then Bolshevik economists, having watched the effects of runaway inflation in its most virulent forms, were determined to stabilize their own currency.

The most thorough study of the Soviet financial system with which I am familiar was made by an English economist, L. E. Hubbard. In his book, Soviet Money and Finance, which has attracted much less attention than it deserves, Mr. Hubbard wrote: "The path traveled by the ruble since 1935 has shown a remarkable convergence toward orthodox capitalist principles. * * * Soviet economic theory may soon be considered reactionary by the advanced advocates of social credit schemes and the manipulation of currency in western countries." By an interesting coincidence the Hubbard book was published in the same year, 1936, as a book by a far more famous English economist, John Maynard Keynes. Soon after the First World War, in 1919, Mr. Keynes had attracted worldwide attention by a book entitled "The Economic Consequences of the Peace." In that 1919 book Mr. Keynes wrote:

"Lenin is said to have declared that the best way to destroy the capitalist system was to debauch the currency. By a continuing process of inflation governments can confiscate, secretly and unobserved, an important part of the wealth of their citizens. By this method they not only confiscate, but they confiscate arbitrarily. * * * Lenin certainly was right. There is no subtler, no surer means of overturning the existing basis of society than to debauch the currency. The process engages all the hidden forces of economic law on the side of destruction, and does it in a manner which not one man in a million can diagnose."

That is what Mr. Keynes wrote in 1919, but by 1936 he had changed many of his

ideas about currency manipulation. He had decided that under certain conditions capitalist governments were obligated to debauch their currency in a controlled manner. But Soviet economists, who had written with respectful admiration of the 1919 Keynes book, still prefered its ideas to the comparatively radical Keynes ideas of 1936. And ever since 1936, so far as their own system is concerned, Soviet economists have stubbornly clung to such old-fashioned notions as balanced budgets and sound money.

Even in today's topsy-turvy world, it is hard to believe that orthodox capitalist principles could command more respectful attention in Moscow than in a number of western countries. But there is evidence to prove it. In overcoming the tremendous destruction of the German invasion and the enormous costs of World War II, the Soviet Government has labored persistently toward a stable currency and reactionary notions of a sound economy. Almost every economic measure employed by the Kremlin since the war has been anti-inflationary inside Russia and throughout the closed Soviet economic system. At the same time Moscow has hailed inflation in non-Communist countries as evidence of the superiority of the Soviet economic system, and its eventual triumph through economic warfare.

Although the Kremlin's faith in economic warfare thus goes back to the earliest days of the Soviet regime, this subject has seldom interested Americans. Economic subjects are played up in our popular press only when something happens to make them look like news. What brought economic warfare back into the news recently was a speech by the Director of the Central Intelligence Agency, Allen Dulles. In one of his rare public statements C.I.A. chief pointed out that the Soviet Government had stepped up economic pressures throughout the world even before the sputniks signalized what looked like a military stalemate. So from here on out, Mr. Dulles predicted, the cold war would probably be fought mainly with economic weapons. The American press reported Mr. Dulles' remarks as fresh and exciting news, although he probably did not consider his idea new. The C.I.A. Director is supposed to have several thousand secret agents working under him all around the globe, but he didn't get material for that speech from secret agents. He got it from stoop-shouldered analysts sitting in libraries reading and studying Soviet publications, just as we correspondents in Moscow did a quarter of a century ago. As the Dulles speech revealed, Soviet publications are expressing precisely the same confidence in economic warfare today as they did in the 1930's.

Meanwhile, however, the Bolsheviks have extended their economic experiments to several additional countries, thanks to opportunities provided for them by World War II. They have learned a lot about how to control inflation inside their own system and how to turn it loose on their enemies. And Moscow's enemies often have played directly into Bolshevik hands. It is generally agreed that the conquest of China has been Soviet communism's major victory since the war. But it has not been widely understood that runaway inflation probably contributed more than anything else to the overthrow of Gen. Chiang Kaishek's Nationalist Government.

After Japan's defeat in 1945, General Chiang returned in triumph to his capital, Nanking, hopeful for the future. But Chiang and his associates apparently had little or no understanding of economic principles, and ignored the necessity of currency reforms to end the economic chaos caused by a generation of warfare. The ensuing runaway inflation wiped out all sound money values, and sapped the will of China's most substantial men and women to resist communism. It demoralized even American business communities in China. When Red armies entered Shanghai they were openly greeted by the Shanghai American Chamber of Commerce in the belief that they could not possibly be more dangerous to business interests than Chiang's inflation had been. Those Americans, like their Chinese counterparts, soon discovered how wrong they were. But then it was too late.

Japan's postwar history presents such a remarkable contrast to China's that it has inspired the sardonic comment that Japan was lucky enough to lose the war, but China was unlucky enough to win it. In 1945, defeated Japan was as completely bankrupt as China was. Economic chaos would have resulted if the Japanese Government, backed by the military occupation, had not fought inflation vigorously. The Japanese thus never were even threatened with such economic anarchy as existed in China for several years before the 1949 Communist takeover. And one reason why the Chinese Communists were given so much time to entrench themselves was that they promptly terminated the shattering effects of runaway inflation. Years passed before the Chinese people fully realized the terrible price they had paid for this temporary relief.

In Europe, Russia and the West have waged economic warfare in many different forms since 1945. West Germany provided the most humiliating defeat for the Soviets. For 3 years after the war Moscow got just what it wanted in Germany—economic paralysis—by vetoing all proposed anti-inflationary measures. But in 1948 Washington, London, and Paris decided to override Soviet vetoes and to create an economically united West Germany with a sound new currency. In an effort to checkmate this move Moscow clamped down the Berlin blockade, but the airlift broke the blockade. As a result, West Germany made one of the most spectacular economic comebacks on record. The Berlin blockade usually has been pictured as a political and propaganda contest, but its primary importance was economic. It was perhaps the most decisive postwar battle in economic warfare.

Another striking example of what economic warfare can accomplish was shown by postwar developments in Austria and Hungary. These two nations, once twin seats of a mighty empire, emerged from World War II in a terrible mess. Both served as battlegrounds for some of the war's most savage fighting, which wrecked, among other things, both capital cities, Vienna and Budapest. When I revisited these two countries shortly after Germany's surrender, they were a sorry sight. Neither had been very prosperous even between World Wars, and now both were bankrupt, having been bled white by occupying armies.

In those dark days of 1945 it seemed to me that the Hungarians were facing the future much more cheerfully than their Austrian neighbors. I couldn't decide whether they were more gallant or just more ignorant of what they were up against. The Hungarians apparently also mystified the Russians, so much so that in 1945 Moscow permitted the only genuinely free election ever held in a country controlled by the Red army. That election proved to be a humiliating defeat for Hungarian Communists, with moderate non-Communists winning an overwhelming majority of the votes. Soviet strategists apparently accepted this defeat placidly, but actually they resorted immediately to economic warfare in Hungary.

When I went back to Budapest in 1946, the Russians had unleashed the wildest currency inflation on record. That this could easily have been prevented was proved in Austria, which has experienced no runaway inflation since World War II. By wartime agreements Allied Control Councils were set up in both Austria and Hungary in which the Western Powers were supposed to have equal rights with Russia. But there was one big difference. In Hungary the Red army was the only effective military force, whereas Allied troops in Austria were at least equal to the Russians. So in Hungary the Russians contemptuously ignored American and British efforts to establish the same anti-inflationary measures which were being imposed at that time in Austria.

The Hungarian inflation was deliberately manipulated so as to demoralize the middle-class Hungarians who had dared to vote against communism. This was done by keeping the printing presses running at full speed day and night turning out more worthless paper money. The Hungarian unit of currency, the pengo, which had been worth about 20 cents before the war, suddenly took off into the stratosphere. The day I arrived in Budapest in 1946 a friend in the American mission advised me, "Don't change more than a dollar at a time. Today the dollar brings 10 billion pengo, a billion more than it did yesterday, and nobody knows what it will bring tomorrow." The next day the exchange rate was 14 billion, and a week later 33 billion. So I was getting 33 billion pengo for the same dollar which would have bought only 5 pengo a few years before.

That wild inflation was aimed at certain groups of Hungarians as deliberately as guns aimed in battles. It wiped out the savings of the country's most solid citizens, the thrifty and hard-working middle class. Then the Russian-dominated government distinguished between white-collar and manual workers.

For example, at Budapest University I found that the professors and clerical staff—mostly Catholics and anti-Communists—were being paid only in paper money while janitors and other manual workers were paid in food and clothing which no amount of paper money would then buy. Two distinguished scientists told me they were keeping their families alive only by bartering their last possessions. One of them had just exchanged his last bed sheet for food, the other said he was "eating" his wedding ring. While I was in Budapest the American mission advertised for a few English-speaking jeep drivers, offering a dollar a day. That amounted to a colossal fortune in pengö, and the hundreds of applicants included prominent lawyers, doctors, and businessmen, a composer of light opera and two formerly wealthy landowners.

After this runaway inflation had served the Russian purpose, the Russians finally agreed to introduce the same anti-inflationary measures which had prevented runaway inflation in Austria. Meanwhile, however, the Soviets had so demoralized Hungarian non-Communists that Communists had easily taken over. So the West lost its Hungarian battle in economic warfare, but at the same time it won the battle in Austria. The contrast is striking, for today Austria is one of the most stable countries in Europe, despite having fewer natural resources than Hungary. Austrian non-Communists never were submitted to the demoralizing effects of runaway inflation.

It has taken some time for most Americans to appreciate how important economic warfare has been and will continue to be in the worldwide conflict with the Soviets. How well are we prepared to wage this kind of warfare? That question reminds me of a conversation which took place a quarter of a century ago when Dictator Joseph Stalin had his first meeting with an American diplomat, Ambassador William C. Bullitt. Shortly after the United States resumed diplomatic relations with Russia, the Soviet dictator invited the American Ambassador to the Kremlin. This was a most unusual gesture, because Stalin at that time almost never received foreign diplomats. Mr. Bullitt told the small group of American correspondents working in Moscow about Stalin's invitation, and said if we would wait for him at the Embassy he would give us an immediate off-the-record report of what happened. We had to wait a long time, because Stalin kept Mr. Bullitt talking for several hours. That conversation really

was an interview, with Stalin asking most of the questions.

Stalin's chief interest was President Franklin D. Roosevelt, and he became increasingly fascinated by Mr. Bullitt's description of how the American Presidency works. The Ambassador spent a good part of the afternoon explaining the American system of checks and balances. He told how the President not only must devise a program acceptable to Congress and the Supreme Court, but also must face vigorous and continuous opposition of a rival political party, and bear in mind the political fortunes of his own party's members. It was apparent from Stalin's questions that he had never before fully understood basic American governmental principles. Finally he shook his head and commented, "You have greatly increased my respect for President Roosevelt. Speaking frankly, it seems to me that your form of government imposes almost impossible demands upon the President." After a moment's thought he added, "But it seems to work for you."

Although President Roosevelt's problems in 1934 were big enough to astonish Stalin, they seem very simple compared with President Eisenhower's today. During the intervening quarter of a century the American Government has almost incredibly expanded its activities, at home and abroad. Decisions made in Washington today have immediate and far-reaching reactions in every corner of the globe. These multiplied responsibilities have imposed tremendous new stresses and strains upon our Government, and particularly upon our economy.

Meanwhile, however, the Soviet Government also has added enormously to its own stresses and strains. It has assumed responsibility for hundreds of millions of people outside its borders, just as the United States has done. It has challenged Washington to an all-out arms race with the most costly weapons in history, and at the same time has proclaimed economic warfare against the non-Soviet world. Moscow has done all this during a period when 200 million Soviet Russian citizens, better educated, are demanding more than the bare necessities.

Today Russia and the United States are much more openly in conflict than they were in 1934, but so long as the arms race remains stalemated the outcome obviously depends upon other factors. The Soviet Government's faith in economic warfare is clearly stronger than ever. How can Moscow's self-confidence be explained? One explanation is that Soviet strategists rely upon their enemies to fall into an economic trap. Financial irresponsibility in the United States would be just what would suit Moscow best. If the Russians can force the pace of American spending to the point where inflation gets out of control, they can forget about such weapons as intercontinental missiles. For the ability of Americans to wage economic warfare on even terms will depend upon whether the American Government and people can guard against further serious inflation in our own economy. The entire non-Communist world depends, as never before upon the solidity of the American economic and financial structure.

H.R. 446

EXTENSION OF REMARKS
OF

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. WILLIS. Mr. Speaker, I would like to explain the provisions of the bill H.R. 446, which I introduced on the first day of this session. The purpose of the proposal is simply to treat all patrons or married savers in savings and loan associations alike throughout the United States.

The present palpable inequality of treatment arises in this way. We all remember the bank and savings and loan association closures in the early 1930's. The deposits and savings of millions of our fellow citizens were snatched away from them overnight. To its everlasting glory, Congress moved forward immediately and passed two laws to prevent a recurrence of a similar financial catastrophe in the future. It first created the Federal Deposit Insurance Corporation, with authority "to insure the deposits of all banks"—12 U.S.C. 1811. And then Congress created the Federal Savings and Loan Corporation, with authority "to insure the accounts of all institutions eligible for insurance"—12 U.S.C. 1725.

In order to support the bank deposit insurance program, the Federal Deposit Insurance Corporation Act provided for a uniform assessment on all member banks of one-twelfth of 1 percent per annum—12 U.S.C. 1817. And from the beginning of the program all bank depositors throughout the United States have in fact been treated alike, whether they come from common law States or community property States.

The Federal Savings and Loan Insurance Corporation Act likewise provided for "a premium charge for such insurance equal to one-twelfth of 1 percent of the total of all accounts"—12 U.S.C. 1727. But unlike bank depositors, savers in savings and loan associations are not in fact being treated alike. Although savings and loan associations located in community property States pay the same and identical premiums as those located in common law states, married savers in community property states do not enjoy the same insurance protection as those coming from common law States. Under the regulations issued pursuant to the statute, married couples living in common law States enjoy insurance of the account of a husband in the sum of $10,000, insurance of the account of a wife in the sum of $10,000, and insurance of a joint account of husband and wife in the sum of $10,000; while a married couple living in a community property State receive an insurance coverage of the account of a husband in the sum of $10,000 and insurance coverage of the account of a wife in the sum of $10,000, but no insurance benefit whatever of a joint account of both husband and wife. In other words, a married couple living in a common law State enjoy an aggregate coverage of $30,000, but a married couple living in a community property State receive an aggregate coverage of only $20,000. And yet the savings and loan associations throughout the United States, in both community property and common law States, pay the same and identical insurance premiums to support the national program. This is not only inequality of treatment but rank injustice; it is as wrong as a 2-foot yardstick and as phony as a $9 bill.

This matter has received the particular attention of the executives and attorneys of savings and loan associations in community property States, of which there are eight as follows: Arizona, California, Idaho, Louisiana, New Mexico, Nevada, Texas, and Wyoming; but the savings and loan associations throughout the United States also recognize that this situation must be corrected.

A serious attempt was made to correct this inequity by having the regulations of the Federal Savings and Loan Insurance Corporation amended to provide the same amount of coverage to married savers in both common law States and community property States. The opinion of the General Counsel of the Home Loan Bank was that the desired objective could not be accomplished through amendment to the regulations, and that this would require further legislation. The Federal Savings and Loan Insurance Corporation is a part of the Federal Home Loan Bank System.

The proposed change in the law was submitted by the United States Savings and Loan League and was included in the Financial Institutions Act of 1957, known as Senate bill 1541 of the second session of the 85th Congress. The proposed change in legislation, in substance, was adopted by the Senate last year, but the bill failed of passage in the House.

The United States Savings and Loan League at its annual convention held in Philadelphia during the month of November 1956, through its legislative committee, endorsed this amendment to the law in the following language:

> This recommendation would amend title 4 of the National Housing Act to clarify and make certain that married savers in certain community property States are provided insurance coverage on an equal basis with savers in other States.

Subsequently, Henry Bubb, chairman of the Legislative Committee of the United States Savings and Loan League, testified favorably before the Senate committee on January 30, 1957, in connection with the Financial Institutions Act of 1957, Senate bill 1451 of the second session of the 85th Congress, in submitting a recommendation that the needed change be made in the law, with the comment that the whole purpose of the proposed change was to make it clear that in community property States the husband can have $10,000 of insurance coverage, the wife $10,000 of insurance coverage, and the two of them $10,000 of insurance coverage as such persons may have in common law States.

At the 1958 convention of the United States Savings and Loan League held in San Francisco during the month of November, the legislative committee of the league adopted the following:

> The league recommends amendment to the law governing insurance of accounts to make it clear that married savers in community property States are entitled to the identical protection of married savers in other States.

The United States Savings and Loan League has a membership of some 44,000 savings and loan associations located in every State of the Union.

The community property States, eight in number, and the State leagues of the associations in each have endorsed the enactment of this amendment. The associations located in the community property States are as follows: Arizona, 17 associations; California, 235 associations; Idaho, 11 associations; Louisiana, 72 associations; New Mexico, 23 associations; Nevada, 4 associations; Texas, 203 associations; and Wyoming, 10 associations.

We do not have a breakdown of savers on a State level; however, 2 associations in my district at Lafayette, La., have savings accounts as follows: Lafayette Building Association, 7,400; Home Building and Loan Association, 5,600. This gives you a good illustration of the number of people interested in this legislation.

When we consider the hundreds of thousands of savers in savings and loan associations in community property States, it is easy to understand their eagerness to have the law amended to put them on a par with savers in common law States.

For many years citizens in community property States enjoyed a very distinct advantage in income tax matters over citizens in common law States. By being permitted to file separate income tax returns for the husband and the wife covering funds owned by the community, they were enabled to remain in lower brackets and thereby pay much less income tax. After many years of continuous persistent effort, the law was amended to put persons residing in common law States on the same level as persons residing in community property States. Community property States are being differentiated against purely on account of their State laws. Since the insurance of shares in savings and loan associations is on a national basis, we desire by this bill to make the same apply equally in all of the States of the Union, just as has been done in connection with income tax matters.

A copy of bill H.R. 446 follows:

H.R. 446

A bill to amend the National Housing Act with regard to insurance of accounts so as to provide uniform protection to all married savers in savings and loan associations

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 401(b) of title IV, National Housing Act, as amended (12 U.S.C. 1724(b)), is further amended by adding at the end thereof the following new sentence: "Notwithstanding any other provision of law (including any law which would constitute an account community property), two persons who are husband wife shall each be insured under this title with respect to accounts in his or her sole name in an aggregate amount not to exceed $10,000 and, in addition to any insurance under the foregoing provisions of this sentence, they shall be insured with respect to accounts in the sole names of both of them in an amount (not to exceed $20,000) such that the total of the insurance under this sentence with respect to accounts in his or her sole name and accounts in the sole names of both of them shall not exceed $30,000; and neither of them may be additionally insured under this title with respect to any account in such institution unless such insurance is authorized by this title otherwise than by this sentence."

Introduction of Bill To Remove Dual Employment Limitation in Employment of Retired Officers of the Uniformed Services in Civilian Positions in the Federal Service

EXTENSION OF REMARKS
OF

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. BALDWIN. Mr. Speaker, on Wednesday, January 7, 1959, I introduced a bill, H.R. 701, the result of which will, if enacted, make available to our Government highly trained and loyal citizens to serve our country in civilian positions under our Federal system. I refer to the opportunity we shall then have of employing some retired officers of the uniformed services in civilian positions in our Federal services who are presently barred from such employment.

Under present laws, most career retired officers of our uniformed services are entirely barred from employment by the Federal Government in civilian positions, while many others, when employable, are so severely restricted in accepting such positions as to render it impossible for them to accept such employment. Reference is made to the so-called Dual Employment Act of 1894 (act of July 31, 1894; 5 U.S.C. 62) and the restrictions contained in the Economy Act of 1932 (sec. 212 of the act of June 30, 1932; 5 U.S.C. 59(a)).

Under the Dual Employment Act of 1894, commissioned officers of the regular services are not employable by the Federal Government in civilian positions if their retired pay exceeds $2,500 per annum, unless retired for physical disability or elected to office or appointed thereto by the President with Senate confirmation. Thus, almost all retired officers of the regular military services are barred from employment by our Government, if they have not been retired for physical disability. Under this law, they may not even waive their retired pay to thus serve their country since the statute simply bars them from any civilian employment by our Government. Recently, General Quesada found it necessary to resign his earned retired status in order to serve the President of the United States in an appointment which did not require Senate confirmation.

When retired officers are employable in civilian positions under the Federal Government, unless they have been retired for physical disability as the result of combat wounds or the explosion of an instrumentality of war, they may not, under the provisions of section 212 of the Economy Act of 1932, receive a total compensation of more than $10,000 per annum. If they are employable and the compensation of the civilian position exceeds $10,000 per annum, they may waive their retired pay during their incumbency in the civilian position. Those retired for combat wounds or the explosion of an instrumentality of war may keep both their retired pay and the pay of the Federal civilian position. Prior to 1932 all retired officers who were employable by the Federal Government received both their earned retired pay and the pay of the civilian office.

It should also be noted that these restrictive provisions do not apply to retired members of the Reserve components of our armed services. For many years, under appropriate legislation, it was established that members of the Reserve components of our Armed Forces would not be in any way restricted in their civilian pursuits, including employment by our Government. That provision has been reenacted and made to apply, generally, to all members of the Reserve components in the Armed Forces Reserve Act of 1952, which became effective on January 1, 1953. Nowadays, we have career retirement for reservists as well as for regulars. In addition, reserve officers now serve on long periods of active duty. It is entirely appropriate that they should be entirely free from restrictions in their employment opportunities like other citizens. We should have comparable legislation excluding retired officers of the Regular services from such restrictions, thus making all retired officers of the uniformed services available to the Government for civilian employment where the best interests of the country require such employment. Furthermore, such officers should be entitled to receive both their retired pay, which they have earned in active service in the Armed Forces of their country, and whatever civilian compensation may attach to any position under the Federal Government in which they may be employed.

The present situation has a twofold detrimental effect. It renders impossible employment of competent and available retired officers, highly trained and experienced in important fields of Government activity, at a time when their service would be greatly beneficial in the defense effort. It also deprives these officers of the opportunity of employment by their Government in civilian positions to which other citizens of the United States are eligible. It relegates these loyal military servants of the Government to a position of second-class citizenship.

Retirement laws, applicable to the armed services, properly provide that some officers be retired from the top of each rank each year and for enforced retirement upon the attainment of certain maximum allowable ages in each rank. This has been found essential to maintain the officer personnel of the services at the highest possible state of proficiency, both professionally and in physical health. It does, however, result in the loss of service to the Government of substantial numbers of highly trained, loyal and efficient officers whose services could and should be used in other governmental agencies. Yet far from planning for such use, especially in these times when we should be utilizing our available manpower to the best advantage in the defense effort in which we are now engaged for our very survival, there exist these outmoded and restrictive dual employment and dual compensation laws, which should be amended to make this potential source of manpower avail-

able to our national use. In this respect, it should be asked, Do our international competitors similarly bar themselves from the use of their trained military officers? The question suggests its own answer.

There is a mounting opinion, among those who are aware of this situation, that our present policy is wasteful in manpower and wrong. I am sure that Members of the House will wish to see the existing restrictions against the employment of retired career commissioned officers removed. That is what my bill, if enacted, will accomplish.

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my weekly newsletter to constituents for January 10, 1959.

The newsletter follows:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, January 10, 1959)

"I do solemnly swear that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely without any mental reservation or purpose of evasion and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God." (The oath.)

Thus, for 436 Representatives (including 17 women) began the 2-year 86th Congress. There were many new faces. Republicans totaled 153 (down from 200), Democrats 283 (up from 235). The opening prayer of House Chaplain Braskamp fittingly ended with a united Lord's Prayer. Meanwhile, in the other body (Senate), Chaplain Harris included "Grant us the art of disagreeing without being disagreeable."

No. 206, Old House Office Building, is the Texas Fifth District, Dallas County, headquarters. The staff is the same—Frank Crowley, Mary Hornbeck, Dorothy Chrest, Kay Wharton—an able and unique group—unique in two ways—representing one of the Nation's largest districts and in being the original staff.

The 44th Congressman in history to be House Speaker, SAM RAYBURN, Texas, was again elected by the Democratic majority in a straight party line vote; while Republicans replaced JOE MARTIN, Massachusetts, with CHARLES HALLECK, Indiana, as minority leader. The determining factor in this contest was leadership, not political philosophy since both are conservatives.

The state of the Union message was well presented by the President (he looks fine) to the joint Houses, Supreme Court, Cabinet, Chiefs of Staff, and diplomats. Worldwide in scope, it was too general for detailed programs. These will follow. The theme was "security plus liberty."

Some of the references made are most important and thought-provoking, including: liberty and the God-given rights of man; world suspicion and tension; mass destruction possible; keeping the peace requires unrelenting effort; Communist agreements and treaties are worthless unless containing self-enforcing mechanisms; defense cost exemplified by bombers worth their weight in gold; heavy military expense requires elimination of waste and duplication; strong economy is foundation for national safety; competitive enterprise and freedom describe America; public understanding is needed; basic causes of inflation are wage-price spiral and deficit financing by Government; self-discipline and restraint are necessary; meet current costs (of government) from current revenue; balanced budget; ours is the noblest of causes—human freedom.

Some of Government's present conflicts and dilemmas can be detected in this message, including: Too often we make decisions based on trusting the Russians; security can jeopardize liberty when overzealous government overexpands its jurisdiction (abroad, foreign aid; at home, welfare programs); we don't balance the budget or pay-as-we-go; waste and duplication in Government is not sufficiently being sought out and stopped by Congress; politicians sponsor more Government spending with its crushing tax load, forgetful of the need for a strong free economy; competitive enterprise and freedom can be killed by Government regulations; self-discipline and restraint are frequently forgotten by self-seeking citizens and politicians; human freedom can perish from well-meaning but misguided Government "help" and taxation.

My forecasts include: Much bitter partisan politics with "criticism for criticism's sake" for political advantage; liberals proposing spending schemes without regard for a balanced budget; conservatives of both parties realizing their ideological kinship, their combined lack of strength, and the frustration of partisan politics between parties themselves split.

Questions the future will answer: Is this a labor-socialist Congress? Can the President save the day by the veto? Will the veto be sustained or over-ridden? Will the public understand the respective jurisdiction of the Administration and Congress and help direct the course of legislation? On the answers to these, as I see it, rest the "security and liberty" of this Nation and her people.

Finally, to Dallas County people at this Congress' outset, I pledge again to support consistently all earlier stated principles made during campaigns or in Congress and live up to the congressional oath stated above, so help me God.

Introduction of Bill To Equalize the Pay of Retired Members of the Uniformed Services

EXTENSION OF REMARKS
OF

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BALDWIN. Mr. Speaker, on Wednesday, January 7, 1959, I introduced a bill H.R. 703, which has for its purpose the re-establishment of the relationship between retired pay and the active duty pay of members of our uniformed services.

It will be remembered by Members of the House that, when the Military Pay Act of 1958 (Public Law 85-422) was enacted last year, it departed from the long-established policy that retired pay of previously retired personnel of the uniformed services be computed on the same basis as that of personnel thereafter retired.

The failure of the new pay law thus to keep faith with those who have served our country so well in war and peace has resulted in disillusionment among both active and retired personnel of the services. It has dealt a blow to what, in the past, has been the greatest single incentive to tenure in military service. If this mistake is left uncorrected, it alone may nullify the very purpose of the law itself, namely, to improve the stability of career military service and to stem the exodus from such service of our best qualified personnel.

As pointed out by the Cordiner Committee report, military retirement is a unique form of retirement, possessing characteristics not found in any other form of retirement. Career retired personnel of our uniformed services continue to "hold office" after retirement. They may be, and frequently are, involuntarily recalled to active service. They are, thus, not free agents, as are those who retire under other systems. Further, there is always a definite ceiling over their potential in reward for their service—a ceiling which we here in Congress place over them in a succession of pay laws for all to read. Until the enactment of the Military Pay Act of 1958, they could, at least, have faith that their Government would adhere to well-established standards governing their retirement rights.

Among other things, in recognition of these principles, the Cordiner committee reported as follows:

The committee has therefore concluded that the incentive value of its existing military retirement program depends to a major degree upon its integral relationship with active duty compensation and the confidence which has been built up in the military body that no breach of faith or breach of retirement contract has ever been permitted by the Congress and the American people. It is this unique characteristic which serves to counterbalance many of the limited aspects of the military retirement pay and has made it one of the most influential selling points in the recruitment efforts of the services.

Editorials have appeared in leading newspapers and periodicals throughout the Nation, urging a correction of the error which has been made. Among them are the New York Times, the Washington Star, and the authoritative spokesman of the military services, the Army-Navy-Air Force Journal. One quotation from the New York Times should be looked upon as prophetic:

Young officers who might make the services a career will not be blind to this discrimination; if officers already retired can thus be discriminated against in the interests of false economy, this can happen again.

The legislature of my own State of California petitioned Congress to maintain the time-honored policy in regard to the retired pay computation of previously retired personnel of the services—

CONGRESSIONAL RECORD, May 1, 1958, page 5248.

The relatively modest cost of retired pay maintenance, as compared to the high costs of the newly created incentive features, provided in the Military Pay Act of 1958, is small, indeed, to the replacement costs which will inevitably result from the defections from career military service of those who, unless we restore their confidence, will leave the services. Faced with the assurance that their retired compensation will be progressively reduced, the best and most alert officers may seek other careers, unless we act now. Even worse, necessary replacements for those who thus leave the services might well result in the substitution of less qualified personnel for the best qualified of our fighting men.

In the face of this dire threat to our national safety, I am sure that Members of the House will wish speedily to correct the mistake we have made by reestablishing equality of treatment in retired pay compensation among members of the uniformed services. That is what my bill, if enacted, will accomplish.

Startling Facts About Florida's Population Growth

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. FASCELL. Mr. Speaker, in this morning's mail I received the following copy of a very comprehensive report from Harold Colee, executive vice president of the Florida State Chamber of Commerce in Jacksonville:

STARTLING FACTS ABOUT FLORIDA'S POPULATION GROWTH

(Compiled by the Florida State Chamber of Commerce, Jacksonville)

1. Florida has a permanent population of 4,442,000, as calculated by the U.S. Bureau of the Census in mid-1958.

2. Florida is the fastest growing large State in the Nation:

Since 1950 it has gained 1,671,000 new permanent residents; only California added more.

This Florida gain is about the size of the State in 1940; also;

This Florida gain is about the same as today's size of Arkansas or Arizona or Oregon.

3. Florida gained 60 percent during the 8 years, 1950–1958.

Only little Nevada (267,000 population) with 67 percent topped this.

4. Florida's weekly gain in population averaged 5,032 persons each week during the past 3 years.

This is a net figure and was made up of 3,885 persons who moved here from other States and countries and 1,177 persons from natural increase.

This weekly gain was greatest in the year which ended June 30, 1956, and has slightly lessened since that time.

5. Florida's 3-year population gain:

Year	Number gained (in thousands)			Persons gained weekly		
	Total	Natural	Migration	Total	Natural	Migration
1955–56	289	58	222	5,385	1,122	4,263
1956–57	272	63	209	5,231	1,204	4,027
1957–58	233	63	170	4,481	1,207	3,274
3 year	785	184	601	[1] 5,032	[1] 1,177	[1] 3,855

[1] Average.

6. Florida stepped up one more rung on the population ladder last year, passing Missouri, to a rank of 12th in mid-1958. (Incidentally, Florida ranks 13th in beef cattle.)

Florida ranked 20th in population in 1950; and Census Bureau estimators affirm that Florida will take 9th place between 1965 and 1970.

7. Florida's population is approaching that of Indiana (with 4,581,000) and Massachusetts (with 4,862,000).

8. Florida's population is made up of 37 percent under 21 years of age (United States, 38 percent); 53 percent from 21 to 64 years of age (same as United States); 10 percent 65 and over (United States, 9 percent). Breakdown based on 1956 census estimates, the latest available.)

White persons account for 81 percent of Florida's population. This proportion has been increasing steadily for many years.

9. Floridians numbered 2,771,305 on April 1, 1950, the date of the last regular census. The U.S. Bureau of the Census has made the following estimates of Florida's population as of July 1 of each year:

Year	Total population		Increase from previous year		Percent increase from 1950
	Number	Rank	Number	Percent	
	Thousands		*Thousands*		
1950	2,836				20
1951	2,992	156	5.5	5.5	19
1952	3,152	160	5.3	11.1	17
1953	3,303	151	4.7	16.4	17
1954	3,464	161	4.8	22.1	15
1955	3,657	193	5.5	28.9	14
1956	3,937	280	7.6	38.8	13
1957	4,209	272	6.9	48.4	13
1958	4,442	233	5.5	56.6	12

NOTE.—Gain from Apr. 1, 1950, 60 percent; from July 1, 1950, 56.6 percent.

THE PEOPLE/THE LAND

10. Floridians numbered 51 for every square mile of land in the State in 1950 and 82 in 1958. (U.S. average, 58 persons per square mile in 1958.)

Twenty-six States had more people per square mile than Florida in 1950; 16 States were more densely populated in 1958.

There are 54,262 square miles of land area in Florida; 24 States are larger.

11. Florida's growth means more markets, more opportunities. It also creates an urgent need for more highways, more schools, more public facilities of all types. And it brings with it changes in land use and the readjustments which attend change.

Because of Florida's superior climate, the land is desired for homes. And because of this same climate, and the adaptability of the soil, the land is desired for agriculture. In recent years the rivalry between population growth and expanding agricultural pursuits has been accentuated. The 1958 Yearbook of Agriculture, titled Land, published by the United States Department of Agriculture, points up Florida's land situation in the following quotation:

"L. A. Reuss, of the Agricultural Research Service, reported that recent trends in Florida icluded a rapidly rising urban population, a moderately increasing rural nonfarm population, and a declining farm population. Projections to 1970 indicated a possible slight increase in the number of farms, a moderate increase in urban areas, and a market growth in the rural nonfarm population.

"Spreading urban and suburban areas intensify problems of providing roads, electricity, sewerage, police and fire protection, schools, and shopping facilities. Tax and zoning problems are multiplied. Premature subdivisions often do not provide for services.

"Urbanization has a strong impact on the attitudes and goals of farm people as they are brought into closer contact with nonfarm or part-time farm people, urban employment, and ways of life. This impact is greater in northern and western Florida, where the culture of the rural population is more homogeneous than in the rest of the State. Increased opportunities for nonfarm employment increases interest among rural people in education and training.

"The number of noncommercial—part-time and residential—farms has dropped in northern and western Florida and increased in central and southern Florida. In some counties there were decreases or only slight increases in the number of farm operators working off their farms 100 days or more; largest decreases in this group were reported in Duval and Nassau Counties in the Jacksonville area.

"A study in Duval County by Daniel Alleger, an economist at the Florida Agricultural Experiment Station (Gainesville), showed that two-thirds of part-time and retirement farmers were gainfully employed, one-fourth were retired, and the others were self-employed.

"Two-thirds of the home-farm units had fewer than 6 acres. More than half had fewer than 4 acres. About half of the operators planted one-half acre or less in crops. Nearly 90 percent of the enterprises were gardening types of agriculture. About 80 percent of the operators kept poultry or meat animals. The economic advantages of part-time farming came more from savings than from increased earnings.

"As population and economic activity have grown in Florida, there have been tendencies toward a gradual upgrading in the use of land: Subdivisions replace citrus groves, citrus groves replace improved pastures, and pastures replace native rangelands.

"The acreage of bearing citrus groves increased about 25 percent (an estimated 567,000 acres in 1958) and the nonbearing acreage doubled (94,500 in 1957–58) from 1949 to 1958, according to Mr. REUSS. Some established citrus groves were being cleared for subdivisions, highways, and industrial parks. Some estimates indicate that only 50,000 to 100,000 acres suitable for citrus have not been planted, and of these 25,000 to 50,000 acres would be taken up for homes. All ridgelands in some places are occupied, and new groves are being set out on flatwoods land after ditching and bedding. Demand for land for citrus in central Florida affects the supply and the cost of land available to producers of other farm products.

"The area of improved pasture in Florida was estimated at more than 1.6 million acres. Continued expansion is expected. Florida has perhaps 10 million acres that could be converted from native rangeland into improved pastures. Some loss of acreage of improved pastures occurred when new citrus groves are set out and when residential and commercial subcenters are established in open country."

The acreage of truck crops increased by 116,000 acres between 1950 and 1958 (471,000 acres planted in 1957–58 according to the Florida State Marketing Bureau).

"The demand for land for truck crops in 1958 was not in serious conflict with other uses of land. Urbanization encouraged increases in the acreages in truck crops in rural areas such as the Everglades, some expansion in acreage around urban markets, and some outward movement of production areas at the perimeter of expanding urban centers.

"The acreage in general field crops has declined slightly. Demand for land by pulp and timber companies affects the economy of general farming in northern and western Florida.

"Several examples are at hand of some of the effects of a high demand for land. Dairy farmers near Miami have sold land for subdivisions for $1,000 or more an acre and moved their operations to cheaper land north of Palm Beach or near Lake Okeechobee. The same type of movement is taking place near towns like Tallahassee. (St. Petersburg is typical of this movement.) In the process, the dairymen may increase greatly the size of their farms and boost land values at their new locations. Cattlemen are refraining from investing funds to improve pasturelands that may be in demand as sites for citrus groves or subdivisions. In areas where the land market is highly active, especially the coastal and metropolitan areas, investors are permiting much land to remain idle, pending resale or the anticipated change to a higher use. Dwellings in rural areas are in demand as housing for part-time farmers and for nonfarmworkers. Market values of tracts that have dwellings seemed in 1958 to exceed current or prospective values for agricultural purposes."

Sources: U.S. Bureau of the Census, Florida Bureau of Vital Statistics, and U.S. Department of Agriculture.

Compiled and distributed by Florida State Chamber of Commerce, P.O. Box 8046, Jacksonville, Fla., January 1, 1959.

Further, I would like to direct the attention of my colleagues in the House to the results of a survey that was recently made on the district that I represent, Florida's Fourth District, which is comprised of Dade and Monroe Counties.

The 1950 census showed only 495,000 Dade County residents. The 1955 Dade census, 703,777; a 5-year increase of approximately 84 percent. A 1958 survey by the University of Miami concludes Dade now has a population of 852,000.

Monroe County, with an official 29,957 in 1950, is growing similarly and is now thought to have 65,000. It is authoritatively estimated that 1,200,000 residents will have permanently settled in Dade and Monroe by 1960.

The 1,200,000 Dade and Monroe County figure compares to a congressional district national population average of about 345,000. The district with the least people has only 159,000.

The Bureau of Census figures, recently released, confirm Florida's fabulous growth and estimate that Florida will be entitled to three additional seats in the Congress following the 1960 census.

The present permanent population of Florida's huge Fourth Congressional District—Dade and Monroe Counties—now far exceeds the entire population of each of 15 States—Arizona, 749,587; Alaska, 128,643; Delaware, 318,085; Maine, 913,774; Idaho, 588,637; Montana, 591,024; Nevada, 160,083; New Hampshire, 533,242; New Mexico, 681,187; North Dakota, 619,636; Rhode Island, 791,896; South Dakota, 652,740; Vermont, 377,747; Utah, 688,862; and Wyoming, 290,529.)

Further, the present population of the district I represent is larger than the combined population of four States.

During the year many of you will have occasion to visit and/or pass through Florida, and through my congressional district. On behalf of our chambers of commerce, our many business interests, and each and every member of our community, I take this opportunity to extend to you an invitation to visit with us and to take advantage of our salubrious climate, and any of the multitude of business and recreational facilities that are abundantly available.

John R. Reidl

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, my district was saddened by the recent untimely death of John R. Reidl, vice president and general manager of the Appleton Post-Crescent.

I was privileged to know John Reidl, not only as one of the Nation's outstanding newspapermen, but as a close friend and adviser. It was in this latter capacity that John Reidl will be most sorely missed. He unselfishly devoted himself to assisting people in all walks of life, in the same modest and quiet manner in which he contributed to the civic leadership of his community and State.

John Reidl was a newspaperman's newspaperman, one of the most skillful and respected practitioners of his art. He worked his way to the top, from reporter to city editor, to managing editor, to executive vice president, and general manager. On his way up, he contributed greatly to the success of the Post-Crescent, helping to make it one of the truly great newspapers of Wisconsin.

His life was aptly summed up in an editorial which appeared in the Post-Crescent after his death:

John Reidl was a real Christian, and a man who truly accomplished the objective of living the good life, and leaving the world a better place for his having lived in it.

I include the complete editorial as part of my remarks, as well as an editorial which appeared in the Green Bay Press-Gazette:

[From the Appleton (Wis.) Post-Crescent, Jan. 3, 1959]

JOHN R. REIDL

John Reidl wouldn't have wanted an editorial published about him. He would have snorted that it was a waste of good newspaper space. One of the best judges of news values we have known, he could never understand that he could be news. Several years ago he wrote his own obituary for the Post-Crescent's files; it was four paragraphs long and said, in essence, that he had been born, had lived, and died.

But John Riedl did a lot more than that. A complete list of the things he did for his newspaper, his community, and its people will never be drawn, for he never told anyone about many of them. Newspapermen knew him as a highly skillful practitioner of their craft, businessmen knew him as a topnotch executive, civic leaders knew him as a man to whom they could turn with their knottiest problems, politicians went to him to share his astute evaluation of political trends and events. But perhaps his least known side was his compassion for his fellow human beings; a deeply religious man—he went to mass daily for many years—he truly lived a Christian life. Reporters, for instance, sometimes would notice one or two rather infirm looking individuals in Riedl's office, deep in conversation with him; later they learned that Alcoholics Anonymous sent their most difficult cases to him for personal counsel. He and his wife supported a number of needy older people for many years; exactly how many will never be known. A stickler for publishing the news despite the persuasive importuning of people who didn't want some story in the paper—especially if the importuner were prominent or wealthy—he sometimes would break his own rule for, as he put it, "some poor fellow who didn't have any influential friends." To his closest associates he would occasionally relate, quietly but proudly, how some of those poor fellows had come back in later years to thank him for giving them a break when they needed it.

Over the years journalism schools sent their most promising graduates to the Post-Crescent so they could be trained under Riedl. A tough taskmaster who insisted on good writing and absolute accuracy—he was known, sometimes affectionately and sometimes fearfully, as the Bull of the Woods in his earlier days as managing editor—he would spend hours with a young reporter or editor, patiently going over copy and explaining how a story should be written or edited. One of his outstanding qualities in his later years was an unaffected sympathy with the problems of young people; unlike many older men he could really understand their ambitions and dreams, and often cautioned his department heads against discouraging their younger employees. Often he would permit his subordinates to go ahead with projects the quality of which he was personally doubtful; he would say it was better to let young men try out their ideas than to stifle their creativeness.

Riedl became irritated when someone referred to journalism as a profession; he insisted on using the term "newspaper business" and sometimes would shock more idealistic practitioners by asserting that news is a commodity—"we buy it and sell it, just like any other business." Or, he would point downstairs and comment, "The important thing is what's in the kitty (company treasury) down there." Despite this ultrapractical approach he was early a strong advocate of publishing more news columns—the kind that bring no direct revenue—buying the best news, picture and feature services, running more columnists than almost any other newspaper, and building up one of the biggest news staffs of any newspaper this size. He also pushed hard for building up the Post-Crescent's circulation in as large an area as possible, on the theory that it would bring more business to Appleton "and what's good for Appleton (later he would say the Fox Cities) is good for the Post-Crescent."

Riedl was a self-educated man. His formal education went only through high school, yet his knowledge of many subjects would put holders of doctors' degrees to shame. He read widely and learned naturally—he spent one winter, for example, reading nothing but books on constitutional law. He numbered among his close friends college and university presidents and professors and—although he was a devout Catholic—Protestant ministers. He loved to sit for hours with the latter, discussing theology and doctrine, about which his knowledge was formidable. He knew much about the history of Appleton, and was a fount of information for writers and researchers about the city's families, its industries and its early leaders.

Riedl's civic activities were many, although again he was wont to depreciate the role he played. Late in World War II when, under doctor's orders, he sat down to write letters of resignations from all the committees and commissions of which he was a member, he found he had to write more than 20 letters. He was a strong, sometimes impatient, advocate of civic progress on all fronts, taking the lead in such programs as the establishment of the Apostolate and the Visiting Nurse Association, a community fund, the county airport, an industrial development program, and the like.

A political conservative, Riedl nevertheless numbered among his friends Democrats, liberals, and labor leaders. They all came to him for advice—on one occasion three men running for the same office called on him within the space of 2 hours—and he gave it freely, even when the receiver knew that Riedl himself thoroughly opposed his policies and principles. Among his close friends were men with such varying ideologies as former Gov. Philip La Follette, the late Senator McCarthy, and former Lawrence (now Harvard) President Nathan Pusey.

It is difficult to write about a man with whom one has had such close business and personal ties. Words will not express adequately our feelings. Suffice it to say that John Riedl was a real Christian, and a man who truly accomplished the objective of living the good life, and leaving the world a better place for his having lived in it.

[From the Green Bay (Wis.,) Press-Gazette, Jan. 5, 1959]

JOHN R. RIEDL, OF APPLETON

The death of John R. Riedl, vice president and general manager of the Appleton Post-Crescent, represents a real loss to the newspaper business in Wisconsin. To the Press-Gazette it means the loss of a good friend.

During the years since 1920 when Mr. Riedl became city editor of the Appleton Post-Crescent, there has been a close relationship between the Post-Crescent and the Press-Gazette. Throughout this long period, Mr. Riedl was active successively as city editor, managing editor, as executive vice president, and as vice president and general manager. Always and regardless of the title he held, he was a firm rock of commonsense and a man ready to go halfway in any cooperative move.

He was a good newspaperman and as such was familiar with or active in almost everything of importance going on in Appleton. He preferred a quiet, behind-the-scene support for most activities to that of the public leader but he supplied the energy and drive for a great many good things that happened in his community and in the newspaper field about him. He will be missed as a friend and a counselor by many who knew him well and worked with him during his very active years as a civic leader and a newspaperman.

Statement of Policy by League of Wisconsin Municipalities

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, January 12, 1959

Mr. WILEY. Mr. President, in the days ahead we shall be faced with serious decisions on a wide variety of issues affecting local, national, and international interests.

In considering programs for domestic progress, a major challenge will be to determine the appropriate role of the local, State, and Federal governments in the development and maintenance of these programs. Too, we must consider social, economic, population, and other factors in the overall economy.

We recognize, of course, that today there is a trend toward population concentration in urban areas.

For example, in 1850, only about 15 percent of the people lived in our cities, villages, and towns; in 1950, only 100 years later, the percentage had risen to about 65 percent.

With this tremendous growth and expansion, there arise, of course, numerous problems. These cover a wide variety of fields, including the need for more adequate highways, airports, urban renewal, adequate water and sewer systems, and other programs.

Today, I have received from Mr. Ed Johnson, executive director of the League of Wisconsin Municipalities, a statement of municipal policy by that splendid organization.

The statement outlines the views of the league on a wide variety of important programs, including intergovernmental relations, the need for an improved civil defense program, the necessity of effective Federal control over natural gas, problems of urban renewal, and other challenges of deep concern, not only to local municipalities, but also to us, in Congress.

We realize, of course, that there are different approaches to resolving these problems.

To give my colleagues the benefit of the constructive thinking of the league outlined in the statement of municipal policy, I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF MUNICIPAL POLICY OF THE LEAGUE OF WISCONSIN MUNICIPALITIES

This statement of municipal policy of the League of Wisconsin Municipalities is the vehicle through which the cities and villages of Wisconsin make known their aims and purposes. It sets forth broad areas of responsibility for municipal, State, and Federal governments on matters affecting local governments. It is primarily a restatement and summary of many long-standing league policies.

This policy represents the foundation upon which the league builds its legislative action program at both the State and Federal levels. It does not attempt to state the league's position on the hundreds of individual bills which will be presented to the Congress and the State legislature during the coming sessions; rather it attempts to set forth guideposts for league officials and committees to use in establishing the league's position on individual bills which may come under consideration in future years.

THE FEDERAL GOVERNMENT AND MUNICIPALITIES

Each year it becomes more and more apparent to the officials of Wisconsin cities and villages that the impact of Federal Government policies on local governments is becoming greater. The effects of national legislation and administrative programs are felt in every city and village in Wisconsin. League members therefore feel that their thinking on the major Federal municipal issues of the day should be made known to Members of Congress and other Federal officers. It is for this reason that the following statements of national municipal policy are set forth:

Intergovernmental relations

The relations between the Federal, State, and local governments determine the limits of the ability of municipalities to solve their own problems and to serve their citizens. Therefore, continued progress in municipal government is dependent on a proper relationship between and understanding among the various governmental levels and units.

The league endorses the guiding philosophy of government as set forth by the Kestnbaum Commission on Intergovernmental Relations in its report to the Congress in 1955. The report states the following:

"Leave to private initiative all the functions that citizens can perform privately; use the level of government closest to the community for all public functions it can handle, utilize cooperative intergovernmental arrangements where appropriate to attain economical performance and popular approval; reserve national action for residual participation where State and local governments are not fully adequate, and for the continuing responsibilities that only the National Government can undertake."

To continue the necessary constant study of Federal-local relationships, the league recommends the creation of a permanent national commission by Congress. The members should be representatives of all levels of Government, and they should have as their primary aim the clarification and definition of the policies of the Federal Government with respect to local units.

Municipal credit

The improvement of municipal credit and the municipal bond market is a matter of much concern to local governmental officials in these days of high costs and the need for tremendous capital improvements. Because of the effect of national tax policy on municipal bonds, the league recommends to Congress that: (1) The present Federal income tax exemption of income from municipal bonds be continued; and (2) that legislation be adopted which would further broaden the market for municipal bonds by authorizing all banking institutions to participate in the municipal bond market, and the income tax exemption be clarified so as to authorize the "pass-through" principle for investment companies.

Payments in lieu of taxes

The league urges the Congress to enact legislation which will broaden the present Federal policy regarding payments to local governments in lieu of property taxes on Federal property and payment of special assessments on Federal property benefited by local improvements.

Highways

Since the greatest need for improvement in highway facilities exists in and around municipalities, the league urges the Congress to continue to expand the Federal highway program and to given even greater recognition to the needs of cities and villages. The impact of the new Interstate Highway System is yet to be felt, and the Congress should pass all legislation necessary to implement the role that cities and villages must necessarily play in the provision of adequate highway facilities to the millions of motorists in the Nation.

Airports

Airports do not serve only the residents of the municipalities in or near which they are located; they serve the traveling public of the Nation. For this reason the Federal Government has a repsonsibility for participating in any program to provide adequate terminal facilities for air travelers. The league urges that the existing Federal airport program not only be continued but be expanded in order to adequately provide facilities for the ever-increasing number of air travelers. Local units of government are financially incapable, in many instances, of financing the construction and improvement of airport terminal facilities which are and will be needed to provide an adequate network of air terminal installations.

Civil defense

Because of its very nature civil defense is a matter of national concern. Wisconsin municipal officials stand ever ready to cooperate in civil defense activities. In spite of the readiness of local officials to aid and assist in the civil defense program, they are not in a position to know the over-all needs of such a program and feel that an adequate civil defense program requires greater participation and leadership at the national level.

Natural gas

Since an adequate supply of natural gas, reasonably priced to the consumer, is essential to the citizens and industries of Wisconsin, and since natural gas consumers would be left without adequate protection if there were no Federal control over the price of natural gas as sold by the producer and supplier, the league urges Congress to reject any legislative proposals which would leave the price of natural gas unregulated by Federal authority.

Water pollution control

The pollution of rivers and streams which flow through many municipalities and States is a problem of national concern. The current Federal program for sewage plant construction has been successful in enabling local governmental units to expedite their pollution control activities. Although there may be questions in the minds of some Wisconsin municipal officials as to whether such a program was originally justified, there now remains no question that it should be continued for municipalities with limited financial ability. Discontinuance of the program would cause new sewage plant construction activities to be curtailed and be detrimental to the pollution control program. For this reason the league urges that the Congress continue to appropriate funds for sewage plant construction and research in the field of pollution control.

Urban renewal

The decay of our municipalities through blight and deterioration is a matter of concern to all residents of our Nation. The league urges that the Federal urban renewal program be continued and that funds be made available to local units of government to assist them in preserving our urban centers. Slum clearance and urban renewal are of such a nature and of such great expense that local financing of the needed programs is impossible.

THE STATE OF WISCONSIN AND ITS CITIES AND VILLAGES

The actions of the State legislature and State officers, departments and agencies have had and will have an increasingly greater impact on the residents of Wisconsin cities and villages and their local governments. Municipal governments are no longer mere creatures of the State but are active, working partners in the performance of public services and in the administration of Wisconsin government. Wisconsin has long had a reputation for good government at both the State and local levels. This reputation can be maintained only as long as the working relationship among all levels of government within the State is maintained according to sound principles and policies. It is for this reason that the League of Wisconsin Municipalities, representing the State's cities and villages, sets forth the following broad principles as a statement of municipal policy in regard to State and local relationship.

Home rule

Actions of the State legislature and State officers, departments and agencies should always conform to the spirit of the home rule amendment of the State constitution overwhelmingly ratified by the people of Wisconsin in 1924. Government close to home is a Wisconsin tradition and should be preserved. The League, representing those units of Government which have been granted broad home rule authority by vote of the Wisconsin electorate, must necessarily oppose all measures involving attempts to have the State interfere in the local affairs of Wisconsin cities and villages.

Finances

The limited taxing powers of Wisconsin municipalities, together with the Wisconsin practice of having a substantial portion of total public services performed by local governments, demands an extensive program of intergovernmental financing and a necessarily complex State-local financial relationship. It is essential that in this State-local financial relationship the integrity, home rule authority and financial stability of municipalities be preserved. The State government has the responsibility for providing the means whereby Wisconsin local governments can adequately finance necessary local governmental activities without causing undue burden on the local property taxpayer.

The league, therefore, in representing its membership must oppose all proposals which (a) impose additional costs and mandatory duties upon cities and villages, directly or indirectly, without providing new revenues to pay such costs from sources other than the general property tax; (b) take away revenue now received by cities and villages unless replaced by some source other than the general property tax; (c) exempt property from general property taxes or cause exemption from State taxes shared by municipalities without providing an equivalent new replacement revenue; or (d) create excessive restrictions in the allocation of State aids and shared taxes.

Urban growth

Cities and villages must be given the opportunity for normal expansion. The complexities of urban growth are increasing each year. Responsibility for the solution of problems caused by the urbanization of Wisconsin's population rests equally with the State and local units of government. Continuing study of urban problems at all levels of government must be encouraged and local units must be given adequate means to solve problems of urbanization through cooperative effort. In all matters relating to urban expansion the home rule authority of cities and villages must be given full consideration and what appear to be simple solutions through mandatory State legislation must be discouraged.

Highways

The members of the league anxiously await the findings of the present study of highway needs being made by the highway advisory committee of the legislative council. It is firmly believed that the results of this study will statistically prove that the greatest needs in the field of highway development are found in Wisconsin cities and villages. No major changes in the formulas for the distribution of highway aids should be made until the complete results of the study are known.

Cities and villages are now expending for street purposes several times the amount received from highway user taxes. It is now necessary to finance much of the highway costs to cities and villages from the general property tax. Certainly no consideration should be given to proposals to reduce the amount of income which cities and villages presently receive. Serious consideration should be given to proposals whereby the highway user pays a greater and more equitable share of highways costs.

Employee relations

The league does not oppose unionization of municipal employees but it does oppose State legislation interfering in matters of local governmental employment. Members of city and village governing bodies are in a far better position to understand the problems of their employees than are members of the State legislature. If home rule means anything in Wisconsin, it means that local employee relationships should be dealt with by the duly elected, local governmental officials. Therefore, the league will continue to oppose any attempt to have the legislature enact laws interfering with local government-employee relations.

Water resources

An adequate supply of water is essential to the development of any urban community. No water use should be given a higher priority than municipal public water supply. No private use should interfere with the availability of water for public purposes. For these reasons the league will oppose any attempt to enact legislation which would curtail the authority of municipalities to obtain an adequate supply of water for public use.

Education

The rapid increase in school population has caused tremendous pressures on the general property tax which provides approximately four-fifths of the funds necessary to support elementary and secondary education in Wisconsin. It is doubtful that the property tax can continue to bear such a high percentage of school costs in years to come when school enrollments are expected to increase at an even more rapid rate. If the property tax is either directly or indirectly further burdened for the financing of education, this source of local governmental revenue will make home ownership prohibitive, especially by individuals on fixed incomes.

The league believes that all children should have an opportunity for adequate education in the public schools of Wisconsin. However, educational opportunity must not be considered in a vacuum. In Wisconsin cities where education is one of many governmental services, it must be considered in relationship to all other municipal services rendered. The fragmentation of governmental services through mandatory attachment of districts outside corporate limits to school systems in cities operating under

the city school plan frequently results in curtailment of municipal expansion. For these reasons the league will oppose any attempts to enact legislation for the compulsory attachment of districts which will jeopardize the opportunity for normal growth and expansion of the municipalities for all governmental purposes if those responsible for local municipal government are denied an opportunity to participate in such decisions.

Dedication of the Wiley-Dondero Ship Channel, St. Lawrence Seaway, Massena, N.Y., September 13, 1958

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BROOMFIELD. Mr. Speaker, I offer for the RECORD the address made by the Honorable George A. Dondero, of Royal Oak, Mich., former Member of the House of Representatives, at the dedication of the Wiley-Dondero Ship Channel, being a part of the St. Lawrence Seaway project named in honor of Senator WILEY and himself, September 13, 1958.

The address follows:

DEDICATION OF THE WILEY-DONDERO SHIP CHANNEL, ST. LAWRENCE SEAWAY

(Remarks of Hon. George A. Dondero, dedication of the Wiley-Dondero Ship Channel on September 13, 1958, Massena, N.Y.)

An occasion of this kind occurs only once in a lifetime. This is the greatest red letter day of my life. We are filled with emotions of gratitude and appreciation to our fellow countrymen for the signal honor bestowed upon Senator WILEY and myself by determining that this ship channel shall bear our names.

We dedicate today an important link in one of the world's most impressive monuments to international cooperation and good will.

We are witnesses not only to the construction but the near completion of the greatest engineering project of our time. The dream of two friendly nations who speak the same language and read the same Bible will soon become a reality.

Perhaps if North America has a lesson for the world it is the lesson of the border delineated by the St. Lawrence and the Great Lakes; the lesson that it is possible to divide, and yet to share; that it is possible to be independent and at the same time interdependent; and that sovereign peoples can work together to bring fulfillment to a great common dream of industry and commerce. Let the world take note of what can be accomplished when mutual trust, friendship, and understanding chart the course of nations in building a great work for the benefit of all mankind.

To have had a part in guiding through Congress the legislation that made it possible for the United States and Canada in mutual trust, friendship, and understanding to undertake the building of this colossal project is an achievement and satisfaction for Senator WILEY and myself which cannot be measured in words.

On the walls of the House of Representatives in Washington, immediately above the Speaker's chair is inscribed the only quotation in that historic chamber. It is from Daniel Webster, a legislative giant of 100 years ago. Said he, "Let us develop the resources of our land, call forth its power; build its institutions, promote all its great interests and see whether we also in our day and generation may not perform something worthy to be remembered."

To Lew Castle, Administrator, his staff and advisory board of the St. Lawrence Seaway Development Corporation, the Corps of Army Engineers of the U.S. Army and all who had a part in the planning and construction of this gigantic undertaking for the development of navigation and hydroelectric power on both sides of the river, the thanks of both nations are generously tendered for its benefits to commerce, prosperity and peace, and to the national defense of North America.

After many years of hesitation, consideration, negotiation, and of planning, the mighty St. Lawrence seaway will soon become a reality. Man's dream of two centuries will have come true. Here it stands an unparalleled example to the world of international understanding and good will. Because of this I believe that in the years to come the people of the United States and Canada will, for their own safety and the good of all, walk together in prosperity, in majesty, and in peace.

Item Veto

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. PELLY. Mr. Speaker, I am introducing a concurrent resolution to implement the recommendation of President Eisenhower in his state of the Union message on January 9, 1959, for giving the Chief Executive item veto power in connection with appropriation and authorization bills.

As the President said, the responsibility either to approve or to veto specific items is one of the most important corrections that could be made in our annual expenditure program because of the savings of tax dollars that would result.

My proposal, Mr. Speaker, is an amendment to the joint rules of the House and Senate not only providing veto power of individual items in appropriation bills but also veto power of authorizations for borrowing funds direct from the Federal Treasury. This is the only answer I see for eliminating nonessential spending and unnecessary projects.

I know that when this item veto power was requested by former Presidents, the argument was advanced by some Members of Congress that in the President's hands we would place the power to use pressure on or punish individual Members of Congress who did not vote the way a President wanted them to on his administration's measures.

Of course, Mr. Speaker, there have been times when Members have been subject to pressure, and we all have legislation which could be used against us. But our first responsibility is to the Nation and any vindictive veto would boomerang under the light of publicity; or it could be overridden by Congress. Certainly Members know in their hearts that the passage of this concurrent resolution is one necessary and important way of restoring fiscal responsibility and Federal economy to our Nation.

I hope the Judiciary Committee will consider this matter.

Why Is Anyone Surprised at Soviet Maneuvers?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. JUDD. Mr. Speaker, when the Communists turn on smiles and appeals for us to trust them one month, and switch to threats and brazen lies about us the next month, one always hears some Americans ask, What are they up to now? This is always a cause for astonishment. How long are we to refuse to read the Communist rule books? These rules books spell out in detail the pattern of deception, lullaby songs, and so on, which they follow faithfully.

There never is any mystery about the ultimate objective behind any Communist actions. The objective is to confuse, divide, soften up, and weaken us preparatory for the final kill. Whenever they urge us to follow a given course, it is because that will be good for them, not for us. How can we hope to survive, unless we wake up to the nature of this conspiracy and refuse to fall for its devious tricks, and turns?

One of the best short analyses I have seen of this consistent Communist behavior is in the enclosed column by Mr. Roscoe Drummond, in the New York Herald Tribune several weeks ago. The headlines of today, the current hotspots of Communist agitation, are different now than they were then, but the pattern never changes.

Under leave to extend my remarks, I include the article, as follows:

REDS MAINTAINING POLICY OF TENSION

(By Roscoe Drummond)

WASHINGTON.—Everybody agrees that the Soviet and Chinese Communists are well embarked on a tough, tension-laden, let's-keep-everything-in-turmoil policy. What surprises me is not that the Communists are acting to lacerate every sensitive spot in the free world but that so many people in the West should in any way be startled or surprised or in any way find it unexpected.

Of course, there will be stops and goes in Soviet-Chinese tactics; there will be some pauses to catch breath, to reappraise and get ready to apply the pressure somewhere else. But the fact is that creating tension and turmoil is the norm of Communist policy—it is the built-in requirement of Communist dogma. The only time to be moderately surprised is when they let up. Let us never forget that absence of pressure from Moscow and Peiping is the interruption of the normal.

The Communist concept is not national, it is international. The Communist revolution

has neither spent itself nor come to an end after establishing its control over millions of Russians and Chinese.

What we need to realize is that the Soviet and Chinese Communist leaders are dedicated Leninists and that in the words of Lenin they are committed to carrying on a "permanent revolution" against every non-Communist society everywhere in the world until one or the other prevails.

This is not the West's cold war challenge to the Communists. We have never said that the whole world must be one thing or the other. This is communism's challenge to all who do not want communism. This is why it is well to appreciate that a tough, let's-keep-everything-in-turmoil policy from Moscow and Peiping is not a departure from the normal, is not startling, surprising, or unexpected, but is standard, by-the-book, authentic Leninist routine.

No one has more lucidly set out the Marxist-Leninist philosophy of the "permanent revolution" than Harry and Bonaro Overstreet in their new book, "What We Must Know About Communism," which is the most mature, perceptive, clear-headed, radiantly illuminating work on this subject I can imagine. On the one point I am seeking to make, let me quote from the Overstreets who, in turn, quote pertinently from Lenin:

"Peace, as Lenin saw it, was 'a respite for another war'—while the 'permanent revolution' went on; '* * * there is no other alternative: Either the Soviet Government triumphs in every advanced country in the world or the most reactionary imperialism triumphs, the most savage imperialism * * * Anglo-American imperialism, which has perfectly mastered the art of using the form of a democratic republic.

" 'One or the other.

" 'There is no middle course.' " (Lenin, "Selected Works," vol. VIII, pp. 146–149.)

So let us not be surprised when the Communists take a tough turmoil-laden line as they are now—toward Hungary, toward Yugoslavia, in Berlin, in Iran, at Geneva over ending nuclear tests, creating frontier incidents in the air (as downing the U.S. plane off-course over Armenia) and in the continued alternate-day shelling of Quemoy and Matsu.

And the revolution goes on inside the Communist strongholds. Mao Tse-tung has decapitated the flowers of criticism he urged to lift their heads into view. Khrushchev is no longer talking about "socialist legality" and has called a halt on the "rehabilitation" of past victims of socialist illegality. Premier Imre Nagy and his closest associates have been shot. Moscow's "literary thaw," which lasted about a year after Stalin's death, has ended with the attacks on Pasternak.

Moscow and Peiping are not engaged in "peaceful coexistence." They are engaged in "permanent revolution" against every non-Communist society by every measure they think has any chance of succeeding.

Amending Federal Tax Laws

EXTENSION OF REMARKS
OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. MACDONALD. Mr. Speaker, I have today introduced a bill designed to close one of the largest and most inequitable loopholes that exist in our tax laws. Our Federal income tax law admittedly has many devices which have caused a serious erosion of the tax base. None is worse, however, than that loophole which I now wish to call to the attention of the House. I deplore any gimmick which permits one group to escape its just share of Federal tax obligations by shifting that tax burden to others. Our tax system, largely one of self-assessment, can survive only when justice is preserved as between taxpayers of the entire country.

The loophole to which I wish to direct attention today is that which permits giant, wealthy oil and gas companies to avoid hundreds of millions of dollars of taxes which should be paid to the Federal Government. I refer to that device in the Internal Revenue Code known as oil and natural gas depletion allowance. Under the present law, income for tax purposes may be reduced by 27.5 percent of the gross income from each oil and gas property, but not to exceed 50 percent of net income. For 32 years, oil and gas companies have benefited from this device at the expense of other taxpayers of the Nation. I think the time has come when Congress should no longer pamper this giant industry. Tax favoritism and discrimination are always undesirable even when rates are low. Under present high levels, they are intolerable.

How did the oil and gas interests obtain favored tax treatment? It all started back in the days of World War I when income tax rates were greatly increased. Because of the skyrocketing cost of drilling as compared with prewar costs, Congress was persuaded to introduce a new concept into the tax law. This new concept was called "discovery value depletion," and was based upon the theory that it was unfair to limit the discoverer of an oil deposit to the recovery of his costs which were largely incurred prior to the war, when the purchaser of a proven field could recover the amount paid at war prices. Under the then existing law, oil and gas companies were allowed to recover tax-free only their actual investment in depletable property. In this respect they were treated just like other industry is today. If private industry in Massachusetts, or any of the other States builds a factory to provide jobs for workers, they can recover only what is invested through depreciation allowances. Even though the property should subsequently increase in value, only what has been invested may be recovered. But this did not, and still does not, satisfy oilmen. They argued then that Congress should allow them to recover the value of the property after the discovery of oil, rather than their actual outlay. Congress went along with this in 1918. But soon great difficulty and much litigation ensued over methods of determining "discovery value." So, as a substitute, in 1926, Congress enacted the new concept of percentage depletion, which, as I have said, allows a deduction from income of 27.5 percent of the gross income from each oil or gas property limited by 50 percent of net income. The total investment may be recovered time after time, tax free. An investment of $1 million may be recovered many times over, as has been done often, with no taxes being paid on this 27.5 percent of gross income. I contend that it would make just as much sense to exempt 27.5 percent of the gross income of every actor, writer, athlete, movie star, doctor, or any other individual for that matter, who are daily depleting their creative and physical resources. Why should this special treatment be given to the largest and most wealthy corporations in our land today?

Let me emphasize this point. In classifying corporations for purposes of income statistics, the Internal Revenue Service has set up 14 categories of corporations according to the size of total assets. The highest, or 14th group includes corporations with assets of $250 million or over. In 1955, this group claimed two-thirds of all the depletion allowances taken by corporations.

I point out that, in addition to the billion dollar oil companies which benefit from percentage depletion, there are others who receive an allocable share of the deduction. I refer to lessors and royalty owners, often wealthy investors engaged in buying oil royalties from proven fields. Risks involved in oil exploration and production are sometimes cited in support of continuation of percentage depletion but certainly the buying of oil royalties from proven fields has very little risk indeed. The lessor of land on which oil is discovered usually exerts little effort or makes little contribution to a discovery; yet, he also is entitled to an allocable share of the deduction.

I may say in passing that those individuals and corporations who benefit from percentage depletion are, in effect, being subsidized by the other taxpayers of the Nation. It is a government subsidy over which Congress exercises no control. One result may well be overexploitation and waste, or exhaustion of our resources. It is my belief that normal profit incentives and the free price system are adequate to insure necesary supplies, especially where the demand for the product has nearly tripled in the last 25 years and certainly will continue to increase as more and more producing fields have been discovered.

One of the most unfortunate aspects of the legislative process develops when preferred treatment is once given to a favored group. Then others, reasoning by analogy, argue that they too should have similar preferred treatment. And Congress, instead of withdrawing it from the first, is caught in the illogic of its initial action, and extends it to a second group. Third, fourth, and succeeding groups likewise get a favorable hearing. This has been the history of percentage depletion. The oil interests have for years urged upon Congress this theory that incentives for exploration were necessary because of the risks involved and that oil was vital to our national security. In turn, the coal people argued that tax favoritism was being given to their principal competitor. Therefore, they needed relief. Now, no one will seriously contend that we are in need of additional coal fields. Estimates of available supply predict that we have enough coal for at least another 1,000 years. There is no immediate need for further exploration,

nor is there current exploration. Even so, the allowance for coal is only 10 percent as compared with 27.5 percent for oil and gas. Actually, the oil industry productivity is far in excess of current demand and the exploration argument is shopworn and unconvincing.

It is my personal belief that a much fairer tax law would result if percentage depletion were entirely eliminated. Because now, not only oil and gas are legally entitled to it, but all mineral industries receive it in varying degrees. The amounts vary from 5 percent, 10 percent, 15 percent, 23 percent, to 27.5 percent, the percentage allowed being determined to a degree by the amount of political pressure competing groups have been able to bring to bear on this body. If we could eliminate it altogether, we could add about three-quarters of a billion dollars annually to Treasury receipts.

I appreciate the fact that any proposal for the repeal of the entire idea would run into a wall of well-entrenched special interests with no possibility of passage. So, today I point out only the worst injustice and hope to appeal to those in this House who will work to correct this. I do not propose to eliminate the subsidy entirely, but seek rather to reduce the present amount from 27.5 to 15 percent.

On January 23, 1950, President Truman in his message to Congress stated:

> I know of no loophole in the tax law so inequitable as the excessive depletion exemption enjoyed by the oil and mining industries.

I want to point out that this charge was not altogether new to President Truman. President Roosevelt and his Secretaries of the Treasury long fought for the very proposal that I urge today. I must say, too, that the present administration has been less impressed with the necessity for action.

A study made by a recent Presidential Commission showed that the percentage depletion allowances taken by oil companies were 19 times as great as those which would have been allowed under cost depletion. A reduction from 27.5 to 15 percent, which I propose, would still allow these companies to write off 10 times the cost of their investment, so you can see that I can hardly be charged with being unfair to the oil and gas industry. I wish to repeat. It is not my purpose to deny oil and gas companies the opportunity to recover their investment, tax free, just as do investors in plant and machinery. But I do wish to hold that recovery to 10 times the investment instead of 19 times as can currently be done. Again, to repeat, an investor in my State who builds a factory to give jobs to workers, may recover in depreciation no more than his actual investment. Why should billion dollar oil companies be preferred, especially when small independent wildcatters do most of the exploring? The usual contribution of the major companies is the so-called pocketbook explorations where the major companies taking no exploratory risk, merely buy up the independent, together with his earned depletion allowance.

I would like to point out that in my opinion we cannot permit this kind of tax favoritism to continue. The result of large percentage depletion allowances of course greatly reduces the tax bill of the oil companies. However, oil companies can point to the tax law and say that they pay the same rates as all other corporations, namely 30 percent on the first $25,000 of taxable income and 52 percent on all over $25,000. That is true, but the effective rate is greatly reduced by the exclusion of large blocks of exempt income. Actually, most oil companies pay only one-third to one-half the rates that other corporations pay. For example, between 1947 and 1956, five big oil producers paid Uncle Sam only 5 percent of their total cash earnings. Five comparable industrial corporations paid 38 percent, or an additional 33 percent. A large number of producers pay not one dime in Federal income taxes, yet they report large net incomes and pay dividends to their stockholders. Obviously, there is a wrong here that needs correcting. I think that it is no coincidence that Fortune magazine found that more than a third of the Nation's wealthiest individuals had made their fortunes in oil. This, at the tax expense of all other industries.

The President stated that he will submit a balanced budget to the Congress. There have been grave doubts expressed that revenues are likely to be as large as estimated by the President or that expenditures will be as small. It is my thought that the goal of a balanced budget is one greatly to be desired at this time. It would generally be favorable for the economy of the Nation. Since inflation is a specter that is to continue to haunt us, we should certainly do what we can to stop it. The reduction of the percentage depletion allowance to 15 percent will yield a substantial sum of tax revenue estimated by the Treasury Department to be about $420 million annually. This is obviously a large sum of money. In fact, it almost exactly equals the total 1958 tax collections from all sources within the Commonwealth of Massachusetts.

I wish to be as accurate as possible in my estimate of revenues to be obtained, and for that reason offer this brief explanation. The $420 million estimate given assumes a continuance of present prices and production, and no change in foreign tax credits. It appears likely that oil and gas companies may make some changes in prices if percentage depletion is eliminated. But these changes are not capable of statistical projection. If oil prices are raised, then the yield will be greater than I have estimated. If they are lowered, the yield will decline. Included in my estimate is some $95 million of additional revenue from foreign production. The Treasury fears that this increase will be largely dissipated through an increase in foreign tax credits. If this be true, then the net yield may be more in the neighborhood of $325 million. But I say to the Members of this House, that even in days of $80 billion budgets, we must not overlook the possibility of obtaining an additional third of a billion dollars, especially when the result includes greater equity in the tax laws for all our industries. This additional revenue could be used for tax relief for the small taxpayer. It could also be used to eliminate some of the excise taxes that are helping to strangle small business. The money might also be used for national health research programs; hospital construction or educational scholarship grants which are so needed.

To conclude, Mr. Speaker, enactment of my proposal will have the following desirable effects:

First. Help to close one of the largest loopholes that exist in our tax laws.

Second. Remove an inequity which is shocking both in its philosophy and its results.

Third. Add greatly needed revenue to contribute substantially toward a balanced budget.

Fourth. Reduce the probability of overexploitation and waste or exhaustion of a valuable natural resource.

Fifth. Make the availability of supplies dependent upon normal profit incentives and the free price system rather than uncontrolled subsidies.

The Drama of John Foster Dulles

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. JUDD. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following appreciative article regarding the prodigious labors for peace by our distinguished Secretary of State. The article is by Mr. William S. White of the New York Times:

THE DRAMA OF JOHN FOSTER DULLES—SECRETARY'S PRODIGIOUS LABOR FOR PEACE BRINGS APPRAISAL OF APPRECIATION

(By William S. White)

One of the most arresting personal dramas of Washington is that of John Foster Dulles, whose permanent residence is in the eye of the hurricane.

Various observers may rationally dislike Mr. Dulles or some of his policies as Secretary of State. But nobody in possession of the facts—which, by the way, is just the kind of large, dustily legalistic phrase Mr. Dulles himself would use—could reasonably deny two things:

1. This Secretary of State has what are inelegantly called guts to a degree that few men in recent public life have surpassed. True, it may seem at times a rather tiresome, quibbling sort of courage; Mr. Dulles is not one to read from the large print when the fine print is available.

2. This Secretary of State, whose endless travels about the world would long ago have left limp and exhausted the average man of 30, has a physical industry so great as to be fatiguing even to watch.

Two years ago this month Mr. Dulles all but crawled on hands and knees from the hospital, where he had undergone an unpleasant thing—surgery for intestinal cancer. He returned to his manifold duties

stolidly silent about what most men find it impossible not to comment on—"my operation."

Never once since has he gone about holding his pulse in public. Never once has he asked quarter, on grounds of health, from the very hard world that surrounds him.

He is the oldest member of the cabinet—now in his 71st year—and yet he makes far more demands upon himself in every way than do any two of the others.

Just now, these demands are piling high about him. The Russians are glowering at the Western position in Germany, and crisis in its nastiest meaning may be in the air.

Mr. Dulles is making our policy in this infinitely tricky business, and in a sense making the policy of the whole Allied West, since we are the biggest of its partners. He is walking a high and swaying wire. His problem is not to give up any of our vital interests, but not, on the other hand, to do anything that would make it impossible for the Russians to draw back without losing face.

In all this he is carrying three buckets of water on his soberly tailored shoulders. One of these buckets represents the Allies, one the Russians themselves, and one the Congress—to which, with its huge new Democratic majorities, Mr. Dulles must pay far more heed than ever before.

How adroitly he is swaying with these buckets was well illustrated by a recent Dulles press conference. This the Secretary held on the day usually reserved for the President's own press conference, while Mr. Eisenhower himself was on holiday in Georgia.

Here Mr. Dulles grappled with explosive questions like an old Army sapper removing land mines. He spoke of the Russians without animosity or threats. His manner toward them, rather, was that of a corporation lawyer dealing with a rude and irresponsible but dangerous witness in an antitrust suit—firm, but careful and coolly detached.

The Secretary often has been—and sometimes fairly—accused of "brinkmanship," of an unduly threatening line. Whatever the past, this is in no sense now his line. It is now hardly possible, even for an observer never exactly enchanted with Mr. Dulles, not to feel some sense of security that our latest crisis, given all present circumstances, is in the hands of this possibly uncomfortably righteous but undoubtedly tough and supple man.

Amendment of the Senate Rules—The Three-Fifths Proposal

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Three-Fifths," published in the Baltimore Evening Sun of January 5, 1959. The editorial comments on the proposal I made before the commencement of the present rules debate, namely, that rule XXII be amended to enable cloture to be invoked by a vote of three-fifths of the Senators present and voting.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THREE-FIFTHS

The present rule in the Senate is that only two-thirds of all Senators can force cloture and bring a filibuster to an end. And by two-thirds of all Senators is meant two-thirds of the 98 Members of the Senate, not just two-thirds of those present and voting.

Senator LYNDON JOHNSON, Democratic leader, has proposed that the rule be amended so that two-thirds of those present can bring about closure, but Senator COOPER, the candidate of the more progressive wing of the Republican Party for floor leader, says that there is not much difference between the present rule and what Mr. JOHNSON offers, since on important issues nearly all Senators are present. Mr. COOPER wants to change the rule so that three-fifths of the Senators present can stop a filibuster and bring a bill to a vote.

The Cooper plan goes further toward relaxing the present rigid rule than the Johnson plan, which is good. At the same time it does not let down the barriers completely, as the so-called liberals in the Senate suggest, and this too is good. It would be a serious mistake to change the rules of a legislative body as loosely organized as the Senate in such a way as to give a mere majority control over procedure. Such a system would not promote majority rule in anything except name. In reality it would give those highly organized minorities known as pressure groups the whip hand in many crucial Senate votes.

For when Senators vote on the record, as they nearly always do, the votes often reflect their subservience to the particular pressure groups to which they owe their offices and not their own thoughtful convictions or the wishes of the great silent majorities of their constituents. And since the pressure groups are nearly always in favor of extreme measures—witness the labor group, the racial groups, and the like—the record votes often do not represent majority rule but just the opposite. This isn't always the case, but politics being what it is it often happens. And the filibuster can serve a good end in preventing the distortions of justice and reason which so often occur when extreme measures are put over.

At the same time, it must be recognized that the filibuster is a device for allowing Senators to escape public commitments, and that public commitments can serve majority ends as well as pressure group ends. Hence it is important not to keep the rules favoring filibusters too rigid. Without endorsing the Cooper proposal it may be said that it splits the difference between the too extremes.

Big Brother Week

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared relating to the Big Brother Week movement.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEFAUVER

This is Big Brother Week in Tennessee and elsewhere. I would like to emphasize the importance of adult cooperation with youngsters who need kind and constructive guidance.

The principle of the Big Brother movement is the application of the one-man—one boy relationship to the treatment of boys who have problems which may be solved through adult direction.

Adult members of Big Brother organizations deserve our most sincere thanks for their efforts.

In my State of Tennessee, many Big Brothers associations have helped rehabilitate boys who are fatherless or who lack the guidance which a father should provide.

All Big Brothers are volunteers under the supervision of trained, professional staffs of Big Brother agencies.

The events which disturb the minds of young men are seldom public events. Most boys live in their own small world. It is a particular human relationship which sets their inner stresses and directs their actions.

During the years when I was chairman and a member of the Juvenile Delinquency Subcommittee, we had an opportunity of studying in detail the Big Brother program and we found it to be one of the most helpful programs to young people that is offered in our country. Many young people who would have become juvenile delinquents have been saved from this plight in this personal interest of a Big Brother. It is the human touch and personal interest that boys need more than anything else.

Let us join in supporting Big Brother organizations.

Lincoln-Douglas Debates

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. DIRKSEN. Mr. President, the year 1958 marked the 100th anniversary of the series of seven debates in Illinois between the Honorable Stephen Arnold Douglas, the then incumbent Senator, and Abraham Lincoln, a candidate for the Senate in that year. These debates provoked national interest, and every one of the seven communities where they were held fittingly commemorated this great event. It was my privilege to participate actively in three of these celebations, and I submit for printing in the RECORD the address which I delivered at Freeport, Ill., on August 22, 1958, and at Galesburg, Ill., on October 7, 1958.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

THE MAGNIFICENT MISSIONARY

(Address by the Honorable EVERETT McKINLEY DIRKSEN at the Lincoln-Douglas ceremonies, Freeport, Ill., August 27, 1958)

I. INTRODUCTION

Today in this inspiring communion, let me salute the magnificent missionary—Abraham Lincoln.

A missionary is one with a mission.

It is customary to think of a missionary as one who goes forth to propagate a religious faith.

Very naturally we think of Jesus Christ, of Buddha, of the Apostle Paul, of Mo-

hammed, of Moses, of Francis Xavier, of Father Marquette, or others.

But a missionary can be more than this.

A missionary could be a dedicated group like the Crusaders. Or it could be an entire nation under a spirited leader.

The mission might be in any field of human activity.

The Roman emperors leading the legions of ancient Rome were missioners bent on conquest.

The French under Napoleon were missioners bent on world dominatien.

The Moors inspired by Mohammed were missioners intent on the destruction of all infidels, and that included all who did not embrace the doctrines of the Koran.

The first English in India were missioners seeking an expanding trade.

Every generation has had its individuals, it groups, its institutions, with a sense of mission in some field of human activity.

II. CIVIL MISSIONERS

Among the missionaries of mankind in the field of civil endeavor there is one who stands out above all others—that magnificent missionary—Abraham Lincoln.

He sought to propagate no religious faith.

He sought no conquest, like Caesar or Napoleon.

He neither sought nor exercised autocratic power.

He sought no material advantage.

He was a humble, common man, whose only weapons were an incandescent conviction, an unflinching zeal, an invincible logic and an unfailing sense of right and wrong.

III. THE MISSIONARY EMERGES

Not far from where we meet today, in the city of Bloomington, on May 29, 1856, the spirit of this great missioner emerged.

Two years before that date the repeal of the Missouri Compromise and also the new and hateful doctrine of popular sovereignty was breeding a strong revulsion in the land.

Heretofore the issue of slavery was essentially a policy problem.

In some quarters it was probably little more than an intellectual exercise.

When the meeting in Bloomington drew to a close, Abraham Lincoln was summoned to speak.

This was the occasion when he uttered the celebrated "Lost Speech."

The form and text may have been lost, but the spirit and the effect were imperishable.

This was the utterance which his partner, Herndon, referred to as the greatest of his life.

Until then, according to Herndon, the slavery issue had been argued on grounds of policy and not from the standpoint of eternal right.

But on this day Abraham Lincoln seemed newly baptized.

"From that day," wrote Herndon, "to the day of his death he stood firm in the right."

The smothered flame had broken forth.

A new sense of justice fired his energy.

His soul was now seasoned.

Abraham Lincoln had found his cross.

A new sense of mission was lighted.

The magnificent missionary had emerged here on the rolling prairies of Illinois destined to become one of mankind's greatest crusaders in a human cause.

IV. THE INTERIM YEARS

In that interim period between the emergence of the magnificent missionary and the time when the formal debates in this series began, not only the great moral issue of that day but also the zeal of Lincoln was being fueled.

In the presidential election of 1856 James Buchanan was elected.

In the territory called Kansas the clashes over the slavery issue were being referred to as war.

The unrestrained spirit of John Brown burst into murderous action like that of some "apocalyptical horseman of vengeance."

In that period came the amazing decision of the Supreme Court of the United States under the leadership of Chief Justice Taney in the celebrated Dred Scott case.

There came in that period a most extraordinary document called the Lecompton Constitution, under which one group expected that Kansas might enter the Union.

There was the fact of an election campaign for the United States Senate between Lincoln and Douglas and the development of sharp personalities between them as each sought a victory.

There was the fact of a growing interest beyond the boundaries of Illinois to give national significance to the contest between Lincoln and Douglas.

Thus in that period between the emergence of Abraham Lincoln's sense of mission at Bloomington 2 years before and the first of these debates at Ottawa on a hot Saturday afternoon in August of 1858, the spirit of the moral baptism was working steadily in the soul and mind of Abraham Lincoln.

V. THE MORAL LIGHT SHINES BRIGHTLY

In this great continuing discussion beginning at Ottawa and ending in Alton, few things were left undiscussed.

The debate embraced the Missouri Compromise of 1850, which sought to limit the extension of slavery.

It included the effort to repeal that compromise through the Kansas-Nebraska bill, which was piloted through a Senate committee by Judge Douglas.

It involved the Dred Scott decision in the Supreme Court of the United States.

It covered the personal life of the candidates.

But the moral issue was the overriding light.

It came in the very first discussion at Ottawa.

"I hold," said Lincoln, "there is no reason in the world why the Negro is not entitled to all the natural rights enumerated in the Declaration of Independence. The right to life, liberty, and the pursuit of happiness * * * in the right to eat the bread without the leavy of anybody else which his own hand earns, he is my equal and the equal of Judge Douglas and the equal of every living man."

Here was the beginning of the moral thunder which was to roll down through conflict, emancipation and victory.

On they went—these gladiators—from Ottawa to Freeport, from Freeport to Jonesboro, from Jonesboro to Charleston, from Charleston to Galesburg, from Galesburg to Quincy, from Quincy to Alton.

It was then mid-October.

Here then came the final discussion.

Slavery is wrong. It is wrong. It is wrong. The very word came tumbling from Lincoln's lips over and over.

"That is the real issue," said Lincoln in the final discussion. "That is the issue that will continue in this country when these poor tongues of Judge Douglas and myself shall be silent. It is the eternal struggle between these two principles—right and wrong—throughout the world."

VI. THE CONTAGION

Then as now editors and politicians, scholars and historians could interpret the debates as they saw and felt them against the backdrop of their own day.

It may be difficult to evaluate this great event by orienting oneself into that period and then looking backward into the past and forward into the future.

Two years before the debates the missioner had emerged.

Character and conviction had emerged.

A notion of the ultimate course which the country was to take and the moral concepts which must be asserted had emerged.

The missioner had found himself.

And so on and on he went.

The issue of principle was drawn.

It was the age old struggle of right and wrong.

At first it had to be tempered to reality.

Abraham Lincoln knew that he was dealing with an entrenched institution.

He knew he was dealing with a Supreme Court, with a Congress, and with a Constitution.

He knew that he was dealing with a divided land, with a people who were sharply divided.

He was dealing with friends and party associates interested in a political victory.

He was dealing with his own senatorial candidacy.

All these were realities.

And he knew that the people must be conditioned for this whole dose of basic moral principle and the struggle between right and wrong.

This was not a case for a thimbleful of gospel.

And as the conditioning process went on, so the conditioning of the spirit of Abraham Lincoln went on.

With it all there was the slow but inevitable contagion which developed.

The thousands upon thousands of people who attended or who read the accounts were caught up in the fervor of the occasion.

They were given a sustained chance to think, to medidate on the moral issue, and to separate the superficial from the genuine.

They had a chance to get a sharpened sense of the real issue and to reflect week after week upon the basic principle of human equality.

VII. THE ULTIMATE IMPACT

The ultimate impact of this series of debates can best be found in the utterances which came later.

On a cool November afternoon at Gettysburg in the year 1863, 5 years after the debate series came to an end there came those deathless words from the lips of Lincoln, when he spoke of a nation conceived in liberty and dedicated to the proposition that all men are created equal.

After 5 years the eternal truths rolled on and on.

Again, on a misty morning in the month of March 1865, in the Nation's Capital, as he stood to receive the oath for the second time, with all the agonies of carnage and death written on his rugged face and his furrowed heart, he could yet say, "It may seem strange that any man should ask a just God's assistance in wringing their bread from the sweat of other men's faces, but let us judge not that we be not judged."

Thus did a sense of mission which slowly incubated on these rolling prairies of Illinois become fashioned and shaped in these debates to carry on and on not only in the hearts of his countrymen but in the heart of a great, humble man, who to the very end dedicated himself to the spirit of what Thomas Jefferson wrote in the Declaration of Independence so many years before, when he said, where all could behold, "We hold these truths to be self-evident—that all men are created equal."

The magnificent missionary had executed the mission to which he was ordained.

ABRAHAM LINCOLN

(Address by Senator EVERETT MCKINLEY DIRKSEN at the 100th anniversary of the Lincoln-Douglas debate at Galesburg, Ill., October 7, 1958)

Ecclesiastes, so long ago remarked that "The thing which hath been, it is that which shall be and that which is done is that

which shall be done; and there is no new thing under the sun." The past is prologue. And the past is tradition.

To the Thessalonians, Paul wrote, "Hold fast to the traditions ye have been taught." And what is tradition? It is the whole body of culture and beliefs, of usages and practices, of achievements and accomplishments, of personalities which come down to us from the past.

In the American tradition, shining majestically, there are the Pilgrims and pioneers, Valley Forge and Gettysburg, the Declaration of Independence and the Constitution. In it looming large are William Penn and Daniel Boone, Washington and Paine, Zenger and Marshall, Jefferson and Jackson. In it are faith and hope, tears and laughter.

And high in our tradition stands Abraham Lincoln. Can he be explained in any other way than that he was an instrument of divine destiny?

History is but the unfoldment of a divine pattern. This may be amusing in highly liberal quarters. If not this, it can only be materialistic drift. If there be a creative hand behind this universe, there must be a creative hand in its unfoldment and direction. Everything in it, sun, moon, stars, planets—their distances—the calibration so that people will neither freeze nor scorch to death—the procession of the seasons—man's subsistence—all rise to testify to the amazing adjustments in the universe to preserve life. And surely the creative force would not provide it all in such meticulous detail and then ignore its ultimate destiny.

But destiny does not unfold in a vacuum. It cannot be manifested without a vehicle, without an instrument. The light falling upon Saul enroute to Damascus to convert him into the world's great salesman was a divine hand reaching for an instrument. The voice from the heavens said to Ezekiel, "Son of man, stand upon thy feet and I will speak unto thee." Destiny was seeking an instrument. The servant of the Lord commanding Joshua to be strong and of good courage and giving him assurance and instruction was but finding an instrument for the unfoldment of history.

Abraham Lincoln standing before 15,000 people on a cold, raw, windy day in Galesburg 100 years ago today may not have seemed an instrument of an all-pervading conscience to carry on in a struggle which still besets our land a century later. How could a story teller be regarded as an instrument of destiny unless it be remembered that in a day when the vagaries of the mind were not too well understood, it is easy enough to perceive that the brooding mystic introvert can so easily conceal his introvert attributes in this understandable manner?

But consider this whole moral common man moving always godward, never too fast and never too slow, walking ever slowly but never backward.

In May of 1856 in Bloomington he delivered what came to be known as the Lost Speech. The form and text may have been lost, but not the spirit and the impact. For it was here that he received a new baptism. It was here that the moral, rather than the political or intellectual aspects of the slavery issue fired his soul and his cross was found.

Two years later, at Ottawa, it became the overriding issue for on that occasion he said, "I hold there is no reason in the world why the Negro is not entitled to all the natural rights enumerated in the Declaration of Independence, the right of life, liberty, and the pursuit of happiness * * * in the right to eat the bread without leave of anybody else which his own hand earns, he is my equal and the equal of Judge Douglas and the equal of every living man."

Here at Galesburg he said of his opponent that, "he is blowing out the moral lights around us when he contends that whoever wants slaves has a right to hold them." He continued, "I confess myself as belonging to that class in the country who contemplate slavery as a moral, social, and political evil having due regard for its existence among us and the difficulties of getting rid of it in a satisfactory way and to all constitutional obligations which have been thrown about it; but, nevertheless, desire a policy that looks to the prevention of it as a wrong, and looks hopefully to the time when as a wrong it may come to an end."

On they went in the discussion until at last, this far-reaching discussion carried them to the concluding debate at Alton. Over and over a word kept tumbling from Lincoln's lips. It was the word "wrong." And as they concluded, Lincoln said, "That is the real issue. That is the issue that will continue in this country when these poor tongues of Judge Douglas and myself shall be silent. It is the eternal struggle between these two principles of right and wrong through the world.

The moral contagion which Lincoln had created was spreading. At first, the moral issue had to be tempered to reality. He was dealing with an entrenched institution, with a Supreme Court, with a Congress, and with a certain concept of the Constitution. He was dealing with a divided land. He was dealing with people sharply divided. He was dealing with friends and party associates who were vitally interested in a political victory. He was dealing with his own candidacy. These were realities. Little by little, people must be conditioned for the whole dose of moral principle—wrong versus right. As the conditioning process went on, so the conditioning of his own spirit went on. The contagion was slow but inexorable.

Came that day in March 1861, when he took the oath as President of the United States. How careful he was with respect to the Constitution and the rights of the States. How earnest were his entreaties to preserve the Union. Yet he never lost sight of the moral issue. "If the Almighty Ruler of Nations," he asked, "with his eternal truth and justice be on your side of the North or on yours of the South, that truth and that justice will surely prevail by the judgment of this great tribunal, the American people." And he continued, "Inteligence, patriotism, Christianity, and a firm reliance on Him who has never forsaken this favored land are still competent to adjust in the best way all our present difficulty." There was no word about slavery. He knew as none other knew what the ultimate solution would be.

On the first day of January in 1863 it is said that he first regaled the Cabinet by reading from one of the quaint and whimsical lectures of the current humorist, Artemus Ward. Then in a complete change of mood, he took from a drawer what turned out to be the Emancipation Proclamation. What a spectacular way to begin a new year. Having disposed of the details, he came to the final paragraph. "And upon this act, sincerely believed to be an act of justice, warranted by the Constitution, upon military necessity, I invoke the considerate judgment of mankind and the gracious favor of the Almighty God." That day there must have been unbounded joy in God's Heaven.

On a cool afternoon at Gettysburg in November of 1863, after the words of the orator of the day had faded into obscurity on the afternoon breezes, he came forth with only a few hundred words, but they were deathless. How easily and clearly he stated the issue—whether a nation conceived in liberty and dedicated to equality, can endure. There followed his appeal for a new dedication of the spirit and for a new birth of freedom. Justice and morality were marching and he was in the forefront, moving ever forward—not too fast to leave public confidence behind and not too slow to invite defeatism or to frustrate the unfoldment of a divine pattern.

Came that day in March 1864 when he stood before his countrymen again to take the oath as Chief Executive. Gettysburg was behind him now. The progress of the Union forces was more encouraging.

He might have become stern and less humble. He might have fulfilled the politicians' hopes and stated what he expected to do with the sister States still in rebellion. He might have threatened. But not so. There was no passion, no spleen, no politics. It was the instrument speaking. "If we shall suppose that American slavery is one of those offenses which in the providence of God must need come, but which having continued through his appointed time, He now wills to remove and that He gives to both North and South this terrible war as the woe due to those by whom the offense came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to Him?" What humility he concluded. "With malice toward none, with charity for all, with firmness in the right." There was that word again. Firmness in the right, the antithesis of wrong.

Consider finally Abraham Lincoln's last speech. It came in the evening of April 11, 1865, at the White House in response to a serenade. Lee had surrendered. There was jubilation in the land. Lincoln took the occasion to speak of the action of 12,000 voters in the State of Louisiana who had taken the necessary steps to return to the Union. Before discussing the details of the action taken by Louisiana and his obvious inclination to accept the action, even though defective in some particulars, he said to the serenaders, "In the midst of this, however, He, from whom all blessings flow, must not be forgotten. A call for a national thanksgiving is being prepared and will be duly promulgated."

Four days later, the assassin's bullet ended all that was mortal. The ages embraced him. The Lord's instrument had consummated his mission. How else shall one adjudge this exalted common man?

National Printing Week

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. PUCINSKI. Mr. Speaker, I wish to call the attention to the fact that the mayor of Chicago, the Honorable Richard J. Daley, has designated the 7-day period beginning January 11 as Printing Week in our great city.

We of Chicago are not only grateful but indeed proud that our city is the printing center of the Nation and the printing industry constitutes one of our largest industries in Chicago.

While this Nation from time to time frequently pays tribute to the various industries of America, it is my opinion that the development of printing has been one of the most effective contributing factors in the development of our democratic process and, we, as Americans, should be grateful to the men and women occupied in this highly skilled trade and to the foresight of those great Americans who have helped develop this industry. We, as a nation, proudly proclaim that our democratic processes have survived because our people are the best informed people in the world. I doubt there will be any dissenters to the statement that, without the phenomenal de-

velopment of the printing industry in this country, we, too, would suffer the intellectual darkness that still plagues so much of the world.

I should like to call attention to the fact that in my city, the Chicago Allied Printing Trades Council, with its executive secretary, Mr. Henry Coco, has done much to raise the standards of the printing industry, and it is through the dedicated work of organizations such as the council that this Nation has been able to make extraordinary progress in improving the printing industry.

In tribute to the thousands of Chicagoans who loyally serve the printing industry daily and because this industry is so important to all Americans, I have introduced the following resolution which I hope will receive speedy approval:

H.J. Res. 25

Joint resolution designating the seven-day period beginning January 11, 1959, as National Printing Week

Whereas the printing industry has a large measure of responsibility for the advancement and dissemination of science and culture in our Nation and throughout the world; and

Whereas the printing industry in Chicago ranks highest among all printing centers in production volume; and

Whereas the printing industry in Chicago surpasses all other industries in the number of separate manufacturing establishments, number of employees, and amount of wages paid; and

Whereas, through the printed word and the growth of America's printing industry, the population of the United States of America is composed of the best informed people of the world; and

Whereas January 17, 1959, will be the two hundred and fifty-third anniversary of the birth of Benjamin Franklin, the father of American printing, and the week of January 11 through January 17, 1959, will be marked by appropriate commemorative ceremonies throughout this continent in public, private, and commercial institutions, with particular emphasis upon the progress of printing and allied crafts: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the seven-day period beginning January 11, 1959, and ending at the close of January 17, 1959, is hereby designated as National Printing Week in honor of the printing industry and its contributions to progress. The President of the United States is authorized and requested to issue a proclamation urging the people of the United States to be mindful of the industrial, educational, cultural, and spiritual contributions which the art of printing has made and is making to the life and progress of mankind.

United States Trading Corporation

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I am reintroducing a bill to establish a United States Trading Corporation in order to meet the challenge of attempted Soviet penetration of world markets. This bill is not designed as a final and complete bill, but is mainly for the purpose of having it referred to the Congress so that the proper congressional committees and their staffs will get to work on this problem which the United States and the free world have to face at the present time. If this bill will be but a start toward a program which will enable the capitalist free world to properly compete with the Soviet economy, our purpose in introducing this bill at the present time will be achieved.

It is estimated that the economy of the Soviet Union, although not comparable to ours in total capacity or total production at the present time, is growing at a rate roughly twice that of ours. Allen Dulles, Director of the Central Intelligence Agency, has described the Kremlin's progress in that respect as "the most serious challenge ever faced by the United States in times of peace"—a challenge making it "most probable that the fateful battles of the cold war will, in the foreseeable future, be fought in the economic and subversive arenas." Certainly, this is but another indication to prove that we should be well on our way toward making battle plans for the economic war.

There was a recent State Department report which labeled the Russian communistic tactics of economic aid and economic policy as being even more dangerous to the free world than the threat of war. We all know, in studying Marxism and communism, that it was the feeling of the founders of the philosophy of communism that ultimately capitalism would fail, and this would make it easy for socialism and communism to take over. However, we must not fall into the trap of adopting the Communist policies. We must be in a position to aid and help individual business enterprises and the capitalist system, so there will be no encroachment by government on free business; but, because of the economic war against the Communists, it makes it necessary that private enterprise and Government march together in this warfare rather than apart.

In recent months, we are getting a new insight into this trade warfare policy and we can site the example shown us in the aluminum industry. Until recently, North American exports of aluminum to European countries provided practically all of the imports of this metal to the free European countries. Just a short time ago, Russian Communist sources announced to various European aluminum purchasers that they would supply aluminum for approximately 1.7 cents per pound cheaper than it could be bought from American and Canadian sources. In other words, the Communists were not worrying about costs, knowing they have slave labor and a Socialist economy where material costs are not measured in monetary value, enabling them to sell raw material or finished products at any price they arbitrarily choose. Our American and Canadian firms cannot meet that type of competition. Are we to idly stand by while we lose those markets and our own continent has to suffer from such competition? Some methods must be found to combat this type of competition in aluminum and surely in many other products, and the operating procedures of meeting this problem must immediately be given a great deal of study.

In setting up the United States Trading Corporation, there will be losses entailed. If we are to compete with the Russian Communist bloc, the Government might have to purchase raw materials and finished products from our concerns and sell at a loss in order to vie with their slave economy. We can possibly see a time when the original capital of the Corporation might be used up, at which time the Corporation would again have to come back to Congress to receive further monetary support. At that time, the Congress would be in a position to evaluate the work and accomplishments of the Corporation, and then could decide whether the program was worth continuing or should be changed.

In the long run, the economic facts of life are bound to catch up with the inhuman and unprogressive economic system of communism. However, in the interim, such a system can badly damage, indeed like the parasite plant can destroy, the healthy and sound economic system of a free society. Just as in our own internal economy we have found that unrestrained monopolistic practices can damage the healthy growth of our own economy so must we recognize that these same practices engaged in world trade can badly damage healthy foreign trade.

In other words, Russia through its state trading can pick and choose specific areas for attack, undersell the market for whatever period of time is necessary to destroy competition and then once competition has been destroyed revert, in true monopolistic form, to increased prices to recoup the economic loss suffered in gaining the market and then go on to exploit the market and, worse still, enslave small nations dependent upon a narrow economic base.

Strong as our private businesses are, they are not strong enough to cope with this kind of operation. Accordingly, the United States Trading Corporation would be set up to respond when this kind of economic warfare becomes apparent.

In putting meat on the bones of the bill I have proposed, it will be necessary to spell out in definite terms the economic circumstances which will permit the Corporation to function. As I have stated, it would be only in answer to a clear threat by Soviet Russia resorting to state trading and monopolistic practices designed to destroy competition or enslave small nations.

If Soviet Russia does not engage in this kind of activity, the Corporation would not have to act. If Russia does, the Corporation would be there to insure the fact that through temporary underselling, though it lasts for several years, Russia could not take over any market and destroy healthy competition, or enslave the economy of some small and weak nation.

There is no question in our minds that affirmative action and positive planning

must take place now. We can compete against the Russian declaration of economic war only by intelligence and cooperation. The bill which we are introducing and which would create the United States Trading Corporation is but a step to get a workable program started.

In conclusion, I want to reiterate that we do not want our Government to take over business. We want a program in which the Government will assist private business, and only take over such functions as would be necessary in order that private enterprise and free government can march down the road of economic warfare together, and ultimately foil the aim of communism to dominate the world.

The bill I am introducing is as follows:

A bill to establish a United States Trading Corporation to meet the challenge of attempted Soviet penetration of world markets, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "United States Trading Corporation Act."

SEC. 2. The Congress recognizes that one of the most dangerous weapons currently being employed by the Soviet bloc in its struggle for world domination is the use of international trade to achieve that objective through economic means. If the United States is to continue to be the leader of the nations of the free world in their effort to resist and retard such domination by the Soviet bloc, it must prepare to utilize international trade as an instrument of our national policy. So that this may be done in the most effective manner with the greatest possible benefit to the United States and its citizens and the other free nations and their citizens there is hereby established a body corporate to be known as the "United States Trading Corporation" (hereafter in this Act referred to as the "Corporation") which shall assist and supplement the efforts of private business in the United States in fostering trade between the United States and the other nations of the world.

SEC. 3. The Corporation shall have its principal office in the District of Columbia and may establish offices in such other places as it may deem appropriate in the conduct of its business.

SEC. 4. The objects and purposes of the Corporation shall be to undertake such measures, and engage in such activities, with respect to the foreign trade of the United States as will effectively meet the threat to the free world of long-range economic penetration of world markets by the Soviet bloc. In connection with and in furtherance of its objects and purposes and the policy of the Congress set forth in section 2, the Corporation is empowered—

(1) to adopt, alter, and use a corporate seal which shall be judicially noticed;

(2) to adopt, amend, and repeal bylaws governing the conduct of its business and the performance of the powers and duties granted to or imposed on it by law;

(3) to sue and be sued in its corporate name in any court of competent jurisdiction;

(4) to determine the character of and the necessity for its obligations and expenditures and the manner in which they shall be incurred, allowed, and paid, subject to laws specifically applicable to Government corporations;

(5) to acquire, in any lawful manner, any property (real, personal, or mixed, tangible or intangible), to hold, maintain, use and operate the same, to pledge, hypothecate, sell, exchange, or otherwise dispose of the same, whenever any of the foregoing transactions are deemed necessary or appropriate to the conduct of activities authorized by this Act or to achieve the objectives set forth in section 2, and on such terms as may be prescribed by the Corporation;

(6) to execute all instruments necessary or appropriate in the exercise of any of its functions;

(7) to use the United States mails in the same manner and under the same conditions as the executive departments of the Federal Government;

(8) to assist citizens of the United States or any corporation at least 60 per centum of the stock of which is owned by citizens of the United States which is engaged in foreign trade and is determined by the Corporation to be achieving the objectives set forth in section 2 by loan, subsidy, or otherwise;

(9) to appoint such agents, attorneys, and employees as may be necessary for the conduct of the business of the Corporation; and to delegate to them such powers and to prescribe for them such duties as may be deemed appropriate by the Corporation; and

(10) to take such actions as may be necessary to achieve the objectives set forth in section 2, and to carry out the powers and duties granted to or imposed on it.

SEC. 5. The Corporation, including its franchise, its capital, reserves, surplus, and income, shall be exempt from all taxation (which shall, for all purposes, be deemed to include sales, use, storage, and purchase taxes) now or hereafter imposed by the United States, or any Territory, Commonwealth, or possession thereof, or by any State, county, municipality, or local taxing authority, except that any real property (or buildings which are considered by the laws of any State to be personal property for taxation purposes) of the Corporation shall be subject to State, Territorial, Commonwealth, county, municipal, or local taxation to the same extent according to its value as other real property is taxed.

SEC. 6. (a) There shall be a President of the Corporation, who shall be appointed by the President of the United States, by and with the advice and consent of the Senate, and who shall serve as the chief executive officer of the Corporation. There shall be a Vice President of the Corporation, who shall be appointed by the President of the United States by and with the advice and consent of the Senate, who shall serve as President of the Corporation during the absence or disability of or in the event of a vacancy in the office of President of the Corporation, and who shall at other times perform such functions as the President of the Corporation may from time to time prescribe.

(b) The annual rate of compensation of the President of the Corporation shall be $21,000, and the annual rate of compensation of the Vice President of the Corporation shall be $20,500.

SEC. 7. (a) The Corporation shall be managed by a Board of Directors of the Corporation. The Board of Directors of the Corporation shall consist of the President of the Corporation who shall serve as Chairman, the Vice President of the Corporation who shall serve as Vice Chairman, and fifteen additional persons appointed by the President of the United States by and with the advice and consent of the Senate. Of the seventeen members of the Board of Directors not more than nine shall be members of the same political party. Before entering upon his duties, each of the directors shall take an oath faithfully to discharge the duties of his office. Terms of the directors shall be at the pleasure of the President of the United States, and the directors, in addition to their duties as members of the Board of Directors, shall perform such additional duties and may hold such other offices in the administration of the Corporation as the President of the Corporation may from time to time prescribe. A majority of the Board of Directors shall constitute a quorum. The Board of Directors shall adopt, and may from time to time amend, such bylaws as are necessary for the proper management and functioning of the Corporation, and shall, in such bylaws, designate other officers of the Corporation and prescribe their duties.

(b) Members of the Board of Directors (other than the Chairman and Vice Chairman) shall receive compensation at the rate of $20,000 per annum.

SEC. 8. (a) There shall be an Advisory Committee of the Corporation consisting of 9 members, appointed by the Board of Directors of the Corporation on the recommendation of the President of the Corporation, who shall be broadly representative of production, commerce, agriculture, and labor. The Advisory Committee shall meet one or more times per year on the call of the President of the Corporation, to advise the Board of Directors on the program of the Corporation.

(b) Members of the Advisory Committee, while attending meetings of the Advisory Committee called by the President of the Corporation, shall be entitled to receive compensation at a rate to be fixed by the President of the Corporation, but not exceeding $50 per diem, and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law for persons in the service of the Federal Government who are employed intermittently.

SEC. 9. (a) The Corporation shall have a capital stock of $1,000,000,000 subscribed by the United States. Payments under this subsection of the subscription of the United States to the Corporation and the repayments thereof shall be treated as public debt transactions of the United States. Certificates evidencing stock ownership of the United States in the Corporation shall be issued by the Corporation to the Secretary of the Treasury.

(b) The Corporation is authorized to issue from time to time notes, debentures, bonds, or other obligations which shall be purchased by the Secretary of the Treasury; but the aggregate amount of such obligations outstanding at any one time shall not exceed $4,000,000,000. Such obligations shall be redeemable at the option of the Corporation before maturity in such manner as may be provided for in such obligations and shall have such maturity as may be determined by the Board of Directors of the Corporation with the approval of the Secretary of the Treasury. Each such obligation shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average rate on outstanding marketable obligations of the United States as of the last day of the month preceding the issuance of the obligations of the Corporation.

(c) For the purpose of purchasing capital stock and obligations of the Corporation issued under this section the Secretary of the Treasury is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under such Act, as amended, are extended to include any purchase of capital stock or obligations of the Corporation issued under this section.

SEC. 10. No director, officer, attorney, agent, or employee of the Corporation shall in any manner, directly or indirectly, participate in the deliberation upon or the determination of any question affecting his personal interests, or the interests of any corporation, partnership, or association in which he is directly or indirectly personally interested.

SEC. 11. The President of the Corporation in carrying out his functions shall consult from time to time with the Secretary of State, the Secretary of Commerce, and the President of the Export-Import Bank of Washington.

Tax Deduction of Expenses for Transportation To and From Work

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I have introduced today a bill designed to allow a deduction for income tax purposes, in the case of a disabled individual, of expenses for transportation to and from work.

My bill would allow a disabled individual to deduct from gross income in arriving at adjusted gross income expenses up to $600 a year for transportation to and from work. For purposes of this provision, the term "disabled individual" is defined to mean an individual who has lost the use of a leg, or both legs, or of both arms, to such an extent that he is unable during the entire taxable year to use, without undue hardship or danger, public transportation as a means of traveling to and from work.

In my opinion, Mr. Speaker, the deduction proposed by my bill would be a real boon to those disabled citizens who need a boost to help themselves to be useful and productive citizens.

The bill follows:

A bill to allow a deduction for income tax purposes, in the case of a disabled individual, of expenses for transportation to and from work

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part VII of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to additional itemized deductions for individuals) is amended by redesignating section 217 as section 218 and by inserting after section 216 the following new section:

"SEC. 217. Transportation of disabled individual to and from work.

"(a) General rule: In the case of a disabled individual, there shall be allowed as a deduction, expenses paid during the taxable year for transportation to and from work to the extent that such expenses do not exceed $600.

"(b) Disabled individual defined: For purposes of subsection (a), the term 'disabled individual' means an individual who has lost the use of a leg, or both legs, or of both arms, to such an extent that he is unable during the entire taxable year to use, without undue hardship or danger, a streetcar, bus, subway, train, or similar form of public transportation, as a means of traveling to and from work."

(b) The table of sections for such part VII is amended by striking out

"Sec. 217. Cross references."

and by inserting in lieu thereof the following:

"Sec. 217. Transportation of disabled individual to and from work.

"Sec. 218. Cross references."

(c) Section 62 of the Internal Revenue Code of 1954 (relating to definition of adjusted gross income) is amended by inserting after paragraph (6) the following new paragraph:

"(7) Transportation of disabled individuals: The deduction allowed by section 217."

SEC. 2. The amendments made by the first section of this act shall apply only with respect to taxable years beginning after December 31, 1955.

Analysis of the Foreign Investment Incentive Bill

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following section by section analysis of the Foreign Investment Incentive Act of 1959—H.R. 5—which I introduced January 7, 1959:

SECTION 1. EFFECTIVE DATE

Section 1 provides that the bill will be applicable to taxable years beginning after December 31, 1958.

SECTION 2. FOREIGN BUSINESS CORPORATIONS

The efforts of American firms to expand their foreign investments have been seriously impeded by the adverse impact of United States tax laws. Despite the avowed policies of our Government to encourage private investment to supplement and ultimately replace foreign economic aid, the capital available for investment abroad by American corporations is unduly restricted by present tax policies. Moreover, our corporations are placed at a competitive disadvantage in their efforts to expand abroad because the tax policies of other countries do not hamper their own foreign investors.

For example, it is possible for corporations of the United Kingdom and Canada to reinvest foreign profits without payment of tax to the home country. No tax liability is imposed by either the United Kingdom or Canada until foreign earnings are repatriated. This is possible under legislation expressly enacted to achieve this result.

Because of these pressures, American corporations have been forced to organize their international operations in foreign corporations in those countries of the world whose laws permit profits earned in one foreign country to be invested in other foreign countries without an intervening tax. This unfortunate trend has developed in part because of the burden U.S. taxation imposes on the expansion of the foreign business activities of American corporations. There are frequent instances in which the management and control of American-owned foreign business have been transferred abroad to have an equal opportunity in foreign markets.

In order to eliminate the necessity for American firms to utilize these foreign corporate vehicles and to promote an expansion of foreign investment by American firms, it is proposed by section 2 of the bill to create a special category of U.S. corporations known as foreign business corporations. Section 2 would offer to American firms substantially the same tax treatment now obtained by the use of foreign corporations and would enable American firms to manage and control their international business in the United States where they belong.

Section 2 would also facilitate tax administration because the Treasury would have information received through the returns filed by these corporations. Any concern by the Treasury for an asserted loss of revenue is illusory. If the present trend to organize foreign business activities through foreign corporations continues, there will be in 5 years little U.S. revenue from taxes on foreign source income. Moreover, to the extent that private foreign investment can supplant foreign aid, there will be a net saving.

A foreign business corporation, under section 2 of the bill, is a domestic corporation which derives substantially all of its income from sources outside the United States and from the active conduct of trade or business, directly or indirectly through subsidiaries in which it has at least a 10-percent common stock interest. Income from the latter source, however, will qualify only if the subsidiary corporation derives substantially all of its income from business done outside the United States. A foreign business corporation may also license the use of patents abroad and render abroad technical, engineering, scientific, construction or like services.

Section 2 of the bill permits foreign business corporations to defer the payment of U.S. taxes on their income earned from sources outside the United States until that income is distributed. Thus, income earned in one foreign country may be reinvested in a new enterprise, in the same or another foreign country, without reduction by U.S. taxes. Similarly, income derived from licensing of patents and rendering of technical services may be accumulated and used to finance further foreign investments. It is just this tax treatment which has led so many American corporations to form foreign subsidiaries to operate their international business. The income accumulated by a foreign business corporation which is not distributed is described as reinvested foreign business income. When a distribution is made out of reinvested foreign business income U.S. tax becomes payable. Against the tax imposed, credit is allowed for taxes paid to foreign countries, just as the foreign tax credit is now allowed to prevent double taxation.

A broad definition of the term distribtion is adopted in order to prevent possible misuse of foreign business corporations for tax avoidance. Since the purpose of the provision is to defer the payment of U.S. taxes only so long as the income is reinvested abroad, a distribution is defined to include any withdrawal of funds from foreign business operations. This includes the distribution of a dividend or the liquidation of a foreign business corporation. To carry out this purpose, any payment made for the acquisition of property sit-

uated in the United States, other than property that is necessary for the conduct of the foreign business, is similarly treated as a distribution, and results in the imposition of U.S. tax. The continued ownership of property that is initially acquired in connection with the foreign business activities, but which is later used in the United States for other purposes, is also treated as a distribution.

The advantages of the foreign business corporation provisions are meaningful only to American firms interested in the expansion of their foreign business. Moreover, these provisions will prevent tax avoidance which has sometimes arisen in the use of foreign corporations. A foreign business corporation cannot qualify if it holds stock in subsidiary corporations which derive any substantial amount of income from investments in the United States. Money cannot be accumulated abroad and then loaned, for example, to the parent organization. Nor can such money be used to purchase plants and equipment in the United States for lease to the parent corporation.

It cannot fairly be contended that section 2 of the bill would make the United States a tax haven. A corporation organized in a foreign country need never pay U.S. taxes on earnings from from non-U.S. sources. On the other hand, a foreign business corporation organized in the United States will pay U.S taxes on foreign income when distributed. Furthermore, ordinary income taxes will be imposed even if the foreign business corporation is liquidated, whereas a corporation organized in a foreign country can be liquidated subject only to capital gains taxes.

SECTION 3. TRANSFER AND REORGANIZATIONS TO FACILITATE PRIVATE FOREIGN INVESTMENT

As presently administered by the Treasury Department, section 367 constitutes a deterrent to increased private foreign investment because of a strict interpretation of the term "avoidance of taxation" in situations involving the transfer of property from a U.S. corporation to a foreign corporation to be used in the active conduct of a trade or business abroad.

Where such a transaction involves the transfer or exchange of assets which may have appreciated in value, the taxpayer must, before completing the transaction, obtain a ruling from the Commissioner of Internal Revenue that such exchange is not in pursuance of a plan having as one of its principal purposes the avoidance of Federal income taxes. Since tax rates in some foreign countries are presently lower than rates prevailing in the United States, the commissioner frequently finds an ominous purpose in a contemplated transaction, and rules that the transaction would be an avoidance of Federal income tax. Indeed, the Treasury Department views any deferral of tax as avoidance of tax.

Section 3 of the bill would facilitate private foreign investment by making expressly applicable to transfers of business property for foreign investment the usual rules for nonrecognition of gain otherwise provided in the code for corporate reorganizations. To accomplish this result, the bill provides that transfers of foreign business property are not for the purposes of tax avoidance and, hence, eliminates the necessity for an advance ruling from the Internal Revenue Service. The term foreign business property is strictly defined to include only property actually used in a trade or business, or stock of another corporation actively engaged in a trade or business. The trade or business must be one 90 percent or more of the gross income of which is derived from sources outside the United States.

To conform related provisions of the code, section 1492 is also amended to provide that the excise tax imposed by section 1491 shall not apply where stock or securities transferred to a foreign corporation are foreign business property as defined in section 367(c).

SECTION 4. EXTENSION OF WESTERN HEMISPHERE CORPORATION STATUS TO INTERNATIONAL TRADE CORPORATIONS

Since 1942 a class of corporations known as Western Hemisphere trade corporations has been taxable at a rate 14 percentage points lower than the normal tax and surtax rates applicable to other corporations. This has been accomplished by allowing a deduction to such Western Hemisphere trade corporations under section 922 of the 1954 code. Western Hemisphere trade corporation status, under existing law, is limited to a corporation which does all of its business—except for incidental purchases—in any country or countries of North, Central, or South America, or the West Indies, provided its income meets two conditions:

First. At least 95 percent of gross income for a 3-year period must be derived from sources without the United States; and second, at least 90 percent of gross income for a 3-year period must be from the active conduct of a trade or business.

The principal purpose of section 4 is to extend the tax status now enjoyed by Western Hemisphere trade corporations to domestic corporations doing business in any foreign country, if the conditions respecting kind and source of income—as somewhat modified—are met.

The justification for enactment of the Western Hemisphere trade corporation provisions in 1942 was that American corporations trading in foreign countries within the Western Hemisphere are placed at a considerable competitive disadvantage with foreign corporations. See Senate Report No. 1631, 77th Congress, 2d session, page 32. Since the same competitive inequity now exists throughout the free world, it is only fair that all U.S. corporations engaged in foreign trade should be treated alike.

The rate differential for the new International Trade Corporation provided by section 4 is fully as justifiable for corporations doing business in Pakistan as in Peru, in Burma as in Brazil, and in the East Indies as in the West Indies. Under section 4, only 90 percent—instead of 95 percent as under existing law—or more of the gross income must be derived from sources without the United States. The reason for this change is the fortuitous possibility that nonrecurring income from within the United States (for example, interest on a tax refund) may result in disqualification for as many as 5 years.

In computing the 90 percent or more of gross income derived from the active conduct of a trade or business, there would be taken into account compensation for technical, managerial, engineering, construction, scientific or like services, royalties from patents, trademarks, and copyrights, and dividends when received from a corporation which, itself, meets the conditions as to kind and source of income, if the stock ownership by the corporation receiving such income is at least 10 percent. The justification for broadening the latter definition is the recognition that foreign countries often require local incorporation and that frequently the risk to American capital is so great as to make essential the sharing of the stockownership.

Under section 4 of the bill, Western Hemisphere trade corporations will cease to exist for taxable years beginning after December 31, 1958, and for all subsequent taxable years such corporations will qualify as international trade corporations. No corporation which meets the present requirements of the Western Hemisphere trade corporation provisions will fail to qualify as an international trade corporation. International trade corporations will be permitted to file consolidated returns in the same manner and on the same basis as consolidated returns may be filed by Western Hemisphere trade corporations under existing law.

SECTION 5. ALTERNATIVE LIMITATION ON FOREIGN TAX CREDIT

Under existing law, domestic corporations, and citizens and residents of the United States, are subject to U.S. tax on total income from sources within and sources without the United States. Since income from without the United States is generally also subject to income tax in a foreign country or possession, a credit is allowed against the U.S. tax for these taxes in order to avoid double taxation of such income.

The foreign tax credit, however, is restricted by the so-called country-by-country limitation, so that the credit for foreign taxes paid to a foreign country cannot exceed the same proportion of the taxpayer's total U.S. tax liability before credit which the taxable income from that country bears to taxable income from all sources. The net effect of this limitation is that the credit for foreign taxes paid to a particular country cannot exceed the amount of the U.S. tax on taxable income from that country.

Thus, under existing law, if a taxpayer earns $100,000 in each of two foreign countries—country A, in which the tax rate is 60 percent, and country B, in which the tax rate is 40 percent, the corporate tax paid, respectively, would be $60,000 and $40,000. Since the income from each country is taxable in the United States at the rate of 52 percent, the total U.S. tax prior to the foreign tax credit is $104,000. Since the $60,000 paid to country A exceeds the $52,000 of U.S. tax on income

from country A, the excess of $8,000 is not allowable as a foreign tax credit, even though the tax paid to country B is $12,000 less than the ratable part of the U.S. tax on the income from country B. Consequently, a taxpayer in such circumstances would pay an aggregate tax of $112,000 on a total income of $200,000, whereas a corporation earning the same income from less hazardous enterprises within the United States would pay a total tax of $104,000.

Section 5 of the bill would provide for an alternative limitation upon the foreign tax credit to insure that the $8,000 of credit for tax paid to country A, which would be lost under existing law, could in effect be applied against U.S. tax upon income from other foreign countries. In no event, however, could the total of the credit for taxes paid to all foreign countries exceed the ratable part of the U.S. taxes upon total taxable income from all sources without the United States. In this manner the fundamental purpose of the foreign tax credit—to prevent double taxation of income earned abroad—which has been a basic cornerstone of Federal tax policy since 1918, would be effectuated.

SECTION 6. CREDIT FOR INVESTMENT INCENTIVE WAIVERS OF TAX BY A FOREIGN COUNTRY

This section will make it possible for American firms which do business without the United States to benefit from tax inducements offered by foreign governments to attract new capital, new technical skills, and American management. Today, if a foreign country is willing to give up tax revenues to induce an American firm to risk its capital and to provide the technical skills and know-how for industrial development, such a concession is of no benefit to the American concern. Under U.S. tax laws, income from foreign sources is fully taxable, but a credit against the U.S. tax is allowed for income tax paid to a foreign country. When a foreign country reduces its tax, the U.S. tax is correspondingly increased. Hence, any benefit of such a tax inducement is vitiated under existing tax laws.

It is not justifiable to thwart the efforts of underdeveloped countries to increase their standard of living through industrialization which cannot be provided without capital from the United States. Frequently, these underdeveloped countries are not firmly committed to either the Soviet bloc or the free world. Our national interest lies in assisting these countries in their efforts to industrialize and in impressing them with the advantages of our economic system. It is difficult to explain that tax sparing, their best opportunity for acquaintance with the free-enterprise system, is nullified by U.S. tax law.

While tax sparing is a worthwhile instrument, its scope must be limited. Safeguards are provided in section 6 by requiring that the taxpayer establish to the satisfaction of the Secretary of State that tax waivers were not only extended in good faith by the foreign country, but were also accepted in good faith by the U.S. taxpayer, and that the taxpayer was, thereby, induced to begin, increase or continue the specified activity within the foreign country. In view of the foreign economic policy aspects of this provision, the Secretary of State is considered best qualified to make the determination under this section, just as the defense agencies have usually been delegated authority to issue certificates of necessity for accelerated amortization.

The period of credit for taxes spared is limited to 10 years.

SECTION 7. NONRECOGNITION OF GAIN ON INVOLUNTARY CONVERSION OF PROPERTY OF FOREIGN SUBSIDIARIES

Under existing law, if the property of a domestic corporation is compulsorily or involuntarily converted as a result of its destruction, theft, seizure, requisition, or condemnation, no gain is recognized by such corporation upon the receipt of insurance proceeds, if these proceeds are converted into property within 1 year after the close of the first taxable year in which any part of the insurance proceeds is received. However, this treatment does not extend to the case where a domestic corporation insures the property of its wholly owned foreign subsidiary with the result that, when the property of the foreign subsidiary is destroyed, for example by fire, the domestic parent pays a tax on the insurance proceeds received as a result of the fire at ordinary income rates.

In many foreign countries it is impossible or difficult to secure adequate insurance coverage. It is necessary for a domestic corporation to seek insurance from U.S. sources in order to protect the assets of its foreign subsidiary. Thus, such domestic corporations are deprived of the benefit of the insurance protection by the operation of existing law to the extent that the insurance proceeds are reduced by the full corporate income tax when they are received. To prevent this result, section 7 of the bill extends the nonrecognition of gain now provided by section 1033 of the Internal Revenue Code of 1954 to cases where property of a foreign subsidiary in which the taxpayer has an insurable interest is compulsorily or involuntarily converted, if the taxpayer, first, contributes the insurance proceeds to the capital of the foreign subsidiary; or, second, purchases property similar or related in service or use to the property involuntarily converted and contributes such property to the capital of the foreign subsidiary. This rule applies whether or not the contribution of insurance proceeds is in exchange for stock. It also applies to cases where a contribution to capital is directly to the subsidiary, or indirectly through another foreign subsidiary. To prevent a double benefit to a domestic corporation as a result of the new treatment provided by the bill, section 7 specifies that the domestic corporation's basis of the foreign subsidiary's stock shall be increased only by the amount of any gain which is recognized. Similar safeguards are provided by section 7 to prevent a distortion in the earnings and profits of the foreign subsidiary. Thus, since the foreign subsidiary would be allowed a deduction in the amount of this loss arising from the involuntary conversion of its property, the bill provides that its earnings and profits are to be increased by the amount of the gain which is not recognized by the domestic parent corporation as a result of the new treatment provided by the bill.

Do We Need an Overseas Trade Monopoly in Order To Compete With the Soviet State Trading Apparatus in Critical Sectors of the World Market?

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, the visit of Anastas I. Mikoyan to our country to promote trade between the United States and the U.S.S.R. will have served a useful purpose if it causes us to greatly strengthen our own trading policies.

During the week of December 1, 1958, the Subcommittee on Foreign Trade Policy of the House Committee on Ways and Means took a look at the Russian trade monopoly when experts from seven Federal departments and agencies testified regarding it. It became clear, after hearing these witnesses, that while our Government recognizes the inherent danger to our way of life from the Russian trade offensive, it has no policy to meet or equal it. The United States is not alone in lacking such a policy. The Finish Government collapsed recently, a victim of Russian economic pressure. Brave little Finland, which fought the Russian military juggernaut almost to a standstill only 20 years ago, collapsed like a house of cards when Russia refused to trade with the Finns. About the same time the Government of Iceland resigned because of economic difficulties and the Communists were conspicuously active in bringing this about too.

John J. Powers, Jr., president of the international division of Charles Pfizer & Co., Inc., told 500 members of the Pharmaceutical Manufacturers Association at a meeting in New York's Waldorf-Astoria Hotel that:

> The enemy has devised new techniques and is launching a major offensive on a worldwide basis, while we are still in the perilous position of preparing only for a shooting war that may never come. Recent Russian international trade disruptions in aluminum, tin, and other commodities are as much a sign of war as the shooting in Quemoy and the political maneuvering in Berlin. The Soviet bloc clearly demonstrated that it will dump, that it will sell under cost for political purposes, that it will use inflation as a political weapon, and that it will extend long-term, low-interest loans.

Mr. Powers and other able observers conclude that Russia is winning over the economically underdeveloped, politically neutral countries by linking their aspirations to Russian goods and technology.

We can only hope that as other countries come face to face with economic

realities similar to those which led to the overthrow of the Governments of Finland and Iceland that they will take a second look at the well-filled Christmas stockings offered by the Russian Santa Claus. Uncle Sam has given away over $60 billion since the end of World War II. This has not succeeded in endearing him to other nations who prefer trade to aid. With a fraction of what we have spent Russia is being phenomenally successful by a trade offensive in which aid, as we know it, has at best but an insignificant role. Somehow aid has been easier for us and we have chosen the easy way. Our best interest in the long run demands more trade and less aid. This is a task for all of us to get going on, business, President Eisenhower, and the Congress. The National Planning Association, with the aid of a Rockefeller grant, and the Business Advisory Council of the Federal Government's Department of Commerce are each making painstaking studies of how we in the United States and the free world can meet and master the Russian trade offensive. It is not a minute too soon.

According to a press report by James Reston—New York Times, December 2, 1958—the administration has been discussing quietly for the past 6 months the advisability of establishing an overseas trade monopoly to compete with the Soviet state trading apparatus in critical sectors of the world market.

The current groping for some line of action by which to counter the Soviet thrusts in selected markets must be viewed against the broad setting of recent commercial policy of the U.S.S.R. and the aggressive tactics employed by its trade monopoly as both buyer and seller.

I. RECENT TACTICS OF THE SOVIET TRADE MONOPOLY

Within the past 2 or 3 years the Soviet trading apparatus has attracted worldwide attention by a series of acts tending to draw several smaller countries into its own commercial orbit and to undermine the competitive position of a number of other trading nations. Some of the tactics used by the U.S.S.R., through the medium of its trade monopoly, may be summarized as follows:

A. BUYING UP OF PRESSING SURPLUSES

First. During 1956–57 it moved to relieve Burma of its rice surpluses by buying at the rate of 114,000 metric tons a year.

Second. In Iceland, it has made heavy purchases of fish in the past 2 years, at the rate of 45,000 tons per annum.

Third. Large-scale procurement of cotton and rice was ordered in Egypt: 60,000 tons yearly of the former and 70,000 tons of the latter.

Fourth. In Uruguay and Argentina, the U.S.S.R. recently appeared as a new, and reportedly welcome, buyer of wool, taking four to five thousand tons a year from each country.

Note: While the above commodities are of the type usually imported into the U.S.S.R., the significance of the recent pattern of procurement arises from the fact that the Soviet trade monopoly has been able to shift its buying from Western-oriented suppliers—Australia, Iran, South Africa, Norway—to more promising markets. Such shifts, moreover, can be made by the trade monopoly without regard to the usual commercial terms: price, quality, cost of transport, et cetera. It is known, furthermore, that some of these imported products were later reexported by the U.S.S.R. to other countries within the Soviet bloc.

B. PREEMPTING MARKETS OF TARGET COUNTRIES

In a number of selected markets, the Soviet trade monopoly has been pressing its initial advantage to the point of establishing its commercial dominance.

First. In Afghanistan, for example, it has succeeded in preempting a growing share of that country's total trade—now over 30 percent.

Second. The U.S.S.R. has also extended its political leverage into Finland by way of raising its purchases to about 20 percent of that country's total exports.

Third. In Egypt, Russia has recently stepped up its purchases to a point where they now account for over 20 percent of all Egyptian exports.

Fourth. Similarly, the Soviet trade monopoly now takes 22 percent of Iceland's total export trade.

By way of getting these countries more deeply involved in the Soviet commercial orbit, the trade monopoly is conducting an aggressive export campaign. As a result, the position of the established western exporters to these markets is being seriously undermined by Soviet sales of similar goods at cut-rate prices. A number of such target markets are now supplied by the U.S.S.R., for the first time, with trucks, autos, tractors, bulldozers, scrapers, cranes, machine tools, and oil equipment.

As far as can be ascertained from available trade reports, when the Soviet Government decides to introduce a particular line of machinery into an underdeveloped country, say in the Middle East, the regular western supplier to that market finds it impossible to compete.

It is interesting to note, for example, in this connection, that the Yugoslav Government reported in late November 1958, that it was under severe pressure in the Middle East from the Soviet trade agents who "with uneconomic prices and other means are trying to push us out of the Arab market"—New York Times, November 30, 1958.

C. MAKING INROADS INTO WESTERN COMMODITY MARKETS

Agents of the Soviet trade monopoly have also stepped up their activities on a number of world commodity markets. The pressure to increase Soviet sales has been concentrated especially on petroleum products and nonferrous metals—tin, aluminum, nickel, and zinc. The effect in such cases has been to depress prices and to cut the export earnings of several small producer-nations—for example, Bolivia, Malaya, and Indonesia, in the case of tin.

These practices have been characterized by Prime Minister Diefenbaker of Canada as "warfare in the market place," designed to undermine the economic strength of the free world. In this type of operation, said the Prime Minister, "the profits are measured not in the ledgers of commerce, but by the numbers of souls who trade their security and survival as freemen in the future for a temporary material advantage of the present"—New York Times, November 5, 1958.

Specifically, Canada has been affected by Soviet incursions into sensitive markets for several of its export commodities such as, among others, platinum, nickel, aluminum, soybean oil and meal.

D. PROMOTING THE POSITIVE FEATURES OF STATE TRADING

In its approach to the underdeveloped nations, the Soviet trade monopoly plays up a number of features in its state trading system calculated to appeal to the economic interest of these countries. The following features are stressed:

First. The state trading agencies of the U.S.S.R. do not require hard currencies for their exports. The purchase of Soviet goods can always be arranged on a barter basis, with the buying nation paying in goods rather than in currency.

Second. Soviet machinery is made available on the installment basis over periods as long as 5 years.

Third. Trade with the U.S.S.R. is particularly stable, because it is usually conducted on the basis of bilateral trade agreements that are renewed from year to year. Such agreements include specific lists of goods to be supplied by each side in the course of the year. Moreover, in the interest of stability, the U.S.S.R. often suggests 3- and 5-year agreements. Such formal lists have their special appeal to countries where governments are heavily involved in the conduct of foreign trade.

Fourth. The Soviet trade monopoly also recommends itself as a stabilizing influence on the prices of raw materials exported by the underdeveloped nations. As a token of its good intentions, it offers to sign purchase contracts at prices fixed to run over an extended period of time.

II. THE RECORD OF THE SOVIET TRADE MONOPOLY

The conduct of foreign commerce on a monopoly basis has enabled the U.S.S.R., over the years, to utilize trade as a weapon for the attainment of political objectives. Viewed from the other end, however, namely, from the standpoint of the nations trading with the U.S.S.R., the record of the Soviet trading system has been on the whole rather unsatisfactory. Its very utility for political pressure has made the trade monopoly a rather poor medium for the conduct of normal trade relations. More often than not it has prevented the development of a climate of mutual trust and simplified procedures. The experienced trader in the Free World has always known that only the politically motivated deal is closed promptly. By contrast, ordinary commercial transactions are inordinately time-consuming, being accompanied by excessive formalities and long periods of indecision.

While we need not here submit a full list of the liabilities of the Soviet trading monopoly, it may be useful, in the interest of perspective, to recall a few of the basic negative features of the Communist system of state trading as identified in a

recent paper by a distinguished western economist read before an East-West economic conference held in Rome in March 1958: [1]

1. The individual state-trading country of the Communist bloc does not usually aim at enlarging its international trade as such, but rather seeks to establish its other objectives and to make use of trade as a temporary convenience that may assist in carrying out some general policy objectives of the state.

2. Supplies placed on the market by a state-dominated economy tend to be marginal rather than the result of a line of continued production intended for the market. In the main, commodity trade is consciously used as a device for counteracting the mistakes of the planning mechanism and for compensating for the failures of the domestic plant to meet the goals set by the planners.

3. Because trade in a state-managed economy serves chiefly as a corrective to the planning mechanism, it tends to be discontinuous. Hence, trade which requires for its most effective operation a substantial specialized investment over a long period of time is discouraged. Trade tends to gravitate to: (a) Bulk commodities where added amounts can be easily absorbed by an already existing market; (b) large units of equipment in which sporadic transactions are normal.

4. One of the greatest obstacles to trade with countries employing a monopoly system is the ever-present risk of interruption in active contact that comes with each shift in the political orientation of the regime. Constant shifts of executive officials and of formal jurisdictions prevents maintaining long-term contact with the same individual or department. The central management of the economy, furthermore, leads to sudden changes of interest, to the launching of campaigns for dealing with an unexpected or unhedged surplus or shortage.

In short, practical experience with state trading over the past 40 years has not evolved the institution into an effective instrument for the normal, profit-motivated, and recurrent exchange of goods. What has attracted the Communist governments to this system, to be sure, is the very fact that it lends itself readily and pliably to manipulation by the political authority without the need to serve public notice, that is, by action taken through purely administrative channels. It can be used as a medium for rewarding friends and punishing enemies.

Even so, it is important to note that the instances of prompt action on the part of the monopoly in the world market have to be viewed as the exception rather than the rule in the functioning of the state trading apparatus. These are the instances in which a higher ranking authority bypasses the clogged channels of the Ministry of Foreign Trade. True, both agencies in question act in behalf of the same government, and both are free of any restraint in regard to cost. The fact remains that most of the spectacular commercial deals that have recently attracted our attention have involved the short-circuiting of the normal state trading machinery in the interest of a clear political advantage.

III. POSSIBLE DEFENSIVE MEASURES

At the present juncture in international relations, the United States may legitimately consider the adoption of certain measures to enable it to defend the national commercial interest in parts of the non-Communist world. There are two types of situations in which the U.S. Government could conceivably intervene to prevent the erosion of legitimate commercial rights:

One, in which pressure is brought to bear by the Soviet trade monopoly on an individual market in the form of uneconomic prices, or similar unfair practices, for the purpose of expelling from that market established United States sellers. The presumption in favor of action in such cases would be that the price cutting is only a temporary device employed by the trade monopoly to achieve the desired result. For the long term, even the Soviet trade monopoly is under orders to sell at the highest obtainable price.

Two, in which the purchasing power needed by some friendly countries for United States goods is frozen in the form of commodity surpluses that cannot be easily marketed to their normal nation-customers without the use of credit. Here the United States would be acting as an intermediary to keep trade flowing through ready channels, reduce the opportunity for Soviet pressure, and at the same time help unfreeze potential cash resources for the purchase of U.S. goods.

To cope with situations of this sort, it may be advisable to consider the establishment of the following instrumentalities:

First. An anti-dumping fund to enable American exporters to withstand Soviet attempts to expel them from established markets by the device of price cutting. Traders in this position may be regarded as victims of a planned Soviet political maneuver against the United States as a nation rather than against them as individuals.

Second. A U.S. commercial corporation to undertake commodity transaction with foreign countries which involve barter, credit, three-way transactions and other exchanges having a clear national economic or political objective that could not be pursued by a profit-motivated business firm.

In connection with the above, it is worthy of note that, according to the press, Representative THOMAS B. CURTIS disclosed before the American Management Association that he planned to reintroduce a bill in the next Congress calling for the creation of a U.S. trading corporation. It would grant financial assistance to American industries faced with unfair competition from the Soviet Union—New York Times, November 6, 1958.

IV. THE NEED FOR PERSPECTIVE

It would be shortsighted, however, to jump to the conclusion that the United States should establish a trading monopoly of its own to combat that of the Soviet Union, for to do so would be to recommend state trading to combat state trading. This is one case where fighting fire with fire could be disastrous.

The present foreign trade policy of the United States, which was inaugurated in the 1930's as an antidepression measure, has become too passive to offer an effective response to the Soviet trade threat. The present need is for a more vigorous foreign trade policy, one which, instead of confining itself to the multilateral reduction of trade barriers, would bring about a maximization of imports and exports by the countries of the non-Communist world. Such a policy, one that would be geared to the very real strategic needs of the United States, could be evolved only after a searching reexamination of our present and future international economic position with particular reference to the economic strategy of the Soviet Union.

BRIEF STATEMENT ON THE BULK-PURCHASE PROGRAM OF THE BRITISH GOVERNMENT

The British Government does not have a monopoly of foreign trade. During and after World War II, Great Britain has engaged in a form of state trading through the use of what are known as bulk-purchase contracts. These contracts, or bilateral agreements, concluded between the British Government and other governments, quasi-governmental bodies or private groups were concerned with the volume, the types and the terms of exportation and importation of specific goods for a specified period of time.

Such contracts provided that Britain would buy a fraction or a specified quantity of the exportable surpluses of the commodity produced in a given country. The price of the commodity was usually subject to revision up to a definite maximum at certain stated intervals. A program of bulk purchase was continued after World War II because it was evident that food and other commodities would have to be rationed for a period of years and the Labor Party leaders felt that the retention of central purchase would give the most effective control of distribution of supplies within the country.

The bulk-purchase contracts served several purposes: First, they served to steer trade from the dollar area to the sterling area and to soft currency areas; second, they tended to assure a fairly constant flow of imports at relatively favorable prices; since the contracts were ordinarily for a period of years they tended to promote price stability. They provided a certain amount of protection to British producers or investors since such contracts directed trade toward those British dominions or territories in which British capital was invested.

Usually the bulk-purchase contracts specified the exchange of an array of goods from Britain for raw materials and foodstuffs of equivalent value. Postwar contracts were for longer duration extending—in most cases—from 3 to 15 years.

Over 40 separate contracts were negotiated covering trade with other Commonwealth countries and possessions and with countries in Latin America, Eastern and Western Europe, and Asia. About one-half of all British imports were covered by such agreements up to 1950.

The Conservative election victory in 1950 resulted in a policy of honoring existing bulk-purchase contracts, but of negotiating no new ones.

State trading existed in the United Kingdom after World War II, but it coexisted with private trading and was not

[1] "Trade Between Countries With Different Economic and Social Systems," by A. K. Cairncross (Glasgow University) UNESCO, SS COOP, EC, 7 Paris; Feb. 17, 1958.

a monopoly. In recent years, the volume of state trading has declined.

I include here a letter I have received from Hon. Douglas Dillon, Under Secretary of State for Economic Affairs, and a letter from Harold Boeschenstein, Chairman of the Committee on World Economic Practices, Business Advisory Council, Department of Commerce, which is currently engaged in a study, at the request of President Eisenhower, of how we can meet the Russian trade threat effectively.

I also include an article by James Reston of the New York Times of December 2, 1958. I would like to say that in the development of this information I have had the assistance of Leon M. Herman, specialist in Soviet economics, Howard S. Piquet, senior specialist in international trade, and Elden E. Billings, analyst in international finance of the Library of Congress:

UNDER SECRETARY OF STATE,
FOR ECONOMIC AFFAIRS,
Washington, December 15, 1958.

Hon. FRANK THOMPSON, Jr.,
House of Representatives.

DEAR MR. THOMPSON: Many thanks for sending me a copy of your statement of December 16 on the Soviet economic offensive. I certainly agree with your thought that this is a matter which demands our full attention.

As you have pointed out, the situation with respect to the underdeveloped countries is especially urgent. Our best estimate is that the Sino-Soviet bloc has extended credits of almost $2.6 billion to these areas since 1954. More than 90 percent of this amount has gone to seven countries.

As of possible interest, I am enclosing a copy of my recent speech before the American Management Association, which deals with the subject of Soviet foreign economic policy.

Sincerely yours,

DOUGLAS DILLON.

OWENS-CORNING FIBERGLAS CORP.,
Toledo, Ohio, December 18, 1958.

Hon. FRANK THOMPSON, Jr.,
Old House Office Building,
Washington, D.C.

DEAR CONGRESSMAN THOMPSON: I appreciate receiving the copy of your recent release on the Sino-Soviet economic offensive and concur that there is nothing more vital to our Nation than the manner in which we face up to this.

As you may know, I am a member of the committee, referred to in your release, created by the Business Advisory Council at the behest of the Government. Inasmuch as the work of the committee is not finished, I know you will understand why I should not comment at this time other than to say that such vigorous concern as yours is clearly needed among men in your position.

Sincerely,

HAROLD BOESCHENSTEIN.

[From the New York Times of Dec. 2, 1958]

TRADE POLICY QUANDARY—SOVIET ECONOMIC DRIVE BEGINS DIVISION IN ADMINISTRATION ON COUNTERMOVES

(By James Reston)

WASHINGTON, December 1.—The annual battle over the Nation's foreign economic policy started today with the administration more divided than ever over how to deal with the Communist world's economic offensive.

When experts from seven Federal agencies finished testifying this afternoon before a House Ways and Means Subcommittee on the challenge of Communist trade policy, Chairman HALE BOGGS, of Louisiana, remarked: "They all recognize the danger but have no policy equal to it."

In the last few days several isolated incidents have illustrated the nature of the danger they were discussing:

Last week it was disclosed that the Soviet Government had concluded an agreement to sell $13,500,000 worth of benzene to the Dow Chemical Co., at a price equivalent to 24 to 25 cents a gallon. The current price in the United States is 31 cents a gallon.

Coincidentally, Augusto Frederico Schmidt, head of the Brazilian delegation to an inter-American economic conference in Washington, announced that his country was increasing its exports to the Communist nations. The British Commonwealth and the European common market nations, he observed, were "gradually closing their doors to our production," and the United States was not able to absorb Brazil's losses in those markets.

Premier Nikita S. Khrushchev, of the Soviet Union, in his latest maneuver to influence the political future of Berlin and Germany, held out once more the promise of a vast market for German products in the whole of the Communist world.

A high official of the United States Government, discussing the problem of meeting the Communist offensive, commented this afternoon:

"It is politically impossible for us to discuss in public the radical changes we shall have to make to deal effectively with the Soviet economic offensive.

A POLITICAL INSTRUMENT

"They control all of their foreign trade. They can use it as a political instrument regardless of cost. They can take losses to drive competition out of a given market precisely as large producers once were able to do to eliminate small competitors in this country.

"We have been discussing quietly inside our own Government for 6 months the need to establish an overseas trade monopoly to compete with the Soviet monopoly on equal terms, but this is so foreign to our normal way of doing business that we dare not mention it in public."

What the public hearings before Chairman Boggs' Ways and Means Subcommittee demonstrated today was that the administration was just as divided on less radical policies than the creation of a monopoly for the sale of U.S. products overseas.

Henry Kearns, Assistant Secretary of Commerce, predicted that the administration would ask the next Congress to approve tax concessions to encourage increased private investment abroad.

DIVISION IN DEPARTMENT

It is known, however, that some of Mr. Kearns' superiors in the Commerce Department are opposed to dealing with the problem through tax concessions, and the Treasury Department's chief tax expert, Dan T. Smith, refused to go along with Mr. Kearns' prediction that the administration would ask for tax concessions.

The division within the administration on this subject reflects the conflict between those who have been stating the Nation's foreign policy objectives and those who have to tend the Nation's Treasury.

The State Department and the International Cooperation Administration, concerned with the dangers of Communist economic subversion, are prepared for a radical revision of U.S. foreign economic policy to meet what they regard as a radical attempt by the Communist nations to upset the whole pattern of foreign trade.

The Treasury Department, however, faced with a $12 billion deficit in the current fiscal year, tends to oppose any new programs that might reduce revenue and create a double standard of taxation.

To minimize this dilemma, the Administration is now studying the possibility of reducing military aid to underdeveloped countries and increasing economic aid.

It is also discussing with Britain and the so-called common market countries of Western Europe ways and means of preventing the common market countries from discriminating against trade with countries outside the common market.

More than likely a compromise will be reached on this latter point under which the Common Market countries will agree not to raise tariffs against the United States, Britain, Switzerland and other nations for a period of 18 months. But this again is regarded here as merely a postponement of the problem.

The main point under discussion here is that the Soviet Union and the other Communist countries are concerting their foreign trade policies for political purposes, while the administration and the other free governments of the West are divided over how to deal with a wholly new situation.

Chairman BOGGS was not hopeful tonight that his hearings would find a way out of this problem, but he planned to carry them on in order to make clear what the problem was.

Tax Credit for Education

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I have introduced a bill today to amend the Internal Revenue Code of 1954 to allow a 30-percent credit against the individual income tax for amounts paid as tuition or fees to certain public and private institutions of higher education.

The increased financial burden is a major barrier to the student's education. This bill is designed to encourage many parents to reappraise their financial ability to pay the costs of a child's education, so that more children can avail themselves of our country's rich educational opportunities.

The basic features of my bill which I believe to be sound in terms of fairness to the taxpayer and of service to the national interest are the following:

First. The bill would apply only to higher education—that above the 12th grade—including colleges, graduate schools, professional schools, junior colleges, technical institutes, teachers' summer courses, and the like.

Second. The payments involved would be only those made to educational institutions which meet the tests for special tax treatment under the present income-tax laws.

Third. In order to eliminate any possible feeling that the bill would discriminate in favor of taxpayers in higher brackets, it would provide that 30 percent of the student fees would be taken as a tax credit on the tax bill. Thereby the cost to the Government would be approximately the same as if the student fees were made deductible, but the relief

to all taxpayers would be the same regardless of their tax bracket.

Fourth. A ceiling of $450 for each student would be placed on the amount of the tax credit. This would mean that that portion of any tuition above $1,500 per year would not result in any further tax credit. It would be hoped that this ceiling would be sufficient to cover the tuition charges for graduate and professional education as well as for that at the college level.

Fifth. There would appear to be no occasion for limiting the taxpayer entitled to receive the tax credit to any particular relationships with the student. The neighbor or employer of a promising but financially poor boy or girl frequently proposes to pay his or her tuition to make higher education possible, provided the tax payment can be made deductible, but this is difficult under present laws. It would be expected that the tax credit plan would bring out more funds in the nature of scholarships to those unrelated to the taxpayer but in whom the taxpayer has some philanthropic interest.

Sixth. No tax credit would be allowed on amounts for tuition and fees supplied in the form of scholarships, fellowships or grants from sources other than the taxpayer himself. It would be assumed that payment of tuition and fees would be the first charge against such a scholarship, fellowship, or grant.

It is my opinion that such a tax credit will be a stimulus to more efficient use of private and public institutions. The result would be encouragement of broad distribution of student enrollment in all types of institutions, an objective which has always been considered to be in the public interest, and which is of even greater importance in the current emergency situation.

A bill to amend the Internal Revenue Code of 1954 to allow a 30 percent credit against the individual income tax for amounts paid as tuition or fees to certain public and private institutions of higher education

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part IV of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to credits against tax) is amended by adding at the end thereof the following new section:

"SEC. 39. Tuition and fees paid by individuals to institutions of higher education.

"(a) General rule: There shall be allowed to an individual, as credit against the tax imposed by this subtitle for the taxable year, an amount equal to 30 percent of the aggregate amount paid during the taxable year by such individual to institutions of higher education as tuition or fees for the education of such individual or of any other individual at a level above the twelfth grade.

"(b) Limitations.

"(1) Individual receiving education must be full-time student: Amounts paid for the education of any individual which (but for this paragraph) would be taken into account under subsection (a) shall be taken into account only if such individual is a student (as defined in section 151(e)(4) for the calendar year in which the taxable year of the taxpayer begins.

"(2) Adjustment for scholarships and certain allowances: In the case of any individual who for any period receives—

"(A) any scholarship or fellowship grant (within the meaning of section 117(a)(1)) which, under section 117, is not includible in gross income, or

"(B) any education and training allowance under part IV of title II of the Veterans' Readjustment Assistance Act of 1952,

any amount paid for tuition or fees for such period which (but for this paragraph) would be taken into account under subsection (a) shall be taken into account only to the extent that the aggregate of such tuition and fees charged such individual for such period exceeds the sum of (i) an amount equal to all the scholarships and fellowship grants described in subparagraph (A) received by such individual for such period, plus (ii) an amount equal to 30 percent of all the allowances described in subparagraph (B) received by such individual for such period.

"(3) Maximum taken into account: Amounts paid during any calendar year with respect to the education of an individual which (but for this paragraph) would be taken into account under subsection (a) shall be taken into account only to the extent that they do not exceed $1,500. The Secretary or his delegate shall prescribe such regulations as may be necessary for the application of this paragraph in cases where two or more taxpayers pay amounts with respect to the education of the same individual.

"(4) Credit not to cause refund of tax: The credit allowed by this section shall not exceed the amount of the tax imposed by this chapter for the taxable year, reduced by the sum of the credits allowable under sections 33 (relating to foreign tax credit), 34 (relating to credit for dividends received by individuals), 35 (relating to partially tax-exempt interest), and 37 (relating to retirement income).

"(c) Institution of higher education defined: For purposes of this section, the term 'institution of higher education' means only an educational institution—

"(1) which normally maintains a regular faculty and curriculum and normally has a regularly organized body of students in attendance at the place where its educational activities are carried on;

"(2) which regularly offers education at a level above the twelfth grade; and

"(3) contributions to or for the use of which are deductible under section 170."

(b) The table of sections for such part IV is hereby amended by adding at the end thereof the following:

"SEC. 39. Tuition and fees paid by individuals to institutions of higher education."

SEC. 2. The amendments made by this Act shall apply only with respect to taxable years beginning after December 31, 1957.

Counterattack on Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. BOGGS. Mr. Speaker, I am very pleased to incorporate in the CONGRESSIONAL RECORD for this the first day of the 86th Congress a very arresting article written recently by Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation.

This article is entitled "Counterattack on Juvenile Delinquency." As all of us know this is one of the very grave problems confronting our Nation and I commend the sane, sensible thoughts of Mr. Hoover to the attention of all of you.

The article follows:

[From This Week magazine, Oct. 26, Nov. 2 and 9, 1958]

COUNTERATTACK ON JUVENILE DELINQUENCY

(By J. Edgar Hoover, Director, Federal Bureau of Investigation)

PART I

America is facing an emergency, a crisis which threatens the very future of our Nation.

It is the emergency of juvenile delinquency. The tide of youthful lawlessness is rising at a terrifying pace. By 1962 one million of our teenagers will be arrested each year—at the present rate.

My considered opinion is that we must act—and promptly. The time has come for a counterattack against juvenile delinquency. Unless this counterattack is successful, no street or park in the Nation will be safe. Worst of all, every child in the Nation will be exposed to the vicious acts of the delinquent minority.

Thousands and thousands of words have been written recently about the juvenile-delinquency problem. "Are the schools to blame?" "Are the parents to blame?" "Is our whole culture at fault?" are some of the questions which have been argued at length in newspapers and magazines. But now the time has come for action.

I am delighted that This Week magazine has asked me to propose such action in this series of articles.

Medicine of two kinds

In this series, I will outline what I believe to be an effective two-pronged counterattack against juvenile delinquency designed to (1) bring existing delinquency under control and (2) prevent future delinquency.

But first let's define the scope of the problem.

During 40 years in law enforcement I have seen thousands of youths skid downward along the path from minor delinquency to vandalism, petty theft and progressively more serious crimes. Those of us who recognize juvenile delinquency as the training school for adult crime are seriously alarmed at its increase.

Here are the statistics that worry me and all law enforcement officers: During 1957 persons under 18 years of age comprised 53 percent of all arrests for the major offenses against property. Last year, more than two-thirds of the auto theft arrests, over one-half of the burglary and larceny arrests, and one-fourth of the arrests for robberies in cities involved juveniles.

No one is immune

Throughout the United States, an estimated 740,000 youngsters under 18 years of age were arrested last year. This is 3.3 percent of the population in the 10 to 17 age group, and it means that 1 out of every 30 youngsters was arrested for violating the law.

Since 1952, our juvenile population has increased approximately 22 percent. Juvenile arrests in the same period have risen 55 percent.

And the offenses committed by young people are characterized by more violence, more contempt for law and order. In every one of our cities terror runs down the street as youthful hoodlums grow increasingly bold and vicious.

This is the scope of the problem, a problem which cannot be dismissed as affecting only one area or one class. Juvenile delinquency and juvenile crime are not restricted. No child—rich, poor, city dweller, or suburbanite—is inherently immune to delinquent behavior.

Delinquency is a worldwide disease. A recent study in Great Britain disclosed sharp

increases in sex offenses, drunkenness, and crimes of violence among British teenagers, notably the "Teddy Boys." In Russia, an official Soviet Government booklet entitled "The Fight Against Hooliganism," reveals that knifings, beatings, thefts, and destruction of property by Soviet youth, constitute a menace of great concern behind the Iron Curtain.

But we're concerned with the causes of juvenile delinquency in the United States. I believe that this menacing cloud, mushrooming across the Nation with its terrifying portents for the future, is indicative of a deep-seated national illness. I am certain that here is proof once again you cannot dance without paying the piper. Over the past quarter of a century all too many Americans have been ignoring the basic traditions of work, discipline, and vigilance on which our Nation was founded.

Values are to blame

We seem to have misplaced the sense of values which made this a great Nation. Self-indulgence and the principle of pleasure before duty on a vast and growing scale have become a phenomenon of our adult world. These are warning symptoms of the "decadence disease"—which has contributed to the decay of so many civilizations throughout history.

When children, without discipline and without moral standards implanted by a stable home, are thrust into a culture in which pressures from every direction promote the principle of self-indulgence, what reaction can be expected? To such children, restraints are unbearable. When they want something, they take it.

These children are victims in a very real sense. They are the victims of a society which has substituted indulgence for discipline. They are the victims of a breakdown of authority and moral standards in the home, in the neighborhood, and—too frequently—in the entire community. And they are the victims of those practitioners of expediency who have blurred the lines between right and wrong, good and evil.

So, in large part the juvenile delinquent is a byproduct of our self-indulgent age. As such, he deserves understanding and sympathy, as well as an effort to rehabilitate him. Yet, while seeking to save those who can be salvaged, we must not make the mistake of adding to the problem by repeated, misplaced leniencies.

The treatment accorded youthful criminals must be fair, reasonable, and realistic.

I have been called an advocate of the get tough policy. To an extent, perhaps I am. I have seen too many instances in which repeated leniency has encouraged misbehavior, and I have adso seen occasions when the policies of a realistic judge proved to be very effective deterrents to crime.

The "I can get away with anything—I'm a juvenile" attitude on the part of scores of young hoodlums is a clear-cut indication of how sentiment can supplant sense. Too frequently, misguided sentimentality, along with a policy of blanketing all youthful offenders under a protective covering of anonymity, actually encourages juvenile misbehavior. The knowledge that one can get by, not once but time after time, breeds bitter contempt for law and makes a mockery of our system of justice.

Let me repeat here what I have said many times. I heartily endorse reasonable consideration for children involved in minor delinquencies and first offenses. I do not, however, believe that the umbrella of special privilege should be held impartially over all juveniles, including those who commit heinous crimes or those guilty of repeated offenses. Leniency is misdirected when it is applied repeatedly to those whose every act expresses disdain for law.

Prelude to worse crimes

When "I can get away with anything—I'm a juvenile!" becomes the scornful slogan of increasing numbers of youthful cynics, we need to be wary. Such youngsters, through actual experience, are beginning to visualize themselves as immune from the law. If they get by repeatedly with the little things, the temptation grows. All too often the little things have become a prelude to really vicious crime.

I do not exaggerate when I use the word "vicious." The appalling rise in juvenile crime is equalled only by the increase in violence and brutality displayed in the commission of such crimes.

The three most prevalent juvenile offenses are: burglary—in 1957, 54.8 percent of all arrests for burglary involved youths under 18. Example: On the west coast last fall, two boys, aged 15 and 13, were surprised by a merchant while they burglarized his store. One of the boys fired a .22 caliber pistol at the businessman, killing him instantly. The gun had been stolen in a previous burglary; larceny—in 1957, 51.3 percent of the persons arrested for larceny were youths under 18. Example: A series of burglaries and larcenies committed on the east coast was finally traced to a small juvenile gang. Among their other crimes: making bombs out of stolen explosives in order to blast open the coin boxes in telephone booths; and auto theft—in 1957, 67.6 percent of all arrests for auto theft were youths under 18. Example: Last June, a young hoodlum arrested in a stolen car admitted a number of crimes in Texas, California, and Arizona. His ambition: to "shoot it out" with the police some day. "I've taken shots at officers, and I've been shot at before," he boasted.

The three most vicious youth crimes are—

Rape: In 1957, 19.5 percent of all arrests for rape involved youths under 18. Example: On the East Coast a few months ago, a young couple in a parked car was held up by three teen-age hoodlums. The girl, aged 15, was separated from her companion and taken to a remote area where the youths attacked her.

Assault: In 1957, 7.3 percent of the persons arrested for assault were youths under 18. Example: In Washington last summer, 10 youths in two cars stopped their vehicles, jumped out, beat three young sailors, leaving one unconscious, and fled. Two of the youths were apprehended a short time later. They could give no reason for the assault.

Criminal homicide: In 1957, 6.4 percent of all arrests for criminal homicide were youths under 18. Example: Last December the robbery spree of a juvenile gang ended with the shooting of a liquor-store proprietor. None of the gang members were over 17 years old. For the youth who pulled the trigger, this killing was the culmination of a series of vicious crimes.

In many ways the second list is more frightening than the first. And for a very good reason. In recent years, reports on youth crimes have indicated a mounting savagery, a senseless brutality which makes one's blood run cold.

I will list just two examples of this nightmarish criminality:

New York—Two young men, refugees from Communist tyranny, were quietly walking along the street. When they stopped to ask directions of a trio of youths, they were attacked and beaten violently. Reason? According to the news account, the three assailants were "toughs" who had been drinking beer for hours on a tenement roof, then had descended to the street "to find some action."

Two of the perpetrators of this vicious attack, each 18 years old, were out on bail pending trial for felonious assault and malicious michief in another case. The third, 16, allegedly greeted his mother with an unprintable epithet when his parents arrived at the police station.

Philadelphia—A young foreign student was returning from mailing a letter near the campus of his university last spring when he was accosted by an 11-member juvenile gang. Two youths shackled the student's arms, others knocked off his glasses and began beating him. A blackjack, lead pipe, and hard-toed shoe were used. The young man's face was chopped to unrecognizable pulp, and his clothing was searched for the money he did not have. Within minutes after police arrived on the scene, the victim of this brutal attack was dead. And what had his 11 attackers—all teen-agers—been seeking? The admission price of 35 cents to attend a neighborhood dance.

Blind, senseless brutality. No conscience. No sense of right and wrong. Violence for the sake of violence. This is the frightening face of juvenile crime in its most terrible form.

Yes, our juvenile-delinquency problem is real, and it is growing. It may even be more serious here than in other areas of the world. Following a trip to the United States to study juvenile criminals, an Austrian educator reported in a lecture that he had found a fundamental difference between juvenile delinquency in Europe and in the United States. He indicated that the American way of life requires more self-control and discipline than the European one and that when the juvenile aggressor casts off his inhibitions, his acts are more ruthless and elemental. In short, the American juvenile delinquent is more deadly than his European counterpart.

Trigger-happy Americans

The Austrian educator said: "If someone in Austria is threatened by a juvenile gangster holding a pistol, he might be able to talk him out of it. No chance of that in America. The young rowdy would pull the trigger."

Much of the trigger-pulling in America occurs in the new urban menace—the juvenile gang.

The swift growth of these gangs holds a deadly portent for the future. The drive and purpose of the bopping gang are, with rare exception, alien to juvenile groupings of the past. Emotional intensity without moral responsibility renders these packs of young hoodlums increasingly explosive and dangerous. Vicious and arrogant, cruel and cowardly, seeking to rule a specific area of the city by fear and violence, the modern juvenile gang assembles an arsenal of zip guns, switch-blade knives, steel chains, and other deadly weapons.

The terror which exists in those areas infested by the juvenile gang reaches its ultimate in outbreaks of savage brutality and murder. Witness, for example, the gang killing of a crippled 15-year-old youth and the vicious assault on his companion in New York last year. They were kicked, beaten, and stabbed.

Another aspect of delinquency is the ever-increasing juvenile vandalism. Schools have been wrecked, cemeteries and houses of worship have been desecrated. And vandalism has led to more than property damage.

Last year a 12-year-old boy admitted starting a fire which took three lives. Police files showed that despite his youth, this boy had an impressive record. He previously had been picked up for throwing rocks, shooting an air gun and placing torpedoes on street-car tracks. He admitted starting four other fires in addition to the fatal blaze.

Terrifying picture

Senseless brutality, gang killings, vandalism—these, together with the other major crimes I have mentioned, add up to a truly

terrifying picture of juvenile delinquency today.

What can we do about juvenile delinquency? In this series, I propose the following two-part counterattack:

First, we must bring under control existing delinquency. To do this, we must launch an immediate program of decisive action by police, the courts, and parents.

Second, we must prevent future delinquency. This means a long-range but positive plan to strengthen the moral fiber of America.

We must act now to halt this spreading disease, which if not stopped, will bring the law of the jungle to every American street.

PART II

Seven steps to halt teen-age terror

"I want to be a good burglar, and I figure I'll have to go to prison to learn the business * * * but you know, I'm a pretty good burglar right now." These words were voiced last January by a 10-year-old. He was, indeed, a "pretty good burglar." This boy had admitted breaking into a bar, a machine shop, and a lunchroom. He had had other brushes with the law—including one in 1957 which had prompted his mother to complain that she could not control him.

Unable to control a 10-year-old child. What an absurd statement. Here is but one more example of a modern phenomenon which is sweeping across America—the abdication of parental responsibility that underlies the nightmare growth of juvenile delinquency.

Last Sunday, I outlined the scope of the problem.

In today's article, I wish to present a counterattack, a comprehensive plan to control delinquency, make our streets safe from gang warfare, protect our property and our very lives. It may be summed up in seven points.

We must:

1. Drive home to parents what their responsibilities toward their youngsters are.
2. Improve the effectiveness of juvenile courts and juvenile aid facilities.
3. Stop coddling known young criminals.
4. Take the protective wraps of secrecy and anonymity off juvenile hoodlums.
5. Crack down hard on the corrupters of youth—the dope peddlers, pornographers, etc.
6. Attack delinquency problems at the local level, mobilizing community resources for a unified front against immorality and crime.
7. And this is most important: begin today to reestablish a firm moral structure in America to prevent future delinquency.

The first six points in my program make up a plan to control existing delinquency. Let me elaborate on them—and on the urgent need for them—today. I will discuss the final point in next week's concluding article.

Responsibility of parents

Any program to combat juvenile delinquency can begin in only one place—the home. Abdication of parental responsibility—a malignant form of self-indulgence before duty—has gained a strange hold on all too many American households today. One jurist said recently:

"The (delinquency) problem is not so much an improper youth as it is an improper home."

Unquestionably, the very heart of the delinquency problem rests with the family. When mothers and fathers fulfill responsibilities of parenthood, juvenile crime cannot exist.

Everyone is aware of the problems confronting the children of broken homes. But how about the problems of children in "bent" homes? Let me illustrate:

The pressures of business have estranged thousands of youngsters from their fathers. The distance between office and home has grown increasingly greater, and in many families the young children are in bed before their father gets home from work. Under circumstances such as these, mothers have been forced into a role of greater authority and responsibility. The man of the house tends to be looked upon as merely a weekend handyman—a tired, silent partner.

Many fathers are forced to hold two jobs in order to make ends meet. In some families both father and mother are employed.

The result of the above situations is obvious: the children suffer. Repeated rationalizations—"After all, it's in the interest of the whole family"—are small consolation to the youngster who thirsts for the love and attention of his "too busy" parents.

These are the practical problems of what I call "bent" homes. What about the psychological factors?

A terrible degree of moral decay has infected those parents who flaunt press clippings concerning their numerous marriages and divorces. And how much further into degradattion can some mothers and fathers sink after exposing their children to wild parties and thinly veiled promiscuity? Yet, these are common occurrences with the growing ranks of those "sophisticates" who pride themselves on never permitting moral considerations to interfere with their personal desires.

In a normal child, the stamp of character is imprinted early. And it is imprinted deep. Youngsters learn quickly by the example of their parents.

And even more important, boys and girls who have known little or no real family life invariably long for the security of a genuine home. Subconsolously aware that they are being cheated, they do not understand exactly how life has failed them. So these youngsters react blindly and compulsively, striking out at society in general. This is the beginning of juvenile delinquency.

How can we relate parental neglect to delinquency? In some States there are laws under which penalties—including fines and jail sentences—have been levied against the parents of juvenile offenders. This is one way to make disinterested parents face up to their responsibilities to their children.

Where parental neglect is found to be a factor in delinquency, society has every right to demand that the parents of the young offender be called into court and be required to account for their actions. Neglectful mothers and fathers are no less a menace to the community than are their children. Let them be identified and publicly recognized as such.

Improvement of juvenile courts

Every State has special courts or special court procedures to deal with juvenile crime. Yet many of these facilities are sorely inadequate to handle the load.

One Maryland judge complained last June that in his county the juvenile court was expected to function with an inadequate staff, no juvenile detention facilities, no treatment institutions for disturbed children, and no police officers trained in handling juveniles.

In another community it was revealed that youngsters in immediate need of psychiatric care had to wait from 6 months to a year to get into one of the city's child clinics.

A metropolitan newspaper recently editorialized, "As long as young criminals can, figuratively or otherwise, thumb their noses at police and the courts because they know that usually there's no place to commit them—except in the so-called custody of their parents—just so long will our city be in a sorry and perilous fix. The inadequate facilities for neglected children are likewise a disgrace to the city."

It is a common practice to heap a greater burden upon the existing facilities than they possibly can bear. This has been true of probation and parole systems where supervision of released offenders becomes a sham when the existing staff of officers is required to supervise greater and greater numbers of cases. This also has been true of welfare departments such as the one in which a case worker complained that it was impossible for her to do an adequate job for any of the 90 children assigned to her.

We need improved and enlarged juvenile court and juvenile aid facilities to help stamp out delinquency.

Coddling of known young criminals

Frankly, I am alarmed at the extremes to which some authorities have been permitted to go in protecting young offenders. Under a pretext of rehabilitation, tragic blunders have been committed against the American people.

As I said in last week's article, I know that I have been called an advocate of the "get tough" policy. To some extent this is true. I think the time has come when we must be realistic. We must show the hard-core delinquents who have no respect for law and order that we mean business.

Sometimes the coddling of delinquents takes an ironic form. In a number of cases, misguided humanitarians have succeeded only in ruining the lives of the juveniles they were so earnestly trying to help.

Let me illustrate with an actual case. Last February a 17-year-old hoodlum was captured after a gun battle with police. He was well known to the authorities in his city, having built up an extensive juvenile record over a 5-year period. A probation officer familiar with this youth's case said that the boy idolized his father. Who is his father? A veteran criminal, now serving a 15-year sentence for burglarizing a grocery market.

Several months before his gun battle with the police, this teen-ager and his father had been arrested for grand larceny. The youth was convicted, but the charges against his father were dismissed for lack of evidence. Here was an opportunity to remove this young man from the influence of his father. Instead, he was merely placed on probation, and, in effect, permitted to continue his apprenticeship in crime.

Coddling of delinquents must be stopped—for the protection of the youths themselves, as well as the general public.

Protection of delinquents by secrecy

Closely linked to the coddling of young criminals is the widespread practice of sheltering them under a cloak of secrecy. A number of investigative agencies have been dangerously hampered in protecting the public by the secrecy which many courts attach to official proceedings involving juveniles.

For example, last Christmas four teenagers brutally beat an attendant and escaped from the detention hall in a southern city. Three of the boys were being held pending their transfer to the State reformatory. They had been picked up for robbery. The fourth boy reportedly was being held as a material witness in a sex case.

Despite the extensive records of these young hoodlums and despite their brutally executed escape, juvenile authorities were said to be powerless to identify them to the public. One juvenile court judge was quoted as stating, "If they are not recaptured within 24 hours, we may name the boys and describe their records as a matter of public welfare. But at the moment we are bound to respect the fact they are juveniles and withhold their identity."

A more realistic approach to delinquency certainly is needed when dangerous teenagers such as these are permitted to hide under an umbrella of secrecy. Youths who commit vicious crimes, as well as those who are guilty of repeated offenses, are not mere delinquents. And they should not be accorded all the special considerations which delinquents have come to expect.

We must stop shielding young hoodlums from publicity. We should use publicity positively to fight delinquency. It can be a powerful weapon. Let's bring all the names and facts about teen-age crime out into the open.

Corruption of youth

Our country is plagued today by an ugly brand of parasite who commercializes upon the immature judgment and curiosity of young people. In this category I include the filth merchants, dope peddlers, and others who make their living by corrupting youth. These furtive characters frequently are found loitering near schools, playgrounds, and juvenile hangouts. They also run the mail-order houses which blanket the Nation with promotional material such as the following letter:

"Hello!

"My name is Mary.

"I'm an art model—pose in the nude you know, and I thought maybe you would like me or my girl friends to pose for you in a very special way."

The Post Office Department, which has jurisdiction when obscene material is sent through the mails, has received thousands of complaints from parents in all parts of the country whose children have received these letters. But our youngsters do not have to send away for indecent pictures and literature. There probably is a generous supply on the shelves of a neighboring newsstand.

Dealing in pornography and other forms of filth has become a multimillion-dollar business. In one city, the police recently arrested the operator of a bookstore who had been selling indecent photographs, color slides, pamphlets, and books at prices ranging up to $75. Two squad cars were needed to haul away the filth which was found in his apartment.

As a law-enforcement officer, I am required to exercise strict control over my emotions. But frankly there are times when I cannot help feeling my blood boil. This is particularly so in cases where an adult has deliberately set out to corrupt the morals of a child.

The examples, unfortunately, are legion. In one city, the head of the juvenile bureau complained that the delinquency problem had been compounded by the fact that homosexuals were plying local teenagers with liquor and making advances toward them. In another city, 2 boys, aged 16 and 18, were taught the criminal art of stealing and forging checks by an ex-convict.

And in a third city, a middle-aged mother of 5 children was found to be the supplier of weapons for a gang of young robbers.

But of all the corrupters of youth, perhaps none is more terrible than the dope peddler. The dope pusher entices children to try narcotics, and in many cases the youngsters become addicted to drugs. It is well known that drug addiction leads directly to crime. The addict craves larger and larger doses, and the price is high. To get expensive narcotics, youths often follow the trail which leads from larceny to burglary and to more serious crimes.

All calculated assaults upon the standards of youth should be met with stern law enforcement and punishment. In communities where existing laws are inadequate to thwart the filth merchants, the dope peddlers, and the rest—let's have new laws, laws with teeth in them.

Mobilize community resources

An effective attack against the delinquency problem can be launched in only one place. That is at the community level. Crime and delinquency are essentially local problems.

In the final analysis, immoral conditions persist within a community only because the last person to recognize his responsibility and acknowledge his blame is the individual citizen. He finds fault with the police department, ignores the pleas for assistance of youth-serving agencies, berates the schools and complains, "Why hasn't the Federal Government done something about this?"

How absurd. Despite the pleas for creation of a special Federal agency to spearhead the fight against delinquency and crime, I want to assure you that the Federal Government has no vaccine or cure-all to overcome moral sicknesses which exist in local communities. If the frightening growth of youth offenses is to be stopped, the forces for good within each community must unite.

As a first step, local efforts must be coordinated. Agencies must pool their resources. Petty jealousies and differences must not stand in the way when there is vital work to be done. Church groups, parent-teacher associations, public and private youth-serving agencies, civic organizations and local law-enforcement agencies must all work together—for the benefit of all.

The second step requires a realistic appraisal of local weaknesses which are a detriment to the cause of decency. Inadequate police budgets, lack of playgrounds in crowded residential areas, obsolete juvenile detention facilities, weakness in existing laws, overcrowded schools, and lack of supervised recreational programs are among the many dangerous conditions which prevail in all too many cities across the Nation. These conditions can best be recognized—and corrected—by the local citizens themselves.

The third step is action. Not only must corrective measures be initiated but each one of them must be carried through.

There you have my plan for the basis of a counterattack on existing delinquency.

Now, what about my seventh point: that we must begin today to reestablish a firm moral structure in America to prevent future delinquency.

I feel this step is tremendously important. Any plan to control delinquency must look to the future as well as to the present. Point Seven calls for a reaffirmation of the moral values that can stop delinquency in the future.

We cannot allow this situation to continue. We must make our towns and cities safe, now and forever, from juvenile terror. Once Americans understand this, I am sure they can do it.

PART III

Where does discipline begin?

Last summer a very interesting newspaper article came to my attention. It concerned an outdoor camp for boys—one established under the sponsorship of a religious organization. This is no ordinary boys' camp. It caters to youths whom many other camps would reject as undesirable.

After school had closed for the summer, a group of about 100 boys departed for this camp from the crowded streets of a large eastern city. Their ages ranged between 14 and 21. No less than 40 of them had court records, and a number of other belonged to juvenile gangs. Heading the group as it boarded buses for a month's stay at the camp was a youth worker who was only a few years removed from childhood himself. Did this young man have any misgivings about the backgrounds and court records of these boys? Not in the least. In the following words he expressed his attitude toward the challenge presented by these boys:

"We have some of the toughest guys in the city. We know what they've done and what they're capable of doing. But we show them what toughness really is—being able to face up to problems and assume a responsible place in the community."

The man who spoke these words, and the camp in which he works, are doing an effective job in combating juvenile delinquency. I would like to contend in this article that his philosophy is our true final answer to this terrifying problem.

We must show youth what toughness really is. These are profound words. Character, pride, resourcefulness, excellence—these qualities require real toughness. It takes strength and courage to be good, to stand for the principles which we all know are right. If we can help our youth develop this moral toughness, they will become the kind of citizens America needs to survive as a free Nation.

I cannot overemphasize the urgency of the delinquency situation. The current wave of youthful crime and vandalism is mounting in both size and intensity.

In community after community across the land, youthful hoodlums are going on the rampage. Juvenile arrests are rising at such a rate that 791,000 arrests of persons under 18 years of age are predicted for 1958—and 1 million will be recorded each year beginning 1962.

As I said 2 weeks ago in my first article in this series, juvenile lawlessness must be stopped. The time has come for a counterattack against juvenile delinquency.

Last week I outlined half of a counterattack against juvenile delinquency. I presented a six-point plan to control existing delinquency by:

1. Accenting the responsibilities of parents.
2. Improving our juvenile courts and juvenile-aid facilities.
3. Stopping the coddling of young criminals.
4. Stopping the protection of juvenile hoodlums by secrecy.
5. Cracking down on the corrupters of youth.
6. Attacking delinquency at the local level.

Fighting existing delinquency, however, is only half the problem. At the same time, we must also begin today to reestablish a firm moral structure to prevent future delinquency. We must stop sowing the seeds for more frightening delinquency in the years to come.

Today, I will suggest an approach to this most difficult problem. I will try to indicate a cure for the underlying sickness of our age which I call "decadence disease." If a cure can be found, if we can restore to America the firm moral precepts of our forefathers, we can ward off future delinquency.

How can we head off future delinquency? How can we convert the arrogant toughness of our teen-agers into a moral, constructive toughness? The best way is by example—adult example. Yet, as examples thousands of American mothers and fathers are proving themselves dismal failures.

The "decadence disease"

From the examples of these parents, more and more youngsters are learning dangerously harmful lessons: "Rules are made to be broken." "If you are smart enough, you can get away with anything." "After all, you only live once."

Corrupt slogans. Parents by their own words and deeds are beckoning youngsters to abandon the principles which have made this a great country.

"Decadence disease" is infecting our children. And self-indulgence, the insistence upon pleasure before duty, the constant search for "the easy way"—are its symptoms.

When a child is exposed to dubious morality at home, he invariably becomes confused. When glaring inconsistencies exist between what he is told is right and what he sees going on, neither praise nor criticism from his parents can have any real meaning. Mothers and fathers who bask in self-indulgence are grossly ineffective at disciplining their children or inspiring them toward worth while goals.

Confronted with the charge, "You kids are making this a lousy world," one member of a tough juvenile gang replied, "Yeah? That's the way we found it." And if the adult atmosphere surrounding this young

man and other members of "bopping" gangs is taken into consideration, it probably will be impossible to disagree with his flippant remark.

Discipline is the opposite of self-indulgence. Show me a home in which the parents practice self-discipline and I'll show you a home where a mother and father hold the love and respect of their children. A youngster asks only to be taught the boundaries of acceptable behavior. Discipline, fairly and consistently invoked, breeds pride and respect. And children want—desperately—to be disciplined.

They need guideposts

Superficially, they may rebel. But on a deeper level, where character is formed, a child wants to be told what he can and cannot do. He needs guideposts to help him orient himself to the world. He looks to his parents for these guideposts. If parents are lazy or indifferent or overindulgent, is it any wonder that a child loses love and respect for them? How can a child continue to look up to a parent who continually compromises and yields to him?

No American, regardless of his age, outgrows the need for discipline and self-discipline. In a democracy, restraint and self-control are essential in all phases of life. This fact should be evident to all normal adults, and it should serve as a guide to them in rearing their children.

Frankly, I become irritated when I hear doting mothers and fathers say, "I love Junior so much that I just can't bring myself to punish him." In reality, these parents do not love their children. It is a strange kind of love indeed which turns a normal infant into a maladjusted child.

And let there be no mistake, an undisciplined child cannot help being maladjusted. Frustration, tension, and resentment confront him on all sides.

On the west coast last February, three young boys were caught in the act of letting air out of automobile tires. The father of one of the boys, an 11-year-old, was summoned to police headquarters. Told that the youths had deflated scores of tires, the father unhesitatingly said, "Son, pump them up again." After supervising as the boys inflated 16 tires with hand pumps, he yielded a bit and rented a power air pump for them to use. But he saw to it that the job was completed.

What a refreshing and praiseworthy attitude. Contrast this with the attitude other parents whom law-enforcement agencies encounter day after day:

"Oh, no. Not my Harry. You officers are always picking on him. Why don't you let him alone?"

A firm hand

Pampering, overprotection, making excuses, and cooing soft words when a firm hand across the seat of the trousers would be more appropriate are practices which create contempt for authority and obstruct decency among youth. These practices are harmful enough when they exist merely in the home. But today we even find them spreading to some of our courts.

In California last year a 17-year-old hoodlum was arrested following an attempted burglary. This young criminal cursed at the arresting officers and boasted that regardless of the kind of report they made, the courts would release him in a couple of days. What made him so certain of this? "I've been arrested and released before," he sneered in defiance.

Near the Nation's capital, a 15-year-old was attacked from behind and viciously beaten by an older boy who was wielding a milk jug. The victim's skull was fractured, his nose broken, and he required a number of stitches. The attack was unprovoked. Yet, when the assailant appeared in court, the judge dismissed the assault charge.

In another case local policemen were assaulted by two 17-year-olds who called them obscene names and shouted at a crowd of people to help kill the officers. During the fracas a gun was taken from one of the teenagers. Both of these youths had police records. Yet, for openly defying the law, each of them was sentenced to serve only 60 days in jail and a term of probation.

Let there be no mistake. I do not advocate handling all violators under the same rules which are applied to hardened criminals. I do feel, however, that the seriousness of violating the law must be impressed upon juvenile delinquents and other young offenders. They must learn that, in spite of the leniencies they may receive in the interest of rehabilitation, and in spite of their youth, society still holds them responsible for their acts. And that repeated violations will not be tolerated—no matter how young the offender may be.

Appropriate punishments

In dealing with juveniles, it is essential that the punishment fit both the offense and the offender.

Earlier this year, six boys in Virginia were convicted of savagely beating and mistreating a mule. They used planks and pummeled the poor animal so cruelly that it was feared it would lose an eye. The judge who heard the case ordered that the boys be given what many may regard as an appropriate punishment, a good, sound, old-fashioned whipping by their parents. In addition, each of the six was released to the custody of his parents on strict injunction of good behavior until he attains the age of 18.

In another case, a 17-year-old boy who had committed extensive acts of vandalism in a high school was placed on probation under the provision that he find a part-time job after school and make restitution at the rate of $20 per month for the damage he had done.

If, as a result of their sentences, the six Virginia youths learn to respect the feelings of animals and the teen-age vandal learns to value the property of others, the courts will have helped them to become better citizens. What more can we ask of our juvenile courts than a record of positive accomplishments such as this?

But we must understand that a child will never reach a juvenile court if his parents believe and practice discipline. No child will hate his parents if firm but fair discipline is consistently applied. On the contrary, the youngster will feel his father and mother care enough about him to want to teach him the differences between right and wrong. Indifference and overindulgence breed contempt. Discipline breeds love.

The deadly slogans

Our teen-agers must be taught discipline outside the home, too. Many visitors to our shores simply cannot understand, for example, how an American youth could ever strike a teacher or, for that matter, refuse to obey a teacher's command. The homelands of these people have a deep-bred respect for teachers and other public officials.

The teens are difficult years. They are a stage of life when virtually every child begins to feel new pressures. "Conform." "Give in." "Join the crowd." "Don't be a square." These are more than expressions. They are real and awesome forces in the teen-age world.

The stereotype of our modern-day troubled teen-ager is an unruly, outspoken, rock-and-roll addict who cruises the streets in a souped-up jalopy, shouting insults out the window. In appearance he aspires to looking shaggy and to leaving behind the impression that he has not been near a barbershop in weeks.

The teen-agers who fit into this general pattern are fickle, aimless and confused. Whether drag racing down a major highway or thumping a pencil in dejected boredom over their schoolwork, these boys and girls feel a basic insecurity. A void exists in their lives, and they are constantly experimenting—shifting from one fad and one "craze" to another—trying often pathetically to fill the gap.

The bravado and self-confident air of these youngsters veil only thinly a basic fear and uncertainty, an emptiness which gnaws deep in their souls. These children long for something which cannot be found without the help of adult society: discipline and direction.

We are plagued by a growing juvenile problem only because adult America has failed its youth. Rather than standing aloof and asking "What is the younger generation coming to?" we adults must establish a closer relationship with our youngsters. They need standards, goals, wholesome examples. They need vision and imagination such as burned so intensely in the hearts of our forefathers. They need adults who will help give direction to their lives.

In my book, "Masters of Deceit," I wrote: "* * * youth gravitates toward companionship with competent, generous, and experienced adults. * * * If the adults can show, in action, that it is possible to combine high idealism with solid practicality and patience, the results will enhance character and citizenship development manifold."

Our adult delinquency

Herein lies the solution to the problem. We adults must set the example for young America. Let us invade the juvenile world with ideals. Let us bring meaning and purpose into the lives of our children. Let us leave no room in their minds for ugly thoughts or vicious deeds. And they will have no need to turn to either criminality or to communism to fill a void.

If we adults succeed, if we can change destructive toughness to firm moral toughness, we will have succeeded in preventing delinquency in the future. And we will have bequeathed to our children—and to our Nation—the greatest gift of all. We will have given them the toughness, moral fiber, strength and courage to keep our Nation strong and free.

A Solemn Inaugural

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, and as an adjunct to my reintroduction this week of a resolution proposing a Christian amendment to our Federal Constitution, I wish to quote the radio message of Dr. R. J. G. McKnight delivered on the Christian Amendment Hour under the title of "A Solemn Inaugural."

The message is as follows:

A SOLEMN INAUGURAL

(Radio message by the Rev. R. J. G. McKnight, D.D., Ph. D.)

This series of broadcasts is designed to reach the minds of all true Americans. These discussions are not to be political, patrisan, denominational, or sectarian—in any sense. They are addressed to loyal citizens of the United States who love their country and seek for it the "blessedness of a nation whose God is the Lord."

Life magazine, in its portrayal of the inauguration of President Dwight D. Eisenhower, January 21, 1957, for a second term in office, used this caption (Feb. 4, 1957): "A Solemn Inaugural and a Gay Celebration."

The writer in Life magazine, with a keen sense of the relative importance of things, has caught and brought together in the heading of his article the two dominant emotions which surged in the hearts of 75 millions of Americans who watched the proceedings on television, or heard them by radio.

The solemnity of the induction as Mr. Eisenhower, with his left hand upon the open Bible, his finger pointing to the words, "Blessed is [in Hebrew 'Oh the blessedness of] the nation whose God is the Lord," and his right hand raised to God, in whose presence he was standing, was emphasized as he added to the words of the oath prescribed in the Constitution—the prayer, "So help me God."

It is no wonder that Mr. Eisenhower, a Christian, should say to the many reporters gathered about him, "And I will tell you this: When you stand up in front of America and take your oath * * * you can't feel anything but solemn."

Not only so but clergymen of four different faiths offered prayers that God would give the President His blessing and divine guidance in the performance of the duties which belong to the high office of the Presidency of the United States.

Furthermore, those who followed the prayers carefully, observed that three of the clergymen offered their petitions to God, the Father, and "in the name and for the sake of the Lord Jesus Christ, Thy Son, our Saviour."

The Reverend Dr. Edward Elson, Mr. Eisenhower's pastor, implored Almighty God to "guard, guide, and empower Thy servants in this solemn hour of dedication."

In his first inaugural, the President prefaced his address with a prayer, which he had written. On this latter occasion, while he did not offer a formal prayer, he declared that "peace with justice" is the "bold and solemn purpose" of his second White House term. He branded "international communism and the power that it controls" as "the great divisive force" loose in a world which, he said, rarely has "known such peril as today." And closed with this petition: "May the light of freedom, coming to all darkened lands, flame brightly until at last the darkness is no more."

The whole address rose above party and above nationalism in its appeal to all men who love freedom to join with America to break the tyranny of atheistic communism.

Never before in the inauguration of our Presidents has our dependence upon God been so clearly enunciated.

The Reverend Dr. Elson, Mr. Eisenhower's pastor, in his sermon on January 20, in the presence of Mr. Eisenhower and Mr. Nixon, said: "To be under God is to acknowledge that this is God's world, that He is the Sovereign Lord and Ruler of all life. He is the God of Creation * * * Americans believe that God is above the Nation."

He also said: "Rightly do we sing:

"'Our Father's God, to Thee,
Author of liberty,
To Thee we sing.
Long may our land be bright,
With Freedom's holy light.
Protect us by Thy might,
Great God, our King.'"

To quote once more from Dr. Elson's sermon. He said: "To be under God is to be guided by Him. That nation which seeks to understand and obey His laws; that nation which seeks to discern and do His will—only that nation becomes an effective instrument of God's purpose on earth. Above all, over all, guiding and empowering all is the transcendent God. To the degree we possess His mind and spirit which is at the center of the universe, and which we Christians believe to be revealed by Jesus Christ, we are and shall remain a Nation under God.

"'In the beginning God.' On these first words of the Bible early America staked down its life."

Dr. Elson is right. And the further we go back into the beginning of our Nation the more evident it becomes that the Founding Fathers "staked down" the "very life" of the Nation they proposed to establish on these shores, on the doctrine of the Sovereignty of God and of the Kingship of Christ as the One to whom all authority in heaven and on earth has been committed.

Read the compact made on board the *Mayflower*, November 11, 1620, which reads in part as follows: "In the name of God, amen. We, whose names are underwritten, * * * having undertaken for the glory of God, and the advancement of the Christian faith * * * a voyage to plant the first Colony in the northern parts of Virginia; * * * do by these presents solemnly and mutually, in the presence of God and one another, covenant and combine ourselves together into a civil body politick, for our better ordering and preservation, and furtherance of the ends aforesaid."

The charters of the 13 Colonies—"laid down authoritatively the Christian principles in accordance with which their governments were to be administered, and made suitable acknowledgments of God the Creator as their source of authority."

The effect of these firm pronouncements is found in the provision for Chaplains in Congress, our establishment of the day of Thanksgiving, our motto "In God we trust" on our coins and postage stamps and, more recently, the inclusion of the words "under God" in our pledge of allegiance to the flag.

There are evidences that Christian citizens of the United States are coming to realize that, in the turmoil of the world, there is need for a closer walk with God.

What will the next step be?

What ought the next step to be?

It seemed to many who heard the President take the oath as it was administered by the Chief Justice, as it is prescribed in the Constitution—and the Chief Justice in administering the oath felt that there was something lacking in the constitutional oath—something that should have been there and was not there.

Both the President and the Chief Justice knew the nature and the form of the prescribed oath.

They had taken the oath in the prescribed form many times.

Were they aware that the oath was not what it ought to be?

Otherwise why did the Chief Justice add to the oath the words—words which are not in the oath—"So help you God"? And did Mr. Eisenhower, by answering solemnly and firmly in words which are not in the oath, "So help me God"—did he in doing that indicate his belief that an oath is not a valid oath unless it contains an appeal to God?

A Study of the Present Russian Civilization and Its People

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I would like to insert an article into the CONGRESSIONAL RECORD which is perhaps a little different from the type that usually is inserted.

The title of the article is "Pasternak and the Russian Community" and was written by Charles B. McLane, professor of Russian civilization at Dartmouth College, where students desiring to do so may major in Russian civilization.

The question might be raised, What has a book review to do with legislation? The point is this: A more thorough knowledge of Russian civilization and the Russian people is very important if this Congress is to legislate intelligently in many fields from defense to education.

If the Un-American Activities Committee has run out of things to do, which I do not believe is the case, it might undertake a comprehensive study of the present Russian civilization and its people. Such a study would be invaluable to the legislative committees, including the committee concerned with studying and passing out legislation designed to cope with the threat of Communist infiltration into the United States and other countries with whom we are allied. This article by Professor McLane provides a good philosophic starting point.

I am happy to advise that the Joint Economic Committee is going to update and make more comprehensive its study of Russia's economy within the ensuing months. The last study of the committee, "Soviet Economic Growth: A Comparison With the United States," made in 1957, limited as it is, provides about the best information we have today on the Russian economy. It is when I look at the limitations of this study and realize that it is the best we have that I begin to worry.

It is important that we start discussing Russia from the standpoint of knowledge and facts instead of as a convenient bogeyman to try to get Federal appropriations for the Defense Department or for Federal research or for Federal aid to education.

As I have said many times before in speeches on the floor of the House by overestimating Russia—if we are—we enhance her reputation in the eyes of the uncommitted peoples of the world. The dangers of underestimating Russia have been sufficiently elaborated upon by people in public life and in the public relations media so that I am satisfied we have little to fear that we might go that route.

It is my personal conviction after some degree of studying the matter that we are continuing to badly overestimate Russia; and certainly in our statements in regard to Russia's accomplishments, and she has had many, we have been unanalytical.

Russia has not followed pure Marxism for several decades. In many ways she is going further and further away from communism to adopt procedures and principles which are peculiar to the private enterprise system. Khrushchev is quoted recently as laughing at one of the basic doctrines of communism "to each according to his needs, from each according to his abilities.", as well he might. Certainly Soviet Russia of 1959

is hardly a society where that principle is observed.

As a working hypothesis I suggest that Russia has been able to advance economically almost in ratio to the extent to which she has abandoned communism. If this hypothesis is true we had better start getting that information out to the peoples of the rest of the world who might otherwise be tempted to become a part of the Russian empire thinking that they were becoming part of a Communist system that had worked so well.

I have a further hypothesis that the extent to which the United States has not been going ahead is the extent to which she has been going away from the private enterprise system and adopting certain of the ineffectual programs of state socialism, or communism, if you please.

The reader will note the reference in the first paragraph of Professor McLane's article as follows:

Soviet Russia's alleged educational accomplishments (alleged, incidentally, much more noisily here than in the Soviet Union where the entire educational edifice has been undergoing an agonizing reappraisal).

At another point in the RECORD I am inserting the remarks I made last year before the subcommittee of the House Education and Labor Committee considering Federal scholarship programs.

Professor McLane's article follows:

PASTERNAK AND THE RUSSIAN COMMUNITY

(By Charles B. McLane, 1941, professor of Russian civilization at Dartmouth, joined the faculty in 1957, was cultural attaché with the U.S. Embassy in Moscow, 1950–52, and formerly taught at Swarthmore College)

The Pasternak affair has been on many minds in recent months and will not soon be forgotten. I think the episode met a need in the United States. It came at a time when for more than a year the news out of Russia had been too good for our peace of mind—sputniks, alleged educational accomplishments (alleged, incidentally, much more noisily here than in the Soviet Union where the entire educational edifice has been undergoing an agonizing reappraisal), and, as usual, continued success relative to ours in diplomatic gambits. It was therefore comforting to have world opinion reminded—we, of course, knew it all along—that persecution of non-conformity is a more enduring characteristic of the Soviet system than a show of free competition in the world of ideas and values.

This sense of relief is natural enough and, all things considered, not a wholly unworthy emotion. But it has made more difficult a dispassionate evaluation of Pasternak's controversial book as a work of art. The fact that few here have heard of Boris Pasternak prior to the publication of Doctor Zhivago last summer (despite the recognition long since accorded him outside the Soviet Union as one of the foremost Russian poets of this century) is far less disturbing than the general unwillingness, with the book now before us, to judge it except in a purely political context.

A colleague whose perception in literary matters I generally respect recently expressed the view that it was not really necessary to trouble with Zhivago, was it? In a season so crowded with other talent—like "that other Russian," as he called him, Loelta's Nabokov—there was hardly place for a Russian martyr whose notoriety sprang from the proffer, and his rejection, of a Nobel Prize.

The difficulty Americans have with Pasternak, even when they try, is one of access—access to his rich but immensely involved language. It is generally recognized that the present American edition of Zhivago is an inadequate translation, but it is also true that no translation of Pasternak can be entirely adequate. For he is a poet, and a particularly difficult poet, despite the fact that he has described Zhivago, whimsically, as a "novel in prose." Small wonder, then, that many honest citizens who have read the American Zhivago conscientiously have been puzzled by the acclaim it has received. So far as the Nobel Prize is concerned, they have murmured "Politics!" (murmured so as not to be mistaken for Soviet pundits who of course are saying the same thing). Others, searching further for the greatness, have attempted to locate it in Pasternak's continuation of the tradition of "War and Peace" a vast Russian panorama, in the old manner, against a background of war and social upheaval. But Pasternak is only incidentally concerned with these matters. So little is he preoccupied with the Revolution, for instance, that the reader with even modest knowledge of chronology is hard put to say at what juncture in history this or that episode in his narrative occurs.

Not revolution, but the impact of revolution on man, and more particularly the capturing of the transformations which arise from this impact in a prose that has few peers in the Russian language—this is Pasternak's business. To Soviet bureaucrats the infuriating thing about Pasternak, in Zhivago as in all his work, must be not that he is hostile to the Revolution—this they could deal with—but that in a deeper sense he ignores it. This in Russia is unpardonable.

It must be obvious then that a proper review of Zhivago is a very exacting and scientific exercise, far beyond the scope of these brief observations and beyond the capacities of the present writer, a political scientist. To qualify, one should be versed in symbolism, in Joyce and Proust (despite the fact that Pasternak has evidently turned to Proust only in recent months), and in the entire evolution of modern formalism. Zhivago is a book in this tradition. To seek mere entertainment in it, larded perhaps with a vaguely social message, is to miss the whole point of Pasternak's effort.

No writer, not even Pasternak, can be judged wholly outside his times and his community. It is currently fashionable, of course, to picture Pasternak as an indomitable David living in splendid aloofness and disdaining modern Soviet Goliaths such as Surfkov (head of the writers' union) and Semichastny (a particularly arid persecutor from the Komsomol). He is imagined as the rare flower that blooms from a barren land. Moreover, Soviet propaganda itself inadvertently supports this thesis by insisting so stridently that Pasternak was never and is not now a member of the integrated Soviet community. But Pasternak himself speaks otherwise. In declining, under pressure, the Swedish prize, he gave as his reason the opprobrium attached to this honor "in the society to which I belong." This was understood abroad to have been a gesture, necessary as a minimum stratagem for survival, but meaningless. Since, however, Pasternak is a man not easily cowed and not one to resort lightly to stratagems, it is worth reexamining his claim. Is he part of the Soviet community? More particularly, has his greatness in any sense been nurtured by this community to which he claims to belong?

In certain specific respects Pasternak unquestionably is—or was until very recently—a member in passable standing of the Soviet literary community. For instance, his home in the dacha-village of Peredelkino, a refuge and resort for established Soviet writers, testifies to this. His income was assured through translations of Shakespeare and Georgian verse. Much of his own poetry has circulated in manuscript for years and evidently has not been without influence on younger writers (though admittedly, the influence is not yet apparent). He has not been without companionship. Even his silence has been tolerated. All this suggests that Pasternak has been less in a state of absolute isolation than is sometimes fondly imagined.

Yet, when all is said and done, the question of his being truly a part of Russian society today remains unanswerable so long as he stands thus sharply opposed to its official spokesmen. One thing only is certain: he belongs to no other community. Some day, under happier circumstances, "Doctor Zhivago" will be read in Russia—where, of course, it has not yet appeared. As Edmund Wilson predicted in The New Yorker of November 15, in one of the finest reviews of the book yet to appear, the children of Pasternak's present persecutors will speak of Larisa, Zhivago and Antipov as naturally as their parents now speak of Tatiana, Onegin and Lensky, or of Natash, Pierre and Bolkonsky.

Fair Campaign Practices

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. McGOVERN. Mr. Speaker, one of the most disturbing aspects of American political campaigns is the frequent use of smear techniques on the part of campaigners or their supporters. Vigorous political debate and honest public criticism are essential ingredients in a healthy political process, but slander, character assassination, and distortion have no place in a democracy.

In an effort to curb some of the shabby campaign practices that have been displayed in recent campaigns, the Fair Campaign Practices Committee was formed under the leadership of a number of concerned citizens of both political parties. Mr. Charles P. Taft and founding member and present chairman of the committee reviews some of the committee's observations to date in an article which appeared in the October 12, 1958, New York Times magazine which I include at this point:

CAMPAIGN TO STOP THE CAMPAIGN SMEAR

(By Charles P. Taft)

Webster defines the word "smear" thus: "To besmirch, sully, defame; specifically to vilify by applying a debasing epithet (smear word) or by secretly and maliciously spreading gross charges or imputations." Meade Alcorn, Republican National Chairman, has his own political test for defining smear, which he says has kept him out of trouble: "Is it true? And is it relevant?"

The problem of what constitutes a political smear is one that arises almost every week during national political campaigns. In 1951 the problem was etched on the public mind by the Senate Subcommittee on Elections, exploring the excesses of the Butler-Tydings campaign of 1950 in Maryland. This led to the formation, in the fall of 1954, of the Fair Campaign Practices Committee. The citizens who organized the group were outstanding men and women of

both major parties, increasingly concerned over the substitution of accusation and vilification for fact and argument by candidates. The committee set out to induce all candidates for Congress and State governorships to sign—and thus to pledge publicly to observe—a code of fair campaign practices based on the proposals of the 1951 Senate Elections Subcommittee. Among the practices the signers agreed to shun were:

Personal vilification, character defamation, whispering campaigns, libel, slander and scurrilous attacks on a candidate or his personal or family life.

Use of campaign material which misrepresents, distorts or otherwise falsifies facts, and malicious or unfounded accusations aiming to create or exploit doubts without justification as to a candidate's loyalty.

Appeals to racial or religious prejudice.

The final plank in the code committed candiates who signed it immediately and publicly to repudiate support based on such tactics.

Many candidates in 1954 signed. But not all observed the code, as political observers with any memory can vouch. Yet it represented a start in a direction that members of the Fair Campaign Practices Committee felt was not only essential but considerably overdue. The committee met in 1956, and found compliance with the code by candidates substantially above the 1954 level. Paul Butler and Leonard Hall, Democratic and Republican national chairmen, respectively, in 1956, appeared publicly in Washington to sign the code. And last month Butler and Meade Alcorn, Hall's successor, likewise signed and publicly endorsed the code that, if followed, could change the nature of much of the political campaigning that has characterized our land of the free—and the free swinging.

Why all this concern over campaign techniques? Is not electioneering in the rough-and-tumble style of the frontier an indelible part of the American tradition? After all, have not American election campaigns down through history been pretty raw?

They certainly have. No American statesman now safely ensconced—indeed, revered—in the history books has been proof against calumny on the hustings. George Washington was verbally scarred in the infant days of the Nation. Jefferson was called "worse than a traitor." In the Jackson period, handbills called Old Hickory a murderer and graphically presented the theme with woodcuts of 13 coffins. Lincoln was described as "that obscene ape from Illinois." The legitimacy of Cleveland's child was the subject of japery in the streets. Theodore Roosevelt was described—among the more charitable epithets—as "that damned cowboy." And the maledictions pronounced upon Hoover and Franklin Roosevelt are still within the memory of many adults.

If in earlier days it was commonplace for a candidate to traduce his opponent in a libelous fashion, why the concern today?

For one thing, the wrenching change in communication has altered the freedom that at one time surrounded a politician seeking votes in a small and isolated community. What once could be said free of the risk of offending a voter 50 miles away cannot be uttered now without being offered, via the press associations and television, to the whole Nation. A candidate for national office, seeking to stir voters in one of New York City's 22 congressional districts, can, if his oration is fiery enough, turn voters in California for—or more likely against—his whole party.

Another factor is the increasing self-consciousness of ethnic and religious minority groups in the United States. Negroes, Jews, Italians, Irish, Germans, Poles, and Mexicans have become numerous enough in some areas to wield significant—indeed, decisive—political power within their communities.

Occasionally they have voted as blocs, and sometimes still do. In the political world, when blocs develop, they are courted for their bloc vote. And when a bloc is large enough so its vote may elect or defeat, it not only is courted as a bloc but in some quarters is feared. Even the small extremist groups may be something to be feared, especially when they are represented by fanatical and able hate merchants.

Where do we stand today in our efforts to bring about observance of a fair campaign code? Most campaigns for major office are less offensive than the classic examples of high, wide, and anything-but-handsome electioneering in the old days. But the exceptions, while arithmetically modest, are glaring and dangerous in the light of today's communication system.

In 1950, the Nation was shocked by the Maryland senatorial campaign already referred to, in which a composograph merged one picture of former Senator Tydings with quite another picture of Communist leader Earl Browder. The end result, a seemingly candid photo showing the conservative southern Democrat in intimate conversation with the onetime Communist chief, carried much weight with Maryland votors.

In 1952 and 1953, a rash of fast and loose accusations of softness or lack of due diligence toward communism, playing on the national temper of the time, helped divert public attention from records and issues. It was the excesses of this period that stimulated the establishment of the Fair Campaign Practices Committee.

During the 1956 campaign our committee received few complaints of violation of the code, and political observers felt there was less vituperation than in recent years. But before we could congratulate ourselves we began to hear rumors from here and there that one or another candidate had been the victim of a Machiavellian smear effort.

Disturbed, we launched in 1957 what now will be a biennial, off-year, State-by-State study of the actual use of smear. To our surprise and pleasure we received the instant and enthusiastic cooperation of nearly two-thirds of the 96 State chairmen of both parties.

What we found last year did not square at all with the initial report about the ethical level of the 1956 campaign. In 26 States one or both parties claimed one or more of their candidates had been smeared. Effects varied widely. Smear elected some candidates whom it was intended to help, but in some cases it backfired and defeated some candidates it aimed to elect.

In one case, a senatorial candidate had his putative Washington romantic life explored in the style of a sensational magazine. In another, a candidate who, a generation earlier, had been indicted for embezzlement and subsequently cleared when the culprit confessed, was assailed with photo reproductions of the clipping announcing his indictment, with, naturally, no mention of his exoneration. In an Eastern State a teetotaler was described as a drunk, and in the Midwest a moderate drinker was described as a prohibitionist plotting secretly to dry up his State's resort areas.

Although the Communist issue was on the wane as an automatic vote getter, a Senate candidate was, for the third time, the target of a brochure printed on pink paper, citing parts of his voting record out of context to make him look like a slave to the Communist Party line. The gambit, which had twice kept him from the Senate, this time failed and he won election.

The antilabor issue was raised with increasing frequency and stridency in 1956. One candidate was described as the beneficiary of vast labor contributions and the recipient of detailed labor instructions. He was depicted in a prominent newspaper side by side with his State's then CIO chief, ostensibly taking orders. Investigation revealed that the photograph had been cropped to eliminate a third man—the head of a manufacturers' association. The man in the middle, the candidate, had been mediating a labor dispute.

In the same State this year, a member of the opposite party running for the same post received a telegram from a labor leader demanding that he repudiate a statement contemptuous of labor that had been attributed to him. The candidate, instead of answering by wire or mail, went personally to confront his accuser. He asked what could have prompted such a charge from a labor leader he long had counted as a friend. "I know it's a lie, you know it's a lie, and I know you know it's a lie," he said.

Nothing came of the episode for several weeks. Then, virtually on election eve, anonymously distributed handbills quote the telegram, and added the utterly false statement that the candidate had not even answered the accusation.

The Negro issue began to come to the fore in 1956. In one Midwest State a letter ostensibly on the letterhead of a southern white citizen's council (which eventually proved to be nonexistent) suggested that a vote for the Democrats would keep Southern Democrats in control of Congress, and that these men could be relied on to keep the colored in their place. The catch was that, seemingly inadvertently, the letter went to Negro voters in a heavily Democratic district.

Last year, in a special election for Congress in an eastern district, the Negro issue figured in anonymously distributed literature. Negroes were touted off the Democratic candidate with inflammatory photo reproductions of Negroes being clubbed by white men. The conditions leading to such maltreatment were ascribed to Democrats in Congress.

Already this fall, somewhat in advance of the last-minute period so commonly associated with scurrilous campaign literature, a Republican candidate for State office in a rural southern district is a target of hate literature which depicts—in this heavily prosegregation district—a Negro man and a white woman on a bed. Fully clothed, but on a bed nonetheless. This, the leaflet suggests, is to become commonplace if the candidate, a known integrationist, is elected.

Integration is not the only inflammatory 1958 issue that lends itself to such tactics. Labor always produces a hot argument, and promises to do so more and more, with a good many right-to-work proposals on the State ballots.

The Knowland-Brown-Joe Kamp affair in California has lately been in the headlines. Kamp, a notorious pamphleteer, had written a lengthy screed against Walter Reuther which seemed apt to some of the supporters of Senator Knowland, Republican candidate for Governor. Mrs. Knowland, who did not recognize Kamp's name and reputation, initially authorized some distribution of the pamphlets among proponents of the right-to-work plank of Knowland's platform in California.

Paul Butler, as Democratic National Chairman, objected in accents of righteous indignation, tempered probably only by partisan glee at being handed so eminently exploitable an issue. He demanded that Meade Alcorn repudiate the pamphlet, which Alcorn immediately did.

From this point supporters of Edmund (Pat) Brown, Knowland's Democratic opponent, took up the cry in California, bending every effort to make the Knowland team look not only like "right to work" advocates but the willing beneficiaries of neo-Fascists as well.

Where does righteous attack on a smear leave off and smearing-by-crying-smear begin? The line is difficult to draw. And in the California case it is complicated by the fact that the principals of the piece are not candidates.

Kamp's pamphlet was directed at Reuther. In much of it Reuther was described in terms for the most part quite acceptable to many conservative Republicans, and, indeed, acceptable to many Democrats fearful of increasing labor dominance of politics. But this was not enough for the pamphleteer. In addition to denouncing the labor leader in terms acceptable—or at least tolerable—in polite society, Kamp also characterized Reuther in some dreadfully intemperate language—"foul-mouthed agitator * * * vile perveyor [sic] of vicious slander * * * ruthless, reckless, lawless labor goon * * * persistent prevaricator * * * double-talking, rabble-rousing opportunist who glibly repeats the fallacious fulminations of his Red-tinged ghostwriters * * * an evil genius."

At all events, Alcorn repudiated Kamp, and Knowland stopped distribution of the pamphlet as soon as he learned of it, on the stated ground that it carried no printing trade union label. Joe Kamp could hardly get one. But this did not deter some of the Brown forces from identifying the Knowland people with every Kamp association that could be disinterred, including a jail sentence for contempt of Congress. Guilt by association has not often been a Democratic argument.

Even with the change in the national temper that has obtained on the Communist issue since the demise of Senator McCarthy, the issue is not dead in 1958. It has been raised in the campaign of a Western Congressman whose name appeared on letterheads of organizations once described by a House Un-American Activities Committee report as subversive. Despite the fact that Un-American Activities Committee members on both sides of the aisle defended the Congressman against any implication of knowing participation in pro-Communist ventures, the charge—not made by his opponent, but by an independent newsletter operator in Washington—is doing his campaign considerable harm, it is feared.

The unique thing about this case is that it has cropped up early in the campaign. Traditionally, the time for this sort of attack is the last week before election. The Congressman in this instance has already had time enough to file a libel suit, and conceivably could have it tried before election day. This might suggest that the smear artists are losing their sense of timing. If so, we can all rejoice. But if not, as is more likely to be the case, what needs to be done about the problem? Indeed, what can be done?

In my estimation, public education at every level is the only ultimate answer. The Fair Campaign Practices Committee has initiated five steps that I believe are making slow but real headway.

First, and longest range, is education in the schools. Two years ago, none of the major high school texts in American Government or the like dealt directly with smear tactics in an election campaign. This gap is being filled. We have developed a teaching-aids program which integrates material covering this subject with existing texts. Authors and publishers of textbooks have begun to use it in new books and revisions of present ones.

College political science texts, since our committee began agitating on the subject a few years ago, are beginning to deal with it at new and greater length. Our young citizens will emerge from school with a more realistic idea of the distinctions they must be prepared to make as mature and voting citizens.

Second, our State-by-State smear study enables us to keep abreast of what actually is being done, by whom, against whom and where, and to make it known in an off-year when the vision of the people is less campaign inflamed.

Third, we are working with civic and church organizations, which enjoy a unique capacity to translate latent concern among the citizens into active political and social terms. As more and more voters become more sophosticated about dirty campaigning better able to spot a smear or a whispering campaign or to suspect a rumor or half-truth or cropped photo—the profit in these tactics, which always is in proportion to the difficulty of detecting them, will dwindle. Then, more and more smears will boomerang. When this happens, obviously, they will stop—we hope. (Already we have found that one of three smears backfires.)

Fourth, in a series of public conferences undertaken this year we have found intense interest, not only among civic leaders but also among individual citizens concerned with political morality, in what steps can be taken to mitigate the evil of scurrilous electioneering. We will continue and extend such meetings.

Finally, the usefulness of working with politicians themselves must not be underestimated. Though never really true, it is no longer quite so fashionable as it once was to count all politics as a dirty business, beneath the participation of decent men and women. I have grown up among politics and politicians, from the presidential to the city council level. I know that politicians are decent and responsible citizens, with only a few exceptions—certainly no more proportionately than there are in business.

Our program is working to destroy the lethargy that leaves political control in the hands of a few and deprives the many, by default, of a voice in choosing party leaders and party platforms. Responsible political figures at every level are among the most enthusiastic supporters of the Fair Campaign Practices Committee. We intend to continue to court their support.

I might say in conclusion that the current "Don't Pass the Buck" drive is working in its own way to improve the level of citizen participation in politics—and thereby the level of politics. Yet, I cannot leave the subject without a plea for the Fair Campaign Practices Committee, which, with a small but influential membership of distinguished citizens and a small and devoted staff is working without regard for a constant and demoralizing financial problem to bring the solid but largely unspoken moral convictions of more Americans to bear more and more directly on politics.

And, after all, the quality of our politics is the way we in America claim to distinguish ourselves from and above the rest of the world today. If you are concerned give—and think, talk, and write about it.

Uniforms for Holders of the Medal of Honor

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mrs. KEE. Mr. Speaker, on the opening day of the 86th Congress, I introduced H.R. 121, a bill to amend title 10 of the United States Code, to authorize the furnishing of uniforms to persons awarded the Medal of Honor. This is the same bill I introduced in the 85th Congress. Under leave to extend my remarks in the RECORD, I include copy of letter which I received from Mr. Miles D. Kennedy, director of the legislative commission, the American Legion, together with copy of resolution adopted at the 1958 national convention of the American Legion, supporting this measure:

THE AMERICAN LEGION,
Washington, D.C., January 5, 1959.

Hon. ELIZABETH KEE,
House of Representatives, Washington, D.C.

DEAR CONGRESSWOMAN KEE: Referring to your bill H.R. 12631 which you introduced on May 22, 1958, relative to furnishing uniforms to holders of the Medal of Honor, I enclose a copy of Resolution 181 adopted at our 1958 national convention supporting your bill.

In view of the enclosed resolution we would be more than pleased to have you reintroduce your bill during the early days of the 86th Congress.

Thanking you for your courtesy and with every good wish, I am,

Sincerely yours,
MILES D. KENNEDY,
Director.

RESOLUTION 181 (WEST VIRGINIA)

Committee: Military affairs.

Subject: Men receiving the Congressional Medal of Honor be furnished uniforms be consolidated with Resolution 181 and adopted.

Whereas there are approximately 340 men upon whom the Nation's highest militiary honor was bestowed who are still living; and

Whereas these men are the symbols of the highest traditions of bravery and devotion to the armed services and to our country; and

Whereas these Medal of Honor winners are asked on many occasions to participate in civic and patriotic events every year, such as Armed Servicez Day, Veterans Day, Medal of Honor conventions, conventions of civic and fraternal organizations, dedications and other memorable affairs; and

Whereas most of these men have been out of military service for many years and do not have uniforms suitable for these occasions; and

Whereas it is appropriate that these men of valor, who have earned the highest recognition within the gift of a grateful nation, be outfitted with the necessaray and appropriate uniforms to wear at the many public functions they are expected to attend: Now, therefore, be it

Resolved That The American Legion in national convention assembled in Chicago, Ill., September 1–4, 1958, support in every appropriate manner a similar bill to H.R. 12631 in the House of Representatives introduced by Representative ELIZABETH KEE, of the 5th Congressional District of the State of West Virginia in the 85th Congress which provides that, "At the request of any such person who was awarded a Medal of Honor in the name of Congress, the Secretary concerned shall, not more than once each 3 years and under such regulations as he may prescribe, furnish such a person an appropriate class a summer and winter uniform (including insignia) without charge."

Approved.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Jim Wright's Christmas Newsletter

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. JOHNSON of Texas. Mr. President, in the 12th District of Texas, Representative JAMES C. WRIGHT, JR., has the reputation of speaking from the heart as well as from the head. This amazing and energetic young man grew up in a small town, subsequently becoming mayor of it, and still later serving as member of the Texas Legislature. He is now a Representative in the Congress from the fourth largest city in Texas.

JIM WRIGHT has a way of speaking his mind that is both refreshing and compelling, and he is a writer, moreover, of considerable power and warmth. In his newsletter for Christmas week, JIM WRIGHT sent out a rather remarkable document that is a lesson, I think, for all of us.

I ask unanimous consent to have printed in the Appendix of the RECORD JIM WRIGHT'S Christmas newsletter, along with an excellent editorial from the Dallas Morning News commenting on Congressman WRIGHT'S proposals.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[From the Dallas Morning News, Dec. 25, 1958]

IT'S A STRANGE CHRISTMAS

It is a strange Christmas in a strange world. We send four tons of potential destruction careening around the globe and install in it a mechanism to proclaim peace on earth and good will toward men everywhere. The strange part about it is that we really mean the destruction—and we really mean the benediction.

If Ivanovich and John Doe could only sit down together, as Representative JIM WRIGHT, of Fort Worth, suggests, they would have no trouble at all finding that they could understand each other and get along with each other. But the people at the summit stand in the way. That is why all our summit conferences fail.

Speaking for John Doe, JIM WRIGHT suggests that Russia and the United States forget a part of their program for destroying each other and invest the savings in health. Health isn't dangerous. It isn't subversive. Nobody wants to shoot health or exile it to Siberia. Everybody can use health.

Well, then, says John Doe, per JIM WRIGHT, speaking to Ivan Ivanovich, why not have a new 5-year plan for Russia and for the United States, too? In 5 years Russia will spend, under this plan, the one-half amount of rubles Russia now spends each year in getting ready to wipe out the United States. And in that 5 years, the United States spends one-half the amount of dollars that it spends getting ready to wipe out Russia.

At the end of the 5 years, every town of 10,000 population in the whole world would have a hospital. There would be money left over for schools and colleges. And typhoid, smallpox, malaria, leprosy, and yellow fever would be disappearing from the earth.

And somewhere, maybe, in all this, the world would learn the lessons of peace and brotherly love and of the divine providence which sent the Christ Child to us almost 2,000 years ago.

THE WRIGHT SLANT ON WASHINGTON

"There went out a decree from Caesar Augustus that all the world should be taxed."

As I look through the window today upon Washington—like Rome, a city from which decrees go out—I can see the severely beautiful Washington Monument. In the eye of imagination it looks like the finger of a wise man pointing to a new star in the heavens. On the Ellipse behind the White House towers the national Christmas tree, tall as a six-story building.

Aside from such landmarks, Washington is just about like any other big city at Christmastime; neither better nor worse. There is the same commercialism, the same emphasis on material things, the same congested traffic and frantic haste. And, as in every other city, the only time you can really see the light that shone over the shepherds on their hilltop in Judea is when you look closely into the eyes of a little child.

"And she brought forth her first-born son and wrapped him in swaddling clothes and laid him in a manger, because there was no room for them in the inn."

Just as it was in Bethlehem, so it is in Washington in 1958. No room under the tree for another present. No room in the post office for another package. No room on our engagement pads for an additional plan. No room in the department store aisles for another shopper. And in too many hearts—no room for Him and His message of a better way.

At the conference tables in Geneva and elsewhere men discuss more and more and settle less and less because there is no room in their minds for a new idea of peace on earth—still new and still largely untried after 2,000 years. Our thoughts are on guided missiles with nuclear warheads, and not on the star.

"And, lo, the angel of the Lord came upon them, and the glory of the Lord shown round about them: and they were sore afraid."

Afraid? Well, yes, the average person in today's world is afraid. And maybe that's one reason we stay so busy, so we won't have time to think about it.

"And the angel said unto them, Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people."

To all people? Even to those we don't like and don't trust? Even to those who plot and plan against us? Good tidings to Democrats and Republicans alike? To the rude motorist who squeezed you out of your lane in the Christmas traffic today? Good tidings of great joy—even to the Russians? Well, that's what the angel said.

"And on earth, peace, good will toward men."

"Peace," the word the angels sang, must have seemed as impossible a dream in those days as it does now. There was then, as now, the temporary absence of major armed conflict, the uneasy, and repressed order of a Pax Romana. But real peace must be something more than just a nervous stalemate enforced by fear. It has something to do with good will.

Is there any real basis for good will? Did the angels speak the truth? Did he who lay in the sweet straw of the manger amid the barnyard noises bring into the world a flowering promise that lives and grows in the hearts of men amid even the bitter passions of this hour?

We say he did. We who celebrate his birth state that he did. And how strongly do we feel it?

Suppose that each of us could write a sincere and searching letter to someone—average as ourselves—in Russia, a letter to those who are the victims of a cruel history and an ugly system which has turned out the lights of Christmas. Who knows what good we might accomplish could we but establish intimate communications with these people? I'd like to write such a Christmas letter to all the plain, afraid, average men who live in Russia. And here is what I'd say:

"DEAR IVAN: I've been thinking about you. I've been wondering how you were. Guess it must be mighty cold over there. It's been downright chilly here, in fact. Hope you've got a nice, warm place for the wife and kids.

"We're feeling pretty warm inside right now. It's Christmastime. You see, Ivan, a lot of us have the belief that God himself came to earth in the person of a man and taught that all of us should love each other. That may sound a little silly to you, maybe a bit overly sentimental. Anyway, that's what we celebrate at Christmas.

"Let me be painfully frank about this thing, Ivan, and admit that I haven't been feeling very kindly toward you lately. Guess you haven't felt exactly good about me, either. Truthfully, I suppose we've both been a little bit afraid. For one thing, we believe in entirely different economic systems. Now, I'm convinced that our system of capitalism or free enterprise is the best. But if you don't like it, Ivan, I certainly don't want to force it on you. That comes under the heading of your own business.

"Why can't we just look at this thing straight and agree that we have a healthy competition going on between us to prove which system can do a better job for its people—and that neither one of us is going to change just to suit the other?

"If we could agree on that, then maybe we could agree to a moratorium on trying to force the rest of the world to copy either one of us. Oh, I don't mean we wouldn't keep on telling people how great we think our system is, nor expect you to stop saying how well you like yours if you really do. But there just isn't any sense in trying to cram it down their throats. With armies, I mean. Starting wars and getting a lot of people killed. Why can't we just let them look at both of us, and listen to both of us, and then make up their own minds?

"You know, this military business can get out of hand. That's why we're both a little nervous, isn't it? And here's the reason, the big thing we have in common—I've got kids, Ivan. And so have you. My kids mean more to me than anything else in all the world. Surely you feel the same way about yours. Now there just isn't an ounce of sense in our horsing around and acting like plain fools and arranging things so that our kids will have to be killing each other some-

day. My kids are thinking about Christmas, Ivan. Little starry-eyed things, they're not mad at you or at anybody.

"You know what, Ivan? We folks over here are spending right at $45 billion this year on armaments. That's because we're scared of what you'd do if we didn't. I don't know quite what your folks are spending on this sort of thing, and I don't expect you do, either, but I figure it's just about the same as we're spending.

"Tell you what I'd do, Ivan. I'd make a binding contract with you. We'll cut down ours if you'll cut down yours. Now, of course, it would all have to be open and aboveboard, right on the top of the table, or no go. But I'm willing, if you are. We could start out easy.

"Let's do it this way. We'll cut 10 percent from our military expenditures this year if you'll do the same thing. Right out on the top of the table, now. We'll take $4½ billion out of our military spending this year if you'll do the same thing, match it dollar for dollar. We'll both put our money into the same fund. That'll make $9 billion for the first year.

"If the deal holds, we'll double it next year. We'll both cut our current military budget by another 10 percent, and each of us will put up $9 billion next year. That'll make a total of $27 billion in the fund.

"Want to help mankind, Ivan? Well, here's your chance. Here's your chance to help mankind and get rid of your fears at the same time. You like 5-year plans, so I'll make you a 5-year plan. Let's keep this up at the second year's rate for 3 additional years, and we'll have put a total of $81 billion into this fund between us at the end of 5 years. Neither one of us will have missed it, because it will have come out of what we'd otherwise have been putting into weapons which would just have made both of us more nervous.

"We could make an $81 billion gift to humanity, Ivan.

"Do you know how much $81 billion is? Well, it would build and equip a brandnew $2 million hospital for every city of 10,000 or more in the world. Our medical experts say that with $4½ billion they could absolutely eradicate malaria, typhoid, smallpox, yellow fever, and leprosy from the face of the earth. It would build 120,000 high schools or 250,000 elementary schools. It would build and stock 250,000 first-class libraries and it would provide 20 million 4-year college scholarships. It would build 20 million modern homes to replace the world's infested slums. It would build almost a million miles of modern roads—enough to circle the earth several times. Take any combination of these benefits you like—it still adds up to a whole lot more sense than spending this money on the implements that kill and destroy rather than those that build and ennoble and improve.

"Then, after 5 years we could slack off. We could reduce our contributions to the Christmas fund and give some tax relief to the folks who have been carrying the burden for so many years—yours as well as ours. Think of it, Ivan. Imagine what the effect would be in Russia if just 20 percent of all the money now being spent on military hardware were being plowed back into the economy and spent on the merchandise of peace. Think what it would mean in terms of automobiles and homes and household appliances.

"It's a wonderful dream, isn't it, Ivan? It could be a reality if we would only play fair and square with each other and do away with needless secrecy. Of course, you'd have to know that we weren't cheating. You'd be entitled to know it, just as we'd be entitled to proof of your compliance. We could use the United Nations organization to inspect and police our operation to insure good faith on both our parts. We'd have to open up our borders and let one another come and look—but what would there be to fear if we both were playing straight?

"You know, Ivan, we could give the world the greatest Christmas present since the first Christmas, 1,959 years ago. We could really bring tidings of great joy and, for the first time in two milenniums the greatly troubled people of this old world of ours could obey the angels' injunction: 'Fear not.'

"That would be the best part, that everybody could gradually stop being afraid. If we ever got together on this we could make all the old hatreds and fears and misgivings vanish like hot breath on a looking glass.

"Think it over, Ivan. We've both been trying the other way long enough. Think it over carefully. And, meanwhile, have yourself a merry Christmas.

"Sincerely,

"JIM."

Whimsy? Perhaps. Perhaps there is no way effectively to get such a message through to Ivan, insulated as he is by curtains of iron. Maybe such a plan, offered by our President, could form the basis for a major breakthrough in the diplomatic stalemate. If such a sincere and honest message could be broadcast to Ivan through the Voice of America, it might do some good. At worst, it could certainly do no harm.

Citizenship Role in American Political Life

EXTENSION OF REMARKS
OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1959

Mr. CLARK. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by the senior Senator from West Virginia [Mr. RANDOLPH] at a dinner meeting of the National Conference on Legislative Education, held in Schenley Hall of the University of Pittsburgh on November 14, 1958, on the subject "Citizenship Role in American Political Life."

Senator RANDOLPH'S remarks on this challenging topic were both thought-provoking and profund, and I know that his many friends who missed the opportunity to hear him speak at the University of Pittsburgh will welcome the opportunity to read the speech which he delivered there in November.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CITIZENSHIP ROLE IN AMERICAN POLITICAL LIFE

(Address by JENNINGS RANDOLPH, U.S. Senator, West Virginia, at dinner meeting of the National Conference on Legislative Education, Schenley Hall, the University of Pittsburgh, Nov. 14, 1958)

I am deeply grateful for the opportunity to participate in this conference and to be a party to the development of what may well become a fresh and significant contribution to the political process.

It is particularly appropriate that this exercise in political groundbreaking, so to speak, is being initiated by the United Steelworkers, whose tradition for responsible unionism was so significantly expressed in the life and work of the late Phillip Murray. And if these sessions are successful in bringing forth a marriage between the academic and scholarly discipline of political theory and the practices of political action in organized labor, then it will have moved further toward the goals that Mr. Murray envisioned.

You have asked me to discuss tonight the question of the "Citizenship Role in American Political Life." This is a topic that one must face with some awe and humility—especially when addressing such a distinguished body of practitioners and students of the art of politics. But this is a topic on which I have had some occasion to reflect—particularly during the past few months when I have been meeting the citizens of my own State at a somewhat accelerated pace. I shall later bring to bear some of the experiences of these past few months on the questions that will arise in the examination of our problem.

But first, the problem must be defined. And since the role of the citizen in a dynamic society must change with the altering structure of society, we might best take a brief historical glance at certain of the assumptions that underlie our view of the matter. I propose to offer nothing new on the subject, but merely to establish a context within which to approach the problem.

For this purpose I believe we can agree that the role of the American citizen was first most clearly expressed in the writings of Thomas Jefferson. Here was developed the view of the American citizen as the independent freeholder, jealous of his own integrity and independence, informed on matters of public concern, and capable of exercising reasoned judgment in the light of this information. The underlying assumption of this view was that man acts of his own free will, guided by the light of innate reason, and that all men are potentially capable of exercising reason.

During the 18th century and for the first half of the 19th century, this typical American citizen found himself in a society which was predominantly rural and agrarian. And with the continual advancement of the frontier there existed in general a harmony between the public interest and the interests of the individual citizen. We need not cavil at the truth of this picture in every instance. This, I believe, is in general a fair sketch of the surrounding conditions and the basic assumptions of the historic image of the American citizen. This is still the image that governs much of the political thought and rhetoric of today. But what of the change from the conditions that gave birth to this image?

Beginning with the great immigration waves of the 1840's and continuing with the industrialization of the North after the Civil War, American civilization underwent a major reconstruction. The conditions of life changed from the rural and agrarian society to an increasingly urban and industrial one. I suggest that we have not yet accommodated ourselves to this change. We have not yet fashioned the new symbols and techniques with which to organize political life; we have not yet clarified the assumptions on which must be based the new citizenship role called for by this change.

Much of the confusion in political thinking today, even perhaps much of the so-called apathy of the voter, stems from this failure—from the failure to establish symbols and attitudes relevant to contemporary circumstances.

Let me illustrate with reference to my recent campaign experiences in West Virginia: after speaking to literally hundreds of audiences, the one characteristic that most impressed, and I might say, most troubled me as well, was the almost complete lack of people under 30. Wherever I went—whether in mining areas, in the farming areas, or in the industrial areas—I experi-

enced the same situation—audiences composed largely of the middle aged and elderly. In part, of course, this was due to the fact that the predominant campaign issues in West Virginia were economic ones—unemployment, recession, and inflation. And these are, of course, felt more keenly by older people and those with families.

But I believe there is another and perhaps deeper reason. During the primary campaign I met an alert and lively gentleman by the name of Charles L. Watkins, in Shinnston, W. Va. Mr. Watkins, a semi-invalid, who is more than 97 years young, informed me that in 76 years he had never missed voting in an election, and that he would make this one as well even if he had to take an ambulance to the polling place. Mr. Watkins is only the most dramatic example I encountered—but there were others as well.

What I am suggesting is that these citizens formed their commitments to political participation at a time when the political process was meaningful to them. They have since maintained the habit and the identification.

Somehow we have failed with our young people. We have failed to communicate to them the significance of the vote—the meaning of the franchise of freedom. Now, I am not afraid of the misuse of the ballot; a poor or unwise vote can be corrected the next time at the polls. But I do fear the nonuse of the ballot—the increasing withdrawal and isolation of the individual from the political processes, and especially as it is exhibited among our younger folks.

The failure to which I refer is a failure for which many of us bear a measure of responsibility—the politicians and public officials who too often avoid the direct issue rather than address the challenging problems that confront us, the segment of the press and communications industry which often emphasizes the sensationalism of charges and countercharges rather than the meaningful interpretation of events, and the many teachers and intellectuals who hold to the notion that politics should be shunned.

All of these have been instruments in our default—the default to communicate to the individual citizen the drama of the most important political experiment in history and his role in it.

This failure is characteristically dealt with in terms of the lack of interest of the voter. And we all recall, I am sure, the closing days of the recent campaign, when the leaders of one of the parties took themselves out to bestir the people. The resulting rhetoric, I believe, generated considerably more heat than light and apparently had small effect on the turn of events.

I would suggest, therefore, that the problem is not primarily one of apathy, but of confusion. And to define the problem as one of confusion rather than apathy is to prescribe a radically different cure. On the one hand, we attempt to launch a crusade to the roll of drums and the blare of trumpets; on the other hand we attempt to dispell the confusion in the mind of the individual and thereby enable him to identify his own interests with the policies and principles set forth by the respective parties and candidates.

It is, therefore, essentially a problem in communication. I have indicated what is considered to be one of the chief sources of this problem—that we are continuing to try to communicate in terms of a world that no longer exists and on assumptions about human behavior that we know are no longer valid. The Saturday Evening Post cover picture is no longer an accurate portrayal of the conditions of American life—nor is the notion that the individual is necessarily guided by the light of innate reason.

I would go further and submit the opinion that another, though related, source of this confusion emerges from the increasing mechanization and specialization of modern life. Although the individual citizen today is caught up in a vast web of associations—legal, commercial, social and personal—he finds no general community of values which he can share. He finds no consensus with which he can achieve harmony and direction and purpose in his contact with public affairs.

Participation in polital life first requires this identification with and sharing of some community of values. But it is this very relationship which is being eroded and chipped away by the growing complexity and specialization of modern life.

The once relatively simple functions of government to which the individual could easily relate have necessarily grown and expanded into a bewildering and complex variety of activities. In the process the individual, whose own integrity as a person is under constant assault, becomes increasingly detached and isolated from the political forces that govern his own affairs.

It would seem, therefore, that we must develop mediating institutions that can bridge the gap—restoring both a sense of wholeness to the individual and a means of enabling him once again to participate in political affairs. Such institutions must, however, embrace a certain consensus of values.

We have such organizations in embryonic form if we wish to consider the voluntary associations that devote themselves to promoting such worth aims as forestry, conservation and preservation of natural resources. These, as well as the more specifically political action groups, throughout the range of the political spectrum, all function in some measure to fill the vacuum between the citizen and the formal political structure.

However, in a larger way, the labor unions can become such mediating institutions. With the growing concern for union welfare, recreation and educational programs, unions can become increasingly the kind of institutions which will enlist the individual's loyalties over a wide range of values. They can thus assume even more fully their legitimate function of promoting the valid interests of their members.

Let me remark, in passing, that I am not one to whom the term "special interests" necessarily has evil connotations. The American Federal system is based upon the constant reconciliation of conflicting interest groups. As Arthur Fisher Bentley pointed out 50 years ago in his "The Process of Government."

"Logrolling is * * * in fact, the most characteristic legislative process. When one condemns it in principle, it is only by contrasting it with some assumed pure public spirit which is supposed to guide legislators, or which ought to guide them, and which enables them to pass judgment in Jovian calm on that which is best for the whole people. Since there is nothing which is best literally for the whole people, group arrays being what they are, the test is useless, even if one could actually find legislative judgments which are not reducible to interest-group activities. And when we have reduced the legislative process to the play of group interests, then logrolling, or give and take, appears as the very nature of the process. It is compromise, not in the abstract moral form, which philosophers can sagely discuss, but in the practical form with which every legislator who gets results through government is acquainted. It is trading. It is the adjustment of interests."

I suggest that this is at the heart of the American political process, and it is precisely this element of compromise that gives our political institutions their flexibility and durability cast.

Acknowledging, then, that special interest groups are a characteristic and essential part of mediating between the individual and the formal political structure, liberals as well as others can view favorably the growing concern in business organizations and the chamber of commerce for increased political activity of their members. For the more concrete experience that members of the business community have in practical politics the less likely they are to be critical of those who devote useful careers to the public service.

However, I cannot emphasize too strongly that politically active interest groups—whether labor unions, the chambers of commerce, trade associations, or whatever—do a grave disservice to the democratic process when they engage in wild charges of conspiracy and call for a war of extermination between the two major parties.

We had something of this (if you will pardon me for a slight partisan comment) in the closing days of our campaign in West Virginia, as well, I understand, as in some of the other States. I refer, of course, to the opposition party's innuendo that the Democratic Party has become the captive of Walter Reuther and COPE. In reply to such irresponsible nonsense I stated then and repeat now that I am mindful of the money and the support that we have received from the voluntary contributions of organized labor. And when I say that the philosophy of the Democratic Party reflects Main Street while that of the Republican Party mirrors Wall Street, I do not therein imply that either party is a captive of certain interests.

It is simply that the Republican Party, and its antecedents, the Whig and the Federalist Parties, have customarily identified the chief function of government as the protection of property interests, while the Democratic Party has sought to distribute the fruits of our society to the widest possible number of interest groups—workers, farmers, small businessmen, etc.

In closing, let me summarize by saying that we may as well recognize the fact of bigness in American life—big government, big labor, and big business. But with this, we must find the means and the techniques to prevent the individual man and woman from being lost in the shuffle. I have suggested some tentative lines that we might explore. I am confident that the papers that will follow during the rest of this conference will lay out other fresh and creative avenues. But I believe that all persons professionally concerned with government, whether in public office, in teaching, or in the labor movement, must guard always against the danger of converting the means of government into their own ends; for the only proper end of a democratic form of government is always and ultimately the safeguard and enhancement of the values of the free citizens.

Speech of Hon. Hale Boggs, of Louisiana, at Constitution Day Ceremony

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Constitution Day speech I made before the Sons of the American Revolution, New Orleans, La., September 17, 1958:

Mr. Chairman, distinguished guests, ladies and gentlemen, it is a great pleasure and privilege to be invited to participate in this Constitution Day ceremony here in the coun-

cil chambers of our city hall. I congratulate all of the wonderful civic, patriotic, and fraternal organizations who have made this occasion possible. I am pleased, if you will pardon a personal reference, to be numbered among the members of quite a few of the sponsoring organizations here today.

I am glad that you are meeting here at the seat of local government. The very essence of our Constitution is in its recognition of the various areas of sovereignty, and the government which is encouraged most under that system is local government because it is closest to the people and thus has a fuller appreciation of their problems, needs and difficulties. We have seen too many efforts made by too many people, especially during the last 50 years to chip away local authority and to move it to the Capitol in Washington.

Some time ago, one of the great American television networks made its facilities available to the blustering present-day leader in the Kremlin, Mr. Khrushchev. Utilizing this opportunity, he had much to say. Among other things, he told the American people that our grandchildren would live in a Socialist society. Socialism to him, of course, meaning Russian communism. He based this prediction on his assertion that this Russian communism represented progress and that our system represented reaction and the lack of progress. This prediction of the loss of liberty for all Americans will not come to pass, unless we forget the lessons of history and unless we fail to understand the overall struggle in which we are now involved.

To say that Mr. Khrushchev's premise is false is, of course to repeat the obvious. In my judgment, there can be no doubt about the fact that the men who drafted our Declaration of Independence, our Constitution, and our Bill of Rights were divinely inspired because they confected a system of government with precise checks and balances; of division of authority between State and Federal sovereignties, and between the executive, the legislative, and the judicial branch in the Federal structure which was not only to become the model for all democratic peoples throughout the world, but was also the most revolutionary system of government ever invented.

The Communist system, on the other hand, Mr. Khrushchev's system, is pure reaction. The Russian revolution simply substituted one form of serfdom for another. Some of you, no doubt, have read the book entitled "The New Class," written by Milovan Djilas, the Yugoslav Communist who is now in prison. There he points out the rise of a vicious new class system under communism. The American Revolution, on the other hand, actually gave people the opportunity to strive and to work in an atmosphere of maximum security and freedom and without the stultifying impediments of the class-ridden societies of Europe, or the heavy-handed interference of a ruthless central government.

This essential freedom, made possible by the American Revolution and the American Constitution, accounts for the greatness of America. But to fail to recognize the dangers we face would be inviting destruction.

And, frankly, my friends, the thing that worries me about Mr. Khrushchev's challenge is that we, like many people who have preceded us, may be becoming too self-centered, too self-satisfied, too complacent. As wrong as the Communist idea has been, they have nevertheless succeeded in obtaining dedicated people to work for that wrong idea. Believe me, we need more dedicated people.

The idea that nations are permanent, that they cannot be vanquished, is one which has never been proved in history. What happened to Rome and Greece is well recorded in ancient history, and in more recent time, we have seen the end of empires dominated at one time or another by the Dutch, the Spanish, the British, the French, the Germans, and the Japanese.

As a matter of fact, today as if by some omnipotent magic, the stage of the world has been stripped of all but two titanic actors: the Soviet Union and ourselves. It is against this background that we must ponder the future and take stock of our weaknesses as well as our strength. And, believe me, we do have many weaknesses. Some of them all of us are aware of.

In a sense, I believe that most of us are influenced by what might be called the installment plan mentality. This mentality dictates that you yourself never have to do anything for yourself, provided you make a small downpayment and pay the rest on easy terms, stretching into a vague but always rosy future.

Or, put another way, we are the victims of what is called the easy way. We see this every day all about us. Turn on your television set. Like as not, you will see an ad of a housewife in a kitchen holding a greasy skillet that within a second or two, and without any exertion on her part—merely through the application of some miracle cleaner—the skillet is brand new and shines like the sun. This easy-do-it philosophy is applied to everything.

Other advertisements tell young men and women that they can acquire the equivalent of a college education if they but buy a set of books (on the installment plan) and look at them a few minutes every day; that you really don't have to work hard to get an education.

In other words, there is always some shortcut.

Unfortunately, we have translated this so-called easy way into our national thinking and into our foreign policy. We want an easy Defense Establishment, one that does not require too many dollars, or too many hours of training, or too much research, or too much study and experimentation, or too much time, or too many young men.

We seem also to suffer from an obsession of being in a hurry. In the conduct of foreign policy, we seem to think that we can get each job done like constructing a building and then turn to some other project. The idea of patient, time-consuming negotiations seems to elude us completely. On the other hand, our antagonists unfortunately seem to understand time. To give you but one example:

During the First World War when the Germans had defeated czarist Russia, and Lenin had begun the Russian revolution, the Germans through the Treaties of Bucharest and Brest-Litovsk, practically dismembered Russia, so great were their seizures of former Russian, Polish, and Finnish territory. Because of this many Russians wanted to resume war with the Germans. But Lenin forbade it. "Let the Germans have it," he said quietly, "one day we'll get it all back."

If time is of the essence to us, it is not necessarily of the essence to our antagonists. If we like to set target dates and keep them at whatever cost in diplomacy, our antagonists are unconcerned with them. And, I might add, neither is destiny concerned with target dates.

We are in a marathon contest with people to whom the marathon distance is congenial. We must, therefore, learn to contain ourselves lest we become exhausted before the race is half run. We must revise our attitudes toward time. We must think less of target dates and more of the long range goal. We must find ways to be patient. All of this is difficult. But it is not written in the stars that our lives should be easy or that we should always live with our way uncontested by others.

Let's note another of our traits. When we are facing a concrete objective, such as fighting a war, we bring to the struggle whatever may be necessary for victory. But once the objective is achieved, once the war is over, and other qualities must come into play in order to win and to keep the peace, we falter.

Once the war is over the qualities necessary to winning and keeping the peace are patience, tact, conciliation, compromise, and above everything else—tenacity. Here we fall short. After the First World War these qualities did not assert themselves among us and so there was set in motion the train of events that led to the Second World War.

But scarcely had the guns of the Second World War stopped firing when, despite all our talk about sticking it out, we did not even hastily demobilize. We hysterically disbanded the mightiest fighting force men had ever known. We abandoned or shoved into the sea billions of dollars worth of military equipment. And in doing all this we not only left vacuums that others rushed in to fill, we also presented to the world the disquieting and revealing spectacle of a people who knew how to do a job but did not know how to complete a task.

If these are our attitudes, are they likely to fill others whom we must have as friends and allies, with confidence in our leadership?

The easy way, unfortunately, has even been translated into our educational system. We have found ourselves falling back in training scientists and technicians, engineers and physicists. We realize now that there is no easy way to get these people, that there is no substitute for hard work, hard study, and long hours.

Unfortunately, somehow or other, we have even failed to translate the picture of America to the rest of the world. No nation has ever been more generous and asked for less in return. During this century we have fought two tremendous wars and not only have we not acquired 1 inch of territory as a result thereof, but we have spent billions of dollars to rehabilitate our former enemies. We have encouraged the new nations in their struggles for self-expression and self-determination all over the world.

As a matter of fact, not a new flag flies under the sun today that in some way does not owe at least part of its liberty to the great American Revolution with its Declaration of Independence, its Bill of Rights, and its Constitution. And yet, we are unfortunately being portrayed to the world as a Nation of complacent people interested only in the accumulation of wealth and greater comforts.

In the Middle East, for example, the whole concept of freedom and liberty is the result of our people—our engineers, our businessmen, our missionaries, our American university in Beirut. The great progress made there against poverty and disease is largely the result of our work. And yet, today in that area of the world, we are pictured as greedy and grasping, interested only in exploiting the oil riches and totally unconcerned with the needs of the people.

The record of American largess and of concern for other peoples is a long and a magnificent and a glorious one. There are countries in the world where millions of people have been saved from pestilence by the work of our Government and by the work of private American institutions.

In Thailand, for instance, the dread malaria has almost been eliminated, and in Colombia the frightful and painful disease of yaws has been wiped out in a few years. The same applies in countless areas. And yet, we have demonstrations against our Vice President and other public officials in some of these countries. This means, as I see it, my friends, that we are failing dismally to portray America as it really is to other peoples of the world—to give the real picture of life on our farms, in our towns, and in our cities, and how we as Americans do more to help one another in everyday

life than probably any people on the face of the earth.

But you see, the battle for the minds of men is every bit as important as the military struggle and in this arena as in others, there is no easy answer, no quick solution.

I was amazed and astonished by the recent polls conducted by Dr. Gallup which indicated that in the opinion of most Americans it is thought that the average return on the average corporate investment runs 20 to 30 percent. Even more astonishing were surveys conducted outside of the United States which showed people in Montevideo saying that the average investment yielded 60 percent and people in Western Europe using figures as high as 47 percent. This demonstrates that American business, in general, has a real job of public relations to do!

Certainly, this is the result of the Communist party line that free enterprise means tremendous profits for a few people without passing on a fair share of earnings to the workers. This nonsense must be counteracted with the truth, not only in the United States but throughout the world.

What are the cures? Well, as the saying goes, the following are for sure:

We must adopt a long-run view of world affairs. The race is not always to the swift.

We must accept struggle and peril as part of our daily portion.

We must possess ourselves in patience.

All this may require a substantial transformation in our temperament. We are impatient. But our potential enemy is endlessly patient. Many of his ambitions of today were his ambitions 400 years ago.

The price of freedom has always been high. It was high at Valley Forge and Lexington. It was high at the Marne in 1914. It was high in France in 1944. But the price of defeat is death and slavery.

If the price of freedom is eating hoecake and molasses, I am for that.

If its price is hoecake and branch water, I am for that.

We must elect to be wise or foolish; to vacillate or persevere, to survive or perish.

Finally, we must have a genuine appreciation and understanding of American liberty and freedom; we must as individuals dispel by word and example, wherever we go, the clever Communist propaganda directed deliberately against us; and we must realize that our society will not survive unless we will it so; that our Constitution as great as it is will only survive as long as the people are dedicated to its principles.

Statement by Secretary of State John Foster Dulles Before Senate Foreign Relations Committee

---

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1959

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement made today by the Honorable John Foster Dulles, Secretary of State, before the Foreign Relations Committee of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE HONORABLE JOHN FOSTER DULLES, SECRETARY OF STATE, BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE, WEDNESDAY, JANUARY 14, 1959

I. INTRODUCTION

The world is today changing more rapidly than ever before. But the fact that much is changing does not mean that everything has changed. There are certain values, certain principles, that are enduring. Among these are the concepts of individual human dignity and the supremacy of moral law.

In a changing world our task is to strive resolutely that change shall increasingly reflect the basic principles to which our Nation has, from its origin, been dedicated.

II. OUR BASIC PURPOSES

1. At a time when war involves unacceptable risks for all humanity, we work to build a stable world order.

2. We seek for general acceptance of the concept of individual dignity which will lead to the spread of responsible freedom and personal liberty.

3. We seek that the free nations shall attain a more rapid rate of economic growth, so that their independence will be more secure and vigorous and so that there will be greater opportunities for cultural and spiritual development.

III. THE PRIMARY THREAT

The Soviet Union and Communist China are expanding their economic and industrial power at a very rapid pace. They do so by a system which combines governmental rule of all labor with imposed austerity. This makes it possible greatly to accelerate capital developments.

There is emphasis, too, on quality. A spectacular product of Soviet material accomplishment was its recent space probe. In this field, the United States is still trying to catch up and make up for the head start of the Soviets. Our space accomplishments during the past year justify the belief that we are making good relative progress.

The Chinese Communists seem to be going into a dark night of massed regimentation and forced labor. What they call the great leap forward is in reality a tragic fall backward into the abyss of human slavery.

Asian nations are experiencing one aspect of Communist economic development: The Communist tactic of flooding their market places with goods at less than prevailing prices. This has widespread effects, some of which reach into our own country. As one example only, the dumping of cotton textiles in Southeast Asia has reduced Japanese exports in that area and is already reducing exports of cotton from the United States to Japan. As Communist economic power grows, we must anticipate and plan for further shocks to the free world economic structure from the Communist trade offensive.

Communist economic methods involve costs in human privation and misery that, for us, are not only repugnant but completely unacceptable. We believe that over the long run such a process must inevitably be altered. Already there are indications that the Soviet leaders are beginning to realize this. There is some scaling down of their heavy industry ambitions. They are beginning to heed demands by workers and peasants for more leisure and for a greater share in the fruits of their labor. Peoples sufficiently educated to operate a modern industrial state may be expected also to acquire the desire for freedom and the capacity to get it. History gives us good reason to believe that the Soviet peoples will not indefinitely submit to dictatorial rule by the International Communist Party leadership. It would appear that the Communists will encounter difficulties increasing in the long run.

But for the short run—and this may be a period of years—the situation is full of danger.

That means that we may face a period even harder than we have become used to. To get advantage from time we shall have to stand on our course. We shall need the national will to stand firm in the face of aggressive threats and probings from the Sino-Soviet bloc. We shall need to make whatever unusual sacrifices may be necessary. People respond to this kind of demand when they understand that a temporary emergency requires it. But these burdens seem to grow heavier the longer they must be borne during a period of relative peace. Our people will need to show what freedom can mean in terms of self-sacrifice and self-discipline; and in terms of fortitude and perseverance.

IV. WORLD ORDER

Let me speak now about world order. This requires an elimination of the use or threat of force to accomplish international change. This was always a bad method. It has become an intolerable method because the force at man's disposal could now practically obliterate human life on this planet.

The United States and other free world nations have, by their conduct, done much to establish, for themselves, the principle of the renunciation of aggressive force; and they have shown their ability and will to deter such use of force by others.

At the time of the Suez affair and the Israeli-Egyptian hostilities, the United Kingdom and France, and then Israel, responding to the overwhelming opinion of the United Nations, withdrew their armed forces and accepted a United Nations solution. This may well prove to be a historical landmark.

During the past year the United States and its partners have further shown their opposition to change through force or the threat of force.

When Lebanon and Jordan seemed threatened from without and appealed to the United States and the United Kingdom for emergency aid, we responded with promptness and efficiency. When the emergency was relieved by United Nations action, we promptly withdrew our forces.

Throughout the world small nations felt a profound sense of reassurance.

In the Far East the Chinese Communists, with Soviet backing, initiated military action designed, as they put it, to expel the United States from the western Pacific. We stood beside the Republic of China as it resisted what seemed the preliminaries of that attack. Our free world associates generally supported our position that change in that area should not be effected by force of arms.

The Government of the Republic of China itself made a notable contribution when, last October, it declared that it relied primarily upon peaceful principles and not upon force to secure the freeing of the mainland. This courageous and statesmanlike act has strengthened the free world's cause in the western Pacific.

Now in Berlin we face an effort to expel the small western contingents in West Berlin. Their presence constitutes an indispensable safeguard to the freedom of that city. The NATO powers, at their December meeting, unanimously vowed that such expulsion should be resisted.

Step by step, discernible progress continues to be made in consolidating a system of collective security which will effectively operate to exclude the use of force to effect international changes.

The mutual security arrangements which we have with free world countries no longer assume the aspect of mere military alliances.

They are the framework of consultative processes that, day by day, are steadily reforming the society of free nations.

In primitive and frontier societies, security is on an individual basis. Each householder defends himself by his own means. That primitive formula is now obsolete domestically. It is becoming obsolete internationally. Many free nations combine to help each other. The resulant power is not a power which can be or would be used for any aggressive or nationalistic purpose. It is a power dedicated to the common welfare as mutually agreed.

The United States has repeatedly made clear—and I said this again at the last December NATO meeting—that we regard our own military power as being a trust for the benefit of our free world partnerships; that we are ready to make known to all the defensive purposes and circumstances under which that force might be used; and that we shall heed in this respect the advice and counsel of our partners just as we would expect them to heed our advice and counsel with respect to the international use of their force.

Thus, out of what may originally have been conceived primarily as millitary alliances, there is developing an international structure which provides collective security on the basis of organized and continuous collective consultation. That is something new in history.

I might add that accomplishment is not always easy given the variety of national development and national viewpoints. Nevertheless the free world practice in this regard constantly grows in efficiency.

World order is not, however, assured merely by the elimination of violence. There must be processes of peaceful change. These, too, are rapidly developing within the Free World. The General Assembly of the United Nations is a forum where these needs find effective expression. The General Assembly does not have the power to legislate change. But it has a capacity to induce change, at least in the case of governments which have respect for, and are responsive to, world opinion.

The peace of the Free World is not a peace of political stagnation or a peace which sanctifies the status quo. It is a peace characterized by peaceful change reflecting new human aspirations and potentialities.

There is, of course, need not only for processes which permit of peaceful change, but there is equally a need for stability in adherence to basic values, including that of respecting international agreements and treaties. This requires that, unless international law and treaty engagements are changed by common agreement, they should be respected.

There has not been as great a development of international law and recourse to judicial processes as would be desirable. The United Nations General Assembly Committee on the codification of international law has made little progress. Some significant progress in law development was made at the recent Law of the Sea Conference, and that Conference will be resumed in 1960. Inadequate use has been made of the International Court of Justice. As the President said last week in his State of the Union address, we envisage further steps to encourage the greater use of that Court.

In such ways as I describe progress is being made toward establishing a world order where peace rests, not on mere expediency or on a balance of power, but on a basis of sound institutions.

This evolution is not spectacular and rarely considered "newa." What attracts attention are the aggressive probings of the Communists and the free world reactions thereto. That gives the impression that our foreign policy consists primarily of reacting to Communist initiatives.

Nothing could be further from the truth. The fact is that day by day, month by month, and year by year, we are building, quietly but steadily, in the United Nations, in NATO, in the OAS, in SEATO, and other organs of consultation, the solid foundations of an international order based upon justice and law as substitutes for force.

The Communist rulers do not share in this effort to build a stable world order based upon justice and law. International communism avowedly seeks world-wide dictatorship. The concept of justice is alien to the Communist creed, and law, in our sense of that word, is unknown. The free world and Communist concepts are mutually antagonistic.

This, however, does not mean that there cannot be useful contacts and negotiations with the Communists. We have had many such. We are striving to make progress in the field of disarmament and in that connection deal with the Soviets, particularly in relation to the controlled discontinuance of nuclear weapons tests. We also seek agreement on possible measures which might be helpful in preventing surprise attack.

At Warsaw we negotiate with the Chinese Communists.

We have made clear our willingness to negotiate about the German question.

We have now an agreement with the Soviet Union on cultural and scientific exchanges which is operating satisfactorily. Also important are the visits to and from Russia of influential citizens.

President Eisenhower urged this in his letter of February 16, 1958, to the then Soviet Premier. Following this initiative, there have been useful visits on both sides, and we are glad that the First Deputy Premier of the Soviet Union, Mr. Mikoyan, is now here learning about our country. We would like to see a broader exchange of students. We believe that in such ways false premises and miscalculations can be reduced in the interest of peace.

V. THE INEVITABLE MOVEMENT TOWARD FREEDOM

I turn now to our second major purpose.

One of the strongest forces working in the world today is the movement toward independence and freedom.

This force is notably manifest in Africa. Here change is rapid, new states are arising almost overnight. This great continent presents a challenge to the United States to do its best to assist the peoples now emerging into independence and new opportunity.

Another such area is our hemisphere to the south. The peoples of Latin America are making clear their determination to control their own destinies. One by one dictatorships have made way for governments more responsive to the popular will.

The worldwide movement toward freedom is accompanied by a growing awareness of the deadly nature of Sino-Soviet imperialism. The leaders of the new freedom are coming more and more to see international communism as an immediate threat to their liberties, not, as some have thought, a mere bogeyman of so-called western imperialism.

The Communists are paying a price for the forced growth of their material power. There is a developing fear in the less powerful nations around the world of the dangerous combination of burgeoning economic and military power with the imperialist drive of the Communists for world domination. This menacing combination brings home with force the threat which, when the Communists were not so strong, was but a matter of vague and largely academic concern.

There has recently been a surprising clarification of understanding around the world of the real purpose of Communist leaders—to subject all the world to the dominant influence and control of international communism, with its primary power centers at Moscow and Peiping.

In the Middle East the deadly designs of communism are now far more clearly realized than a year ago.

In southeast Asia liberty-loving peoples are struggling—and with success—to remain masters in their newly built national homes.

In general, I believe the leaders and peoples of Asia now understand better the sincerity of American policy favoring their independence and our willingness to support unconditionally their efforts to stay free and do so in their own way, which may indeed be a non-Western way.

In France, we are witnessing an inspiring example of national renewal.

The tide of freedom is running strong in Western Europe as Communist strength there ebbs.

Even in Communist countries there is a powerful and persistent craving for greater national freedom. Yugoslavia has been steadfast against all threats and blandishments from Moscow and has courageously maintained its independence.

Hungary's great effort to throw off its shackles, even though crushed by force, has been an inspiration and a tribute to man's unquenchable thirst for liberty. And throughout the bloc, even in the U.S.S.R., revisionism is a living force and ferment. Moscow considers it a deadly enemy, and with reason.

The pull of freedom is daily manifested in the flow of refugees from the Communist bloc to the free world.

The free people of West Berlin have, during years of uncertainty and danger, been an inspiring beacon light for all those whose liberties have been lost to Communist tyranny. We are determined that this light shall not fail, and that Berlin shall not be engulfed in the Red undertow.

As we look ahead, we see freedom as a predominant force, shaping our 20th century world. As Americans, we have faith that the aspiration, deep within the soul of man, to live freely and with dignity in a just and peaceful world is stronger than all the material forces which the Communists invoke as the pledge and promise of their power.

VI. ECONOMIC PROGRESS

I turn now to our third basic purpose.

We believe that economic progress is a necessary condition of stable and free nations. There must also be acceptance of economic interdependence of nations. No nation can live completely to itself.

Unless and until the less developed areas reach the stage of self-sustaining economic growth, the world as a whole will suffer. For the inhabitants of those areas, an increasing rate of economic development has become an essential condition of free societies. The demand for economic and social betterment is now universal, and if progress cannot be achieved in freedom, it will be sought by methods that jeopardize freedom.

The Communists are fully aware of the universal demand for progress, and they point to the Soviet and Chinese Communist accomplishments in industrialization as proof that their way is better than the way of freedom.

Our aid and investment must continue to support the efforts of the leaders of the developing free nations to sustain their peoples' confidence that economic progress can be attained in freedom.

We have not been alone in providing such support. Other highly industrialized states have made significant contributions.

These industrialized nations have also shown a growing awareness of interdependence among themselves. This is particularly gratifying to us. A common market for Europe was one of the policy objectives stated in the preamble to the European Recovery Act of 1948. Now, after 10 years, the six-

nation European common market is a fact. The Western European currencies have become more freely exchangeable and there is a strong movement for broader economic cooperation in Western Europe.

Free world economic progress does not permit complacency or relaxation. It calls instead for renewed effort to increase the forward momentum.

In the years ahead, we must through our trade and financial policies continue to promote recognition and positive use of the benefits of interdependence. These benefits, and the inevitability, of economic interdependence become more clear each year. What is being done in the European Community of Six provides an example and an inspiration for greater economic cooperation elsewhere in the world.

We must continue to apply our will, energy, treasure, and techniques to the problems of the less developed areas. The cause of freedom can be won—or could be lost—in these areas.

VII. CONCLUSION

Let me in conclusion recall the basic purposes underlying our policies:

1. The renunciation of aggressive force and the substitution of collective institutions of peace, justice, and law among nations;

2. Promotion of the concept of human dignity, worth, and freedom;

3. Stimulation of economic growth and interdependence to create enlarged opportunities for realization of cultural and spiritual values.

These goals are not attainable in a few years, but will require decades and, perhaps even generations. Why is this so? We are but one nation among nearly a hundred sovereignties, and but a scant 6 percent of the world's land surface and population. Our foreign policy is not something we can enact into world law or dictate to other peoples. It means rather constant adjustment to forces which, though beyond our control to direct, we can influence through wise statesmanship and adherence to sound principles. With our immense wealth and power, and even more because of our spiritual heritage of faith and freedom, we can exert a shaping influence on the world of the future.

The price of failure would be the destruction of all our other national objectives. While mustering all our resources, both material and spiritual, we must press on with courage to build surer foundations for the interdependent world community of which we are part. This will call for austerity and sacrifice on the part of all. We must put first things first.

Our purpose, ultimately and at all times, should be to use our great power, without abusing or presuming upon it, to move steadily toward lasting peace, orderly freedom, and growing opportunity. Thus do we achieve our constitutional purpose "to secure the blessings of liberty to ourselves and our posterity."

Freedom Is More Than Form

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1959

Mr. THURMOND. Mr. President, one of the principal criticisms of the United States abroad has been its "we know best" attitude in talking to government officials. We must remember that local government is the best government and must be tolerant of the views of the people who would make their own laws. I might inject a note at this point that such tolerance would be welcomed in this body by the South from Senators from other sections of the country who feel that they know better than we southerners how to govern the South.

The Boston Christian Science Monitor on December 1, 1958, ran an editorial from the Toronto Globe and Mail entitled "Retreat From Democracy," pointing out that democracy is something relatively few nations in the world can afford. Also, on December 1, 1958, the Boston Christian Science Monitor commented on this editorial with one of their own entitled "Freedom Is More Than Form."

I ask unanimous consent that both of these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

FREEDOM IS MORE THAN FORM

A phenomenon deserving more attention is the trend toward military dictatorships. In country after country the generals are taking over from the premiers. In an adjacent column we reprint today a thoughtful analysis of this development from a distinguished Canadian contemporary. Since the Globe and Mail's editorial was written Thailand and the Sudan have been added to the list. Iraq made the shift in July.

The Toronto paper has done well to call attention to this situation. Its estimate is somewhat more somber than our own. But its warnings should be given serious consideration. For the picture was never so bright as wishful thinkers have assumed. And the retreat from democracy now is less startling mainly because the democracy in many of the nations involved has been more apparent than real. In Asia, Latin America, and the Middle East military men have often exercised the real power indirectly.

This may make the change look less dangerous—as does the fact that no great gains for communism have been involved. We believe also that a tremendously promising awakening is taking place in most of the countries which have still to learn how to make democracy work. Many which had expected the ending of foreign rule to bring utopia have been disappointed. Some are finding that foreigners are not the only exploiters and others are discovering that effective equality has to be earned and the wise use of freedom learned.

True, patterns of oppression and limitation have been broken, desires for better things awakened, new energies released. The potentialities for good are beyond calculation. As the Globe and Mail says, the peoples who have inherited democracy must be tolerant with those who are taking different paths, steps, and detours (some of them familiar in western histories).

It is heartening that free government has become almost the universal model. (Even the dictators feel it necessary to call themselves presidents.) Understanding of other peoples' difficulties in working toward freedom is essential if the maturer democracies are to be effective in helping the less experienced. Such help is one of the best ways to promote their own security and peace.

It is important for the new nations to learn that national independence provides only the opportunity to exercise freedom; it does not in itself confer either equality of opportunity or self-government upon the individual. And it is vital for the older democracies (especially for Americans with their fortunate inheritance) to realize that freedom (much less their own kind of democracy) is not something all people wish or are prepared overnight to operate successfully.

As the Globe and Mail points out, relatively small are the portions of the world where the conditions are present that are required for eeffctive free government. To its list we would add nonauthoritarian religion fostering individual spiritual growth.) This means that the need for free peoples to cooperate among themselves and to promote the love of liberty among others is far too urgent to warrant present levels of apathy and dissension.

RETREAT FROM DEMOCRACY

The recent revolutions in Burma and Pakistan have called attention to a highly significant trend in Asia—the gradual replacement of democratic systems of government by military dictatorship.

Ten years ago, nearly all the independent nations of Asia, including those which had recently secured their independence, were equipped with representative institutions on the Western European model. Their constitutions provided for universal or nearly universal suffrage, elected parliaments to which the cabinet was responsible, independent judiciaries, and sometimes guarantees of free speech, a free press and other liberties. In may cases, of course, these constitutions were made largely inoperative by internal disorder; but it was taken for granted that they would some into force once peace and stability were secured. Most Asian political leaders of the period believed—under the influence of western books or teachers—that parliamentary democracy was the highest form of government, and the only one worthy of a free and progressive nation.

Today, the picture is totally different. All across Asia—even in the non-Communist areas—the effort to make democracy work is being abandoned. The Middle East is now about equally divided between military dictatorships on the style of President Nasser's, and old-fashioned absolute monarchies such as that of King Saud of Saudi Arabia. Even Turkey, the most stable of these countries, shows signs of sliding back to autocratic rule. Parliamentary government has collapsed in Pakistan and Burma, and the army has been called in to maintain order. In Indonesia, President Sukarno's guided democracy has led to chaos and civil war. Ceylon is racked by virulent racial and religious strife, and it is questionable whether its constitution,, modeled on that of Britain, can survive the strain. * * *

In justifying the dissolution of Parliament and the abrogation of the Constitution, President Mizra of Pakistan * * * expressed skepticism as to the value of universal suffrage in a country where more than 80 percent of the population is illiterate. His words could serve as the epitaph for democracy in many another Asian state where it was attempted in the face of crushing political and economic difficulties and amid a people unprepared for it by anything in their national traditions.

The retreat from democracy, however, has not been confined to Asia. It has been equally striking in the West. Of the various parliamentary republics set up in Eastern Europe after the First World War, few survived the Second. In Germany, Italy and Austria, during the last 40 years, constitutional government has been an on again, off again affair. In Spain and Portugal, experiments in democracy ended in chaos, revolution and dictatorship. Even proud France last summer anticipated the experience of Pakistan; the strife of parties, paralyzing national life, forced her to turn to a military strong man.

In actual fact, democracy, as a stable and well-established system of government, is today confined to a surprisingly small group of nations. They include Great Britain

and its overseas offshoots: the United States, Canada, Australia, and New Zealand; Holland, Belgium, and Switzerland; and the four Scandinavian States. Widely as these countries differ, they have certain very important characteristics in common—a system of representative institutions going far back into the Middle Ages and evolving gradually over the centuries; a large middle class tending to soften the clash between the extremes of wealth and poverty; and a tradition of moderation, compromise and respect for law in the conduct of public affairs. Where these things are missing, it is doubtful whether any experiment in democratic government can succeed. * * *

We need to realize that democracy is now, and is likely to remain, restricted to a small part of the globe. Elsewhere, other systems will continue to prevail—not because the people of these regions are stupid or depraved but because their problems, their history, and their temperament incline them to a more authoritarian type of rule. Over the centuries we have reached some degree of tolerance in religious matters. It is time we learned it in political affairs as well.—The Globe and Mail (Toronto).

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. MUMMA. Mr. Speaker, the National Broadcasting Co. has a very interesting and informative television program with which I like to start out my day. They call the program "Today."

Just recently they did a series on Congress and at my request their able Mr. Frank McGee let me have a transcript of his remarks of last Wednesday on what he said about the work of congressional committees.

Those who heard it may want to see this again, and for those who missed it, here is a second chance. Mr. McGee said:

Visitors often stand and look in awe upon the Chambers of Congress where they think our laws are made. There is nothing wrong with their reverence—except it is misdirected.

Our laws are not written by Congress as a whole, but by congressional committees, working far from the floors of the Chamber. And since there are 34 standing committees, we actually have 34 Congresses.

Every bill introduced goes to one of these committees where it may be amended or completely rewritten, or simply shelved. If a committee votes against a bill, it is as good as dead. If the committee approves it, the rest of the Chamber usually does.

That's why a Congressman must be assigned to an important committee if he hopes to do any real lawmaking. And who makes the committee assignments? The Committee on Committees, naturally. But the list is drawn up the way the other members of the party want it drawn up.

The most important consideration is seniority, or how long the Member has been in Congress. The last consideration often is whether he knows anything about the type of bills he'll be considering. If he keeps getting reelected, he'll learn in time.

Nothing means as much as seniority to a Congressman. It decides his committee assignments, his standing among other committee members, and his influence in the party. Herblock, the cartoonist, suggests committee members are selected by the length of their beard, and offers the thought that this is not the smartest way in the world to run a railroad.

Now, if a Congressman keeps getting reelected long enough, he becomes chairman of his committee. That's the only way he can do it, and once he has the seniority, nothing can stop him.

Only Congressmen from politically safe districts or States get reelected this often. That's why such an unusual number of southerners are committee chairmen when the Democrats are in power.

The chairman has exceptional powers. If he doesn't like a bill that's sent to his committee, he simply doesn't schedule it for action and there is little the rest of the committee or Congress can do about it.

The chairman schedules meetings and selects witnesses who testify for or against a bill. And when a measure reaches the floor, the chairman handles the debate. If he's cool toward the bill, he's not likely to argue for it very convincingly.

Far and away the most powerful committee in Congress is the House Rules Committee.

It gets every bill after another committee is through with it and even though the other committee has approved the measure, the Rules Committee can kill it, amend it, rewrite it completely, or simply pigeonhole it.

In addition, the Rules Committee decides how long and under what conditions the bill may be debated when it reaches the full House. It can cut off debate and forbid amendments—so if the House doesn't like the measure the way the Rules Committee wrote it, that's tough.

There are only 12 members on this committee. If 7 of these, a majority, oppose a bill, it is virtually dead and the other 428 Members of the House can just whistle—or go through the torturous and rarely successful process of trying to force it out of the Rules Committee.

Of course, bills are written with all these pitfalls in mind. Someone once described a camel as a horse—built by a committee. That's why some of our laws have such peculiar wrinkles.

The Nation's Television Programs

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. MONRONEY. Mr. President, the Committee on Interstate and Foreign Commerce expects to hold early hearings on the Nation's TV fare. In this connection, several Oklahoma newspapers have commented editorially on the subject of the slow death of good television programs. I ask unanimous consent to have printed in the Appendix of the RECORD two of these editorials: the first, originally published in the Duncan (Okla.) Banner, and reprinted in the Ada (Okla.) Evening News of December 5, 1958; the second, published in the Enid (Okla.) Morning News of December 4, 1958.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Duncan (Okla.) Banner, reprinted in the Ada (Okla.) Evening News, Dec. 4, 1958]

COLUMN OF COMMENT

Senator MIKE MONRONEY, who did a fine job investigating packing of automobile prices by dealers, is turning his attention to TV. Is there a villain? If there is, it's an economic one.

MONRONEY wants to know if the networkers aren't paying too much attention to ratings the programs receive. That's a good question.

Offhand, we would answer that in the negative. TV audiences, however, perhaps are only limited judges of the character of programs.

They love to complain about mediocre offerings, and they say they want better quality entertainment. Yet they shun educational programs like poison.

Their tastes vary, even among their favorites. Quiz shows, for instance, have hit the skids on ratings. Westerns and whodunits are popular.

Grand opera has keenly appreciative, but limited audiences. Condensed better plays win plaudits of critics, but most viewers flip the dial somewhere else. TV audiences say one thing, practice another.

The networks must make a profit to stay in business. Sponsors want big audiences, not limited ones. Networks say they try to strike a balance.

Senator MONRONEY wonders if more Federal regulation is needed to improve quality. Chances are there will be a Senate probe to develop more facts.

Live drama has been one of the casualities on TV, but we haven't heard listeners complain much. For one thing, filmed drama has fewer limitations.

MONRONEY's view is that it isn't the advertiser who controls the programing, but the ratings offered by audience testing companies.

He may have a point there. Among three accepted rating services, there frequently are varying findings each week. Each uses different methods.

One startling revelation of a newcomer in the ratings field is that, from actual visits, not telephone calls, as may as one-third of the receiving sets turned on at a given time are not watched by anyone in the home.

MONRONEY's probes resulted in posted prices on every 1959 new car offered buyers. Perhaps he can come up with something beneficial to TV viewers.

[From the Enid (Okla.) Morning News, Dec. 4, 1958]

POWER TO MONRONEY IN TRY FOR BETTER TV FARE

More power to Senator MIKE MONRONEY, of Oklahoma.

Our Senator MONRONEY is stirring up a television fuss in Washington. MIKE is leading sort of a one-man movement to probe television practices in killing off quality television programs and placing cheaper and perhaps more profitable programs in their stead.

For example, if you've watched television at all you couldn't help but have noticed the rash of western programs appearing on the TV screen nowadays. There are more than you can shake a stick at. At the same time the information type and better quality type of programs are fading fast.

We think Senator MONRONEY is doing the public a real service if he can make the money-conscious TV networks think of something besides the almighty dollar. After all, the air waves are public property.

They are supposedly granted to television stations to be used in the public interest, convenience, and necessity. But are they?

In other words we have a great and wonderful medium in television but are we using it properly? Do the old, old movies, horror stories, crime shows, westerns of all kinds enlighten and stimulate the population of our country or do they constitute a breeding ground for crime and indifference?

The TV networks and the individual TV stations have a terrific responsibility and we think that Senator MONRONEY's efforts may help make them realize this fact. We certainly don't think the National Association of Radio and TV Broadcasters has done any kind of job in policing the industry. It doesn't even make its own members live up to the industry's code. If you want an example of this just count the commercial time on the Jack Parr show or on the news, weather, and sports half-hour shows on the stations in this area. We listened to one 5-minute sports program recently where the commercial time actually was greater than the time for sports news.

But this is the subject for another editorial. Let's get back to the fact that Senator MONRONEY as the second-ranking Democrat on the United States Senate Communications Subcommittee is asking some sharp and pointed questions of the networks in regard to the slow death of good television programs. We say, more power to Senator MONRONEY.

Final Report: Citizens Committee for the Hoover Report

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. BROWN of Ohio. Mr. Speaker, on December 31, 1958, the Citizens Committee for the Hoover Report filed papers of dissolution with the secretary of state of the State of New York. This marks the end of an 11-year organized effort to reorganize the executive branch of the Federal Government.

On January 10, 1947, after extensive studies had been made, I introduced H. R. 775, a bill to establish a commission on organization of the executive branch of the Government. Before preparing this bill, I studied previous efforts to reorganize our Government and found that none had been particularly successful. Perhaps the major accomplishment from these previous reorganizations was that of President Taft's 1912 Commission, from which stemmed—almost a decade later—the Budgeting and Accounting Act of 1921.

Our intensive research showed that various factors had been responsible for these modest results from previous reorganization efforts. Some commissions had been dominated by the Congress and failed of acceptance in the Executive. Others were dominated by the Executive and did not achieve full credence in the Congress. In other cases, partisanship adversely affected the eventual results. And, further, some excellent proposals were allowed to die in Government pigeonholes because there was no participation from private citizens, and the recommendations received little public support. Therefore, in H. R. 775, a wholly new and balanced formula was provided.

The Commission was to have equal representation as between Congress, the Executive, and the public. It was to be balanced equally as to parties, and also each body of Congress was given the equal representation to the other within the congressional third of the Commission's membership of 12. .

This formula, designed to correct the deficiencies in the composition of previous Commissions, succeeded beyond the fondest hopes of those of us who prepare it. To illustrate this, I would like to quote James A. Farley, a distinguished member of the second Commission, who said of the work of this Commission chaired by former President Hoover:

> At no time did politics enter into the deliberations of the Commission. Where we differed, they were honest differences of opinion, and Mr. Hoover recognized the right of each member to give free expression of his views.

Public Law 162, approved without dissenting vote by the 80th Congress established the first Commission. It operated from 1947 through 1949. Seventy-two percent of its recommendations were put into effect.

Because of the success of this early Commission, I again, in 1953, introduced legislation, to provide for a second Commission. Again, the measure was approved by the Congress without dissent and was enacted into law on July 10, 1953. The second Commission, which operated from 1953 through 1955, again brought results far in excess of the hopes of many of us. As of late in 1958, President Eisenhower reported that 64 percent of the recommendations had been put into effect.

The Citizens Committee for the Hoover Report, under the distinguished chairmanship of Mr. Clarence Francis, as I mentioned at the outset of my remarks, has now formally dissolved. That committee of 50,000 private citizens supporting our proposals should, as former President Hoover and President Eisenhower have pointed out, be very proud of its accomplishments; for the committee's efforts succeeded in bringing to the American people a realization of the need for more efficient and more economical government. As a result of the committee's efforts, 121 pieces of legislation were enacted to accomplish the Commission's objectives. This body of legislation is far and away greater than anything ever accomplished by a similar group.

Congress, too, should take great pride in its own accomplishments on this vast series of reorganization proposals. Not only did Congress create these two Commission on a wholly bipartisan basis, but Congress also acted in a highly responsible manner in putting the Commission's proposals into effect. You, Mr. Speaker, the outstanding gentleman from the 12th District of Massachusetts [Mr. MCCORMACK], and our beloved friend from the 14th District of Massachusetts [Mr. MARTIN] played instrumental roles in all of these matters and I think we all should be pleased with the constructive and bipartisan nature of our actions.

Upon the completion of this organized effort to reorganize the Federal Government, the citizens committee has prepared a final report. This historical report give the Congress and the public an authoritative statement of what has been accomplished and what yet remains undone.

FINAL REPORT: CITIZENS COMMITTEE FOR THE HOOVER REPORT

DEFENSE UNIFICATION AND H.R. 8002 CROWN CLIMAX YEAR AS CITIZENS COMMITTEE DISBANDS—64 PERCENT OF SECOND COMMISSION'S RECOMMENDATIONS ADOPTED—HOOVER RATES SAVINGS AT UPWARDS OF $3 BILLION A YEAR—"GREAT IDEAS ALWAYS GO FORWARD," FRANCIS SAYS—MANY GROUPS TO ACT ON UNFINISHED BUSINESS

Two of the most significant and far-reaching recommendations ever made in the name of the bipartisan Hoover Commissions are now the law of the land. They are H.R. 12541 for defense unification (signed as Public Law 599 by President Eisenhower on August 6) and H.R. 8002 for modernized Federal budgeting (Public Law 759 of August 25).

Thus, in the waning days of the 85th Congress, the climax year drive for governmental economy and efficiency was crowned with achievement as the Citizens Committee for the Hoover Report prepared to disband. Preliminary research figures show that 64 percent—63.9 percent to be exact—of the second Hoover Commission's recommendations have been adopted and are being put into effect.

Former President Herbert Hoover estimates the eventual economies resulting from these recommendations at upward of $3 billion a year. In a message to citizens committee members, Mr. Hoover said: "Economies totaling $7 billion can be traced to the first Commission's report. And we are on our way to savings of upwards of $3 billion a year as a result of the second Commission's recommendations. * * * Your crusade has been the greatest education of the American people in civil government since the Constitution was under debate."

EISENHOWER COMMENDS COMMITTEE—PLEDGES CONTINUED INTEREST IN REPORT

Noting the disbandment of the citizens committee, President Eisenhower has addressed a message of warm commendation to its members. In a letter to Clarence Francis, national chairman, the President said: "Through its fine work the citizens committee has contributed significantly to the understanding of an interested and well-informed public—a very real and lasting source of strength as we look ahead to the future." The President said the administration would continue to implement the Commission's proposals and he predicted that the time will again come when there will be need for a new, comprehensive review such as inspired Mr. Hoover's monumental missions.

In its final assignment, the committee's research staff has drawn a comparison showing that the second Commission's record of 64 percent adoption fell somewhat short of the first Commission's 72 percent. On the other hand, a greater share of the second Commission's recommendations were of fundamental and major importance. That is because the second Commission was authorized by Congress to go into questions of policy, whereas the first was limited to problems of organization and management.

Citizen support of Commission recommendations came to a peak in 1958. Never has Congress been so impressed by the force of public interest in Commission legislation.

Never has bipartisan teamwork operated so effectively to get results. Executive branch officials, led by the President, worked closely with congressional leaders of both parties. Scores of cooperating national organizations fused their forces with those of the citizens committee to produce a heavy flow of congressional mail from every corner of the country.

At the same time, the opposition was never stronger. This applied particularly to defense reorganization (H.R. 12541) and modernized budgeting (H.R. 8002). The defense issue came suddenly to the fore in April when President Eisenhower sent a message to Congress calling for sweeping revision of the Pentagon chain of command; stronger civilian control of the military under the Secretary of Defense; central direction of defense research programs; and unified land, sea, and air commands in the field.

Based squarely on Hoover Commission proposals, the President's program was aimed at the root causes of confusion, delay, and waste in the Pentagon. Ten years earlier, the first Commission's task force had warned that "victory by bankruptcy" was an objective of the Kremlin—and that was before the era of sputniks, guided missiles, and other 5,000-mile-an-hour menaces—not only to our freedom but to our very lives. In his call for a streamlined defense structure, the President spoke for safety with solvency.

Nonetheless, it soon became clear that the diehard opponents of unification would fight the new plan to the bitter end. The battle lines were clearly drawn as a long parade of witnesses came before the House Armed Services Committee. Many asserted that the plan would create a Prussian General Staff, endanger the Navy, and abolish the Marine Corps. On May 10, National Chairman Clarence Francis gave the defense bill first priority among the objectives of the citizens committee in its climax year.

At the start it seemed that powerful House foes of the measure would succeed in blocking it altogether. Citizens went all out in their demand for action, however, and on June 12, the House adopted, after a hot floor fight, a bill containing some features of the President's plan. The bill was badly watered down, however. So the President, in one of the most strongly worded messages he has ever sent to Congress, asked for four amendments to correct the most dangerous deficiencies of the House measure.

The scene then shifted to the Senate. Again public opinion, now sharply focused on the President's amendments, was brought to bear with all its force on the Senate Armed Services Committee. And it was here that the turning point came. On July 15 the Senate committee unanimously approved a strongly amended bill which the Senate itself adopted by a vote of 80 to 6 five days later. Thus ended, successfully, the battle for the biggest single achievement in the 10-year history of the two Hoover Commissions.

Meanwhile, however, it became evident that the final adoption of H.R. 8002 was by no means assured. It should have been on March 6 when the House approved the bill after an historic 2-day floor battle by a vote of 311 to 87. But it wasn't.

H.R. 8002, as passed by the House, differed only slightly from the Senate version, S. 434, which had twice been approved unanimously by the Senate. On March 10 it went back to the Senate Calendar for final approval. This should have been routine. But it wasn't.

Instead, H.R. 8002 got "hung up" in the Senate because of a technical change in the House language which created a minor conflict with Senate rules. Day followed day, week followed week, and still the Senate took no action. The delay began to look like a triumph for the wily parliamentarians who had, from the beginning, vowed that H.R. 8002 would never become law. By May 15, in fact, they were openly proclaiming that the bill was "dead for the session" which, of course, meant dead for all time.

Aroused citizens then went to work. Soon the Senate was flooded with calls for action on H.R. 8002. On June 27 the bill was taken off the calendar and referred to the Committee on Appropriations. A hearing was held on July 8 when yet another effort to kill the measure was barely thwarted. Then back went the bill to the Senate Calendar. Its opponents strove for delay, delay, and more delay as the session neared its end. Public pressures mounted, however. Senators in increasing numbers became aware that something or somebody was stalling final action on an issue which they thought they had long since settled. Finally, on July 31, virtually the whole Senate rose up in protest and H.R. 8002, only slightly amended, was brought to the floor for a vote. It passed, 68 to 6. (About 18 of the absent Senators would have voted for it, too.)

The battle should have been over then. But it wasn't. H.R. 8002 had to go back to the House for final adoption. Again, obstructionists worked for delay. Again the bill went back to committee. Again pressures rose and, at long last, H.R. 8002 was brought to the House floor. There, on August 14, the opposition collapsed and the bill was approved by a voice vote—just 10 days before the 85th Congress adjourned.

In many ways, the story of H.R. 8002 epitomizes the history of the Hoover Commissions and the citizens committee. Briefly, they said it couldn't be done, but it was done. At all events any substantial reorganization of Government was considered impossible when the first Commission began its work in 1947—and on the evidence this was true. Since 1887, no less than seven boards, committees, and commissions had made studies and issued reports which were quickly forgotten. This discouraging trend was reversed by three principal factors: (1) Active congressional sanction (2) scrupulously bipartisan teamwork between the Executive and Congress in two administrations and (3) vigorous citizen support.

The dramatic and completely dispassionate quality of Hoover report research played a big part in the outcome, too. The Commissions gave tangible, understandable examples to support their findings; then they made specific, practical recommendations of a very clear nature. The public quickly developed confidence in the reports and the motivation behind them. Thousands of good citizens from coast to coast joined enthusiastically in support of the Commissions' proposals. Conscientious officials and Members of Congress welcomed their support. This was a pressure group of a new sort. Its members asked nothing for themselves—but much for the Nation.

HISTORICAL HIGHLIGHTS

1947: Congress unanimously created the first Commission on Organization of the Executive Branch of the Government, a 12-man bipartisan body. At the suggestion of President Truman, former President Herbert Hoover was named Chairman. The Commission appointed 24 voluntary task forces composed of 300 eminent experts to perform detailed research and report back to the Commission.

1949: The Commission made its 19-volume report to Congress including 273 specific recommendations for streamlining governmental organization, improving efficiency, and eliminating overlapping duplication, and waste. Back of the Commission's report were 2,300,000 words of task force facts and figures.

In that year, the Citizens Committee for the Hoover Report, a voluntary, bipartisan organization, was formed under the chairmanship of Dr. Robert L. Johnson, president of Temple University. Working closely with scores of organized national groups and backed up by State committees from coast to coast, the citizens committee rallied unprecedented support for the Commission's recommendations. Despite the intense opposition of powerful special groups, within and without the Government, some 72 percent of the Commission's recommendations were adopted within the next 3 years.

1952: Its work largely done, the citizens committee became virtually inoperative in order to avoid the crossfires of politics in a presidential year. The committee continued on a standby basis, however, under the interim chairmanships first of the late Morris Sayre and then of Sidney A Mitchell.

1953: Congress, again unanimously, created the second Commission on Organization and again Mr. Hoover agreed to serve as chairman. Given broader powers by Congress, the Commission, aided by 19 task forces including some 400 voluntary experts, began the 2-year job of forging an even more massive report.

1955: The second Commission made its report to Congress including 314 recommendations based on 3,500,000 words of task force research.

The citizens committee was fully reactivated under the chairmanship of Clarence Francis. Again good citizens of both parties joined forces and, aided by scores of national civic groups, threw the full weight of their support behind the second Commission's proposals, 64 percent of which were adopted and are now being implemented at eventual annual savings of over $3 billion a year.

1958: Having designated this as its "climax year," the citizens committee made the most forceful effort in its 9-year history and, as the 85th Congress adjourned, announced its withdrawal from the national scene.

THE MEN WHO FASHIONED THE FINAL REPORTS OF THE COMMISSIONS

Members of the first Commission on Organization (1947–49): Hon. Herbert Hoover, chairman; Dean G. Acheson, Senator George D. Aiken, Representative Clarence J. Brown, Arthur S. Flemming, James V. Forrestal, Joseph P. Kennedy, Senator John L. McClellan, Representative Carter Manasco, Dr. James K. Pollock, George H. Mead, and James H. Rowe, Jr.

Members of the second Commission on Organization (1953–55): Hon. Herbert Hoover, chairman; Representative Clarence J. Brown, Herbert Brownell, Jr., Senator Homer Ferguson (and Senator Styles Bridges) James A. Farley, Arthur S. Flemming, Representative Chet Holifield, Solomon C. Hollister, Joseph P. Kennedy, Senator John L. McClellan, Sidney A. Mitchell, and Robert G. Storey.

The first Commission received a congressional appropriation of $1,938,600 and returned a surplus of $31,000 to the Treasury. The second Commission had an appropriation of $2,848,534 and returned a surplus of $84,000.

The box score in brief

	1st Hoover Commission, 1947–49		2d Hoover Commission, 1953–55	
	Number	Percent	Number	Percent
Total recommendations proposed	273	------	314	------
Total recommendations adopted	196	72	200½	63.9
Recommendations accomplished by administrative action	111	41	146½	46.7
Recommendations accomplished by legislation	85	31	54	17.2
Total legislative enactments	77	------	44	------

Thus, all told, 121 pieces of enacted legislation were based in whole or in part upon

or reflected recommendations of the two Hoover Commissions. This includes 44 presidential reorganization plans and 77 public laws. The presidential plans were made possible by the Reorganization Act of 1949 (as recommended by the first Hoover Commission). Under it the President may submit reorganization plans to Congress and the plans become law unless rejected within 60 days by a majority of either House. Since 1949 the act has been renewed biennially by Congress and is still on the books, effective until March 1959.

MAJOR ACCOMPLISHMENTS OF THE FIRST HOOVER COMMISSION

In addition to the Reorganization Act of 1949, the most significant gains resulting from the first Commission's report were:

1. The Military Unification Act of 1949. While this measure left our Defense Establishment far short of complete unification, it was a great stride toward that goal. And it came just in time to produce unprecedented teamwork among the armed services in the critical early days of the Korean action.

2. Creation of the General Services Agency (combining four previous agencies) for more efficient Government housekeeping through modernized purchasing, inventory control, storage, and records management in the civilian agencies.

3. Complete internal reorganization of the State Department to clarify responsibilities, expedite communications, and break down artificial staff barriers.

4. Consolidation of functions in a Labor Department of full Cabinet stature.

5. The end of political appointments in the corruption-ridden Bureau of Internal Revenue which now operates under the merit system.

6. Regrouping of welfare activities and creation of the Department of Health, Education, and Welfare.

7. Separation of "hidden subsidies" from payments for carriage of airline mail.

8. Elimination of much delay, waste, and duplication in the Post Office.

Savings from these and other measures became hard to trace in the budget upsurge created by the Korean war. Special studies by the citizens committee, however, show that a total of at least $7 billion in savings was made—based on the official reports of the Federal agencies themselves.

MAJOR ACCOMPLISHMENTS OF THE SECOND HOOVER COMMISSION

The most important gains resulting from the second Hoover report are found in the most important—in terms of cost, national safety, or both—areas of Government.

1. Defense unification (H.R. 12541, now Public Law 599): The constitutional principle of civilian control of the military was strongly reinforced by this measure. The authority of the Secretary of Defense was greatly clarified concerning the transfer, reassignment, consolidation, and abolition of functions. The effectiveness of the Joint Chiefs of Staff as a planning unit was strengthened. The number of Assistant Secretaries was reduced. Many basic causes of interservice bickering and delay were eliminated or at least diminished.

Moreover—and this bears vitally on the safety of the Nation and the very lives of its people—the measure provides for unified combat commands. Frightening evidence of confusion and dissension in the frontal sectors of our defense bastions were brought out not only by the Hoover Commissions but by highly expert witnesses in the hearings on the unification bill.

Finally, this law includes, as an amendment, an economy provision of potential great weight. The amendment authorizes the unified procurement and management, under civilian control, of common-use defense supplies such as food, clothing, and fuel. In this area the second Commission saw one of the most grievous causes of waste in the whole far-flung Defense Establishment. While the law is permissive, rather than mandatory, it does give the Defense Secretary a chance to effect enormous economies—and its passage tells him that Congress would like him to do so.

2. Modernized budgeting (H.R. 8002, now Public Law 759): The Commission found the Government operating under an obsolete budgeting system. Congress made lump-sum appropriations for long-term projects and thus rarely got a second look at the expenditures in the succeeding years. Huge sums in unexpended carryover appropriations were flowing over the dam beyond further congressional review. (The total of such carryovers was estimated at $70 billion, almost equal to 1 year's budget.) The Commission recommended and Congress finally adopted "annual accrued expenditures budgeting." This means that henceforth the Government will pay, in a given year, only for the goods and services received in that year.

Modernized budgeting would not be possible, of course, without modernized accounting. The Commission also recommended a business-like system of cost-based accounting. This the Congress had approved via Public Law 863 in 1956.

3. Reduction of Government competition with private business: No one law (though several minor laws played a part) was responsible for the results of the Commission's recommendation in this important field. But the results, stemming largely from executive branch action, are impressive.

For example, the Commission found some 2,500 business-type establishments engaged in useless and costly competition with nearby private businesses, usually small businesses, in the Defense Department alone. These included bakeries, laundries, and factories making paint, eyeglasses, ice cream, rope, and scores of other civilian products. The Commission recommended that these be closed. To date over 700 have been or are being shut down or curtailed.

4. An improved Federal career service: The gains in this field were less a matter of legislation than executive action, though some useful laws were passed. In any case the gains were notable. The Commission made a major point of the need for attracting and holding competent administrative, managerial, and scientific personnel in Federal service. Chairman Hoover said: "Government cannot be any better than the men and women who make it function." The Commission proposed the creation of a "Senior civil service."

Since then a Career Executive Board has been set up by administrative action. The Board, under chairmanship of Arthur S. Flemming, has been authorized to proceed with the establishment of a program very similar to that which the Commission proposed. Another major Commission recommendation, providing higher salaries for specialized executive, scientific, and technical personnel, was accepted by Congress in 1956 (Public Law 854).

5. Coordination and expedition of Federal research: First of all, the increase in upper-bracket salaries is showing beneficial effects in the Government's quest for scientific and specialized personnel. By far the most significant improvement in the Federal research picture, however, is provided by section 9 of Public Law 599. (See Defense unification.)

This, based on one of the most fundamental of the Commission's recommendations, amounts to a congressional mandate to the Defense Department to eliminate duplication and delay in its presently overlapping and confused research programs. Further, it establishes for the first time the office of a departmental director of defense and research and engineering with broad powers not only to centralize and coordinate the various research projects of the armed services but to initiate research programs on his own wherever he sees a gap or a lag.

The importance of this development can hardly be overstated. Recent studies have shown alarming contrasts in the time required for U.S. missile and other projects to move from the idea stage to the drawing board and then into production as compared with the record of the Russians.

OTHER ACCOMPLISHMENTS OF THE SECOND HOOVER COMMISSION

The record of the five major achievements of the second Commission is by no means the whole story. Of lesser importance, but well worth working for, were:

Liquidation of the Reconstruction Finance Corporation. This not only put an end to Government loans to snake farms and juke box operators; it returned $474 million in capital funds to the Treasury. (This was also strongly recommended by the first Commission.)

Elimination of red tape in surplus property disposal. Public Law 680 ends the requirement that all transactions must be cleared with the Department of Justice for antitrust violations. This was a cause of endless delay and an inhibiting factor all along the line.

Greater coordination of military hospitals, with one branch of the service handling medical car for all military personnel within a given region. This dispels an ancient, and costly, theory that soldiers could get well only in Army hospitals, sailors in Navy hospitals, and so forth, even if it meant overfilled hospitals here and half-empty hospitals there.

Improved and simplified governmental paperwork. The Commission found that paperwork costs the Government $4 billion a year, a sum nearly equal to the whole Federal budget 25 years ago. Now a Government-wide program of simplification and better records management is in progress. Example: The 1,040 largest post offices now use 600 standardized national forms in place of 22,000 local forms.

Establishment of a National Medical Library. Priceless volumes, badly neglected and ill-housed, were scattered through many parts of the Government. On the Commission's recommendation, these have been brought together and safely stored in a place where they can be used.

These things are merely representative of the scores and hundreds of examples of genuine governmental improvement stimulated by the Hoover Commissions. Other examples include: Defense cargo to commercial carriers. Since 1954, the Department of Defense has shifted its outbound military cargoes from Government vessels to privately owned carriers until today the latter carry about 75 percent of all loadings. This has made it possible to lay up 25 large Government transport ships, transferring the personnel to other duties. Installations closed. The Interior Department sold the Bluebeard Castle Hotel in the Virgin Islands and returned $410,000 to the Treasury. Interior also discontinued its fuel demonstration plant at Louisiana, Mo., and its underground gasification plant at Gorgas, Ala. This saves $3,100,000 a year in operating costs.

UNFINISHED BUSINESS OF THE HOOVER COMMISSIONS

Many established national civic organizations have announced voluntarily their intention of following through on the Commission's recommendations. As a guide, therefore, Reorganization News lists the following:

Principal unadopted recommendations of the first Commission: (1) Reduction of the number of agencies reporting directly to the President, (2) unification of the Federal medical services, (3) elimination of interagency competition in the field of natural

resources, (4) unification of the management of public lands, (5) reorganization and streamlining of the Veterans' Administration, and (6) a clear policy on medical care for non-service-connected disabilities.

Principal unadopted recommendations of the second Commission which are largely noncontroversial: (1) Establishment of a legal career service within the executive branch, (2) adoption of a congressional policy to eliminate unnecessary Government competition with private enterprise, (3) gradual but complete abolition of the Postal Savings System, (4) investigation of defense mobilization policies regarding retention and disposition of industrial properties, (5) elimination of duplicate staffing by both military and civilian personnel in the Department of Defense, (6) authorization for the Comptroller General to assist the Appropriations Committee in reviewing budget estimates, (7) establishment, within the General Services Administration, of an overall policy authority for the disposition of surplus property, (8) investigation of the Tennessee Valley Authority fertilizer and chemical activities.

Principal unadopted recommendations of the second Commission which have aroused some degree of controversy: (1) Establishment of a coordinating Federal Advisory Council of Health, (2) reorganization of the Federal legal services by establishing a Federal Administrative Court and by other means, (3) establishment of a joint committee on intelligence matters, (4) improving the efficiency of Government lending agencies and making them self-supporting, (5) reorganization of Federal water resources and power activities and restriction of Federal activity to areas where private industry cannot operate, (6) full implementation of the senior civil service principle, (7) modernization of Federal personnel procedures to eliminate abuses, (8) improved methods of handling veterans' hospitalization problems.

"NECESSARILY A CONTINUING TASK"

(Further excerpts from a letter by President Eisenhower to Clarence Francis, chairman of the citizens committee:)

"I have had frequent evidence during the past 5 years of the enthusiasm with which the citizens committee carried on its important mission, and I have been delighted and encouraged by the effective support the committee has given to the administration in implementing recommendations of the Commission," the President said. He noted that the administration has accepted 77 percent of those Commission's proposals and that 83 percent of these are now being implemented in the executive branch. He went on to say:

"Government reorganization and administrative streamlining is necessarily a continuing task. The fact that the citizens committee has fulfilled its mission does not mean that no further effort is needed in this field. Quite the contrary. The administration will continue to put into effect recommendations not yet undertaken and will, in the operations of the Government, apply day by day many of the principles featured in the Commission's work. In addition, other reorganization plans, suggested as a result of the Hoover Commission studies, will be proposed from time to time.

"The time will again come when there will be need for a new comprehensive review such as inspired Mr. Hoover's monumental missions. Meanwhile, representative Government requires the day-by-day interest of thoughtful and able citizens who are alert to the organization and management problems of good Government and are willing to devote attention to them. * * * As the committee prepares to disband, I hope you will convey to all your associates my appreciation of the time and energy they have so generously contributed to these public affairs. Surely their work has counted in the results obtained."

HOOVER LETTER

The following letter was directed to the Citizens Committee for the Hoover Report by former President Hoover:

THE WALDORF ASTORIA TOWERS,
New York, N.Y., September 17, 1958.

To the Members of the Citizens Committee for the Hoover Report:

The citizens committee is now closing its activites after nearly 4 years of intensive effort. Its accomplishments could be listed with four paragraphs:

1. Many of the recommendations of the Commission on Organization of the Executive Branch of the Government have been adopted by the Departments.

2. There has been legislative enactment of important recommendations. Notably, Federal budgeting has been put on a business basis and Congress has regained control of the purse-strings. The Defense Department has been streamlined and procurement greatly simplified.

3. There has been a great saving to the taxpayers as a result of this. Economies totaling $7 billion can be traced to the first Commission's report. And we are on our way to savings of upwards of $3 billion a year as a result of the second Commission's recommendations.

4. Your crusade has been the greatest education of the American people in civil government since the Constitution was under debate.

As its Honorary Chairman, I would like to pay tribute to its Chairman, Clarence Francis; the managers of its New York and Washington offices, Charles B. Coates and Robert L. L. McCormick; its headquarters staff in New York and Washington; its State chairmen; and each individual in its State organizations. But this comprises so great a host of dedicated men and women that it is impossible.

But they can each take satisfaction in the successful issue of their work. And I add my unlimited admiration for their voluntary aid.

Yours faithfully,

HERBERT HOOVER.

FRANCIS' STATEMENT

As the citizens committee finished its work, Chairman Clarence Francis made the following statement:

"To the Members of the Citizens Committee:

"In our work together we have witnessed a memorable new demonstration of the traditional American principle of citizen participation in governmental affairs. Through two administrations we have seen how much can be accomplished by bipartisan teamwork between the Executive, the Congress, and the public. We can look back with pride today upon a great experience. The citizens committee is leaving the scene, to be sure, but this does not mean for a moment that there will be no further action on the Hoover Reports. We know that President Eisenhower will continue his interest in the remaining recommendations. We have been assured by congressional leaders of both parties that Congress will work for further action on many Commission proposals.

"Then there are the scores of national civic organizations which, all through the years, have lent such effective support to the drive for 'Better Government at a Better Price.' Many of these have already stated their intention of following on the recommendations appropriate to their own spheres of influence. Finally, I feel sure that the Nation's newspapers will carry on the splendid job of public information which they have conducted so vigorously since the very first days of the first Hoover Commission.

"Great ideas always have a way of going forward. I have faith in the spirit of the Hoover Commission, and I believe that this spirit will be reborn again and again, finding its own paths to new achievement, in the years to come.

"CLARENCE FRANCIS."

Mr. Speaker, I believe this body would be interested to have the names and occupations of those distinguished and public-spirited citizens who directed the work of the Citizens Committee for the Hoover Report.

CITIZENS COMMITTEE FOR THE HOOVER REPORT

Honorary chairman: The Honorable Herbert Hoover, New York City.

Chairman: Clarence Francis, former chairman, General Foods Corp.; chairman, Fund for Adult Education, New York City.

Chairman, finance committee: Colby M. Chester, honorary chairman, General Foods Corp., New York City.

Treasurer: N. Baxter Jackson, chairman, Chemical Corn Exchange Bank & Trust Co., New York City.

Assistant treasurer: Keith M. Urmy, vice president, Chemical Corn Exchange Bank & Trust Co., New York City.

Executive vice chairman: Charles B. Coates, president, Charles B. Coates & Co., Inc., New York City.

Administrative director: E. J. Ade, president, E. J. Ade & Co., Inc., New York City.

Research consultant: Robert L. L. McCormick, president, McCormick Associates, Inc., Washington, D.C.

Vice chairmen: Charles R. Blyth, president, Blyth & Co., Inc., San Francisco, Calif.; P. B. (Jack) Garrett, former president, Texas Bank & Trust Co., Dallas, Tex.; B. E. Hutchinson, former chairman of the finance committee, Chrysler Corp., Detroit, Mich.; Frank P. Leslie, president, the John Leslie Paper Co., Minneapolis, Minn.; Julian S. Myrick, consultant, Mutual of New York, New York City; Neil Petree, president, Barker Bros., Los Angeles, Calif.; Allan Rushton, president, Birmingham Ice & Coal Storage Co., Birmingham, Ala.; Freeman Strickland, senior vice president, First National Bank of Atlanta, Atlanta, Ga.; John Stuart, former chairman, Quaker Oats Co., Chicago, Ill.; John C. Vivian, former Governor of Colorado, Denver, Colo.; Tracy S. Voorhees, counsel, President's Committee To Study the Military Assistance Programs, Washington, D.C.

Board of directors: Charles Dana Bennett, consultant, Foundation for American Agriculture, Washington, D.C.; E. LaMar Buckner, former president, United States Junior Chamber of Commerce, Salt Lake City, Utah; Mrs. Theodore Chapman, former president, General Federation of Women's Clubs, Jerseyville, Ill.; Colby M. Chester; Charles B. Coates; Gen. William Donovan, former Director of Strategic Services, Donovan, Leisure, Newton & Irvine, New York City; James A. Farley, former Postmaster General of the United States, chairman, the Coca Cola Export Co., New York City; Clarence Francis; Clinton S. Golden, executive director, trade union program, Harvard Graduate School of Business Administration, Cambridge, Mass.; Richard J.

Gray, president, Building and Construction Trades Department, AFL-CIO, Washington, D.C.; Robert Heller, chairman, Robert Heller & Associates, Inc., Cleveland, Ohio; Solomon C. Hollister, dean, College of Engineering, Cornell University, Ithaca, N.Y.; Dr. Robert L. Johnson, president, Temple University, Philadelphia, Pa.; Henry Kearns, Assistant Secretary of Commerce for International Affairs, Washington, D.C.; Oswald B. Lord, U.S. delegate to the United Nations, New York City; Neil MacNeil, former assistant managing editor, New York Times, Southampton, N.Y.; Roswell Magill, former Assistant Secretary of the Treasury, Cravath, Swain & Moore, New York City; Sidney A. Mitchell, former Executive Director, first Hoover Commission, New York City; Adm. Ben Moreell, chairman, Jones & Laughlin Steel Corp., Pittsburgh, Pa.; Herschel D. Newsom, grand master, National Grange, Washington, D.C.; Dr. Fred D. Patterson, director, Phelps Stokes Fund, New York City; Neil Petree; Stanley Resor, president, J. Walter Thompson Co., New York City; Capt. Edward V. Rickenbacker, chairman, Eastern Air Lines, Inc.; Wallace H. Savage, former mayor of Dallas, Tex., Lane, Savage & Counts, Dallas, Tex.; Joseph P. Spang, chairman, the Gillette Co., Boston, Mass.; Steve Stahl, executive vice president, Oklahoma Public Expenditures Council, Oklahoma City, Okla.; Robert G. Storey, dean, Southern Methodist University Law School, Dallas, Tex.; John Stuart.

Advisory board: Warren R. Austin, first United States delegate to the United Nations, Burlington, Vt.; Donald Comer, chairman, executive committee, Avondale Mills, Birmingham, Ala.; Colgate W. Darden, Jr., former president, University of Virginia, Charlottesville, Va.; Charles Edison, chairman of the board, McGraw-Edison Co., West Orange, N. J.; Henry Ford II, president, Fort Motor Co., Dearborn, Mich.; John N. Garner, former Vice President of the United States, Uvalde, Tex.; Lessing J. Rosenwald, former chairman of the board, Sears, Roebuck & Co., Jenkintown, Pa.; Dr. Robert G. Sproul, president, University of California, Berkeley, Calif.; Anna Lord Strauss, former president, League of Women Voters of the United States, New York City; Charles E. Wilson, former Director of Defense Mobilization, former chairman, General Electric Co., New York City; Harry H. Woodring, former Secretary of War, Topeka, Kans.

Progress and Development in Janesville, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. WILEY. Mr. President, in these days of problems and great challenges, we recognize that one of the great phenomena on the face of America is the growth and expansion of our villages, towns, and cities. In 1950 about 65 percent of our population lived in urban areas. Today it is an even higher percentage.

The future promises even greater growth for our urban centers. As a result, cities are confronted with the tremendous problems which growth and expansion create, including, among other things, ever-greater need for public services and facilities.

From time to time I have welcomed the opportunity to call attention to progress in Wisconsin—to areas which are realistically attempting to meet the challenge of today.

For example, the Janesville Daily Gazette recently published an annual program edition for its 80,000 readers. This splendid issue reviews progress during 1958 in business, industry, science, agriculture, building, government and many other fields.

Although it is not possible to highlight all the significant programs touched upon in the special edition of the Janesville Gazette, I should like to invite attention to a particular article, entitled "City Has Made Great Strides," by City Manager Joseph Lustig, of Janesville.

In his roundup, Mr. Lustig reviews the progress made in dealing with local problems, as well as on projects and overall improvements for the city itself. These include such programs as schools, highways, parks, housing, and others.

We recognize, of course, that constructive, forward-looking programs are in progress not only in Janesville but also in our villages, towns, and other cities throughout Wisconsin and the Nation.

As an illustration of the constructive effort by the Janesville community in meeting today's challenges—as well as in dealing with the many problems faced by our communities—I ask unanimous consent to have printed in the Appendix of the RECORD the article entitled "City Has Made Great Strides."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CITY HAS MADE GREAT STRIDES

(By Joseph Lustig, city manager)

It is again my privilege to report to the citizens of Janesville on the accomplishments and progress made in the various fields of community matters and improvements dealt with during the year 1958. Whatever has been accomplished has been made possible by the men who serve you on the city council. These men have shown a recognition of the needs of our expanding community. They have devoted many long hours of their time in discharging the responsibilities of councilmen. Their positive approach to the many projects and problems which were submitted to them has resulted in one of the largest public improvement programs ever undertaken in one season.

The outstanding achievements of the year 1958 lie in the initiation and completion of the many projects which were outlined in my message of a year ago.

The tremendous size of the public works program, amounting to $1,250,000, taxed the manpower and resources of the engineering department to the very limit. The following brief outline of the year's activities of 1958 will indicate the type and scope of the many projects carried on during the year.

PUBLIC BUILDINGS AND SCHOOLS

City hall: On March 21, the public was invited to inspect the completely remodeled city hall. Approximately 1,500 persons were shown the greatly expanded facilities provided to all departments in the building. The police department now occupies the entire basement level. The engineering department now has the larger quarters made possible by the removal of the municipal court to the new courthouse. The health department occupies the former council room on the second floor, with the city council and the patriotic societies jointly using the Patriotic Hall. A new six-passenger elevator provides easy access to the second floor. This entire remodeling project completed at a nominal cost of $88,000 will serve the needs of the city for a great many years.

Golf shelter: A beautiful new shelter on the golf course in Riverside Park was put into use at the start of the 1958 season. This attractive structure, built at a cost of $65,000, provides for all of the conveniences normally found in buildings on public courses—shower rooms, locker rooms, and rest rooms. Light lunches are served all day long in the large central lobby, as well as in the lounge. The new quarters have added greatly to the use of the course and have helped increase revenues approximately $6,000 over 1957.

Schools: The new 16-room Jefferson School on Mt. Zion Avenue and the 21-room Lincoln School on South Oakhill Avenue were opened for the 1958 fall term. These beautiful and functional school buildings, dedicated on November 23, will provide for the needs of these fast growing sections of the city. The financing of the schools was provided for by a $1,845,000 bond issue made in August 1957.

STREETS AND HIGHWAYS

Concrete paving program: A continuing concrete paving program has resulted in the paving of 11 blocks of North and South Academy Street, 4 blocks of Pleasant Street, one-fourth of a mile of Magnolia Avenue, three-fourths of a mile on Milwaukee Avenue to the east city limits, 2 blocks of North Main Street north of Fourth Avenue, and the long needed paving of Eastern Avenue from South Cherry Street to Center Avenue. The removal of the railroad tracks from the roadway in North Main Street and the decrease in the grade on Eastern Avenue have greatly added to the effective use of both of these important streets.

Bituminous paving: The city continued its policy of providing the newly developing areas with curb and gutter and blacktop paving. Approximately 41 miles of streets were so improved during the past year.

Interstate highway: The year 1959 should see the Janesville-Beloit section of U.S. 90 well along toward completion. We were successful in our attempts to obtain additional underpasses with this highway at Mt. Zion Avenue and east of Palmer Park. The Palmer Park underpass was granted upon the condition that easements for a new road be obtained which starts at U.S. 11 and extends easterly through the requested underpass to County Trunk J. These road easements were obtained from the five owners of the land it traverses. The underpass makes possible a new arterial road to be known as Palmer Drive.

Centerway: Centerway and the new Fourth Avenue Bridge were opened to the public on July 1, 1958. The value of this project as a principal traffic artery is apparent to all. Traffic volume has steadily increased, so that now Centerway is by far the most heavily traveled street in the city and a great convenience to east-west travel.

Arterial street system: The council, by ordinance on October 27, established a system of arterial streets. This comprehensive plan creates an orderly and functional sys-

tem of main traffic arteries and should provide for easy and safe travel in all sections of the city.

Five points overhead: The council, acting upon the recommendations of the five points council committee, asked the manager to make application to the Wisconsin Highway Commission for the rerouting of Highway 11 westerly along West Milwaukee Street over the railroad tracks and west along Pleasant Street.

A continuing study of train movements will be carried on and from time to time these results will be submitted to the council Five Points committee for its further consideration. If further studies show a marked decrease in traffic stoppages and indicate a lessening need for a grade separation project, the council can alter its position with respect to its request for the rerouting of Highway 11. The present studies have shown a 52-percent reduction since 1951 in the number of traffic stoppages caused by train movements at this important crossing. This decrease can be attributed to the increasing use of diesel engines, the decrease in passenger trains, and the general decline in the railroad freight business.

Main trunk sewers: About 12.3 miles of sanitary sewers were constructed during 1958 in which are included 3 miles of main-trunk sewers. This system of main-trunk sewers made possible the extension of sanitary sewers to all areas east and south of the city annexed since 1954 and will serve future annexations to the east and south of the present city limits.

Off-street parking: There is an acute need in the central business district for close-in off-street customer parking on the west side of Rock River. This need has been partly met by the purchase of a parcel of land at Centerway and North High Street. This land will provide a 72-car parking lot for long-time parking and makes possible an extension of meter parking in the city hall lot. In addition to the twenty-two 2-hour meter parking stalls now in use, there will be installed 22 additional metered stalls which will provide for parking from 1 hour to 24 hours with a maximum charge of 25 cents.

The capacity of the South Franklin Street parking lot, opposite the YMCA, will be increased by the council-authorized purchase of a parcel of land lying adjacent to the alley east of the Franklin Street lot to provide for a total parking of 71 cars.

ANNEXATION

On September 29, 1958, the council by ordinance extended the east city limits one-half mile east by the annexation of 120 acres of land lying south of Ruger Avenue between the existing east city limits and the east line of the proposed right-of-way of U.S. 90, the new interstate road.

PARKS

Palmer Park: Parking has long been a problem in Palmer Park. In connection with the annexation of the 120 acres of land referred to above, the owner of the land, Mr. Clarence Steinhelper, donated to the city some 22 acres of the newly annexed land lying north of Palmer Park for park purposes. A portion of this land will provide parking for 500 cars and will also provide for an extension of Palmer Park to the north and east.

Monterey Park: A historic marker was placed in the lookout on the big rock in Monterey Park. The marker, consisting of a bronze plaque mounted on a stone pedestal, was made possible by the friends of a former citizen and local teacher, Mrs. Lola Webb (deceased) and the Rock County Historical Society.

This marker points to the site of the first log cabin erected in Rock County. Mrs. Webb taught and was greatly interested in the early history of this area. The plaque was erected in her memory and hundreds of interested citizens and third grade pupils attended the dedication ceremony on November 21, 1958.

HOUSING

An indication of the general growth of the city is evidenced by the 275 homes for which permits have been issued during 1958; of this number 129 are being built in the northeast quarter of the city.

SHOPPING CENTERS

The growth or spread of our cities is a phenomenon which followed the increase in the use of the automobile and the desire for suburban living. The general prosperity which we have been enjoying has created an ever-increasing number of homeowners who are building in the outlying real estate development in the newly annexed areas of this city.

This spread of the urban areas has brought about the outlying modern shopping centers which in Janesville are represented by the newly opened Creston Park Shopping Center in the northeasterly section of the city and Sunnyside Shopping Center on the west side. There are indications of another such development on the south side of the city.

TAXES

Janesville has for a great many years enjoyed an extremely low tax rate due to large sums of money returned to Janesville from State income taxes. That happy situation has now changed. The city of Milwaukee in 1957 filed a claim against Janesville contending that $476,000 of income tax moneys was paid Janesville which should have properly been received by Milwaukee.

Your manager, together with legal and accounting counsel, fought against the validation of this claim by the Wisconsin Tax Commission. In spite of all our efforts the tax commission ruled against Janesville. Janesville has by reason of this decision suffered a loss of not only a large part of the $476,000 claim, but over $1 million which sum was deducted from Janesville's share of income tax money. This loss in a large part is responsible for the $3 raise in the 1957 rate and the $7.50 raise in the 1958 rate. Rising school and county taxes accounted for $5.26 of the $7.50 increase in the 1958 rate. It will be difficult to adjust to the higher tax rate but, needless to say, no city is immune to the rising school costs and overall general increases in costs of all services and commodities. I am sure when all the tax rates of other cities in the class of Janesville have been made public, we will again find Janesville's full value tax rate much below the average of tax rates for cities in our class.

1959

The coming year will be more nearly normal in the anticipated volume of public works projects. Projects which should be initiated in 1959 have been deferred owing to the financial crisis in which the city has found itself, resulting from the Milwaukee claim for misallocated income tax money. It is hoped that in the very near future the city will again be able to carry on the most necessary public works projects. Among such projects would be a garage to house the Janesville bus system. The city garage built in 1948 is more than half occupied by the bus department. This means that the department of public works must keep trucks and equipment out in the yard, instead of under cover. Starting motors in below zero weather is not conducive to good equipment maintenance, nor to efficient department operation during emergencies.

In conclusion, much has been accomplished during the past year that is important to the citizen's welfare and our economy. Janesville has made tremendous strides toward becoming a modern and progressive community and every citizen can look with pride upon these accomplishments.

It is hoped that this report, which of necessity is limited to a general overall picture, and includes but a few of the many varied and complex activities of your city government, will assist the citizen in understanding the operations of his government, so that he may better judge it. Your tax dollar will continue to be one of your best investments in the future of Janesville and it is the past accomplishments that have set an example of what can be achieved through the cooperative efforts of the citizens and their government.

In looking forward we hope we can continue a constructive program that will maintain Janesville as an outstanding community.

To all the residents of the city I would like to express appreciation for their interest in local government, their understanding of our mutual problems and good will shown by all in helping us deal with these problems.

Dope Peddlers in Pennsylvania Obtain Clemency Despite the Vigorous Objections of the Secretary of Internal Affairs, a Member of the Pardon Board of the Commonwealth of Pennsylvania

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. VAN ZANDT. Mr. Speaker, the following article from the December 3, 1958, issue of the Philadelphia Inquirer reveals the red-carpet treatment accorded dope peddlers in the State of Pennsylvania by Governor Leader's administration.

Despite the opposition of District Attorney Victor H. Blanc, of Philadelphia, and Miss Genevieve Blatt, secretary of internal affairs and also a member of the pardon board, Governor Leader ordered the release of 13 Philadelphia drug peddlers and 1 addict before expiration of their terms. Such a display of leniency for drug offenders has shocked narcotic enforcement authorities and has shattered their morale, as well as, seriously threatening the program to rid the Keystone State of dope peddlers.

The article by Joseph H. Miller, of the Harrisburg Bureau of the Philadelphia Inquirer follows:

LEADER IGNORES MISS BLATT AGAIN, RELEASES 13 MORE DOPE PUSHERS

(By Joseph H. Miller)

HARRISBURG, December 2.—Gov. George M. Leader today ordered release of 13 Philadelphia drug peddlers and 1 addict before their terms expired despite the opposition of Secretary of Internal Affairs Genevieve Blatt and District Attorney Victor H. Blanc, of Philadelphia.

As had happened before, Miss Blatt's name was again rubberstamped on the commutation papers as having approved clemency for the narcotics pushers. This time, however, her name was scratched off by pardon board aids before the papers were filed with the secretary of the Commonwealth's office. She is a member of the pardon board.

SPECTACULAR PROTEST

Last week Miss Blatt created a sensation on capitol hill when she marched to the

Commonwealth office and personally struck her name from commutation papers after learning her protest against clemency had been ignored by the Governor's office and that she had been recorded as voting her approval.

Twelve narcotics pushers were ordered freed at that time by Leader before the expiration of their 3- to 5-year terms. When the pardon board ruled they were entitled to time off under good behavior law.

Those ordered released by Leader today were serving 5-year terms imposed in 1955.

OTHERS BACK RELEASE

Three other members of the pardon board recommended freedom for the drug peddlers. They were Attorney General Thomas D. McBride, Lt. Gov. Roy E. Furman, and Secretary of the Commonwealth John S. Rice.

Clemency pleas for the narcotics pushers were filed by the board of trustees of the Philadelphia County prisons and were based on their good conduct while jailed.

Petitions filed in behalf of the addict and 13 pushers were heard at the September, October, and November hearings held by the board.

The effective date of the release of 11 drug peddlers was fixed for yesterday. Another was made effective today, while the others were ordered freed December 6 and December 18.

OPPOSITION BY BLANC

During pardon board hearings in Philadelphia and Harrisburg, District Attorney Blanc served notice on the commutation agency members he was opposed to the release of drug peddlers before their terms expired, regardless of the good-behavior law.

Despite the provisions of the good-behavior law, the Governor has optional power to compel the prisoners to complete their terms.

Drug peddlers serving 5-year terms who were ordered released by Leader included: James E. Gordon, Henry Anderson, William DeLoatch, Charles Vanderhost, Dock J. Carter, James Harris, Sterling Sparkman, Cash Sutton, Earl L. Jasper, Jr., Robert Matthews, Russell Arrington, Raymond Mortorano, and Robert F. Clark, Jr.

William Marling, serving a 3-year term for use and possession of drugs, also was ordered released. His term will not expire until September 6, 1959.

Claim Farmers "Never Had It So Good" Is Illusion

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1959

Mr. PROXMIRE. Mr. President, throughout the months preceding last November there was a spate of publicity emphasizing apparently favorable trends in the farm situation. The Secretary of Agriculture himself remarked at a chamber of commerce meeting in Pittsburgh that "farmers never had it so good."

These claims have faded out recently. But undoubtedly, they have left the impression with many that our present farm programs are succeeding, that the farmers' situation is on the way to improvement, and that nothing much remains to be done. This is a most unfortunate illusion.

The fact is, Mr. President, that farm operators' net income has declined by a staggering one-third in the past decade, measured in terms of real purchasing power. That is, the purchasing power of net farm operators' income in 1947 totaled $18.8 billion in dollars of 1957 value; the estimated total for 1958 was down to only $12.8 billion. These figures are provided by Mr. Leon Keyserling, director of the Conference on Economic Progress, in a pamphlet just issued which is entitled "Toward a New Farm Program." Mr. Keyserling has computed the total net farm operators' income for each year in dollars of constant 1957 value, as follows:

Net farm operators' income (in 1957 dollars)

Year:	*Billions of dollars*
1947	18.8
1948	20.3
1949	15.2
1950	16.3
1951	17.4
1952	16.2
1953	14.1
1954	13.2
1955	12.3
1956	12.0
1957	11.6
1958	12.8

(Estimate based on preliminary data from U.S. Department of Agriculture.)

One of the best brief statements of the real agricultural problem that I have seen was published recently in Pure Milk News, the official journal of the Pure Milk Association. This organization of dairy farmers who provide much of the milk consumed by residents of Chicago includes several thousand in Wisconsin. It is one of the most stable, responsible, and effective dairy farmer groups in the Nation.

I ask unanimous consent, Mr. President, to have printed in the Appendix the following statement by Mr. Walter E. Winn, president of Pure Milk Association, which appeared in the November issue of Pure Milk News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S FACE THE FACTS

For several weeks past, the public has been treated to a barrage of goody-goody stories stating that the American farmer was in clover. He never had it so good.

Gross farm income and per capita farm income from all sources were at an alltime high—net income 22 percent above last year. Production was breaking all previous records and prices received by farmers were 8 percent higher than last year.

These statements will bear further examination and analysis. Taken at their face value, more manpower and capital could be attracted into farming to get some of this easy money. Why not, when farmers are represented as being so prosperous that they resent having to wash their own Cadillacs. I don't happen to know a single farmer who owns one but the metropolitan press gives that impression.

The average price of things farmers raise and sell soared early this spring because of scarcity of fruit, vegetables, beef, and pork. The first two fairly skyrocketed because of the Florida freeze. Beef was scarce because several years of drought in the Southwest was finally relieved with rain, and the ranchers then bid against the meat market for animals to restock their ranges. High-priced beef supported the hog market. Most other important farm products, such as wheat, feed grains, and dairy products are selling for less than a year ago.

Certainly the orange growers who received the highest price in years welcomed their newly found prosperity. But the 20 percent of orange growers living in the area of the freeze had no income at all and did not join in the rejoicing. They will not for several years, or until their groves are rebuilt. Cattlemen in the drought area are in similar position.

Prosperity that has to be based on the misfortunes of others—or war—is poor cause for exultation. But much political credit is being garnered today for sound programs that pretend to have turned the farmers' fortunes again toward prosperity. Farmers badly need the turn in that direction but they had better understand the cause.

All those who have advocated more freedom to produce, no acreage limits, and lower price supports, are claiming the recent upsurge of farm prices and income as proof that their program is working and is in the best interest of farmers. Actually, this year's experience proves just the reverse. The high prices that were received were only on products that were severely restricted in production by disaster—frost and drought.

Almost without exception, farm economists are predicting that our surpluses in the coming years will increase, and that farm prices and income will go down. The following table tells quite a story:

[In billions]

Year	National income	Cash farm income	Net farm income
1947	$185.4	$29.7	$17.2
1948	210.0	30.3	15.9
1949	206.0	27.9	13.7
1950	221.6	28.4	12.9
1951	253.3	32.9	14.8
1952	268.8	32.6	14.3
1953	281.5	31.2	13.9
1954	280.0	29.9	12.2
1955	302.4	29.5	11.6
1956	320.0	30.4	12.1
1957	333.8	30.3	12.1

These figures explain why, in recent years, there has been the greatest migration out of agriculture the Nation has ever seen. Although 1958 gross farm income is the highest of record, costs have mounted at an even faster rate leaving a constantly lower net income which is the figure the farmer really works for.

Many farmers have found their incomes so low that it has been necessary to help out with off-farm or industrial work. This is currently bringing in $6 to $7 billion a year, or a third of total income. When this is added to farm income and divided by the lesser number of farmers, per capita income from all sources is quite a different figure than just farm income. But when a farmer works 8 hours a day in town for needed money to support his family, leaving his wife and children to do the milking and chores, his wages shouldn't be added in and announced as farm income. There are a lot of families who like living in the country well enough to be willing to put in these extra hours and that is their choice. But let's be honest in the bookkeeping and not credit farming with an added 50 percent of income earned from other sources.

Farmers are leaving for city employment because their incomes are low, not high. With rare exceptions, they have thereby improved their income and living standards. Nothing apparently is going to stem this trend to larger and more efficient farms. Those who leave agriculture are likely to solve their own income problem but not that of agriculture. Those who stay will continue to expand total production.

The unanswered question is, "Will increased production at resulting lower prices solve the farm income problem?"

Farm organization leaders and agricultural economists are not in agreement. It is a time for study, not pessimism. Clouding the picture with a distortion of the facts will not aid in finding the solution. Headlines telling our consumers that a dairy farmer never had it so rosy when his earnings for 5 years have averaged less than 50 cents per hour, can only worsen our public relations at a time when the situation cries for better understanding.

Those who favor lower price supports have made no secret of their intention to work for lower milk prices in the next session of Congress. The inescapable facts are that farmers have new-found capacity to produce which so far has not been checked by either the controls tried or 5 years of lower prices. We have a built-up storage of feed grains and wheat which can, with our probable future expanded production, raise havoc with grain and livestock prices for some years to come. On this outlook there is little disagreement among the farm economists.

It means, among other things, that many more in agriculture will continue to seek other means of livelihood. Those who claim that all that is needed is to turn agriculture free to produce to the utmost, and that all will then be well, are ignoring all the farm history of 100 years. We do need changes in our farm programs but let's courageously face the facts and build accordingly.

The Senate Debate on Rule XXII

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. CASE of New Jersey. Mr. President, the New York Times today contains a perceptive editorial summarizing the results of the recent Senate debate on rule XXII. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATE FIASCO

Two months ago the results of the 1958 congressional elections were interpreted everywhere as a sweeping victory for liberalism, particularly in the Senate. Down to defeat went Mr. Bricker and other stalwarts on the Republican side. Into the Senate came new Democrats from the North and West, younger men with a lively interest in such matters as the cause of civil liberties. On all sides it was predicted that in these matters the new Senate would help to write a bolder and more rewarding record than its predecessor.

Perhaps that will happen eventually, but certainly the new Senate is off to a poor start in this direction. It has turned down a reasonable proposal to end debate by majority vote after it has become clear that debate has ceased to be debate and become obstruction. It had rejected a similar proposal to end such debate by a three-fifths vote. It has wound up by amending the present rule, which requires a two-thirds vote of the entire membership, only to the extent of requiring a two-thirds vote of those present and voting; but since the entire membership of the Senate is almost certain to be marshaled in a vote on ending debate on such matters as civil liberties the change is to all intents and purposes meaningless.

Senator LYNDON JOHNSON, who engineered this meager result, characterizes it as a democratic victory: "It is the will of the people that is reflected here."

So thinks Mr. JOHNSON. Our own estimate differs.

Old No. 4: Yesterday and Today

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. COTTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published by the Vermont Historical Society entitled "Old No. 4: Yesterday and Today." The article was written by Dr. J. Duane Squires. Dr. Squires is a noted historian, author, and lecturer whose recent history of the State of New Hampshire is outstanding. He is head of the social-studies department at Colby Junior College, New London, N.H.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OLD NO. 4: YESTERDAY AND TODAY

(By James Duane Squires, Ph. D., president, Old Number Four Associates)

In an article in the New York Times for Sunday, July 27, 1958, Joseph L. Wheeler describes how amateur historian-archaeologists in Vermont are now working in charting the course of four one-time colonial or Revolutionary highways. One of these, he points out, is the Crown Point Road, which ran from the Connecticut River near old No. 4 to Chimney Point, Vt., adjacent to the Crown Point Fort. Because of plans now underway to restore old No. 4, this particular colonial highway is of special interest to us today. It is of this fort and of this highway that I write in this essay.

In the first half of the 18th century, during the lull between Queen Anne's War (1701–13) and King George's War (1744–48), the Colony of Massachusetts determined to build four frontier forts to guard the western part of the Bay Colony from Indian forays out of Canada. These were located in the modern New Hampshire towns of Chesterfield, Westmoreland, Walpole, and Charlestown, but were then called by the serial number No. 1, No. 2, No. 3, and No. 4. Number 4 was at present-day Charlestown, and was the final jumping-off point for the wilderness lying between the colonies in New England and the French settlements in Canada. In 1740, by royal decree, these four forts were transferred to the jurisdiction of New Hampshire. In that year King George II made the present northern boundary of Massachusetts the definitive line between the two colonies.

Old fort No. 4 was built close to the Connecticut River and covered an area of three-quarters of an acre on a site on the main street of the present village. Archaelogical excavations in 1957 definitely established the site of the old fortification, and brought to light a number of relics of the 18th century. It was composed of 13 houses joined together to make a quadrangle. As a further protection on three sides—the west, north, and east—a stockade was built. This was made of logs a foot in diameter and about 12 feet high above ground. This was the fort which under Capt. Phineas Stevens withstood an attack of several hundred French and Indians in April 1747. This was the base which was a key point in military operations through modern Vermont during the French and Indian War, 1754–63.

In the early campaigns of that war the normal route for New England troops going to the areas around Lake George and Lake Champlain was across Massachusetts, over the Berkshire Hills to Albany, and thence north to Fort Edward and the fighting zone. For Massachusetts soldiers this meant a long tramp around two sides of a triangle. New Hampshire regiments usually went to old No. 4, thence down the river to Massachusetts, and then over the hills to the west. This meant marching or boating along three sides of a quadrilateral. However necessary this might have been in the early years of the war, after the French had lost Fort Ticonderoga, and Crown Point, a more direct road from New Hampshire to Crown Point was obviously desirable.

On July 27, 1759, the fleur-de-lis flag was pulled down at Ticonderoga, and the Union Jack went up. A few days later the same situation came about at Crown Point. General Amherst, the British commander, thereafter determined to begin construction of a military road from his new bastion at Crown Point to the Connecticut River opposite old No. 4, some 87 miles away. The preliminary orders were issued to Capt. John Stark of Rogers Rangers on August 8. Stark promptly set out to make a survey across modern Vermont. In the great central wilderness of the Green Mountains he and his men found not even a pathway or a blazed trail. Stark reported his findings to Amherst on Sept. 9. The general approved the recommended route and on October 26 sent out Maj. Zadok Hawks and Captain Stark with 250 men and proper tools to begin construction from the western end.

The two officers and their axmen started at Chimney Point and laid out the road through Addison, Bridport, and Shoreham in a southeasterly direction. In Shoreham the road changed its direction to east by south. Crossing portions of Orwell, Whiting, and Sudbury it came out on Otter Creek in the northwestern part of Brandon. From thence it went to the village of Fowler in Pittsford. From Pittsford it turned to the southeast through Rutland and into Clarendon. The Green Mountains were approached near the village of East Clarendon. The road climbed steeply to Shrewsbury and thence to Mount Holly. From this region the road turned toward Patch Pond and Lake Amherst. It is, of course, obvious that not all this could possibly have been finished in the autumn of 1759. The roadmakers were low in provisions and in morale, and were paid off at old No. 4 on November 16. Probably the first few miles only were at all adequately done, the rest being merely roughed out and blazed.

In the spring of 1760 Col. John Goffe of the New Hampshire militia with 800 men was assigned the task of completing the road from the eastern end. By the middle of June most of the regiment had assembled at old No. 4. The men, their animals, and materials crossed the Connecticut 2 miles above the fort at Wentworth's Ferry. Here they built a blockhouse for protection and storage of equipment. The road, beginning at this blockhouse on the western bank of the river, ran for about 11 miles northwesterly through Springfield and Weathersfield. From that town it crossed into Cavendish, keeping to the hills away from the Black River. At Twenty-Mile Camp in Cavendish, Colonel Goffe set up his headquarters for the final section of the road work.

Beyond Cavendish the new construction went through Ludlow and into Plymouth. In that town it descended toward Echo Lake and thence went to Lake Amherst. Here the builders reached the end of construction by the working party of 1759. No Indians had been seen during the course of the work, but Colonel Goffe was always alert. On July 28

men, wagons, and cattle began passing over the new road; and on July 31 the advance contingents of these reached Crown Point. The highway was now open, and for the first time in colonial history there was a direct route from New Hampshire across modern Vermont. Old No. 4 was the anchor point on the east, and Crown Point the terminus on the west.

Seventeen years later old No. 4 was again prominent in military affairs. This time it was the rendezvous for Gen. John Stark and his New Hampshire troops marching to Bennington. Stark and his men left the fort on August 3 and moved by the old road for part of their way across Vermont. On August 7 the force reached Peru, and on August 8 the general and his 1,000 men camped in Manchester. Throughout this crossing all supplies, reinforcements, and equipment were forwarded to Stark from his operational base at old No. 4.

These are some of the reasons why modern Americans are interested in the restoration of this important colonial and Revolutionary fort. About 10 years ago certain persons in Charleston, N.H., incorporated the Old Number Four Associates. Since then much has been done. A competent architect has been secured, and careful plans for the restoration of the fort have been made. A new site has been secured, the old one now being in the heart of the present village. But the new site is in every way comparable to the original location, and is even closer to Wentworth's Ferry than was the fort 200 years ago. Many groups in New Hampshire have endorsed the restoration effort: the State Planning and Development Commission, the Daughters of the American Revolution, the Sons of the American Revolution, the New Hampshire Federation of Women's Clubs, the Society of Colonial Wars, the American Legion, the Veterans of Foreign Wars, and numerous local clubs and historical societies.

The estimated cost of the restoration of old No. 4 is $200,000. This amount will buy the land, build the 13 houses, erect the stockade, and permit some operating capital for the first year or so. The first logs for the stockade were donated by Dartmouth College, and set in place in July 1958. A great pageant, telling the story of old No. 4, drew many people to the site on August 15 and August 16, and awakened in them a new understanding of the place and function of the old fort in colonial and Revolutionary history.

Many Vermonters have sensed the significance of this program of restoration. Vrest Orton, chairman of the Vermont Historic Sites Commission, has written to the associates as follows:

"The commission feels, and we have emphasized this in our report to the General Assembly of Vermont, that there is a new and significant point of view toward the historic site mission in the States. It is this: Geography, we say, attracts people; history holds them. Good luck and all the success you so well deserve."

Prominent citizens of the Green Mountain State who live along the Connecticut River have served, and are now serving, as officers and directors of the Old Number Four Associates.

Such places as Williamsburg, Shelburne, Old Sturbridge, and others show clearly that restorations of historic sites and areas can charm and inspire modern Americans. It is believed that the restoration of old No. 4 in exactly its original form will have the same effect upon thousands of people, not only in Vermont and New Hampshire but also among our visitors. Perhaps by the time that we celebrate the bicentennial of the completion of the Crown Point Road in 1960, the old fort will be ready for inspection. From the same place that Colonel Goffe and General Stark took off 200 years ago, contemporary Americans may begin a trip across the scenic roads of Vermont.

How America Has Benefited Through 75 Years of the Civil Service Act

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an essay entitled "How America Has Benefited Through 75 Years of the Civil Service Act," written by Donald M. Van Dyke, of Arizona State University, in a recent contest conducted by various civil service groups.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

HOW AMERICA HAS BENEFITED THROUGH 75 YEARS OF THE CIVIL SERVICE ACT

(By Donald M. Van Dyke, Arizona State University)

The Civil Service Commission was established by the Pendleton Act in 1883. Its objectives were few and simple. The act was to—

1. Assure proper qualification of Government employees.

2. Take the Government worker out of political bondage by prohibiting political officers from extracting campaign contributions from him or making his employment subject to political support.

3. Halt the creation of Government jobs for the purpose of rewarding political support.

There is no doubt that the Civil Service Act has done far more than accomplish the limited objectives of 1883. In its first year civil service placed over 10 percent of the Federal employees under a formal merit system. Over 2 million, or nearly 90 percent, of the Federal Government employees are now protected by civil service regulations. These figures do not tell the entire story. Many State, county, and municipal governments have passed versions of the Federal Civil Service Act which cover additional millions of local government employees.

The growth of civil service has not been in numbers alone. The standards required for entry into Government employment have continued to rise since the act was passed. In its beginning the Commission took a negative approach, assuring that Government employes possessed minimum qualifications and seeing that Government workers were not dismissed for political reasons. Today the Commission, in its drive for better government in the United States, seeks the highest qualified individuals rather than the "just" qualified; it encourages training programs for prospective public employees; and seeks to improve working conditions, in an attempt to make the American Government employee the best there is.

These improvements under the Civil Service Act are unquestionable. Those mentioned are most certainly not the only, nor necessarily the most outstanding, accomplishments, but they make up a representative list against which no argument will stand. This list only serves to establish that the civil service system has made great progress toward improving government service in the last 75 years. It is a base from which to ask, "What are the benefits of this growing civil service system?"

The accomplishments of the Civil Service Act include those gained under State and municipal civil service systems. A government employee may work for the National, State, county, or city government. A civil service system may be in effect at any or all of these levels. The list of benefits from the Civil Service Act stems from all of them, not any single one. The terms "civil service system" and "government employee" include those of all governmental units in the country. These terms should be understood in this context if the full meaning of the benefits of the Civil Service Act are to be acknowledged.

Benefits from the Civil Service Act can be placed in four main categories. Civil service benefits to the Nation and the people, civil service benefits to the Government, civil service benefits to Government employees and benefits resulting for nonmerit system employees. Examples of how they have benefited from the Civil Service Act are discussed below.

CIVIL SERVICE BENEFITS THE NATION AND THE PEOPLE

Not one day goes by but what each American is affected by some governmental service. Perhaps the most impressive example is the American food supply. Grocery stores draw stock from all parts of the Nation. Florida fruit can be purchased anywhere, Idaho potatoes are eaten in Maine and corn from Iowa is used for cornpone in Alabama.

The American housewife has no fear of unsanitary packing conditions contaminating the food she buys. She does not weigh or measure each of her purchases to see if she is actually getting what is marked on the package. Government employees, working under provisions of food and drug acts, laws prohibiting false advertising and laws providing for enforcement of sanitary conditions in packing plants and canning factories, do these things. Spoilage is reduced by fast transportation of perishable foodstuffs on highways constructed by the Government, or on trains and planes regulated by Federal commissions. Lettuce purchased in St. Paul today may well have been picked in Arizona yesterday.

Americans have these services because the Civil Service Act makes it possible to have confidence in government employees who administer them. Officials who carry out these programs are capable and competent. It is the civil service system which guarantees highly qualified employees to perform these services. In this way improvements in the civil service system reach into every American home every day of the year.

Medicine, drugs, gasoline, clothes, and heating fuels are other items which are supplied to the American consumer under Government supervision and protection. These are only a few ways in which the American citizen benefits from an effective civil service system.

CIVIL SERVICE BENEFITS THE GOVERNMENT

Constitutions and laws are often regarded as government; however, constitutions and laws only set out the form and scope of government operation. People who fill the positions and perform the tasks as set out by these legal requirements are in reality the government. In the United States there are less than 500 elected Federal officials. There are over 2 million nonelected employees. These people are the government. Their competence, ability, and efficiency is the competence, ability, and efficiency of the government.

Quite obviously the government can only be as good as the individuals who perform its functions. It is by constantly raising the standards which these individuals must observe that the civil service system, for 75 years, has been improving the government. The merit system makes it possible for individuals who are dedicated to public service to devote themselves to public service rather than to political servitude. There are many who feel a sincere desire to serve the people, and it has been the civil service system which has allowed these men and women to enter the field by closing the public service to

political hacks, ward heelers, and campaign managers. As those who are in government gain higher standards and proficiency, as they become more efficient, and as more dedicated persons enter the government, the government itself improves.

CIVIL SERVICE BENEFITS GOVERNMENT EMPLOYEES

Benefits gained by civil service employees appear to be very obvious. Tenure has been tremendously improved by placing it on a performance basis, rather than on political affiliation; civil service employees can no longer be forced to make contributions to political campaigns; hiring is based on ability, not political activity; salaries have improved greatly; and working conditions are better than in former years. These are some of the obvious improvements in Government employment brought about by the Civil Service Act. There are others just as important. The prestige of governmental workers has risen greatly. No longer does Federal employment bring the charge of "parasite." An employee's coworkers are pleasant to work with and have qualifications at least equal to his own. His superiors must meet high requirements of proficiency and ability and demonstrate these abilities in order to obtain and hold their positions of authority. As an individual gains more experience and training he can qualify himself for higher positions, with the realizaton that he will be allowed to compete fairly for promotions.

Such improvements lead to a higher level of morale, to a great esprit de corps within the Government service. This attracts even more highly qualified persons into competition for Government positions. Such improvement brings recognition to a highly qualified civil service and pride in the service motivates employees to even better performance.

The civil service system has upgraded the civil servant in the eyes of the public as a whole and has had a special effect in other instances. A young person wishing to enter Government employment can now attend colleges and universities that offer courses in public administration, courses which are designed to train outstanding young people for years of high quality service in the Government. This condition is one which tends to perpetuate and improve itself once started.

Another advantage to the public servant which has come to be realized through the Civil Service Act is the operation of governmental job classification systems. Wages paid by the Government may leave something to be desired when compared to those paid by private industry, but they have improved greatly. There is no longer an unfair wage spread among those who are performing the same or equal jobs. All employees of equal rank receive an equal salary. The more experienced ones are paid for their extra ability on an equal basis. The qualifications necessary for obtaining promotions are known and if met the employee will be promoted on the basis of his ability. Wage levels and promotions are no longer determined by political contacts. They are set according to ability on a competitive basis. Even if Government wages are regarded as low the fact that they are based according to ability demonstrates improvement already gained and indicates the possibility for future gains.

Once again space permits enumerating only a few instances of the advantages and benefits of civil service in this category. The above list is intended as only a partial sample.

CIVIL SERVICE BENEFITS EMPLOYEES NOT UNDER ITS CONTROL

Civil service has proven itself in the last 75 years as a workable, desirable way of selecting and holding good governmental employees. It has set high standards and conditions which can be compared to governmental units not using an accepted merit system. If an exempt unit does not measure up properly or suffers abuses in any way, then the public may, and with pressure, effectively demand that the concerned group of employees be brought under a civil service program.

Under these circumstances any agency wanting to avoid being placed under the civil service system must maintain comparable standards of fair employment and, above all, employ competent, able people. While such units may be able to avoid meeting some of the standards imposed by civil service their overall level has been raised simply by the existence of the civil service system. Therefore many of the benefits of the Civil Service Act have been passed on to most Government employees.

CIVIL SERVICE AND THE FUTURE

Civil service has undoubtedly improved public employment. It has not done so to the extent that there are not more improvements to be made. The job the Civil Service Act was designed to do is dohe. A great deal more has been done. There are still many jobs remaining for the civil service system to do. The problem of raising public wages to compete with private industry has been mentioned, as has the fact that there are still many employees not covered by the system. The accusation that merit system employees are slow, that it is impossible to fire them must be met and resolved. Many levels of local government lack comprehensive, functioning civil service systems and this situation demands improvement. Looking back over 75 years of civil service it is next to impossible to measure the full extent of the impact of the merit system on American government. Perhaps the nearest measurement is to state simply that it has been too great to value. But the benefits of civil service are not set in the past, they are not enumerated and forgotten. They are hard won gains which have to be defended each day, and which demand continuing improvement and expansion. The current strength of the civil service program, its public support, its past accomplishments are the basis for another 75 years of continuing and expanding benefits. The past is gone and the future belongs to those who make it. Civil service can aid America in making that future a good and a full one.

Constructive Change Versus Destructive Change

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. THURMOND. Mr. President, the phrase "changing times" is heard again and again on the floor of the Senate. Except for the need, or in some instances the alleged need, for changes in the Nation's laws, there would not be a need for the Congress to meet.

A recent editorial in the Edgefield (S.C.) Advertiser, entitled "Constructive Change Versus Destructive Change," philosophizes on the subject, pointing out that change that does not hold to the fundamentally sound values in our way of life will be destructive. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONSTRUCTIVE CHANGE VERSUS DESTRUCTIVE CHANGE

There is more marked attention to the element of time, to the coming of new years and to the significance of time with relation to change. Everyone is expecting something new to happen. There are so many new things in the offing it is natural that a new year excites the imagination more than it used to.

The principal issues are between constructive change and destructive change, between two different worlds competing for supremacy.

Constructive change will still hold to certain fundamentals, and at the start of another year the Advertiser reaffirms its faith in American religious ideals and in its human values—appreciation of industriousness, of fair play, of independence, of individual freedom; respect for the rights and entitlements of others; righteous indignation, keen discernment and persevering protest against public wrongs; a willingness to accept personal responsibility and to apply the best one has to meeting the daily problems of life independent of dishonest gain and sensitive to the perils and snares of false charity.

Changes are the order of the times, but change that does not hold to the fundamentally sound values in our way of life will be destructive, not constructive. They will be changes fostered by the ill-intentioned, by the iconoclasts.

It is up to the individual whether the next year will find us nearer the fulfillment of a universal desire for peace, not only among nations, but nearer the ideal of the perfect friendship, the perfect harmony of human relations, that is the ultimate goal, or whether led further along the road of tempting but empty promises.

In the numbers of individuals who demand only constructive change as against destructive change is to be found the barometer of progress. All other manifestations are illusions.

The most embattled citizen now is he or she who is committed by natural impulse and by training to the nobler and sturdier features of our country's traditions, who looks upon change as not bad in itself but recognizes an influence of destructive intent as threatening dominance.

If there are greater numbers of people who have been induced to follow the destructive side in recent years, it has made the challenge of constructive change the most courageous that any generation of Americans has yet faced.

Governor Brown Sets Forth a Program of Responsible Liberalism for California

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. ENGLE. Mr. President, California's 32d Governor, Edmund G. Brown, took office at Sacramento on January 5. In his inaugural address Governor Brown set forth a program of responsible liberalism for our growing State. The Public Printer estimates that the text will make 2½ pages of the

RECORD at a cost of $202.50. I ask unanimous consent that Governor Brown's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, Mr. Speaker, Mr. Chief Justice, Governor and Mrs. Knight, members of the legislature, and my fellow Californians, where democracy lives, free people speak in strong voices. Last November, a free people called for a new vision for California. We begin today the solemn duty and high privilege of translating that vision into public policy and into law.

The election reaffirms our conviction that the people of California are resolved to move forward with courage and confidence. Offered reaction by the radical right, the voters emphatically declined. Offered government by retreat, the people preferred progress. Clearly then, our duty is to bring to California the forward force of responsible liberalism.

RESPECT FOR PEOPLE

The essence of liberalism is a genuine concern and deep respect for all the people. Not monuments or institutions or associations, but people. Not one race, or one creed, or one nationality, but all the people. When people come first and special privilege is scorned, government is truly liberal.

In a liberal atmosphere, the individual stands secure against invasion of his dignity or intrusion on his conscience. He has the right to require justice and fair play, the right to demand protection from economic abuse and selfish threats to his security. At the same time, government must not, in naive good intention, stifle his initiative or smother his growth. Men must indeed have freedom to breathe the air of self respect.

A liberal program must also be a responsible program, a reasonable, rational, realistic program. We must know how much it will cost and where the money is coming from. Benefits must be measured against burdens. A program which pampers the people or threatens our solvency is as irresponsible as the one which ignores a vital need. But we will always remember that there is a difference between responsibility and timidity, and we are resolved to be governed more by our hopes than by our fears.

IN WARREN'S PATH

In the path of responsible liberalism, we walk in the giant footsteps of such memorable Governors as Hughes and Roosevelt in New York, Wilson in New Jersey, La Follette in Wisconsin, Altgeld and Stevenson in Illinois, and Johnson and Warren in California. Let us mark their example and set our sights to match their achievements.

Here in California the explosive growth of our population and economy strains the fabric of government. Between election and inauguration, our population increased by 75,000 people. We must accept both the perils and the promise of this magnificent growth. No longer can we afford to stay on dead center, unresponsive and inert. I pledge a confident, pioneering leadership, ready to welcome growth, pursue its promise, and prepare for tomorrow.

A liberal's duty to be responsible has a special meaning in view of the grim crisis we face in the budget. From last year's budget, our bleak legacy is a $100 million deficit. For several years, our State has spent more than it has taken in, and now almost all of our reserves and special funds are exhausted.

ECONOMY BUDGET

I am resolved that our new administration will face our financial responsibilities without flinching. Before the end of the month, I will recommend an economy minded budget, and a courageous and fair program to obtain new revenues. I pledge, however, that we will not sacrifice essential services or narrow our vision for California.

OPPOSITION TO COMMUNISM

Throughout the world, the cynical creed of communism slanders democracy with the charge that men are too greedy, too ignorant, or too lazy to govern themselves. Let us, in our respect and concern for all the people, resolve to prove anew that representative government is the best government. Let us forge a program which will liberate our human resources and demonstrate the renewed vigor of American society. In this way, we will answer the slanders of communism and expose its evil design.

DEMOCRATIC PRIDE

This is a day of proper pride as well as earnest dedication for California Democrats. Not for 20 years, and only once before in this century, has a Democratic governor made the inaugural address to the legislature. And not since 1889 has there been a majority of Democrats in both houses of the legislature.

The job of government, however, is not a narrowly partisan undertaking. I pledge my full cooperation to Democrats and Republicans alike. I know most of you personally, and I consider this to be one of the ablest legislative bodies in the United States. My door will always be open so that we can consider together our common problems of State government. We must understand each other, trust each other, and work together in harmony. Where the good of the people is involved, I will expect the support of the distinguished members of both parties, and I hope by my actions to merit it.

THANKS KNIGHT

In this connection, I express my deep appreciation to Governor Knight, to Mrs. Knight, and to the entire executive family for the genuine cooperation afforded me in the transfer of the functions and duties of this high office.

SPECIFICS PROGRAM

In obedience to the constitution, I turn now to specific recommendations. I lay before you a program which in my considered judgment meets the test of being both liberal and responsible.

1. Guarantee equal job opportunities.

Discrimination in employment is a stain upon the image of California. We must recognize that conduct which degrades any member of society degrades society as a whole. Every man must finally see the necessity of protecting the rights of others as the most effective security for his own.

I therefore urge you to enact legislation to bar discrimination by an employer or a labor union on grounds of race, creed, national origin, or age. We should provide the means for conciliation, public education, and enforcement to insure that there are no arbitrary barriers to useful and productive employment. In truth we are, and in practice we must be, one people, equal in privilege and opportunity. This is our moral duty.

2. Protect the consumer.

We are all consumers. Yet, we have never been able to speak in a single voice because we are disorganized and our needs are so diverse. Without a forceful spokesman in government, we have little defense against highly organized special interests. I therefore recommend legislation providing for the appointment of a consumers' advocate, who should be empowered to advance the consumers' interests by public education and by representation before government agencies.

I also urge you to enact legislation to protect people from installment racketeers. Every year thousands of Californians are deceived into signing sales contracts which contain unfair provisions and result in outrageous carrying charges. We need new laws to wipe out these vicious practices. We need them fair, strong, and soon.

3. Encourage economic development.

To keep our economy strong, we need new industries, new payrolls, and new jobs for our expanding population. Accordingly, I recommend legislation for the establishment of an agency for economic development to launch a vigorous program to bring business here. By augmenting private efforts to attract new industries, this agency will invigorate our economy and enrich our lives.

LABOR PROGRAM

4. Safeguard workers' rights.

The voters have firmly rejected the so-called right to work law. In a new and objective atmosphere, let us move forward to strengthen the integrity of the collective-bargaining process. I will soon send you a special message outlining my legislative proposals in detail. May I say now, however, that I intend to recommend:

Legislation under which employees in intrastate commerce can choose a bargaining representation;

Legislation specifically outlawing bribes to union officials;

Legislation setting up safeguards concerning union meetings and elections and providing for the recall of union officers for misconduct;

Legislation preventing loans by unions to their officers, and requiring union officers and management consultants to file financial statements; and

Legislation governing the relationship between a local union and its parent organization.

Such laws would be safeguards against the irresponsible minority whose conduct damages all of labor. But there must be no punitive measures against free and responsible unions which have brought untold progress and improved living conditions to our State. Cripple the responsible union and all of the people will suffer. Strengthen the responsible union and labor can contribute its full energy to the new vision for California.

AID TO PEOPLE

5. Increase social insurance and public welfare.

In the stern judgment of history, our greatness as a state will largely depend on our sense of responsibility to the elderly, the sick, the needy, the injured, and the unemployed. I reject the outdated notion that concern for these people is not the business of government.

I believe that the level of unemployment insurance benefits clearly should be raised. At 1959 prices, no family can meet its basic needs on the $40 per week maximum. In the last year, there has been forceful evidence that thousands of workers are left stranded if benefit payments are limited to 26 weeks when recessions last longer. We should lengthen the period of coverage, at least whenever unemployment has reached a given percentage of the work force.

Turning to the workmen's compensation law, I recommend that we take prompt action to correct the striking inadequacy in the vocational rehabilitation provisions for injured workers. In addition, the amount and duration of benefits may well need to be increased. The same is true of disability benefits.

In the field of public welfare, we should improve the operation of the 1957 medical care program and insure that it fulfills its important purpose. One obvious shortcoming in the program is its failure to extend to persons now enrolled in the aid to disabled program. For the disabled person, the need for medical care is especially great and compelling.

Our new laws in the field of social insurance and public welfare must be responsible as well as liberal. Thus, we must stop short of an extreme, isolated postion which

would discourage the entry of new wealth and industry and thus injure our economy and our people alike. But short of this extreme, we will remember that social insurance and public welfare benefits go directly into our lifestream and that we serve our economy as well as our humanitarian principles by making California a leader in this field.

6. Establish a minimum wage.

I urge you to enact legislation which will establish $1.25 an hour as the minimum wage for California workers not covered by the Federal law. Minimum wage laws assure a worker that he will be paid enough to maintain himself in health and decency. Elementary fairness dictates that this protection should not be denied a person because of the happenstance that he is employed in a local business. Moreover, a minimum wage law will protect ethical employers from the unfair competition of those who would pay substandard wages.

ELECTION REFORM

7. Reform election practices.

Because elections are the strong heartbeat of democracy, the reform of election practices deserves a top priority. I urge you to abolish crossfiling in primary elections, and thus strengthen representative government by making our parties more responsible and more responsive to the will of the people.

I also urge you to strengthen our laws providing for disclosure of campaign funds. The gaps in the present law threaten the integrity of our democratic processes.

In this electronic age, we continue to count ballots by primitive methods. I recommend that existing statutes be broadened to encourage electronic tabulation of votes in all counties of the State. We must also find a way to shorten our political campaign and stop every election from being an endurance contest, both for the candidates and the voters. When we improve the election process, we strengthen democracy.

8. Promote efficiency in government.

I urge you to adopt legislation to enable us to reorganize and streamline State government. Specifically, I believe that the Governor should be authorized to prepare and transmit to the legislature plans for the reorganization of the executive branch of the State government. I also pledge my wholehearted support for your efforts to improve the organization and operation of State agencies.

Not since 1928 have we made a thorough and penetrating analysis of the structure of our State government. Today each citizen pays the price of a government which has developed haphazardly in a piecemeal response to the pressure of growth. We are burdened by layer upon layer of patchwork agencies, and confusing lines of authority. The time has come for us to modernize State government and improve its services to our people.

TO FIGHT CRIME

9. Control crime.

Crime and narcotics are ugly companions. Driven by fear and guilt, the criminal seeks escape through the use of narcotics; in turn, the addict steals to support his costly habit.

As a new approach to this complex problem, I urge you to authorize the department of corrections to establish pilot units for narcotic treatment and control in key areas of the State. This program would provide diagnostic testing and psychiatric aid for addicts released on parole or probation. By providing these new tools for control and rehabilitation, we take a promising and pioneering step toward narcotics control. We only endorse futility if we do no more in this field than renew procedures which time has already proven unsuccessful.

Our prisons are dangerously overcrowded. This not only magnifies the hazards of riots and breakouts, but inevitably produces the frustration of idleness. In meeting this problem, our first responsibility is the protection of society. We must initiate new studies to identify those prisoners who should never be released to prey again on an innocent public. We should also determine whether some prisoners are now kept confined after punishment has served its purpose. In addition, we should establish new forestry camps and industrial training programs so that after release, every man can offer society an effective skill and regular work habits.

Today's prisoners were yesterday's delinquents. The California Youth Authority has pioneered in the field of youth correction, but now we must press forward in the prevention of delinquency. To that end, I will immediately take personal leadership of the Governor's Advisory Committee on Children and Youth to study the early causes of one of society's most difficult problems. If we can find a way to reach the promise and the core of goodness in our emotionally disturbed children, we strike at the roots of crime.

SCHOOL CHALLENGE

10. Improve quality in education.

Both our Constitution and our conscience enjoin us to invest money in young minds, our greatest natural resources. Specifically, our growth requires us to meet these needs in public education: 18,000 new teachers a year, when we now graduated 11,000; 5,000 new classrooms a year, when we now build 2,500; facilities for 400,000 college and university students in 1970, when we now have space and equipment for but 100,000.

These needs are the challenge of growth. Let us meet them with adult dedication and ingenuity. We can attract and retain good teachers, if we offer practical training, adequate professional salaries, and new levels of community confidence and respect. We must also find the means to provide the physical plants as well as the intellectual climate for learning.

In turn, we have the right to require that our schools shall provide genuine education in a well taught, disciplined curriculum. Every child deserves the chance to grow in fundamental knowledge, in special and technical skills, and in insight. I am determined that California will have the best public schools in the United States. I am persuaded, as I am confident you are, that whatever we invest in free public education is returned, manifold, to our economy and to the strength of our democratic government.

ANTISMOG FIGHT

11. Protect public health.

We live in an era marked by new cures for old diseases and by dramatic new dangers to our health. Air pollution is a statewide menace. It threatens the health of people not only in Los Angeles, but in every heavily populated region of the State. We must recognize that our attack on smog cannot stop at county lines.

I therefore ask that you supply additional funds for concentrated research on the dangerous effects of smog on people. I call upon the automobile industry to expand and accelerate its research on smog prevention. I want to serve notice on every industry and every person involved that my administration will take effective action to protect the people of the State. People are more important than dollars.

Exposure to radiation from nuclear fallout and industrial accidents now threatens all of us. We should provide funds for the State department of public health to maintain a constant guard against dangerous levels of radioactivity in air, water, food, and sewage.

In addition, I urge that California follow the example of other alert States and establish a coordinator of the many phases of atomic energy development now in process in several existing State agencies. Failure to act and plan in atomic matters which are so promising to our progress and so critical for our safety, would be both irresponsible and dangerous.

I also recommend that the legislature provide funds for the continuation of the department of public health's program to combat alcoholism and promote temperance.

Fifteen years as a law enforcement officer have convinced me that although other problems may be better publicized, none causes more suffering and despair than alcoholism.

COURT IMPROVEMENT

12. Improve the administration of justice.

There is a log jam in our California courts. In Los Angeles County alone, the backlog of civil cases climbed to nearly 16,000 in 1958. Each case has to wait in line well over a year after it is ready for trial. In other counties, the situation is even worse. Last October when Chief Justice Warren called attention to this crisis in the courts, we were forcefully reminded that justice delayed frequently is justice denied.

Automobile accidents spawn a major portion of the congestion in our courts. For the accident victims, the net result is a grave social loss. After years of delay and uncertainty, the majority will recover nothing, and financial distress will be added to their pain and suffering. Those who eventually win their cases may not be able to collect their judgments, and what they do recover will have to be shared with others.

Three decades ago, California pioneered in establishing an expert commission to handle industrial accidents. Now, the time has come for us to weigh the wisdom of an automobile accident commission to hear and determine claims arising out of auto accidents. If a commission modeled after our industrial accident commission could provide a prompt remedy and fair compensation for the accident victim, we would reduce suffering and hardship. If the commission could gain an insight into the causes of accidents and issue safety orders, we would cut down the carnage on the highways. If, through the creation of such a commission, we could enable our courts to keep abreast of their dockets, we would take a long step toward our goal of equal justice under law.

MORE ARE DUE

The limits of this inaugural occasion do not permit a detailed statement of all that is in my mind and heart today. During the course of this session, I will bring you recommendations on traffic safety, billboards, the redevelopment law, improvements in our recreational program, and other matters.

WATER PROGRAM

Before the end of January, I will send you a major message on water. Development of our water resources is crucial to every segment of our State—the ranchers in our mountain areas, the farmers who make California the Nation's leading agricultural producer, and the homeowners in our population which will grow to 20 million by 1970. No problem has occupied more of my time in the weeks since election than water. Striking progress has been made. I can tell you now that I will soon present a water program which is rational, realistic, and responsive to the needs of all the people of the State.

URBAN PROBLEMS

I will also soon announce appointment of a Governor's commission on metropolitan problems. For the 85 percent of our people who live in urban communities, local government is often inefficient, costly, and confusing because the necessary services are rendered by overlapping and competing agencies. The congestion of our streets symbolizes the necessity for a new and coordinated approach to the pressing problems in our cities. Any approach to these problems must respect our tradition of community responsibility and the high quality of our local officials, but I am convinced that

we should make a concerted attack on these acute and chronic problems.

RESEARCH PROGRAM

Looking beyond these specific matters, let us recall the warning of the Bible that where there is no vision, the people perish. Today we see successful industries accepting this judgment. They search out their most creative minds and put them to work studying distant horizons.

I propose that California follow industry's example and become the first State in the Nation to set up a specific research and development program. I propose that we seek out our most creative minds both in and out of State government and put them to work on a wide range of long-term problems, such as our crowded airways, the plight of workers frozen in their jobs by pensions which cannot be transferred, discrimination in housing, the defects of the present health insurance program, and on to new problems on the frontiers of space.

As I conclude, I would observe that providence seems intent on making us a great people in a great State. This destiny of greatness requires of us our best laws and fairest administration. Let us lead with confidence and compassion as we draw the lines for the new vision for California. May we pray to God that our virtues grow with California and be durable, and that our vision for California be liberal and responsible.

Veterans' Day Address by Stuart A. Lindman, Commander, Minnesota Disabled American Veterans

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine address by Mr. Stuart A. Lindman, commander of the Minnesota Disabled American Veterans, and a well-known radio and television personality in the twin cities of Minneapolis and St. Paul.

I commend to my colleagues in the Senate Mr. Lindman's address, which was delivered at the Veterans' Day ceremonies at the St. Paul, Minn., State capitol building, on November 11, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Pastor Anderson, distinguished guests, veterans, and friends, this is Veterans Day, 1958, the fifth national Veterans Day.

Our permanent theme of these ceremonies in the 11th hour of the 11th day of the 11th month is "Peace with honor."

Peace with honor.
Peace with dignity and courage.
Peace with integrity and uprightness.

And who personifies the peace with courage more than America's wartime defenders—her veterans of military service? Within the memory of living American war veterans today are the ferocities of San Juan, Santiago, Chateau Thierry, the Meuse Argonne, Guadalcanal, the Battle of the Bulge, Okinawa, Korea. These are the men, who—more than once—have saved America. These are the men who fought and bought peace with their courage. Is it not truly meet, right, and salutary, then, that we pay honor to the men, who—more than once—have saved America?

And who personifies the peace with uprightness more than our veterans whose leadership guards America's security in peace? I would remind you: Today there are more than 22 million living American war veterans in the United States. One out of every eight persons is a war veteran. Currently guarding America's security in peace are these war veterans: The President of the United States, the Vice President of the United States, six of the nine Justices of the Supreme Court, and more than half of our Congressmen and Senators. And we must further name the thousands serving on State and local levels, and those of us who also stand and wait. Is it not truly meet, right, and salutary that we pay honor to the men who guard our security in peace?

It's been said that no one will care for you if you care not for yourself. This we can apply to our large family in veterandom.

What we have done, as veterans, will fade from America's memory if we, as veterans, allow it to fade. That is exactly what is happening.

Therefore, as veterans, we should resolve that:

It is our responsibility to let not America forget who we are and what we have done.

It is our responsibility to teach young America who we are and what we have done.

It is our responsibility to keep other world powers fearfully—and I use the word advisedly—aware of who we are and what we have done.

And because it is true that the memory of our accomplishments is fading it would seem that it is once again the veterans' responsibility to spell out how honor can be paid the victors of war, the defenders of peace, the guardians of security.

There are two major avenues:

America must adequately—adequately—care for her disabled and indigent veterans.

And America must heed the veterans' warning to keep this country bristling with defense so that there will never again be any military aggression against us.

Let's be flag wavers. Let's be flag wavers. Former President Herbert Hoover back in 1954 said: "We must realize the vitality of a great spiritual force which we call nationalism. The fuzzy-minded intellectuals have sought to brand nationalism as a sin against mankind. They seem to think that infamy is attached to the word nationalist." The spirit of nationalism springs from the deepest of human emotions. It rises from the yearning of men to be free of foreign domination, to govern themselves. It springs from a thousand rills of race, of history, of sacrifice, and pride in national achievement. In our own country, does not the word "America" stir something deeper within us than mere geography? Does not the suffering and the sacrifice of our forebears who fought for our independence flash in our minds with every mention of the word?

I say: Let's be nationalists. Let's be flag wavers.

Of the 20 some civilizations this world has known, only 1 was crushed by outside aggression; the others have decayed from within. I am sure there were no flags waving as the decadence grew.

A bristling defense will keep other world powers fearfully aware of who we are and what we have done.

Care of the wars' disabled and indigent will teach young America that their country properly and adequately cares for its defenders. So should the call to war ever come again young America will be steadfast in service, knowing full well and rightly so, that they, in their turn, will be rightly cared for.

And as our veterans' care and our sure defense increase so will also grow the American consciousness of the heroics of our wartime veterans and the honor due them.

Of America's care to disabled and indigent veterans:

Today there are nearly 3 million veterans on Veterans' Administration rolls receiving relief of one kind or another. Let me mention but some of the recompense due and paid our disabled and indigent:

Six hundred and sixty thousand veterans have been given vocational rehabilitation; 95 percent of these are gainfully employed. A grateful Government has built 172 veterans' hospitals; admissions to these installations number nearly half a million every year. There are grants for wheelchair homes, automobiles for the severely handicapped, prosthetic appliances. There are monetary benefits in the forms of compensations and pensions. Yes, a grateful Nation attempts to care for a grateful veterandom.

But to mention just two of many concurrent thoughts in this hour of honor to our veterans: (1) the majority of our veteran population is young men. What will be their needs in old age? Will our veterans' benefits keep pace? Will America's care for aged veterans be adequate? And (2) there is a current review being conducted of ratings for disabled veterans. Articulately, let me ask: Is this not simply an economy drive again at the expense of our disabled veterans? I am told that instructions have been received by the Veterans' Administration centers across the country that the review must be completed by January 1 of 1960. At this time half of the claims folders still remain to be reviewed.

I suggest this time directive means a hurried, haphazard handling of a very delicate trust.

I suggest such activity is neither adequate or accurate.

I suggest honor to our veterans through care for the disabled must be a continuing honor in all hours and not to be flirted with at any arbitrarily fixed calendar date.

As veterans we must realize that our mission is not fulfilled until all of our disabled comrades—our fellow veterans in need—their dependents and widows are adequately cared for.

As veterans we must not allow America to forget who we are and what we have done.

Of America's bristling defense, we can be sure:

There is no such thing now as a return to normalcy.

We are living within a time area wherein we are threatened with immediate annihilation.

We must prepare for any contingencies.

We are determined that our defense be maintained.

We cannot afford the luxury of not paying the defense bill.

Or, more positively, we can afford any expense in the cause of national defense.

A heavy expenditure for defense will not lead to economic collapse.

But most assuredly a heavy defense expenditure does call for the most efficient management in our Defense Department.

Of America's bristling defense, we can be sure:

America will never strike the first military blow at any time or place. So if we do not get in the first blow then we must be prepared to roll with any attack against us and make a comeback. Therefore, we need previous preparations, the capability of restoring a smashed economy, and military forces of all magnitude in being. Previous preparations call for research and development. Which things in themselves serve as deterrents to war; through advanced research can we render obsolete potential enemy weapons.

Of America's bristling defense, we can be sure:

Military forces of all magnitude in being call for many, many choices:

Should our biggest expenditure go for civil defense, conventional ground forces, guided missiles, conquest of outer space?

Note the possible clash of choices:

If too much is spent on conquest of outer-space, then would we be able to provide the mobile ground forces needed to contain and handle a local war?

If we defer dollars from civil defense and an enemy does strike, we would not lose millions of people, potential ground forces?

If we spend less on missile research might not an aggressor pass us by? If we shift from mass production of jet bombers, for example, to more advanced research, just what good would missiles on drawing boards do us in the event of an attack?

But we can be sure of this: the less we spend the fewer choices we can make, the fewer the contingencies against which we can be prepared.

Of America's bristling defense, we can be sure:

The Defense Department must be pressured from time to time to spend moneys in unacceptable ways. It might well be that local pressures prevent the services from abandoning obsolete military centers simply to relieve financially distressed areas. It might well be that local pressures dictate that the services stockpile nearly obsolete material simply to sustain particular industries.

Of America's bristling defense, we can be sure:

Duplication of efforts must be avoided among the services, but not at the expense of healthy rivalry.

Finally and positively:

Let's make military service more attractive as a career.

Let's bring more community respect to the researcher and the educator.

Let's transfer to civilian agencies, contractors, and individual workers the work areas that are better performed by civilians, and relieve the military to serve strictly military purposes.

As veterans I am sure we are all for keeping the peace at any cost or expense.

A moment ago I said there is no such thing now as a return to normalcy. Right now I want to quote from Harper's magazine, October 10. Listen:

"It is a gloomy moment in history. Not in the lifetime of any man who reads this paper has there been so much grave and deep apprehension; never has the future seemed so dark and incalculable. In France, the political cauldron seethes and bubbles with uncertainty. England and the English Empire is being sorely tried and exhausted in a social and economic struggle with turmoil at home and uprising in her teeming millions in her far-flung empire. The United States is beset with racial, industrial, and commercial chaos, drifting we know not where. Russia hangs like a storm cloud on the horizon of Europe, dark and silent. It is a solemn moment, and no man can feel indifference, which happily no man pretends to feel in the issue of events."

That is a pretty sobering excerpt from a long time accepted and respected publication, and it was written October 10—October 10, 1847—111 years ago. Things haven't changed much, have they? And how many wars has the world had in those 111 years? And what have those wars proved or decided? The utter uselessness, the folly of war. I'm for maintaining peace with honor at any cost or expense. Peace with honor is wonderful.

This day is a solemn occasion in which all of us dedicate ourselves anew to the peace for which we fought and for which so many of our comrades died. And while we look back to great sacrifices, we must at the same time look forward to the goals we all desire. If we can demonstrate to ourselves that our children and grandchildren will live to know the honorable peace for which we all struggled, only then can we feel assured that we merit a Veterans Day salute.

Unless we have and guard and maintain peace with honor, all will have been in vain.

If you take away anything of what I have said today, make it this: In our homes the spirit of patriotism should be implanted in our children; in our schools the spirit of patriotism should be so highly and strongly developed as to give our country high type individuals who will not only guard our country against decadence (of which I spoke) but will also aline it with God's plan of development and of progress.

"Three things I know must always be,
To keep a nation strong and free.
One is a hearthstone bright and dear,
With busy, happy loved ones near.
One is a strong and ready hand,
To have and serve and keep the land.
One is a worn and beaten way,
To where people go to pray.
So long as these are kept alive,
Nation and people will survive.
God keep them always everywhere,
The home, the flag, the place of prayer."

A Fine Example of Enterprise System

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. THURMOND. Mr. President, advocates of big Government spending frequently allege that only the Government is capable of financing huge projects, that the private investors are not willing to take the chance or spend the money. Many of these big Government advocates would have us turn to socialism, with the central government running everything in a bureaucratic method.

David Lawrence, in a column appearing in the January 8 edition of the Greenville (S. C.) News, comments at length on the recent financial story concerning the split in three parts of American Telephone and Telegraph Co. stock. Pointing out that this passed, no doubt, as a routine item in Socialist- and Communist-dominated countries, Mr. Lawrence goes on to show how A.T. & T. is the world's finest example of the superb job done by people's capitalism in the realm of economics. I ask unanimous consent that Mr. Lawrence's column, entitled "A Fine Example of Enterprise System," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A FINE EXAMPLE OF ENTERPRISE SYSTEM

(By David Lawrence)

WASHINGTON.—Sometimes we overlook the obvious—the things for which we ought to be thankful as we come to a new year. One thing we often overlook is the success of what might be called people's capitalism.

The other day the financial tickers told the world that the stock of the A.T. & T.—the American Telephone and Telegraph Co.—had been split in three parts. It promptly rose in value on the stock exchanges. Maybe the newspapers in Moscow thought it only a routine item in the press of a country where capitalism prevails. But, actually, it was a powerful counterargument to communism, and it's unfortunate that the people of the Soviet Union can't be told what it really means.

For, without a single dollar put up by the Government of the United States, the people themselves have invested their money in and become owners of the largest and most successful single private business in the whole world. Although the vast majority of telephone systems in other countries are owned and operated by the government, the United States has more telephones than the rest of the world put together. There is no cleaner or clearer example of private enterprise than A.T. & T.

With transcontinental and overseas connections in a matter of minutes, the United States owes much to this rapid system of communication. Its efficiency of operation is a tribute to American private enterprise and private management.

True, the Government must approve the rates charged the customers and also takes a hand if any improper practices toward competitors should emerge, but basically the telephone business is a private business. Its investment in plant and equipment totals more than $23 billion, and it employs 700,000 persons. Its owners are more than 1,564,000 individuals and 61,000 institutions. This total includes more than 250,000 employees in the industry itself. No financial group owns any controlling interest. The stockholders elect their directors who, in turn, select the management. Nothing like it of such size exists anywhere else in the world.

The A.T. & T. and its affiliates comprise 23 companies, serving 55,800,000 phones. There are 3,900 independent companies. These serve about 9,700,000 phones—or nearly three times as many as in the whole of the Soviet Union. They, too, do an efficient job in the private enterprise system that provides the United States with 54 percent of all the telephones in the world.

To appreciate the great value of the modern telephone service to business, one must travel in many other countries where communication is almost primitive. The number of telephones in the entire Soviet Union is about 3,558,000 as of January 1958. This is less than New York City's 4,204,000. Moscow has 450,000 phones for its nearly 5 million population, compared with Washington's 582,000 phones for 830,000 residents.

Business moves faster in America than than anywhere else because a multiplicity of transactions is made possible through telephone communication.

Not long ago the late Robert Lincoln O'Brien, who was personal secretary to President Cleveland, was telling this correspondent how the engagements were made with persons invited by Mr. Cleveland to come to the White House for conferences and how the President gave him important messages to other Government officials to be delivered orally. Mr. O'Brien said he actually spent whole days at this task. For he had to get into a carriage and drive around the National Capital going from office to office. There was no telephone service then.

What does the telephone business mean to the American economy? The payroll and other payments to employees of the A.T. & T. totaled more than $3 billion in the first 9 months of 1958.

Here, therefore, is an enterprise managed and owned privately which is bigger than any single business in the Soviet Union and, in fact, bigger than many of the collectivist enterprises of the Soviets put together.

Who gets the benefit of this enormous investment? The people of America and some investors from abroad. For annually the A.T. & T. pays out big sums in dividends on its stock and interest on its bonds—over $600 million to shareholders in 1958. These

stockholders are for the most part persons of modest means—the vast majority are not rich people. Owners of stock include about 344,000 men and 723,000 women, with 498,000 joint account ownerships. Institutions hold only about one-fifth of the company's shares.

Plainly here is something for the American system of people's capitalism to crow about. It is an example to hold up not only to the people of the Soviet Union but to other Communist countries. Indeed, it is a lesson in economics that ought never to be brushed aside by the socialistically inclined politicians within the western countries. For private initiative is in the long run better for the worker, better for the investor and better for the people as a whole.

The Financial Institutions Bill

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. ROBERTSON. Mr. President, last year, as the culmination of 2 years of effort to modernize and codify the laws dealing with financial institutions, the Senate passed a bill designated as the Financial Institutions Act of 1957. Efforts to obtain action on that bill in the other body were unsuccessful, however, and it died with the 85th Congress.

Because of questions which I have been asked about the possibility of reviving that bill, and because of other indications of interest in what happened to it, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Thomas W. Miles, an experienced and well-informed writer on financial topics. This article, entitled "Reexamining the Financial Institutions Bill," was published in the December 1958 issue of the Burroughs Clearing House magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REEXAMINING THE FINANCIAL INSTITUTIONS BILL

(By Thomas W. Miles, Washington, D.C.)

The legacy of the ill-fated financial institutions bill in the last Congress is a public image so blurred by charges that its real job of modernizing banking and credit legislation has been lost sight of. Unless this image can be corrected, it will jeopardize any general overhauling of financial legislation in the forthcoming 86th Congress. For that reason some of the more serious charges might well be reexamined in this lull between engagements to see what substance there is to them.

There were no real problems in the Financial Institutions Bill that Congress could not have resolved in the last session. It has come up with answers to many tougher problems in shorter time. But the things that were said about the bill confused many Members of Congress and resulted in the bill being stymied in the House Banking and Currency Committee.

The charges came so thick and so fast that the answers went unheeded, crowded out of public interest by still newer charges. The net effect of this organized campaign of charges and alarms was to create a doubt—which was exactly what was intended. And when the opposition of organized labor was enlisted, that doubt took on new proportions. Added to all this was the fact that the financial community was divided over certain features. This in itself was a serious impediment.

Two themes ran through the attacks on the financial institutions bill in the House, both appealing to historic American fears and prejudices. The first exploited our deeply ingrained fear of power, in this case the alleged threat of the concentration of economic power in large financial institutions. The second capitalized on the political appeal of the consumer and small business.

Two quotations from the many in the CONGRESSIONAL RECORD aptly illustrate the play on these themes. In one it was charged that provisions in the bill "will weaken the smaller banks and lead to more centralized control over banking."

And the other contended: "Many hidden booby traps against consumers, against the laboring man, against the small banks, against the Federal credit unions, against legitimate insurance agents and salesmen and against the public interest." That takes in the butcher, the baker, the candlestick-maker in a political wrapup.

Before looking more closely at the imagery in the charges we might review briefly the history of the financial institutions bill to get a better perspective. The need for codifying and up-dating banking and credit laws is generally conceded.

Recognizing that need, Senator A. WILLIS ROBERTSON of Virginia proposed in the summer of 1956 to meet it. Subsequently, Senator J. W. FULBRIGHT of Arkansas, chairman of the Senate Banking and Currency Committee, named Senator ROBERTSON to make a study for the committee of all Federal statutes governing banks, savings and loan associations and credit unions. This was a formidable undertaking and one that other less intrepid members of Congress than Senator ROBERTSON had shied away from for years. Senator ROBERTSON was acting in the tradition of his predecessor, the great Carter Glass.

Senator Robertson's first step was to invite all of the Federal supervisory agencies to recommend amendments for changes in the statutes under which they function. These included the Comptroller of the Currency, the Federal Reserve Board, the Federal Deposit Insurance Corporation, the Federal Home Loan Bank Board and the Bureau of Federal Credit Unions. Recommendations were also requested of the Treasury Department, the Bureau of the Budget and the General Accounting Office.

Then, to complete the picture in accordance with the practice on Capitol Hill in such matters, Senator ROBERTSON sought the views of a fair cross section of the financial community. He set up an advisory committee to which each of the 15 Senators on the Senate Banking Committee named 1 appointee. He appointed the other 12 to insure adequate representation of the various groups involved. This became known as the Cravens committee, so named for its chairman, Kenton R. Cravens, president, Mercantile Trust Co., St. Louis, Mo.

There was lots of work to be done. The task was described by Lee P. Miller, recently elected president of the American Bankers Association, as monumental. Senator ROBERTSON spelled it out for the record in these words:

"The study of existing statutes of necessity will be a technical one rather than a broad inquiry into financial and economic theories. The major objective will be to formulate a new banking code with obsolete provisions eliminated and new authority added in areas where need is clearly demonstrated."

The Government agencies turned in more than 180 amendments on which the Robertson subcommittee held hearings that November (1956) and the next month the Advisory Committee reported 200 recommendations. Out of all this basic material Senator ROBERTSON and his counsel, Donald L. Rogers, drew up a tentative 252-page bill which was published as a committee print. Senator ROBERTSON made this comment about the bill:

"I deliberately eliminated from the tentative bill new policy issues and limited the controversial issues as far as practical to those which had previously been considered either by the Senate or the House but on which no final action had been taken."

On this bill the Robertson subcommittee held 14 days of hearings (January 28 through February 18, 1957) and heard 39 witnesses discuss the changes proposed in the laws. In addition, 114 written statements, letters, etc., were submitted, bringing to 1,073 the number of pages in the printed record of the Senate hearings.

After that the Senate Banking Committee met in executive session and drafted the financial institutions bill, S. 1451, which it reported to the Senate March 4. The Senate debated that bill 5 days, fought over a number of amendments and in the end was content to pass it by voice vote. From the recital of the bare facts of this report of the progress of the bill it is abundantly evident that the Senate was fully aware of the controversial features of this legislation.

But if the bill ran a gamut of controversy and compromise in the Senate, it jammed smack into devastating tactics in the House. These involved delay and what was virtually a filibuster in the executive sessions of the House Banking Committee. These tactics were surprising only in the sense that they proved to be insurmountable.

Even before the bill was introduced by Representative PAUL BROWN of Georgia in the House as H.R. 7026, its proponents were on notice that it was in for trouble. Mounting the attack against the bill in the House Banking Committee were Representatives WRIGHT PATMAN of Texas and ABRAHAM J. MULTER of New York. Behind their opposition lay years of sharp criticism of banking laws. They were supported silently, for the most part, by colleagues responsive to labor criticism. Unless this is understood, it would appear that Mr. PATMAN and Mr. MULTER carried off the show alone—which was not the case.

There was another factor in their favor that is not understood very well except in Washington. And that is that Congress does not have occasion to deal with banking legislation very often—the last big banking bill was the Banking Act of 1935—and, accordingly, Congress is not so accustomed to handling this legislation as it would be in the case of a tax measure or a public works proposal. There is no ready frame of reference in which the Members of Congress can relate the technical features involved in an overhaul of banking laws. This might explain why doubts about the bill were relatively easy to raise.

The House Banking Committee fight was long, and exceedingly tedious because many of the members found so much of it repetitious. Throughout, Chairman BRENT SPENCE of Kentucky handled the sessions with judicial consideration, fairness, and restraint. He had the support of many long-suffering members of the committee but time was of the essence and time was against the bill. Indeed, many of the charges against the bill went unanswered in the record only because proponents of the financial institutions bill hesitated to do anything that might be used as a pretext for dragging the hearings on further.

There were 20 days of public hearings in July and August of 1957 and 15 more days

in January and February of this year. Promptly upon their conclusion the committee went into executive consideration of the bill. This took 15 more days and then ran out of time at Easter recess.

Because Mr. SPENCE expected his committee to finish its consideration and report out the financial institutions bill to the House, he had scheduled hearings on three antirecession bills immediately upon the return of Congress. This means that his committee had to put the financial institutions bill aside. In the pressures that developed as the session went on Mr. SPENCE never did find the time to take up the financial institutions bill again and it died with the 85th Congress.

In view of this legislative history the charge that the bill did not have adequate consideration is patent nonsense. And so was the charge that substantive changes in law were slipped into the legislation by bankers who then attempted to pass the bill off as a codification only. The record of the Senate hearings is concerned with the examination of the substantive changes. This bill was to be a recodification which would modernize the laws governing banking and credit. This meant deleting some, rewriting others and writing wholly new provisions to meet the changes that have occurred. There were no bones made about that in the Senate—which takes away the element of surprise in Mr. PATMAN'S discovery of substantive changes having been made in the financial institutions bill.

Discounting those as opening plays in a political chess game, what were some of Mr. PATMAN'S and Mr. MULTER'S more serious charges?

They boil down to two. The others involve legislative histrionics and are couched in words, phrases and, in some cases, Biblical invective that were calculated to make the charge sufficient unto itself. An answer to such rhetoric was hardly expected. Curiously enough, neither Mr. PATMAN nor Mr. MULTER concerned himself too much with some of the controversial features of the bill which the financial community was at such pains to resolve, such issues as bank mergers, savings and loan branch offices and liberalized lending authority. They completely ignored, of course, the reforms that the bill would have brought about. That angle did not fit in with their contention that this was a big bankers' bill.

To organized labor Mr. PATMAN'S most rousing charge involved one sentence in one section, namely 35(a) of title 1, which, he contended, would place a "major loophole" in Federal usury laws for conditional sales contracts and certain types of installment paper. He talked about it as a "gimmick" surreptitiously inserted by bankers to thwart Federal usury statutes.

Mr. PATMAN submitted a number of questions about it to Chairman William McChesney Martin of the Federal Reserve Board who presented his answers in the record of the House Banking Committee hearings. Let's look at what the Fed said was its understanding of these matters.

The Fed agreed that the new sentence would change the Federal law established by a decision of the Supreme Court back in 1831 in the case of *National Bank* v. *Johnson*. In that case the Court held that the acquisition by a national bank of outstanding promissory notes from the owner was a "loan or discount" and therefore subject to the limitations on the rate of interest a national bank may charge.

Then the Fed commented: "Broadly speaking, it appears that the proposed amendment would place a national bank on a basis of equality with other lenders in its State, whereas under the doctrine of the Johnson case national banks are subject to more severe restrictions in this respect, at least in some jurisdictions."

Mr. PATMAN said the 35(a) sentence would also change another more recent court decision involving conditional sales contracts. Not so, said the Fed. Here it is from the record of the public hearings:

"In *Daniel* v. *First National Bank of Birmingham* ((C.A. 5, 1955), 227 F. 2d 353), the court interpreted the transactions, as a factual matter, to have been loans by the national bank to the purchasers of certain motor vehicles, even though in form the transactions were conditional sales at a 'time price,' the conditional sales contracts then being sold by the dealer to the bank. Under the court's interpretation of the facts, in such cases there is no 'purchase of obligations * * * from the actual owner thereof,' which is the subject matter of the proposed new sentence in section 35(a). Accordingly, the statutory change that would be effected by enactment of section 35(a) apparently would not change the law as pronounced and applied by the court of appeals in the Daniel case."

The Fed commented on a number of other points in the handling of conditional sales contracts and then added:

"Apart from such exceptional situations, however, it is believed that the proposed amendment would place each national bank on a basis of equality, in this respect, with other lenders in its State, including State banks."

Mr. PATMAN continued to fight section 35(a) for months after March 18 when the House Banking Committee, rather than delay with more argument on the point, voted in executive session to strike it out.

Another doubt was created about the possibility of so-called sleeper provisions, to discredit this bill. This one was supposed to lie in section 45 of title 1 which authorized national banks located in communities of fewer than 5,000 inhabitants to act as insurance agents and real estate brokers. It was contended that this was an authorization that was repealed 40 years ago; that it is not law any more. And it was duly noted, of course, that the Senate report on the bill overlooked an alleged substantive change in law by describing the section as continuing the provisions of existing law.

Comptroller of the Currency Ray M. Gidney had no doubts about the law being in effect. His Office has regulations for administering it and has been enforcing it for years. He held that the 1916 insurance authorization was not subsequently repealed at all. The Federal Reserve Board saw it the same way. And so too did counsel for the Senate and House Banking Committees, Mr. Rogers and Robert L. Cardon.

Mr. PATMAN saw dangerous possibilities in the situation even though only 77 national banks, 1.6 percent of all of them, were engaging in this business. But the House Banking Committee was not stampeded. In executive session it agreed to permit those banks which were providing this service to continue, subject to compliance with State license requirements.

There were impassioned pleas all on behalf of the plight of the little man, so beloved politically, in such issues as cumulative voting, mergers, etc. But there was little opposition attention to the provisions that strengthen the powers of the banks' supervisory authorities.

These included such features as the prohibition against conflict of interest by supervisory agency employees; the requirement for the disclosure of the identity of major stockholders; the authority to limit dividend payments by national banks; the strengthening of the procedure for the removal of bank officers and directors for unsafe and unsound practices; the strengthening of the procedure to terminate FDIC insurance; the prohibition against political contributions by insured banks; and others.

"Who Killed Cock Robin" is a murder story, but not a mystery. It is also a record—and a written one—of tactics that could be used again and again against legislation important to the banking community and the general public.

Statement of Policy and Legislative Program of the National Consumers League

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. DOUGLAS. Mr. President, Congress and the Nation benefit when a group of thoughtful and public-spirited citizens makes known to us their views on what legislation they believe necessary. This is especially true when the group has a long and distinguished record of supporting, and even of originating, vital laws which now form a very important part of our way of life.

Such an organization is the National Consumers League. Since its founding in 1899, it has aroused consumer interest in, and concern with, the conditions under which goods are manufactured and distributed. It has used the three-point technique of making investigations, marshaling public opinion, and seeking remedial legislation to promote public health, public welfare, and fair-labor standards.

The National Consumers League has been closely associated with the major social reforms of the past six decades. For example, it introduced to the United States the idea of minimum wage and maximum hours legislation, and fought for its enactment. It was one of the foremost supporters of the pure food and drug law, when that legislation was before Congress. It pioneered in the fight for legislation prohibiting child labor. And it was among the first supporters of social security legislation.

To help the underdog and the needy, the National Consumers League pioneered with a number of techniques and institutions which now are widely accepted in America. For example, it promoted the idea of the Children's Bureau, in the Federal Government, to protect child health and welfare. It introduced the idea of a consumer label to indicate fair labor standards in production industries. It introduced "shop early" campaigns as a means of cutting down staggering Christmas season work hours and providing steadier employment for workers.

The list of National Consumers League officers, directors, and members of both the past and present reads like a "Who's Who" of important Americans. They include Felix Frankfurter and the late Louis D. Brandeis, U.S. Supreme Court Justices; Frances Perkins, former Secretary of Labor; Benjamin V. Cohen, former Assistant Secretary General of the United Nations; Sumner Slichter, economist; Sarah Gibson Blanding, presi-

dent of Vassar College; Frank P. Graham, former U.S. Senator, now an important U.N. official; Arthur Schlesinger, Jr., historian; and Francis B. Sayre, Jr., dean of the Washington Cathedral.

Present officers include: President, Dr. John Howland Lathrop, Berkeley, Calif.; treasurer, Hyman Schroeder, Washington, D.C.; board chairman, Mrs. Richard A. Zwemer, Westfield, N.J.; board vice chairmen: Walter Frank, New York, N.Y.; Louise Stitt, Washington, D.C.; and Eleanor Hadley, Northampton, Mass.

The vice presidents are: Elizabeth Brandeis, Madison, Wis.; Mary Dewson, Penobscot, Maine; Mrs. Thomas Fleming, Pasadena, Calif.; Pauline Goldmark, Hartsdale, N.Y.; Alice Hamilton, M.D., Hadlyme, Conn.; John Haynes Holmes, New York, N.Y.; Alice W. Hunt, Providence, R.I.; Archbishop Robert E. Lucey, San Antonio, Tex.; Frances Perkins, Washington, D.C.; Josephine Roche, Washington, D.C.; Mrs. Franklin D. Roosevelt, Hyde Park, N.Y.; Bishop William Scarlett, Castine, Maine; and Robert Szold, New York, N.Y.

Mr. President, at its most recent annual meeting, held in Washington on December 5, 1958, this great organization adopted an excellent "Statement of Policy and Legislative Program." This statement is, in my opinion, a forward-looking and comprehensive program of vital legislation. It is very much in the tradition of National Consumers League.

I believe the league is to be commended for this program, as well as for its activities for the common good. I, for one, am proud to be a member and honorary vice president of this organization.

Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the "Statement of Policy and Legislative Program of the National Consumers League."

There being no objection, the statement and program were ordered to be printed in the RECORD, as follows:

NATIONAL CONSUMERS LEAGUE STATEMENT OF POLICY AND LEGISLATIVE PROGRAM, 58TH ANNUAL MEETING, DECEMBER 5, 1958

In the 60 years, during which the National Consumers League has worked for the improvement of labor standards in America, the greatest economic development and some of the most remarkable social changes in our national history have taken place. We have moved from the extreme individualism and peaceful complacency of the late 19th and early 20th centuries, through two world wars, a decade of devastating economic depression, to the present era of struggle for global supremacy between two conflicting philosophies in a world of threatening unrest.

The National Consumers League was born of the industrial evils of that complacent society at the turn of the century, when the thinking, not only of economists, but of statesmen, businessmen, and jurists was dominated by the laissez-faire theory of economics. Not the State but free competition must control the economic society, and widespread poverty was believed to be inevitable. The sweatshop, child labor, long hours, unsafe and unsanitary work places were the natural outgrowth of such a society.

To combat these evils was the purpose of Florence Kelley and her small but influential band of followers who in 1899 organized the National Consumers League. The accomplishments of those early years are truly phenomenal. State by State, citizens had to be awakened to the corrupting social consequences of poverty, ignorance, and exploitation of human beings, and to their responsibilities for reforms. State by State, legislators had to be persuaded to enact the first inadequate, but important, regulations of the industrial conditions—long hours, low wages, child labor—that caused such human suffering. When laws were passed, the league worked for proper enforcement.

NCL FOUGHT IN COURTS

When unfriendly courts declared unconstitutional these modest restrictions on employers' freedoms, holding that workers were being deprived of their property without due process of law, members of the Consumers League buried their disappointments and determinedly set out to educate the courts. Cases were appealed, the aid of the best lawyers of the land was solicited.

The first brief presenting economic, scientific, and social facts in defense of a labor law ever to be presented to the U.S. Supreme Court was prepared by the National Consumers League in 1908. The case was the famous *Miller* v. *Oregon*, in which Mr. Louis Brandeis defended the constitutionality of the Oregon 10-hour law for women and the U.S. Supreme Court rendered a favorable unanimous decision. By 1915 a law restricting the employment of women to 8 hours a day was approved by the Supreme Court. But only after 23 years of litigation was the constitutionality of State minimum wage legislation for women upheld by the highest Federal Court in 1937.

The great depression of the 1930's brought unspeakable suffering to the American people. It also wrought revolutionary changes in men's and women's thinking about government responsibilities. In so major an economic disaster the Federal Government could not escape its obligation to aid its citizens to recovery and to take measures to prevent similar future catastrophes. By the end of that fateful decade, Congress had enacted a Federal wage and hour law (the Fair Labor Standards Act) which also provides restrictions on the employment of children in interstate commerce.

A sound foundation for a comprehensive Federal social insurance system was laid when the Federal Social Security Act was passed. By 1937, as a result of Federal grants to States for administrative purposes, every State in the Union had passed an unemployment compensation law. At least a principle for which the National Consumers League for nearly 40 years had endeavored to gain acceptance was established. That is the responsibility of government in a democracy, to protect its citizens against the economic consequences, over which as individuals they have no control, of a highly industrialized society.

We are holding our 58th annual meeting in a national and world atmosphere quite different from that in which the Consumers League began its work in 1899. The United States emerged from World War II, militarily strong, rich, and the leader of the free world. The consequent national responsibilities are staggering. Democracy represents a way of life in sharp contrast to that of other powerful nations. The success or failure of our experiment is of vital concern to people throughout the world, and is being watched for signs of strength or weakness by many anxious millions. Probably nothing since the founding of our Nation has done so much to force the thoughtful among us to reexamine the real meaning of democracy and the extent to which it is reflected in our personal and national lives.

Of much, which this self-examination reveals, we are proud: our great free industrial enterprise, our freedom as citizens to speak our minds, our scientific advancement in the control of disease and natural forces. It is our weaknesses that give us grave concern: our intolerable prejudices against our colored citizens, our niggardliness toward education, our false economic values, poverty in the midst of plenty, indifference to culture, our shameful neglect of our duties as citizens, and tolerance of corruption in high places.

BREAK ECONOMIC BARRIERS

These are serious charges against the leaders of the free world, and a challenge to us all to work through every available channel to bring the true meaning of democracy to every American citizen. To those of us in the National Consumers League the way is clear. We will continue to work, as we have in the past to remove the economic barriers to the full participation of millions of our people in the freedoms of which our country boasts.

There is evidence on the enormity of the task that lies ahead. In spite of our tremendous wealth, millions of our people live in poverty. In 1957 almost 3 million families, or approximately 6½ percent, had an annual income of less than $1,000. The income of almost 4 million families, or 8½ percent, was less than $2,000. President George Meany of the AFL–CIO has estimated that as many as one-fifth of the workers in our Nation are being paid less than $40 a week. Twenty million workers are unprotected by the wage provisions of the Fair Labor Standards Act.

The cost of adequate medical care is prohibitive for the great majority of the American people. We need a broad plan of national health insurance which would make the full services of doctors and hospitals financially available to everybody. Voluntary health insurance, even after 25 years of promotion, has brought comprehensive services to only about 3 percent of our people, has failed to reach at all a third of the people, and for the remainder covers only about half the hospitals' costs and less than a third of the physicians' bills.

The protection of workers laid off their jobs is woefully inadequate under our present unemployment compensation laws. In the winter of 1958, when more than 5 million workers were unemployed the insurance payments replaced less than 20 percent of the wage lost. Hundreds of thousands of workers drew no benefits at all either because they were not covered by the laws, or had been disqualified by State eligibility requirements, or had exhausted their benefit rights.

FARM WORKERS SUFFER

The most depressed group in the American labor force today are the migrant farm workers and their families. Estimates of their number vary from 500,000 to 2 million. They move with the crops, which they harvest, from the Gulf of Mexico to the Canadian border, working for substandard wages, sleeping in shacks and sometimes on the ground. Their children have less opportunity for education than those of any other group in the country. They are shifted from school to school, commonly missing major portions of the school year. The employment of migrants is irregular and made worse by the importation of foreign agricultural workers. Often they are exploited by unscrupulous crew leaders, at whose mercy they travel the highways in uncomfortable and frequently unsafe trucks.

They are not covered by State and Federal wage and hour laws. Their irregular periods of employment disqualify most of them for unemployment compensation and old-age benefits. Although the Fair Labor Standards Act prohibits the employment of children under 16 in agriculture during school hours, there is no minimum age requirement for the employment of these children outside school hours. Because of residence requirements migrant workers and their families are denied relief.

Adequate shelter is another of man's prime necessities which is not provided for all

American citizens today. One quarter of all housing units in the United States are substandard. Of the 13½ million substandard units, 7 million need replacement; the remaining 6½ million should be rehabilitated. In addition, we have an acute housing shortage estimated at well over 3½ million units, resulting in much overcrowding. Overall housing construction is proceeding at about half the needed rate. Replacement is failing to keep pace with obsolescence. Substandard housing blights family life, injures health, retards education, breeds crime and juvenile delinquency.

SCHOOL AID NEEDED

Probably the most serious offense of our modern society is to our schoolchildren—children who should be prepared today for the responsibilities and leadership which they must assume in the complex world of tomorrow. What do we find? Approximately 2 million schoolchildren are deprived of adequate housing in our public schools today.

According to the U.S. Office of Education estimates, in the fall of 1957, the shortage of classrooms in the United States amounted to 142,300. A shortage of 132,200 qualified teachers existed at the beginning of the 1958 school year. Of the 1¼ million people teaching in the Nation's public schools last year, 91,538 or 7 percent were teaching with substandard credentials. Seven and a half percent of the qualified teachers in the United States leave the teaching profession every year. Can we win the race for our way of life on such a record?

On the basis of the kind of evidence just presented, showing the urgent social need for greater economic well-being, increased health facilities, and improved educational opportunities for our citizens, the National Consumers League proposes the following legislative program for the ensuing year:

STRENGTHENING FLSA, STATE MINIMUM WAGE AND WAGE PAYMENT LEGISLATION

We will support amendments to the Fair Labor Standards Act which will so extend coverage that the employees of all establishments which operate across State lines will be protected by the provisions of the act. Specifically, coverage should be extended to include chain service industries such as retail establishments, hotels, laundries and dry cleaning establishments, and industrialized agricultural workers. Some of the lowest paid workers in the Nation are found in these groups. We also will support amendments to increase the minimum wage to $1.25 an hour.

We believe that renewed effort must be made to secure minimum wage laws in all the States, to protect those workers in local service trades who cannot be covered by the Federal act. Wage payment laws also should be enacted in each State.

EXPANDING AND STRENGTHENING SOCIAL SECURITY PROGRAM

We should continue moving toward our goal of an adequate system of social security. In spite of recent progress, benefit levels are too low and many persons fail to receive sufficient protection to permit adequate standards of living.

(a) Old age, survivors and disability insurance: Congress this year will be giving serious attention to the health benefits for beneficiaries of old-age and survivors insurance. A program for paying for the cost of hospital, nursing, and certain medical services can both protect people currently and advance constructive development of such needed facilities. Our ultimate goal is a broad plan of national insurance which will make the full services of doctors and hospitals financially available to everyone.

Other urgent needs are the removal of the requirement of age 50 for the receipt of disability benefits and extension of OASDI coverage to low income groups now partly or entirely excluded, especially migrant farm workers.

(b) Unemployment compensation: The Federal-State system of unemployment insurance is far too limited. Immediate Federal action is required to assure that every State extends coverage, increases benefit amounts, pays for longer periods, and avoids overharsh provisions on eligibility and disqualifications. In addition, Federal grants should be available to assist States with high unemployment rates, and States should be permitted to adjust taxes on a statewide basis as well as on an individual rating basis.

(c) Workmen's compensation: Workmen's compensation is likewise failing seriously in meeting its purpose. Present laws, with their emphasis on blame and litigation, neglect the main objective which is rehabilitation of the injured. Weekly benefits are too low. Full medical and hospital care is too seldom provided. Thousands of workers are unprotected by any workmen's compensation law. Safety programs and preventive measures against such industrial hazards as radiation exposure are quite inadequate. Some States fail even to provide insurance against many of the diseases caused by modern industrial processes.

Our workmen's compensation program needs drastic overhauling. Whether or not State laws should be replaced by a Federal Workmen's Compensation Act or an exclusive State fund should be substituted for private carriers, it is certain new remedies must be applied to correct the basic problem, namely the present emphasis on blame for the accident instead of on rehabilitation of the injured workman, which should be the real purpose of workmen's compensation legislation.

Legislation that would provide for the improvements in our social insurance laws, which the above statement shows are so urgently needed, will be supported by the National Consumers League.

RAISING WORKING AND LIVING STANDARDS OF FARM WORKERS AND THEIR FAMILIES

Coverage of migratory and other agricultural labor by a Federal minimum wage law will be a primary goal for 1959.

Other legislative objectives for improving the plight of agricultural workers will be: 1. Inclusion of agricultural workers in the Labor-Management Relations Act; 2. the establishment of a minimum age for the employment of children in agriculture outside school hours; 3. more adequate coverage of agricultural workers by workmen's compensation, unemployment compensation and old-age and survivors insurance; 4. Federal licensing and regulation of crew leaders; 5. State and National measures to improve housing and transportation standards; 6. further, we stress the importance of laws and programs to provide more health, welfare, education, and other community services for migrants.

ESTABLISHING A COMPREHENSIVE HOUSING PROGRAM

Low income families are hardest hit by the housing problem. The difficulty of finding housing at rents or prices they can afford is growing.

The National Consumers League will support legislation that will expand the urban renewal and slum clearance programs, provide housing for the elderly and include feasible measures for assuring comfortable and sanitary shelter for migratory farmworkers and their families.

ASSISTING THE DEPRESSED AREAS TO ECONOMIC HEALTH

We will support legislation designed to aid those urban and rural areas, throughout the country, that suffer from chronic unemployment and underemployment. A bill authorizing loans for new and expanded business and commercial enterprise, loans and grants for public facilities which will help these redevelopment areas to help themselves, and such a bill containing in addition, provisions for technical assistance, retraining facilities, retraining subsistence payments, procurement contract aids and industrial rebuilding in urban renewal areas would have our enthusiastic support. However, great care needs to be exercised in assisting the relocation of establishments from one area to another to prevent increasing unemployment in the original location.

PROVIDING NEEDED FINANCIAL AID TO EDUCATION

The extent to which the democratic ideal is realized depends on the ethical and intellectual capacity of citizens to make wise decisions and choices in all human relationships. Children should be assured the opportunity to secure the kind of education which will challenge their intellectual abilities to the full.

Therefore, we will support those legislative measures which will furnish such Federal financial aid to the States as is necessary: (1) To provide programs of education for children of migratory agricultural workers; (2) to provide the number of public schools required to house adequately all children within the respective States (current estimates of need are between 140,000 and 150,000 classrooms); (3) to employ a sufficient number of qualified public schoolteachers to assure maximum effectiveness in teaching in reasonably sized classes (25 pupils to a teacher in elementary schools); and (4) to establish training programs for teachers that will qualify them to develop to his full capacity each child who comes under their instruction.

IMPROVING THE LABOR-MANAGEMENT RIGHT TO BARGAIN COLLECTIVELY

We believe that the so-called right-to-work laws which have been adopted in a number of States impede organization and the development of good industrial relations and therefore seriously handicap unions in bargaining collectively for better wages and working conditions. We deplore the attempts to secure such laws in other States.

We will support amendment of section 14b of the Labor-Management Relations Act of 1947 that will give to the Federal Government prior jurisdiction on this issue.

Boyce House on Alaska: Texas Invented Eskimo Pie

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1959

Mr. YARBOROUGH. Mr. President, an exhaustive study into the status of Texas in folklore since the admission of Alaska to the Union has been conducted by one of the most noted authorities on the Lone Star State, Mr. Boyce House. The admission of the 49th State has caused Texas to relinquish its title as the largest State in area and, as Mr. House points out, this has given rise to some comments and questions as to Texas' status in the life and legend of the United States.

Boyce House has written 14 books and made almost 1,000 speeches about Texas, more than any other one man. He is known as "Mr. Texas" in his home State, and is noted and honored by his fellow

citizens as a much-sought-after humorist, an afterdinner speaker, and as a chronicler of the tales of Texas, both tall and true. He is, in addition, a respected author and an able news reporter. More copies of his books have been sold than those of any other Texas author. Boyce House is also an astute observer of governmental institutions, has served in public office, and has been, himself, a candidate for statewide office.

Following his study of this problem confronting Texas' new status, he has noted his findings, including the fact that the inventor of the Eskimo Pie was a Texan, in an article for the press.

Mr. House's interesting article on Texas' attitude on Alaska was recently published in the Port Lavaca Wave, an excellent weekly newspaper serving the people in one of Texas' fastest-growing areas, in the gulf coastal area.

Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD the feature column which appeared in the Port Lavaca Wave of Thursday, January 1, 1959, under the heading "Boyce House Explains Texas' New Attitude."

There being no objection, the column was ordered to be printed in the RECORD, as follows:

BOYCE HOUSE EXPLAINS TEXAS, NEW ATTITUDE

(By Boyce House)

"What are you Texans going to do about Alaska?"

This is the question that citizens of the Lone Star State have heard many times from their friends over the Nation in the last few months.

The answer is, "Nothing—it won't be necessary."

Texas long ago became synonymous with size—and, once an idea finds lodgement in the human mind, it is next to impossible to uproot it.

If you wear a Panama, chances are that it didn't come from Panama but Ecuador; St. Patrick was not an Irishman; chili is not a Mexican food, as any Mexican will tell you, with considerable fire; no witches were burned in New England—(they were hanged); Mount Olympus, the home of the gods, would be a foothill in the Rockies; the grass in Kentucky isn't really blue and the composer of "My Old Kentucky Home" was not a Kentuckian; the Trojan War was only a minor disturbance in Asia Minor.

Billy Rose says the Venus de Milo couldn't get a job as a Broadway showgirl; and the Scotch bagpipe was invented by the Irish, who then wished it off on the Scots.

But try to convince the public of these things.

Similarly, Texas has come to be synonymous with bigness. When someone asked Dr. Wernher von Braum if there was a likelihood that two manmade satellites would collide, he replied that such a happening was highly improbable, adding, "You must remember that space is large; it is even larger than Texas."

As a matter of mere satistics, Texas never really has been the biggest. Not only is Australia larger but Canada has two territories and three provinces, each of which is bigger than Texas. But who cares?

I have made a personal investigation since statehood was conferred on Alaska and have found that Texas is just as huge as it ever was; it's still 801 miles in a straight line north and south and 773 miles east and west; and it still has 256 counties, one of which lacks only two square miles of being twice as large as Rhode Island and Delaware combined, with the District of Columbia thrown in.

But Texas is more, much more, than so many thousands of square miles. Texas has cowboys, mavericks, longhorns, mirages, horned frogs that live 31 years sealed up in a courthouse cornerstones without air, food, or water; and Texas Rangers, as all TV viewers and moviegoers throughout the world know. Texas produces more oil, cotton, and sulfur than any other State; also more sheep, though there is nothing sheepish about Texas; and more salt, which is taken by visitors—a few grains at a time—with our tall tales.

Texans, mainly new arrivals from Southern States, it is true, but Texans nonetheless, won their own independence in 1836, set up a republic and sent ambassadors to foreign countries, including the United States; then, in 1846, entered the Union of their own free will. Yes, they did, later on, try to leave the Union but, after 4 years in which to reflect, reconsidered. Even so, the last battle of the Civil War was fought in Texas, weeks after Appomattox and, of course, the Texans won it.

Texas A. & M. College contributed more officers to the Army in World War II than West Point did. Texas has the Alamo. The majority leader of the U.S. Senate is from Texas. The Speaker of the House of Representatives is from Texas. And the President of the United States is from Texas. The San Jacinto Monument is taller than the Washington Monument and the Texas Capitol is higher than the National Capitol.

And it is my understanding that the inventor of the Eskimo Pie was from Texas.

Among the 49 States, Texas is what the forward pass is to football and what the slide trombone is to the band. Texas is tradition, history, courage, energy, vision, friendliness, achievement, hospitality, and humor that is good humored.

Ask the man on the street who the present world's heavyweight titleholder is and it's better than even that he can't tell you but speak of the champ and he knows you mean the greatest of 'em all, Jack Dempsey.

So, whatever the statistical tables show, Texas will always be the champ.

A Proposal for World Peace in the Nuclear Age

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. BROOMFIELD. Mr. Speaker, a very active group of citizens from my home district in Oakland County, Mich., have taken a close look at the problems our Nation faces around the world. They have come up with some conclusions in their studies which I would urge my colleagues to consider and study very carefully.

The membership of this group is varied and represents almost every facet of our community. There are members of the Fellowship of Reconciliation, the Methodist Church, the Detroit and Oakland County Committees for a Sane Nuclear Policy, and the Ferndale Cooperative. They are not speaking officially for these organizations but are offering their own approach to our world problems. May I compliment the members of this group for their forthright and fearless approach.

Their views follow:

A PROPOSAL FOR WORLD PEACE IN THE NUCLEAR AGE

Tremendous strides in scientific progress in recent decades have created a potentially tragic imbalance between the technical and political growth of man. The consequence of this imbalance is that man has uncovered destructive forces of genocidal magnitude, while at the same time he is, as yet, politically inadequate to control these forces.

This political inadequacy arises from the nationalistic efforts of nations to cope with a problem of international scope; namely, the military ramifications of nuclear energy. The situation is analogous to the efforts of our original 13 colonies in meeting a common problem. Just as that situation forged new political concepts which resulted in unity around a common goal, so, too, today's dilemma is forcing new concepts on heretofore nationalistic man. Recognition and acceptance of national differences and national aspirations, as components of the larger world community, are the core features of these new concepts.

Acceptance of the concept of allegiance to the world community is a prerequisite for any nation aspiring to world leadership. It follows from this that such a nation must exhibit positive initiative in peaceful endeavors and show sincere deemphasis of military aspects.

It is our sincere concern that the United States shall show initiative and leadership in the cause of world peace, and it is to this end that we hereby submit the following studied proposals for securing world peace:

1. It is crucially important that we give full support to the work of the Geneva conference on international cessation of nuclear weapons testing. We commend the example set by our Government of banning further bomb tests and urge that this moral initiative not be lost by our resumption of tests.

2. Recognizing that at least two nations possess the power to destroy other nations (and themselves), we feel that continued expansion of the military does not increase our national security and that continued competition in the nuclear arms race is tragically illogical. The strength and security of any nation lies, in the final analysis, not in its illusory military "defensive" or "retaliatory" powers, but in its technical, economic, and moral strength. We therefore urge a continuing and progressive reduction in our military budget and a corresponding increase in the emphasis placed on education, social welfare, and peaceful research. This constructive reemphasis will, we believe, not only make a greater long-range contribution to the security of the United States, but also serve to allay the all-too-justified suspicions of the "neutral" world and reaffirm their faith in the United States as a leader in the cause of world peace.

3. A realistic recognition of the world as it exists is a vital step in alleviating cold war tensions. Diplomatic recognition and acceptance of all nations into the United Nations will place each within the framework, and subject to the discipline of an international body. This has now become a logical and necessary alternative to military settlements of international disputes. Measures which will facilitate the principle of peaceful coexistence should be encouraged. These include east-west trade and greater communication such as travel and exchange of students, educators, scientists, and other prominent sections of our respective societies. Greater emphasis on mutually beneficial economic competition and deemphasis of nonconstructive military competition and arms races will substantially ease dangerous international tensions.

In summary, we submit to you that a distinct need for a new concept in the international political arena has arisen. The concept involves recognition of the worldwide, rather than nationalist, character of the problems of modern man, and therefore the international solution to these problems. Acceptance of this concept is a prerequisite to leadership in the peace-desiring world. It behooves us in the United States to embrace this realistic philosophy for the future, and with characteristic foresight, exhibit sincere initiative in this area.

E. Julius Davis, Detroit, Methodist Minister, St. Luke's Methodist Church, Fellowship of Reconciliation; Morris Goodman, Ph. D., Oak Park, Chairman, Oakland County Committee for a Sane Nuclear Policy; A. Albert Johnson, Oak Park, President, Ferndale Cooperative, Inc., Oakland County Committee for a Sane Nuclear Policy; Isadore I. Kolman, M.D., Huntington Woods, Oakland County Committee for a Sane Nuclear Policy; Warner Van Hala, Royal Oak, Detroit Fellowship of Reconciliation, Detroit Sane Nuclear Policy Committee; Clifford E. Walter, Jr., Roseville, Fellowship of Reconciliation, Detroit Sane Nuclear Policy Committee; Robert Z. Willson, Ferndale, Ferndale Cooperative, Inc., Public Relations, Ferndale Kiwanis Club, Public Affairs Committee Chairman, Member of Baha'i World Faith.

Earl Warren and the Supreme Court

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, January 12, 1959

Mr. WILEY. Mr. President, on Tuesday, December 23, 1958, there was published in the Christian Science Monitor an article which expresses what I think is one of the finest of what might be called legal opinions in relation to what this Government of ours is. The article is written by Erwin N. Griswold, dean of the Harvard Law School. He takes a careful and stimulating look in this article at Earl Warren, the Chief Justice of the United States, and the context in which the 1954 decision was made, outlawing segregation in the public schools. One may not agree with this logical statement, but I suggest that one cannot fail to read it with profit.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EARL WARREN AND THE SUPREME COURT

(By Erwin N. Griswold)

WARREN'S BACKGROUND

Earl Warren came to the Court with a remarkable background. He was 62 years old when he was appointed. He had been a lawyer for 39 years. He spent several years in private practice, and a period as a deputy city attorney.

After that he was, in succession, district attorney of Alameda County, Calif., for 14 years, where he made a distinguished record, and appeared before the Supreme Court of the United States on several occasions; then Attorney General of California for 4 years, and Governor of California for 10 years.

While Governor he was the Republican nomine for Vice President in 1948. All of these offices gave him intimate opportunities to observe the problems of government in action, to deal with people, and to participate in the administration and, as Governor, in the making of laws.

During his tenure as Governor the population of California increased explosively. He consistently proved himself equal to the tasks which this presented. By common consent, Mr. Warren was a first-class Governor, one of the most distinguished Governors this country has had. In the latter years of his tenure of the office he received the nominations of both major parties.

In a sense his experience was largely political. He had never been a judge, but neither had Marshall or Taney or Fuller or Hughes or Stone when they were first appointed to the Supreme Court. He had been a governor, as had Hughes just before he had been appointed to the Court as an Associate Justice. And Taft, though he had had judicial experience, had been Governor of the Philippine Islands and then President of the United States.

The task of judging in the Supreme Court is not, for the most part, like that in other courts in the country, and experience has shown in many cases that a record of high achievement in political office is excellent background for a Supreme Court post.

CONTROVERSIAL YEARS

This was an auspicious beginning. What can we say about the Chief Justice's first 5 years in office? We can surely say that they have been filled with controversy.

Speeches have been made about "Storm over the Supreme Court," and much has been written and said about "The Supreme Court Crisis." Often Chief Justice Warren has been the special object of attack, both as a symbol of the Court, and in his own right.

Are these attacks justified? What is the state of the Supreme Court today? What is the place which Earl Warren has established for himself among our Chief Justices?

Before these questions can be properly considered, it is necessary to clear away a large amount of misconception which has been evident in many of the cirticisms of the Supreme Court.

1. The United States is not a democracy, except in the special sense in which that term is used in this country. It is not even a representative democracy. The earmark of the great American plan, the contribution of the Founding Fathers to the science of government, the things that has kept us going as a great Nation over a period of more than a century and a half of dynamic and constant growth, is that our Government is one of checks and balances.

We do not have a single legislature. We have both the House of Representatives and the Senate. Even if both Houses agree on a measure, it does not become a law without the President's approval, unless there is a two-thirds vote of both Houses after his veto. Even Congress and the President together, even by unanimous vote, cannot pass laws on many subjects. Our Congress is one of limited powers.

The States, too, have limited powers, limited by what they have given up to the Federal Government, and limited by many other parts of the Constitution, notably the 13th, 14th, and 15th amendments.

CLASHES INEVITABLE

Under the Constitution, the judicial power of the United States is given to the Supreme Court and the lower Federal courts. It is inevitable that the Supreme Court in exercising this judicial power will come into clash with one branch of the Government or another—with the President, when it invalidated the steel seizure in 1952, for example; with Congress, when it passes a statute beyond constitutional bounds; or with a State, as in the school-segregation cases.

But what the Court does is to decide the cases that come before it, brought there by human beings, making claims to "equal justice under the law," to use the phrase which is carved over the portal of the Supreme Court's building in Washington.

The Supreme Court does not sit to count votes. It is not its function to carry out the will of the majority. It is a fundamental basis of our governmental system that there are many things which a majority cannot do, and that there are many things on which the people of a State must yield to a greater national interest, as expressed in the Constitution. The Court interprets and applies the Constitution.

In doing so, its very purpose is, occasionally, to thwart the will of the majority of the people, either national or local. Without the Court our Government structure would surely collapse. This is a task of the highest order. And it is obviously one which cannot be carried out with universal agreement or wholly in an atmosphere of sweetness and light.

PRECISION AMID IMPRECISION

2. Many laymen have the view that the law is somewhat like mathematics, a precise subject, where everything follows inevitably from premise to conclusion if one only has the capacity or the character to think straight.

Of course, mathematics is not like that, in many of its aspects. And that is surely not the way with the law. There are many principles, rules, and standards in the law. Legal training involves an understanding of these. It also involves considerable experience with the way the law has grown and developed over a period of many years.

This is obtained by the study of cases, the record of past decisions of courts, and of statutes and other legal materials such as treaties, and administrative regulations, and decisions.

One of the great things about our law, derived from the English common-law tradition, is that the judges of appellate courts are expected to formulate the reasons for their decisions in writing. This is a great stimulus to careful thinking and expression, because the judge knows that his effort is going to be subject to the scrutiny of contemporary members of his profession and of history. It also provides an important means by which students learn the law and lawyers are enabled to advise their clients and other judges may guide themselves in coming to a decision.

But typically, and especially in cases that come before the Supreme Court, there is no one decision that is logically required.

Once I heard a Lord Chancellor of Great Britain say, at a meeting in Australia, that the function of the judge is to "follow loyally the decision which has already been come to."

QUESTIONS LEFT AMBIGUOUS

A judge of the high court of Australia who was sitting beside me turned and said, somewhat impatiently: "That's no help to me. The cases that come to my court are there because there is no case in point, or in many cases because there are two or more lines of decisions which are claimed to be controlling. The judge's function is to choose. He doesn't give me any help in doing that."

So it is with our Supreme Court. Very rarely is decision there a simple matter of finding and following precedent. We would not need great men for judges if that were the case.

Sometimes questions are left deliberately ambiguous by the legislator, so that the

Court is left to make the choice. Legislation is often a matter of compromise, and sometimes a compromise can be arrived at only if issues are not too sharply drawn.

For example, the basic question of whether or not the Supreme Court has power to declare an act of Congress unconstitutional is not specifically resolved in the Constitution itself. Yet it is clear that the problem was known to those at the Constitutional Convention of 1787, and must have been discussed by them.

To have attempted to make this matter specific might have wrecked the embryonic Constitution. Thus they left the question to the Supreme Court itself. When the Court decided the matter, left wholly open on the face of the Constitution, it was not legislating; it was performing the function that was assigned to it by the Constitution. Neither result was inevitable. The Court had to make a conscious choice. As Judge Learned Hand has pointed out in his recent Holmes lectures, the result was practically, though not legally, a necessary one.

The Court has similar problems to consider in many other areas under the Constitution. No State can pass any "law impairing the obligation of contracts." What is a contract for this purpose? Does it include a grant or charter? What sort of action constitutes an impairment?

Or, Congress has power to "regulate commerce with foreign nations, and among the several States." What is commerce? Is the power of Congress exclusive, or do the States have residual powers, at least until Congress has acted?

These, and many other questions like them, have occupied much of the time of the Court over a period of many years.

QUESTION OF DOUBT

Then there are the great and vague constitutional phrases like "due process of law," "privileges and immunities of citizens of the United States," and "equal protection of the laws." All of these phrases present ambiguities, questions of doubt and choice. It is the function of all courts to construe and apply these constitutional terms when they are involved in cases which come before them. But, in the nature of things, it is preeminently the functions of the Supreme Court to speak the controlling word.

And the fact that that word when spoken is not pleasing to one or more of the parties, or to a majority of the people of a State, or even to a majority of the people of the United States, is wholly irrelevant. The very purpose of a constitution is to restrict majorities, either national or local.

3. Finally, we may make reference to the problem which lies back of much of the present controversy about the Supreme Court. This is the decision first announced in 1954 through Chief Justice Warren, speaking for a unanimous Supreme Court in what are called the school-segregation cases.

Much of the criticism of the Court in connection with this decision has been on the assumption that the Court came to its conclusion out of the blue, that it willfully and suddenly made up its mind to change what had always been the law, and that it thus needlessly and unwarrantedly upset the peace of the United States.

But law is not like that; and Supreme Court Justices are not like that. They have all taken an oath to admister justice according to law, and that is an oath which they take very seriously. The Justices are confronted with many problems, in each of which there is an area of choice. But they make their choice according to law, that is, in the light of the legal materials which are available.

PROCESS OF CHANGE

One of the things that one learns about law as he studies it and works with it is that law is a process. Decisional law, in particular, grows and develops, becomes more precise, or encounters change. The judges decide each case as it comes before them, doing the best, most thoughtful, and conscientious job they can in the light of the facts and their understanding of the law applicable to that case.

As individual cases are decided, it becomes apparent that the law has changed, or is in the process of changing. When this is clear enough, an earlier decision may be expressly overruled, either on the ground that it now appears that it was mistakenly decided in the first place, or that subsequent decisions have so undermined the premises on which it was based that it can no longer stand.

This process is the essence of the common law. It involves making law in a sense, but it is not legislating. It is an essentially judicial process, an important function which courts have always carried out, and without which our legal system could not effectively function. To some extent it is a matter of trial and error.

To an even greater extent it is an illustration of the finest functioning of the human mind in the field of government, the constant searching process of striving to reach sound decisions through reason under law.

This is just what happened in the segregation cases. It is true that the Supreme Court in 1896 decided a case called *Plessy* v. *Ferguson*. This case did not involve schools but did uphold segregation in railroad trains; it gave rise to the separate but equal doctrine. A case in 1899, and one in 1925, applied this to schools.

But *Plessy* v. *Ferguson* evoked a notable dissent by the first Mr. Justice Harlan; and it sorely troubled the conscience of much of the Nation for more than 50 years. Even prior to that decision the court had held that there could not be discrimination against Negroes on juries and grand juries. And slowly, as the 20th century progressed, other cases came to be decided which marked out a pattern hardly consistent with the Plessy case.

PATTERN OF EVOLUTION

It is not posisble to go through all the cases here, but an indication may be made. In 1917, a unanimous court, including Chief Justice White, who was a Confederate veteran, held that a Kentucky city could not enforce segregation in housing through a zoning ordinance. In 1938, the court held that a State must provide a Negro a legal education within the State, and could not send him out to another State.

In later cases, in 1948 and 1950, the Court held that Negro law students could not be excluded from State university law schools. Negro students have been going to the law schools of the Universities of Texas, Oklahoma, Arkansas, Virginia, and North Carolina, among others, under these decisions for many years—and for years before the cases involving the common schools were decided.

At the same time, a number of cases in the field of voting rights were decided, and the Court held, in several cases, that Negroes could not be excluded from primaries, even when this was sought to be done by various subterfuges and artifices.

In 1948, it was decided that private restrictive covenants, by which a purchaser of land agreed not to sell to a Negro, were unenforceable.

In the early 1950's a number of cases decided that segregation in Pullman cars, in dining cars, and finally in any way on an interstate journey, was invalid.

All of this developed over a period of a good many years. Anyone who chose to look could readily see that in the normal process of development of the law *Plessy* v *Ferguson* had already been thoroughly discredited, and was clearly on the way out—as has happened to many other cases, including constitutional cases, in the history of the Supreme Court.

A TIME OF DELIBERATION

This was the situation when the school segregation cases came before the Supreme Court. The Court was aware of the problems and exerted extraordinary care and patience in coming to its conclusion.

The cases came to the Court in 1952, while Mr. Vinson was Chief Justice. They were argued extensively on December 9, 1952. Then the Court set them down for reargument, and put certain specific questions on which it asked the assistance of counsel. The cases were reargued on December 8, 1953.

It was at this point that Earl Warren had his first official contact with the problem. The Attorney General of the United States joined in a brief filed with the Court, and the Solicitor General participated in both arguments.

Finally, the cases were decided on May 17, 1954, nearly 2 years after they had been brought to the Court.

Even that was not the end of the Court's consideration. For the cases were set down for further consideration as to the decree which should be entered, and the decision on this, following the traditional equity practice of all deliberate speed, was not announced until May 31, 1955.

All this indicated great deliberation, wise administration, and well-considered judicial conduct. But in the light of the decisions of the Court as they stood when the cases got there, the result was virtually inevitable. The Constitution prescribes "equal protection of the laws."

After some preliminary hesitation, notably in *Plessy* v. *Ferguson*, the cases had come to hold with great consistency that equal protection means equal protection. These decisions left the Court in 1954 with very little area of choice. To judges committed under oath to render equal justice under law, it was evident that *Plessy* v. *Ferguson* had had a shaky foundation from the beginning, and that it had already collapsed from the effect of the many other cases which had been decided in more recent times.

REVOLUTION RECOGNIZED

All of this may seem quite far removed from Chief Justice Earl Warren, and yet it is, of course, extremely close—as he would presumably testify with some eloquence if he were free to do so.

It was the function of the Court to declare the demise of *Plessy* v. *Ferguson*, and it fell to Earl Warren as the Chief Justice to be the Court's spokesman.

The opinion he wrote was short, simple, straightforward, calm, and clear. It did not make a revolution. It recognized that one had already occurred during the past half century of American national and legal growth. The opinion received the unanimous support of all eight of the Chief Justice's colleagues.

Anyone who was Chief Justice in 1954 would have been subject to intense criticism. Earl Warren had sustained this with dignity, grace, good humor, and with a certain distinction, which, though less Jovian, is reminiscent of Chief Justice Hughes.

For Chief Justice Warren is a warm, human man. He is friendly, genial, kindly. He has devoted most of his active life to the service of his fellow men in one capacity or another, and there are millions who have benefited by his actions, though most of them do not know it.

Even on the Court, Chief Justice Warren gives freely of his time and energy to public activities relating to the law and the administration of justice. He has brought about a reorganization of the Judicial Conference of the United States, and seeks to turn over to it supervision of some of the rulemaking

functions of the Supreme Court. He has spoken at many gatherings of lawyers and others, and many of his speeches have been of real excellence, making a contribution to public thought which is much more than routine.

Justice Frankfurter has said that Chief Justice Hughes ran a taut Court, while things were much looser under Chief Justice Stone. The situation under Chief Justice Warren may be halfway between.

Chief Justice Warren is gracious and easy-going in Court, and one may assume that he is the same in the Court's conferences. He makes lawyers feel comfortable and at ease, makes them feel that they are really welcome, and that the Court is glad—indeed anxious—to listen to them. Yet he keeps things going. No one trifles with him.

Perhaps some might think that as a lawyer he is still feeling his way. Of course, a good lawyer is always feeling his way. Any lawyer or judge who is sure he knows the answers is pretty sure to be wrong.

Resolutions of Rural Electric Cooperative Leaders From Wisconsin, Iowa, and Illinois

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, on September 28, 29, and 30, 1958, some 538 rural leaders met in my home State at Madison for the annual region 5 meeting of the National Rural Electric Cooperative Association. They represented the 113 rural electric cooperatives which serve 346,763 consumer-members in Wisconsin, Iowa, and Illinois. Under leave to extend my remarks, I would like to include in the RECORD, some important resolutions on the rural electrification program which were passed at this meeting.

The resolutions follow:

RESOLUTIONS OF NATIONAL RURAL ELECTRIC COOPERATIVE LEADERS FROM WISCONSIN, IOWA, AND ILLINOIS

REA REORGANIZATION

Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

Whereas in June 1957 the Secretary did reorganize REA by requiring that all loans of $500,000 or more, and that all loans of whatever amount, to new borrowers, be reviewed by the Secretary's office; and

Whereas Secretary Benson has supported a bill in Congress which would drastically increase interest rates and drive electric and telephone cooperatives to Wall Street for their financing: Now, therefore, be it

Resolved, That we are vigorously opposed to any reorganization of REA; and be it further

Resolved, That as soon as the new Congress convenes in 1959 a bill identical or similar to the Humphrey-Price bill of 1958, which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and passed.

INTEREST RATES

Whereas a number of bills and proposals were presented to the 85th Congress to increase REA interest rates; and

Whereas the Congress, by enacting the Pace Act in 1944, and fixing the interest rate of 2 percent, therein made a covenant with the rural electric cooperatives to proceed with area coverage at reasonable retail rates; and

Whereas both REA Administrator David Hamil and Director of Agriculture Credit Services Kenneth Scott testified before a subcommittee of the Senate Committee on Government Operations this year that increased rates would have a detrimental effect on telephone loans and electric loans to systems in sparsely settled areas; and

Whereas we believe the continuance of the 2 percent interest rate is necessary to enable the rural electric systems to complete the task of providing full, efficient, and reasonably priced electric service on an area coverage basis: Now, therefore, be it

Resolved, That we urge the Congress to vigorously oppose any change or proposed change in the law, the effects of which would increase REA interest rates.

REA LOAN SOURCE

Whereas the Secretary of Agriculture last February sent to the Congress a proposed bill which provided that the cooperatives secure their financing in Wall Street—for which no legislator would act as sponsor; and

Whereas such bill would double or triple interest rates to the rural electric systems; and

Whereas such bill would virtually kill the generating and transmission program and bankrupt many distribution cooperatives; and

Whereas the Congress has always evidenced its wholehearted support of the REA program by consistently providing sufficient loan funds: Now, therefore, be it

Resolved, That we urge Congress to oppose any and all proposals which would send the rural electric systems into the private money market for their financing, and we urge Congress to continue its fine support of the rural electric program which means so much to the people of rural America and to the country as a whole.

COMPTROLLER GENERAL'S RULING

Whereas a ruling by the Comptroller General of the United States on a loan made by REA to the Central Iowa Power Cooperative of Cedar Rapids, Iowa, to service Greene County Rural Electric Cooperative of Jefferson, Iowa, imperils the entire lending program of REA; and

Whereas by this ruling the Comptroller General has usurped and attempted to nullify the declared will and intent of Congress; and

Whereas under this ruling loans amounting to millions of dollars made by REA in conformity with the Rural Electrification Act would be held illegal; and

Whereas this ruling is a complete misinterpretation of the REA Act: Now, therefore, be it

Resolved, That we approve and commend the counsel for the Iowa Cooperative, William Wisdom and L. F. Wilcox; the special counsel of NRECA, Wise and Potamkin; the Secretary of Agriculture and the Assistant General Counsel of the Department of Agriculture, E. F. Mynatt, for their fine briefs pointing out the defects of this ruling; be it further

Resolved, That the cooperatives respectfully request the Comptroller General to rescind this ruling; and be it further

Resolved, That if the Comptroller General does not rescind this ruling, the Secretary of Agriculture and the REA Administrator be requested to actively resist the ruling and Congress be requested to nullify it.

SELLOUT PROTECTION

Whereas forces opposing the rural electrification program are moving in on cooperatives in various parts of the country, i.g., the New Jersey and Arizona cases, for the expressed purpose of buying them out; and

Whereas it is evident that the power companies instituting sellouts are being directed by executives hired and maintained by their holding companies; and

Whereas electric consumers in and outside the program will pay more for electricity if these sellouts become more widspread: Now, therefore, be it

Resolved, That in keeping with the keynote set by our General Manager Clyde T. Ellis, we launch a counter-offensive; be it further

Resolved, That we urge REA to provide more aggressive assistance to cooperatives needing its help to continue their existence—such as was the case of cooperatives in New Jersey and Arizona; be it further

Resolved, That we urge our State legislatures to provide us with the machinery to function as public agencies or utility districts where such a step is necessary to preserve consumer ownership; be it further

Resolved, That we urge Congress to make all large transmission lines common carriers as a means of helping to advance the objectives of abundant, low-cost power to consumers; be it further

Resolved, That we urge Congress to protect rural electrics and all electric consumers by abolishing the electric holding companies; be it further

Resolved, That we urge Congress to investigate and expose the apparent master plan to cripple and destroy the rural electrification program; and be it further

Resolved, That we urge Congress to thoroughly investigate the sellout cases that have now occurred in order that the Rural Electrification Act may be strengthened as a means of protecting the interests of consumers and all Americans who are concerned about the contributions rural electrics are making.

ADMINISTRATION OF REA

Whereas David A. Hamil, Administrator of the Rural Electrification Administration, has for 2 years administered the rural electrification program in an excellent manner and has gained the admiration and respect of the cooperatives throughout America; and

Whereas Mr. Hamil has carried out the duties and responsibilities of his office in the face of great difficulties; and

Whereas the rural electric cooperatives undertook the electrification of rural areas including the byways and backroads on an area-coverage basis upon the congressional assurance that adequate loan funds would be available at 2 percent interest under the Pace Act; and

Whereas the Secretary of Agriculture, the Director of the Bureau of the Budget, the Comptroller General, President Eisenhower, and others, are advocating changes in the Rural Electrification Act which would increase the interest rate and send us to the Wall Street money market for at least a substantial portion of our funds; and

Whereas such changes would make it impossible to serve the remaining unserved rural people and would curtail the expansion of service to our present consumers; and

Whereas Secretary of Agriculture Benson in a letter dated August 28, 1958, to NRECA President John George, pledged that the Department of Agriculture would not try "to pressure any REA borrower into any course of action": Now, therefore, be it

Resolved, That we heartily commend the Administrator of the Rural Electrification

Administration for the manner in which he has technically administered the program; and, be it further

Resolved, That we protest the actions of the Secretary of Agriculture, the Director of the Bureau of the Budget, the Comptroller General, and the President of the United States in using the power and prestige of their respective offices to advance changes that would be detrimental to the rural electrification program.

THE TRIMBLE BILL

Whereas the divergent methods of allocating costs to power being applied by the various bureaus and agencies will render the future construction of many multiple purpose projects economically impossible and will affect adversely the orderly development of our national water resources; and

Whereas the Trimble bill introduced in the 85th Congress set forth an equitable formula by which cost allocations should be determined, and would fix the responsibility for making the determination in the Congress: Now, therefore, be it

Resolved, That we urge the introduction and early passage in the 86th Congress of a bill identical or substantially similar to the Trimble bill.

TVA SELF-FINANCING BILL

Whereas the Tennessee Valley Authority after 25 years of exemplary service to its region and Nation is the sole supplier of power at wholesale to 50 cooperatives whose yardstick resale rates influence power rates throughout the country; and

Whereas without the prompt construction of additional generating capacity TVA will lack sufficient power to meet the needs of its distributors by 1960, or 1961 at the latest; and

Whereas in addition to the normal and steadily increasing demand for power in its area TVA also is called upon to deliver vast blocks of power, amounting to over half its production, to national defense installations in which all of us as citizens are interested; and

Whereas in the past 5 years TVA has received no appropriations for starting additional generating stations, and construction capital from this source is not in sight; and

Whereas a plan approved by the TVA Board for financing new capacity by revenue bonds to be sold in the open market has been before Congress and will be renewed before Congress at the opening of the next session; and

Whereas we believe this plan is the best proposition ever made by a region to the Nation and would in effect wither the widely cultivated claim that TVA power is subsidized: Now, therefore, be it

Resolved, That, recognizing the supply crisis with which TVA is faced, we urge upon Congress, and upon our several Representatives individually, passage without delay early in the 86th Congress of TVA self-financing legislation on the order of the Kerr bill previously approved by the Senate and of the Davis-Jones bill favorably reported at the past session by the Public Works Committee of the House, the welfare of the 50 cooperatives that distribute TVA power and of the Nation as a whole requiring it.

PREFERENCE CLAUSE

Whereas for more than 50 years the preference clause in Federal power laws, giving preference to nonprofit public and rural electric systems, has been an important influence in insuring the continuation of a healthy competition in the electric industry; and

Whereas over four hundred of the rural electric systems are dependent either directly or indirectly upon Federal power projects for their power supply; and

Whereas constant attempts are being made to weaken the preference clause by such devices as the Case amendment and the Niagara limitations enacted in the 85th Congress: Now, therefore, be it

Resolved, That we urge Congress to reaffirm its support for the preference rights of nonprofit, consumer-owned electric systems and to oppose any repeal, watering down or evasion of the preference clause; and be it further

Resolved, That we strongly urge Congress to enact legislation to remove the effects of the Case amendment to the Rivers, Harbors, and Flood Control Authorization Act of 1958.

ATOMIC ENERGY PROGRAM

Whereas the rural electric systems have urged that the Congress provide for acceleration of the atomic energy program; and

Whereas the rural electric systems have also urged that the Congress provide the opportunity for adequate participation by rural electric and other nonprofit electric systems; and

Whereas the atomic energy program belongs to all of the people and should be protected from monopolistic abuse: Now, therefore, be it

Resolved, That we urge the 86th Congress to provide an atomic energy power program that will be for the benefit of all of the people and in particular will provide for Federal construction of atomic power generating plants as proposed in the Gore bill of the 85th Congress, with preference in the sale of any power therefrom being accorded to cooperatives, municipalities, and other nonprofit, consumer-owned agencies.

GENERATION AND TRANSMISSION LOANS

Whereas the demands for increased power supply for the rural electric systems pose a continuing problem for the rural electric systems; and

Whereas the cost of power to the systems has always been favorably influenced by our right and opportunity to generate and transmit our own power where this would result in lower costs: Now, therefore, be it

Resolved, That we commend the REA Administrator upon his making of the recent Mississippi and Texas generation and transmission loan and we urge him to continue to lend funds for generation and transmission when such loans are feasible; and be it further

Resolved, That the REA Administrator be urged to finance interconnections where mutually advantageous, but we oppose any return to the policy requiring the partnership arrangement with the private power companies; and be it further

Resolved, That Congress be urged to continue to provide adequate funds for this purpose.

NATIONAL TAX EQUALITY ASSOCIATION

Whereas the electric cooperatives object strenuously to the gross misrepresentations and unfair propaganda of the National Tax Equality Association; and

Whereas the NRECA board of directors has recently voted to support the suit of National Milk Producers Federation to recover damages from the NTEA: Now, therefore, be it

Resolved, That we give our wholehearted support of the action of the NRECA board in this matter.

RURAL TELEPHONE PROGRAM

Whereas participation by cooperative organizations in the rural telephone program is at a standstill; and

Whereas the loss of this competitive element in the program can only be detrimental to the whole program: Now, therefore, be it

Resolved, That we urge REA to actively promote the formation and growth of rural telephone cooperatives consistent with both the language and the spirit contained in the Senate Appropriations Committee report recommending appropriations for fiscal 1959; and be it further

Resolved, That we endorse the National Telephone Cooperative Association and encourage all telephone cooperatives to join this organization for their mutual benefit.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1959

Mr. YARBOROUGH. Mr. President, the islands of Hawaii were an independent monarchy in 1854 when they first requested status as a State in our Nation. In 1900, when Hawaii became a Territory, it was with the promise that statehood would eventually follow.

To help the United States keep this promise, and principally because I believe the admission of Hawaii as our 50th State would benefit both Hawaii and the entire Nation, I have coauthored a bill providing for Hawaiian statehood.

These islands have been training for statehood since 1900. They have had a constitutional government for more than 60 years, and more than 87 percent of the electorate—far above the national average—voted in the recent elections. Hawaiians pay more in per capita taxes than the national average, and the per capita income in the islands is ahead of that of 23 present States. The Territory contains 6,423 square miles of land, which would make it larger than three present States, and a population of 575,771, which is larger than the present population in each of 5 States.

The House of Representatives has voted three times to admit Hawaii, but the proposal has not been passed by the Senate. I believe the Hawaiian statehood bill should be seriously considered and passed by the 86th Congress. Mr. President, to support this belief, I request unanimous consent to have printed in the Appendix of the RECORD an article by Sid Ross and Ed Kiester, which appeared in Parade magazine for January 11, 1959, under the heading "Hawaii Wants Statehood Now."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAWAII WANTS STATEHOOD NOW

(By Sid Ross and Ed Kiester)

HONOLULU, T. H.—Film Actress Dorothy Lamour turned up here last month. Newspapermen asked routinely about sarongs and Hollywood, but what they really wanted to know was more important: how did she feel about Hawaiian statehood?

Miss Lamour, not one to disappoint an audience announced she would send statehood plugs to every Congressman and to 700 personal friends. She will also, she said, make tape-recorded interviews on statehood for NBC-Radio.

Hawaiians could not have been more gratified. From Waikiki to Mauna Loa, the Territory is off on one of the great courtships of history. Plans for mustering support for statehood from other visitors include a sampling of visitor opinion and a "straw vote" set up at Waikiki hotels.

The question of statehood is on every tongue, in every newspaper. Last year, the half-million Americans here watched, astonished and perplexed, as Alaska became the 49th State. Their emotions were those of the bridesmaid: happiness at a friend's good fortune, frustration at their own smashed

hopes, determination never again to let love pass them by.

Hawaii wants statehood now. And this month, with Congress back in session, the campaign to win friends and influence votes begins in earnest. Here are highlights of that campaign:

A battery of guest speakers will fan out to mainland luncheon clubs, chambers of commerce, fraternal groups.

The Honolulu Junior Chamber of Commerce is trying for the support of 3,600 mainland "Jaycee" chapters.

Many pieces of mail leaving the Islands will be postmarked with a plug for statehood.

A new film on Hawaii and its history is being prepared for civic groups and women's clubs.

Students are planning "pen-pal" campaigns to line up young people's support on the mainland.

A hometown newspaper service will furnish free photos of visitors, with their views on statehood.

Wide circulation will be given endorsements of statehood by President Eisenhower, former President Truman, Vice President Nixon, Gen. Douglas MacArthur, the State Department, the Defense Department, the AFL-CIO, and Dorothy Lamour.

The aim of the campaign is to whip up mainland support and thus bring indirect pressure on Congress. (A recent Gallup poll showed mainlanders eight to one for statehood.) But the real showdown, as Lorrin P. Thurston, chairman of the Hawaiian Statehood Commission, points out, will come on Capitol Hill.

"Our problem," says Thurston, "is to get Hawaiian statehood before both Houses of Congress in the same session. This has never happened in the past. We feel that if a Hawaiian statehood bill is presented on the floors of both Houses, the vote will favor us."

In 1947, in 1950, and in 1953, statehood passed the House, but died in Senate committee. Thus, perhaps the most important bit of persuasion on the Hawaiian program is to coax Senate Majority Leader LYNDON JOHNSON to allow the bill to reach the Senate floor.

Some Hawaiians fear all the drum beating may antagonize, instead of winning over, congressional support. (Last summer, Alaska's admission touched off a 3 week's high-pressure campaign for a vote on Hawaii; one influential Senator reportedly complained, "This pressure has got to ease up.") But others say this is Hawaii's make-or-break year.

Hawaii, then an independent monarchy, made its first try for statehood back in 1854; became a Territory in 1900 with the promise of eventual statehood; and for 20-odd years has made statehood the big issue. "You can't keep people at fever heat forever," says one observer here.

And Hawaii is at fever heat. Of more than 200 persons interviewed, three-fourths favored statehood; 20 were opposed, and the rest had no opinion.

Says Thurston: "Who is for statehood? Over 80 percent of our sugar and pineapple executives, all our public utilities, all our transportation companies, the majority of bankers and small businessmen, all our newspapers, radio and television stations, both national political parties and the great bulk of the Hawaiian people."

Why do Hawaiians want statehood? The benefits, Hawaiians say, would run in both directions. And there's the matter of simple justice. Additionally, you hear these six reasons again and again:

Second-class citizenship: Administered from Washington, Hawaii is at the mercy of Washington, cannot completely control its own affairs.

Taxation without representation: Hawaiians now pay Federal income tax but have no vote in House or Senate on how tax money is spent; they cannot vote for President, Vice President, or even their own Governor and judges.

The cold war: Statehood for Hawaii would have a tremendous propaganda value, particularly among the former colonial nations of Asia, proving that the United States does not hold Hawaii as a colonial possession.

Foreign affairs: The Pacific is becoming increasingly important in global politics, and Hawaii is Uncle Sam's most important Pacific outpost.

War record: Hawaiian units have run up an enviable record of bravery in World War II and in Korea. World War II's most-decorated outfit, the Japanese-American 442d regimental combat team, was recruited in Hawaii from volunteers.

Island development: Statehood should attract new industry to the islands, lead to development of resources such as bauxite.

In 24 separate investigations by congressional committees, these arguments have been duly weighed. (One recent committee report called statehood "of highest importance" to the United States.) But Hawaii has lost out on other grounds.

Alaska's admission shattered two objections to Hawaii—that it was "too far away" and that its admission would upset the political alinement in Congress. More damaging to Hawaii's case, however, is the claim that the islands are menaced by communism.

Sea-locked Hawaii depends on shipping, and the labor on docks—and the plantations, too—is controlled by the International Longshoremen's and Warehousemen's Union. This powerful union repeatedly has been accused of a Red taint. Its local leader, Jack Hall, was convicted, then freed, under the Smith Act; its international leader, Harry Bridges, has been a Government target for years.

Hawaiian officials, from the Republican Governor down, claim the Red threat has been overblown. ("At most," said one official, "there are 35 Communists in Hawaii—shorn of all influence.")

Less discussed, but another important objection, is Hawaii's melting pot. By one count the islands have 184,732 residents of Japanese descent; 90,079 of Polynesian-Hawaiian or part-Hawaiian; 81,911 of various Caucasian; 61,040 of Filipino ancestry; 30,566 of Chinese; 10,351 of Puerto Rican and 7,624 Korean.

Recently, an editorial in the Charleston, S.C., News and Courier asked: "These islanders may be very friendly and polite people. But how many of them know or care about the political faith of Jefferson, respect States rights, or appreciate the struggle for liberty? We suspect there are very few to understand and believe in the kind of government our forefathers created." Another newspaper was more blunt: "Do we Americans want to put a couple of Japs in the Senate?"

This argument raises hackles all over the islands. Says Gov. William F. Quinn: "They're all good Americans and have proved it in peace and war."

There still is, however, a small undercurrent of opposition to statehood. Some native Hawaiians feel statehood will mean the Japanese will take over. Another group, led by former Governor, now Hawaii Supreme Court Justice, Ingram Stainback, favors a Commonwealth system, such as Puerto Rico has. Under Commonwealth, Justice Stainback says, Federal income tax would be eliminated and thus industry might be attracted.

A small fringe group also wants to keep Hawaii as it is, an incorporated Territory. Rumors claim this group is backed by big business—"then they can run the islands as a closed corporation." The statehood commission, which includes big business members, denies that the status quo has more than a small fraction of business support. And finally, a few descendants of the original Hawaiians like the status quo because they fear losing homesteading privileges.

But these are views of only a small minority. As Parade's poll shows—and as virtually every other poll shows, too—the vast majority of Hawaiians want statehood. They want it badly—and want it now.

Riley Allen, editor of the Honolulu Star-Bulletin, summed up the "No. 50 in 1959" this way recently: "If Hawaii is not ready for statehood now, after many years of Territorial, city and county government on American lines, after writing an outstanding war record in the blood of its young men, after proving its willingness and ability to combat communism, after demonstrating its industry potentials, if it is not ready for statehood now, it never will be."

You'll be hearing a lot about statehood for Hawaii in the next few months. A half-million Americans here are working constantly to see that you do.

Growth of the Federal Government

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1959

Mr. THURMOND. Mr. President, each year our Federal Government grows bigger, and with this bigness freedom of the individual diminishes almost proportionately.

How ironic all this is, for it was a not-so-centralized U.S. Government which led the people to victory in World War I and World War II over regimented dictatorships, and it was largely because of individual initiative and nonregimentation that the United States achieved the world's highest standard of living.

Recently the editors of two nondaily newspapers in Camden, S.C., expressed their concern about the unfortunate trend in the United States away from a decentralized government and away from the theory of individual freedom. They do not paint a pretty picture with their words; yet, their editorials deserve the attention of all thinking men. I ask unanimous consent that both of these editorials—the first, which appeared in the January 7 edition of the Camden News, entitled "A Great Nation Dying," and the second, which appeared in the January 7 edition of the Camden Chronicle, entitled "The Question Mark"—be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Camden News, Jan. 7, 1959]

A GREAT NATION DYING

"It's heartbreaking to see a great nation dying when you know that it could have been saved."

That statement was made to the editor of the Camden News just last week by a man of national prominence, who has a thorough grasp of the situation which exists in this country today.

He had no sooner made the remark than he checked himself and asked that, because of his farflung connections, his name not be used if we quoted him.

But there was no mistaking his feelings. He spoke in solemn tone and the quiver in his voice indicated that he meant what he said and that he felt it very deeply.

He said that this was the saddest New Year in his life. He felt that progress had been made last year by those seeking to destroy a free America and make it a regimented State, and that they will make even greater headway in the year which lies ahead.

He listed as some of the reasons for feeling so hopeless:

Some of the forces which have been fighting to save the Nation have become confused and demoralized. The opposition has succeeded in dividing them on minor issues.

Political ties hold them to their parties. They lack the moral courage to make the breakaway and to form a new alliance which could save the day. He blames the politicians for this and says they are clinging desperately to their jobs and fear that any breakaway might possibly endanger their positions. If the country is going to go down, they figure they will at least hold their jobs until this happens.

Businessmen will not get out and fight because of the fear that they might lose a few dollars if they do. They don't seem to realize that in the end they may lose everything if they don't get out and fight now.

The vast majority of the people are either unaware of the dangers confronting the Nation or are unconcerned about them. If you try to point out the dangers to some of them, they shrug their shoulders, say you are an alarmist, that "things are not that bad" and then run off to chase another dollar or to go to a cocktail party. Some may sense the danger but want to leave it to others to do the fighting—and the worrying. They don't want to get mixed up in it.

The other side is united, is working day and night with a crusading spirit, individuals are giving most liberally of their time and means, taking advantage of every opportunity to confuse and divide us and are running rings around us in putting out propaganda.

And so the leak in the dam gets bigger and bigger and unless something happens quickly to awaken the masses from their lethargy and to unite those of us, who want to save this as a free America, into a band of steel, it is but a question of time until the dam breaks. Let us hope and pray that this something may happen before it is everlastingly too late.

We have often quoted the remarks made by Daniel Webster on an historic occasion and we are going to quote them again in the hope that his words may burn their way into the hearts of some who are so indifferent now:

"Other misfortunes may be borne or their effects overcome. If disastrous war should sweep our commerce from the ocean, another generation may renew it; if it exhausts our treasury, future industry may replenish it; if it desolates and lays waste our fields, still, under a new cultivation they will grow green again and ripen to future harvests.

"It were but a trifle even if the walls of yonder Capitol were to crumble, if its lofty pillars should fall, and its gorgeous decorations be all covered by the dust of the valley. All these may be rebuilt.

"But who shall reconstruct the fabric of demolished government?

"Who shall rear again the well-proportioned columns of constitutional liberty?

"Who shall frame together the skillful architecture which unites national sovereignty with States rights, individual security, and public prosperity?

"No, if these columns fall they will not be raised again. Like the Coliseum and the Parthenon, they will be designed to a mournful and melancholy immortality. Bitter tears, however, will flow over them than were shed over the monuments of Roman or Grecian art; for they will be the monuments of a more glorious edifice than Greece or Rome ever saw, the edifice of constitutional liberty."

[From the Camden Chronicle, Jan. 7, 1959]

THE QUESTION MARK

Just about everything in this country has been getting bigger.

This trend, the economists confidently tell us with hardly a dissenting voice, is not only sure to continue but to accelerate. They blueprint a future of ever-increasing incomes, ever-improving living standards, the mass enjoyment of luxuries which would have been beyond the imagination of man not long ago.

We are on the verge of explosive breakthroughs in physical sciences. The age-old mysteries of space are being fathomed, and soon will be mysteries no more. The miracles of nuclear physics are at hand. Longer, healthier, happier lives for all are promised. And we are not alone. All over the world, peoples and nations are swept along, to varying degrees, in the same tide.

This is fine. Almost everyone wants more money, more of the things that money can buy, more of what we know by the word "progress."

Yet a nagging question arises, the biggest unanswered question that confronts the changing world. While just about everything is getting bigger, is the greatest resource of all getting smaller? That resource is the individual. Not just people in the mass, but individual people—each different, each unique, each a spirit as well as an appetite. Is the individual in very real danger of being dwarfed by the bigness around him, and of being reduced to a statistic?

It's easy enough to say that it can't happen here, even though we have all seen it happen in vast reaches of the earth. Easy enough, but untrue. This Nation was founded on certain concepts: the fullest freedom for all, an unflagging sense of the spiritual nature of man, a passionate regard for the worth of every individual human being. But these, like all other concepts and philosophies, will wither away to nothingness unless they are eternally prized beyond all else and faithfully protected. They must be supported in absolutely specific ways. They demand the highest degree of individual independence and responsibility. If, for instance, we give to government the initiative and the power to regulate and dominate our lives in the name of security, the ultimate end will be the security of the penitentiary. Power once granted to government must always be balanced against a greater power in the hands of the people.

We pride ourselves on our material achievements. But pride can result in a deadly blindness. Other nations, whose concepts are utterly opposed to ours, are producing their own wonders. Communist Russia and Communist China are, so to speak, moving mountains. The whip and the chain, used with dedicated ruthlessness, can also get out the goods, while the soul of man dies.

It took centuries of turmoil, war and revolution to establish the rights of man, the rights of the individual. They can be lost overnight by sins of omission no less than sins of commission. A people whose eyes and minds are fixed on material ends alone will not long remain a free people. They will become merely instruments of power.

There is no foreseeable limit to what we, through our economic, social and political organizations can achieve. It will be the ultimate irony if, in the light of this, we surrender the individual to material bigness, whether in government or anywhere else. We never had a more urgent need to uphold age-old principles and convictions that make for the only worthwhile kind of progress—confidence in something, faith in ideals, fairness, the determination to defend what one believes to be right.

Walt Whitman wrote, a century ago: "The whole theory of the universe is directed unerringly to one single individual; namely, to you." Man in the mass must never hide the face of the individual man.

Science and Freedom: The Continuing Challenge

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, January 14, 1959

Mr. JACKSON. Mr. President, at the November 1958 Conference of NATO Parliamentarians in Paris, important recommendations were unanimously agreed upon to further improve the State of science in the NATO Community.

These recommendations are embodied in the report of the Scientific and Technical Committee entitled "Science and Freedom: The Continuing Challenge."

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address which I delivered as Chairman of the NATO Scientific and Technical Committee in presenting the report to the Conference on November 17, 1958, together with the text of the report itself.

There being no objection, the address and report were ordered to be printed in the RECORD as follows:

ADDRESS BY SENATOR HENRY M. JACKSON, PRESENTING THE REPORT OF THE SCIENTIFIC AND TECHNICAL COMMITTEE TO THE NATO PARLIAMENTARIANS' CONFERENCE ON NOVEMBER 17, 1958

Only one out of every seven people in the world is a member of our North Atlantic Community. We occupy only a small fraction of the lands of the earth. Our Community's soils are not uniquely fertile. Our mineral wealth is not uniquely great. Yet our Community, small in size and numbers, has created the civilization which has dominated world history for the past thousand years.

All other societies and cultures of the past have been parochial. Their imprint has fallen on only one race, one religious group, or one limited geographical area. But the influence of the Old World Community has spread to every continent. We in North America are actively aware of this influence in our progress.

All civilizations of the past have grown and flowered, and then withered. But our own Community has so far escaped dissolution and decay.

There is only one common denominator to societies which have perished—their failure to adapt to change. The root cause of dissolution is never found in material things; it is found in matters of the mind. Nations or communities which meet new problems with new solutions and new ideas endure. Those which do not go under.

Think back to 13th-century China. The China of Marco Polo was more prosperous than the Europe of Chaucer. It had a magnificent educational system, which produced superb scholars and civil servants. But that system was based on the notion of an unchanging and already perfectly ordered society. It found its perfect expression in the Great Wall of China.

Yet the Great Wall could not keep out the ideas of the scientific and industrial revolution. Unable to resist Western technology, unwilling to adapt to it, the China of old slowly disintegrated.

In the meanwhile, our Atlantic world was eagerly embracing the revolutionary ideas of the new science. It was translating the ideas into machines which let 1 man do the work of 10. It was exporting science and technology to every corner of the earth. Science and the Atlantic world became almost synonymous.

More than any other single factor, it is the scientific leadership of our community which has created our world political and economic leadership. Through science, we have attained the world's highest standard of life. Through it also, we have built armaments which have canceled out our weakness in numbers.

But today, the very science which has made our community prosperous and strong threatens us mortally.

Once, because of our head start, our Atlantic world possessed a near monopoly of science and technology. While we did, our world leadership was almost guaranteed. But our monopoly of scientific and technical knowledge is over.

The two overriding challenges of our time are the tremendous growth of science and technology in the Soviet Union and the determination of the economically underdeveloped areas to raise their standards of life. We must find new solutions for these new problems.

The Soviets are resolved to surpass us scientifically, because in so doing they could surpass us industrially and politically as well. The Soviet Union continues to graduate scientists and engineers at a rate twice our own. It continues to raise its industrial output twice as fast as ours. It continues to close the gap in advanced weapons systems. Make no mistake: we are locked in a stern competition.

The peoples of Asia and Africa are spectators to this contest. They are determined to secure, as quickly as possible, the fruits of science—industrial progress, lightened burdens, and richer lives. They are told by Moscow that their only chance to industrialize quickly lies in following the Soviet example. Moscow is consciously and deliberately wooing the uncommitted peoples with trade and aid—ready to snap the trap shut when the time comes.

Since long before sputnik, wise men have warned that science and technology in our Atlantic world are moving forward too slowly to keep pace with the challenges of our time. The danger is present and clear, and our problem is three-fold. We are not graduating enough scientists and engineers. We are not producing enough uniquely gifted talents—the great scientific pathbreakers. And we are wasting precious talent by not employing it efficiently. As a result, it hangs in the balance whether we can continue our dynamic economic growth, meet the Soviet challenge, and convince Asia and Africa through help and example that economic progress is in harmony with freedom.

In 1956, almost a full year before the first sputnik, this conference acted. We established a special Committee on Scientific and Technical Personnel; it was my honor to be appointed chairman.

The committee was asked to report to the third annual conference on ways and means of improving the state of science within our community.

When our conference met in Paris last November, the committee made specific recommendations for positive action by the member governments and the North Atlantic Treaty Organization itself. The committee report was adopted by the third conference, and forwarded to the North Atlantic Council, the member governments, and other interested bodies including the OEEC.

A year has pased since we made our report. This has been a period of solid accomplishment. New drive has been given to our scientific effort. We are now on the right road, and traveling in the right direction.

One year ago, the general public scarcely knew there was a scientific manpower problem. Today, our citizens, acting through the civic and community organizations, are helping solve it.

A year ago, the member states were just beginning to grapple with the problem. Today, for the most part, they have programs of remedial action well underway.

A year ago, consideration of the problem within NATO was still in the study stage. Today, NATO possesses new and unprecedented regional machinery in this field. A full-time science adviser and a Science Advisory Committee are now hard at work, helping the NATO Council.

Finally, these past 12 months have seen heartening progress in translating key recommendations of last year's Parliamentary Conference into effective action.

The report now before you gives the details of what has been done concerning these recommendations; permit me to summarize the highlights of the story.

Last year's conference recommended that NATO sponsor and finance a talent development program which would produce annually at least 500 researchers with advanced training in fields of maximum importance for the defense and welfare of our Community. The NATO Council has approved a NATO science fellowship program, based on the recommendation of our Conference.

Last year's conference recommended an immediate increase in the number and the variety of advanced summer study institutes within the NATO Community. The NATO Council has just approved a program for partial financial suport of advanced study institutes.

Last year, we recommended that NATO sponsor and finance additional important cooperative training and research projects, which particularly lend themselves to international action. The NATO Science Committee is now actively considering new cooperative projects which might merit NATO support.

Last year we recommended that a NATO Defense Missile Training Center be established. Reinforced by this recommendation, AGARD, in cooperation with SHAPE, has conducted a study of available training range areas and initial steps have been taken to budget funds.

Last year's conference proposed an Atlantic Institute for Defense Studies to conduct operations research on a NATO-wide basis. Since then AGARD and SHAPE have sponsored operations research conferences. We hope these will help point the way to a permanent and broad defense studies institute.

Mr. President, every member of this conference should feel proud that so many of our recommendations have been favorably acted upon, by the NATO Council and by the member governments.

The task now is to build on the solid foundation already laid—to speed up and broaden corrective programs already started, and to find new areas for useful action.

Ever since last year, my colleagues on the Scientific and Technical Committee have continued to give close attention to this problem.

Our recommendations for further action are contained in the committee's report at your desk. This report reflects discussions and correspondence with officials of NATO, SHAPE, and the OEEC. It reflects the valuable counsel of the executive agencies of our countries and of distinguished private citizens, including many of the greatest scientists in the world.

Above all, it reflects a great deal of hard work on the part of my committee colleagues.

Let me summarize our new recommendations:

First, we recommend that the NATO Council look forward to increasing the Science Fellowship program. We believe this program is full of promise, and we are thankful it is underway. Considering the scope of the challenge, however, we think the present plan is too modest.

If the NATO fellowships discover one new giant in the scientific field, or if they give us one new revolutionary scientific idea, they will more than pay their way. We believe a reasonable annual budget would be $8 million, when the program is in full operation.

Second, we recommend that the NATO Science Committee place high on its agenda the formulation of a basic long-range policy to guide NATO research and development efforts.

As NATO gets further into the business of scientific cooperation, we must be sure our resources are not dissipated in too many directions. To achieve decisive results, we need to focus on a few urgent objectives.

The logical group to define these objectives is the NATO Science Committee.

Third, we recommend that, in launching projects for cooperative research, the NATO Council give particular attention to joint programs in three fields: materials research, oceanography and upper atmosphere and space.

In the materials field, our knowledge has been strained to the limit by recent technological advances. Unless we can achieve early breakthroughs in basic and applied metallurgy, vital peacetime and military projects will be stalled. Much excellent work on materials problems is now underway in Europe and America, but we need a joint program to make the best use of available talent.

In oceanography, the research demands far exceed the skills now available in any one or two of the NATO nations. Despite the fact that the Atlantic Community is essentially a maritime confederation, our understanding of the ocean is still primitive. For example, we have roughly accurate maps for only about two percent of the deep-sea floor. The advent of nuclear-missile firing submarines and the prospect of nuclear commercial transport underline the need for a bold program of oceanographic research—capitalizing on the most expert talent our Community can provide.

Mr. President, almost five centuries ago, the great voyagers of discovery of the Old World found and explored the New World of the Americas. But the greatest voyages of discovery are yet to come. They lie in the upper atmosphere and outer space.

Your old world, Mr. President, and my new world should now join forces for this greatest adventure of all. We should now explore the world of space together.

Specifically, my colleagues and I recommend that the members of the North Atlantic Treaty Organization now undertake a program of peaceful scientific and technical cooperation in upper atmosphere and outer space research, development, and exploration.

The first goal: A satellite for peaceful outer space research, bearing the emblem of the

Atlantic Community and circling the earth by 1960.

The scientific problems involved in space technology are enormously difficult and enormously expensive. Only a few members of our Community have been able to afford the great outlays of money and manpower needed to develop and build launcing vehicles for satellites.

Yet this is only one part of the total space research problem. The total problem cuts across every scientific discipline. It involves theoretical and applied mathematics, physics, meteorology, chemistry, geology, geophysics, biology, and medicine.

Scientists from every one of our countries possess skills which are urgently needed in space research. Some of the smaller members of our Community, in fact, now lead the world in specialized research areas of crucial importance.

But our problem today is this: We have embarked upon independent and uncoordinated national programs for developing space technology. There is overlapping and duplication of effort. Precious scientific talent is thereby being wasted.

The obviously desirable solution is to establish a mechanism for pooling the talents of all our 15 nations. We already have a foundation for such a joint effort—Prof. Theodore von Karman's Advisory Group for Aeronautical Research and Development. We are already cooperating in aeronautics; a logical next step is to cooperate in astronautics.

The way to start may be by inviting scientists from our entire Community to meet at an early date for the purpose of drafting a cooperative research effort.

As its first goal, this cooperative program might aim at designing an advanced peaceful research satellite which combines the best ideas of our entire scientific Community. This satellite could be sent into space with a launching vehicle supplied by a nation possessing a major missile program. I am informed that it is technically possible to design and launch such a satellite by 1960.

We are now partners on land. We are partners on the sea. We are partners in the air. It is time that we now become partners in outer space.

Mr. President, I sincerely believe that these recommendations are constructive and timely. I trust they will provoke a lively discussion from the floor today.

I cannot close these remarks without sounding a note of warning.

It took sputnik to shock us into taking a fresh look at the state of science in our Community. But we cannot count on being alerted so well again. Our problem now is to stay on the job—day in and day out—even when we do not have providential warnings like sputnik to arouse us. We must not again commit the error of thinking that our community can remain preeminent in the affairs of men without remaining preeminent in science and technology.

But in avoiding that mistake, we must not err in the opposite direction.

In every generation, there is a passionate minority which thinks it has found a magic solution for the great problems of its time. Think back to Hiram Maxim, the inventor of the machinegun, who said, "It will make war impossible." Think of our libraries, filled with thousands of dusty and now-forgotten treatises, each of which had marvelous formulas for permanent prosperity, and perfect and final harmony among all men.

Suppose our Community remains preeminent in science and technology, suppose we win all the races for discovery for advanced weapons? We can still fail in our quest for security. We may successfully bar the front door, yet if we leave the back door open our adversary can enter by that route.

As Khrushchev puts it: "We do not need war. Peaceful competition is enough * * * we will bury you."

Today the Soviets challenge us across the boards, not only in science and industry, and in military strength, but in culture, languages, standard of living, trade, politics, and diplomacy.

The Science and Technical Committee of this Conference has tackled the immediate and urgent work of improving the scientific skills in our North Atlantic world. But this is only part one of the task confronting our Community. Indeed, in may ways it is the easier part of our job. A second part, and a far more difficult one, is the improvement of our skills in dealing with the most unscientific thing in the world; namely, people.

Take the problem of the underdeveloped nations which are now moving toward self rule and trying to raise their standards of life to western levels.

Our Community is well equipped to offer these regions the scientific tools they need to bring closer their dream of a decent standard of life. It is far less well equipped to convince these areas that their cause and our cause are in harmony, that their cause and our cause are both part of one larger common cause, dignity and justice for all men everywhere.

It is right and imperative to invigorate the study and pursuit of science and technology within our Atlantic Community. Yet all our cyclotrons, all our atomic reactors, all our wondrous space missiles, all our Nobel prize winners in science will avail us naught unless, at the same time, we invigorate also those skills and vocations which determine how the fruits of science will be used.

We cannot halt the onward sweep of science and technology. New and yet more momentous discoveries altering the face of our world continue to be made at an ever-accelerting rate. Any attempt to stop or slow the clock of science would be wrong, self-defeating, and hopeless.

There is only one solution which realistic men can entertain: To develop skills and wisdom in the social sciences and the humanities which equal the skills and wisdom of our scientists.

If our age is to become a blessing and not a curse we shall need prodigious talent in philosophy, in sociology, in political science, in law, in languages, and in economics. None of these disciplines can safely be left on the sidelines.

Let me cite an example:

Language—the words and phrases of everyday intercourse—has assumed immense symbolic significance in Asia and Africa. There is a great revival of native tongues, they are becoming the language of politics and of commerce.

Yet we are not assuring ourselves even the minimum language skills in working with the emerging nations. There are over 40 important languages of Asia alone for which even our teaching tools are sketchy or nonexistent.

By contrast, Russian universities have ambitious programs in the Asian languages, including Manchurian, Uigur, Telegu, and the Burmese, Vietnamese, Malayan, and Indonesian languages. Some of the Russian grade schools now even instruct 8- and 9-year-olds in Chinese, Hindi, Arabic, Parsi, and Urdu.

One can almost foretell what countries are next on the Soviet calendar of conquest—from their language curriculum.

Meanwhile, our Atlantic Community lumbers along emphasizing the colonial languages, English, French, German, and Dutch.

How unimaginative can we be to try to build a community of interest with the former colonial peoples while our peoples speak mainly the language of the former governing nations.

Or, take one other example; economics. Moscow has declared war on us on the economic front, and the opening battle has begun. Soviet production is sufficient to support a huge arms budget, to meet the minimum demands of the civilian economy and to start major maneuvers in the markets of the world.

The Soviets doubtless desire to defeat our Community without war, if they can. They would prefer to inherit the world, rather than destroy it.

In Khrushchev's own words: "We will make war on you through peaceful trade to see which system is the best."

The Soviets can sell at a loss and buy at a premium when it suits their political purposes—concentrating their fire on the vulnerable economies in the Middle East, southern Asia, and Latin America.

Moscow has already upset world markets for timber, tin, and aluminum—by cut-rate sales. It aims to set ally against ally, friend against friend—its motto: "Divide and disrupt."

Despite the clear danger signals, our Community has barely begun to drag itself into action. Yet there is every prospect that Moscow's capacity for economic warfare will grow steadily in the future.

Obviously, the Soviets have the easier task. They accept no responsibility for making the present world economic system function smoothly and fairly.

How unwise can we be to continue discounting Russia's economic offensive, when it could prove more dangerous than its armaments build-up?

It is true that Europe is making good progress toward a freer trading area. However, in the wider Atlantic framework, article 2 of our treaty is practically forgotten.

The Atlantic Community should (1) affirm that an economic assault upon one of us, is an economic assault upon all of us; (2) rally our creative talents in economics and political science and put them to work on a joint economic strategy; and (3) use NATO-wide arrangements for economic consultations and economic diplomacy.

In conclusion, let me say:

Our conference should continue its energetic efforts to improve the scientific skills of our Community. In addition, this conference should now launch part 2 of its talent program. We should single out high priority needs in the humanities and the social sciences, such as Asian and African languages, and we should come forward with suggestions to remedy the deficiencies.

The great philosopher Whitehead once said it is the business of the future to be dangerous.

It is the business of our Community to welcome that future and to meet its new challenges successfully.

Our rivals pose as champions of the future, but they are in fact defenders of the discredited past. They advocate an outmoded idea which our Atlantic Community rejected centuries ago—that man must choose between material progress and individual freedom.

We are the real champions of the future. We are the bearers of the truly revolutionary idea of our time—that the quest for material abundance and the quest for human freedom are one and the same quest.

Ours is a privileged time. We have been given a historic opportunity to prove the superiority and power of freedom.

SCIENCE AND FREEDOM: THE CONTINUING CHALLENGE

(Report of the Committee on the Provisions of Scientific and Technical Personnel, NATO Parliamentarians' Conference, prepared by Senator HENRY M. JACKSON, United States of America, chairman, and Mr. C. L. Patijn, Netherlands, rapporteur)

INTRODUCTION

The Second Parliamentarians' Conference held in November 1956 established a special Committee on Scientific and Technical Personnel. This committee was requested to

submit to last years' conference their findings and recommendations concerning these three topics:

(a) The present situation with respect to the training of scientific and technological personnel in the NATO countries.

(b) The relationship between NATO utilization of the existing potential resources in this field and the utilization of similar resources by the Soviet bloc.

(c) The development of resources of scientific and technological personnel sufficient to enable the NATO countries to maintain their individual and collective capacities to resist armed attack and to continue their economic growth essential to their strength and well-being.

The committee report submitted to the third conference made these general findings:

(a) The scientific revolution has created an unprecedented demand for highly qualified scientists and engineers.

(b) The NATO community now faces a major problem in the form of serious shortages of skilled personnel, and in underemployment of available scientific and technical talent.

(c) There is a real danger that the Soviet bloc may surpass the NATO community in science and technology. This shift in the balance of scientific power could well upset the balance of military power.

(d) NATO would urgently need more trained manpower even if there were no Soviet Union and no defense effort. More and better skills will be needed if the Atlantic nations are to take full advantage of new opportunities for industrial progress and economic well-being, and if they are to continue to be the chief exporters of science and technology to the underdeveloped areas of the world.

The committee report recognized that corrective action was primarily the responsibility of the member states. It found, however, that cooperative measures could also play an indispensable role. The report thereupon made specific recommendations for positive action to be undertaken both by national governments and the North Atlantic Treaty Organization.

The committee report was adopted by the Third Annual Conference and forwarded to the North Atlantic Council, the member governments of NATO, and other interested bodies, including OEEC.

During the past year, the members of the Scientific and Technical Committee have continued to give close attention to this problem, focusing particular interest on progress being made in translating the recommendations of the third conference into positive action. The committee members have profited greatly from discussions and correspondence with officials of NATO, the OEEC, and SHAPE. They have also received invaluable counsel from the executive agencies of their own countries and from many private citizens.

Those who have taken part in the discussions of the Scientific and Technical Committee are:

Senator HENRY M. JACKSON (United States of America), Chairman.
Mr. C. L. Patijn (Netherlands), Rapporteur.
Mr. A. de Meerleer for Mr. Smet (Belgium).
Mr. A. G. Normann (Denmark).
Senator G. Portmann (France).
Dr. G. Kliesing (Germany).
Mr. P. Yokas (Greece).
Mr. O. Watnebryn (Norway).
Viscount Goschen, O.B.E. (United Kingdom).
Brig. O. L. Prior-Palmer, D.S.O. (United Kingdom).
Congressman R. J. CORBETT (United States of America).

Adviser to committee: Mr. Kenneth Mansfield (United States of America).

The chairman wishes to thank his committee colleagues for their extremely valuable contributions to this report, and to acknowledge gratefully the assistance of the executive secretary and staff of the conference.

A YEAR OF ACCOMPLISHMENT

Last year's Parliamentarians' Conference met less than 5 weeks after the first sputnik. The Soviet bloc, not the Atlantic Community, had taken man's first step into outer space. A country barely one generation into the industrial age had surpassed us.

A bewildered North Atlantic Community undertook a great reexamination of its course and destiny.

Much good came of this great appraisal in the realm of science and technology.

Over the past 12 months, significant progress has been made in improving the state of science within the NATO Community. Less has been done than might have been done, but we have made a good beginning.

First, there is now far greater public awareness of the importance of invigorating the study and pursuit of science. Twelve months ago, far too many of our citizens were scarcely aware of the existence of this problem. Over the long run it is our ordinary citizens, not experts, who will determine the success or failure of corrective measures. It is our citizens as parents who must encourage gifted young children to follow careers in science and engineering. It is our citizens as taxpayers who must provide the moneys needed to support remedial programs. We should therefore be immensely heartened by the fact that the general public, acting through civic and community organizations, is now beginning to participate actively in helping attack this problem.

Second, the member states of NATO have broadened the scope and accelerated the pace of national remedial programs.

Of particular importance are programs initiated to increase the supply and training of teachers in technical fields, and to invigorate the study of mathematics and science at the high school and secondary school level.

It has been apparent that the international activities this year have in many cases stimulated useful action at national and regional levels.

Third, the North Atlantic Treaty Organization has set up new and unprecedented regional machinery in the science field. A science adviser and a representative Science Advisory Committee of 15 members are helping the NATO Council launch a scientific and technical program for the NATO area.

At the same time, the OEEC has strengthened its machinery in the scientific education and manpower field. A director of the new Office of Scientific and Technical Personnel and a new Governing Committee on Scientific and Technical Personnel are sponsoring practical activities to improve the quality and raise the number of able men and women in the sciences.

Fourth, solid progress has been made in implementing key recommendations of the Third Parliamentarians' Conference, relating to the provision and utilization of scientific manpower.

(a) NATO science fellowship program: Last year's Conference recommended establishment of a NATO-sponsored and NATO-financed talent development program designed to produce annually at least 500 doctoral degree holders with research experience in the fields of maximum importance for the defense and economic well-being of the NATO Community.

This proposal recognized certain disciplines to be of prime importance, among them, applied mathematics, aero and fluid dynamics, basic electronics, nuclear physics, solid state physics, physical chemistry and metallurgy. The Conference believed that a relatively small number of additional trained people of outstanding talent in these key disciplines would have a catalytic effect, accelerating the entire scientific and technological effort of the NATO Community. The suggested program would afford top-level students an opportunity to study abroad at leading centers for their particular disciplines.

The NATO Council has given final approval to a NATO science fellowship program based on the recommendation of the Parliamentarians' Conference and drawing its principal inspiration from that recommendation. (For details see Annex 1—NATO Council's Agreement on NATO Science Fellowship Program.)

The program would cost $1 million for the first year. Tentative plans call for a budget of $4 million annually when the program is in full operation in 4 years. Financial arrangements for the first year have been completed in time to publicize for 1959 fellowships.

(b) Advanced study institutes: Last year's Conference recommended that immediate steps be taken to increase the number and variety of advanced summer study institutes within the NATO Community, in order to extend the influence of outstanding scholarly talent in fields now hampered by a shortage of teachers.

The proposal called for a strong program of institutes in such fields as solid state physics, nuclear engineering, applied mathematics, high temperature metallurgy and medicine.

The proposal recognized that the summer study institute has been an important postwar educational development both in North America and in Europe.

These institutes serve various purposes: bring able students into contact with the latest and best thinking in their fields; bring together mature scholars for extended seminars in particular scientific problem areas, or offer refresher courses in sicence or mathematics to secondary school or college teachers.

Such institutes have distinct advantages: flexibility, inexpensiveness, administration by existing organizations, and an international character.

The OEEC has pioneered in holding summer institutes for high school teachers in the general sciences and mathematics. This year the OEEC sponsored three international institutes for secondary school science teachers; one in England; one in Germany; and one in France. These institutes brought together teachers and supervisors of science teacher courses to develop improved science teaching techniques.

The OEEC is now planning summer institutes during 1959 for science inspectors of high schools, for teachers of science in teacher training colleges, for representatives of high school science teacher organizations, and for science teachers from the small countries who confront special problems in shortages of equipment, etc.

Late last year, the Ford Foundation (United States of America), recognized the importance of the proposed advanced research institute program, and informed that no NATO financing would be available to support institutes as early as the summer of 1958, assisted in an experimental expansion of two already established and well known summer institutes—the French-sponsored summer school of physics at Les Houches, and the Italian-sponsored summer school of physics at Varenna.

In addition, assistance from the Ford Foundation made possible a new 1958 summer institute of solid state physics administered by the Ecole Normale Superieure in Paris. A group of French, Italian and English physicists have agreed to operate this institute in turn, in successive years, if financing continues to be available.

The NATO Council has now fully approved a NATO program for partial financial

support of advanced study institutes, such as the ones at Les Houches and Varenna. (For details see Annex 2—North Atlantic Council's Agreement on NATO Advanced Study Institute program.)

The program would cost $150,000 for the first year. Tentative plans call for an increased budget the following year. NATO financing of institutes will be available for the summer of 1959.

(c) Annual review of scientific and technical education and manpower: Last year the Conference asked the NATO Council to initiate the practice of annual reports from member countries on the adequacy of science education facilities, hoping thereby to encourage a speedup in national corrective programs.

This stock taking was proposed especially in view of the growth of population and the demand for education on the part of increasing numbers of people.

The OEEC, with the full concurrence of the NATO Council, is now conducting the first annual review of the country policies in the training of scientific and technical manpower. The review is being carried on in collaboration with the appropriate educational authorities in member countries.

No uniform set of questions is being used, rather each country is asked questions relevant to its special condition and need. It is hoped that this first year the review will discover the more glaring gaps in individual country programs and will identify the more obvious possibilities for practical improvement.

(d) Cooperative project research under NATO sponsorship: Last year the Conference recommended that NATO sponsor and finance additional important cooperative training and research projects which particularly lend themselves to international action. The Conference was impressed with the outstanding success of the NATO-supported training center for experimental aerodynamics in Brussels, and proposed that this precedent be extended to other areas where cooperative projects could be helpful.

The NATO Science Advisory Committee is now actively considering a number of new cooperative projects which might merit NATO contract support.

Meanwhile, during the last year both the Brussels Aerodynamic Center and the Air Defense Technical Center at The Hague have increased the effectiveness of their programs.

(e) The NATO Defense Missile Training Center: Last year the conference recommended that a NATO Defense Missile Training Center be established to assure the entire NATO community an opportunity for intensive and systematic training in the handling of defensive missiles.

Reinforced by this recommendation, AGARD, in cooperation with SHAPE, has conducted a study of available training range areas. Steps to budget funds for a missile training installation are in a preliminary stage.

Following the 1957 discussions, it became increasingly evident that any NATO missile center would also be useful for the education of the civilian scientific and technical personnel. Such a center might thereby aid our community in establishing a base for the sceince of astronautics in addition to the primary function of training NATO's defensive missile units.

(f) Atlantic Institute for Defense Studies: Last year the conference recommended the establishment of an Atlantic Institute for Defense Studies which would bring the techniques of modern science to bear on defense planning on a NATO-wide basis. It was suggested that this institute could be responsible to SHAPE.

This proposal recognized that effective defense planning can no longer be improvised. Today, with weapons systems and defense problems becoming more complex, there is increasing need for comprehensive programs of operational research.

The potential benefits to be derived from operational research have become increasingly recognized since our 1957 session, particularly through AGARD and SHAPE efforts in their conduct of conferences on operational research, history and methods.

We are encouraged by AGARD's recent establishment of a summer study institute in operational research methods, in which all our NATO nations are being invited to enroll students. This first course we understand will begin in the summer of 1959 and will be open to both civilian and military students.

We hope that the experience thus gained will help speed an early decision by SHAPE on behalf of a broad and permanent institute of defense studies.

THE TASK AHEAD

The job before us is to build on the solid foundation laid in the past year—to bolster and expedite remedial programs already started, and to identify new areas where further action is needed.

We believe that the member governments should again be called on by the NATO Council to maintain and enlarge appropriate programs on the national level, looking both to the removal of barriers to talent and to the employment of trained manpower in the most efficient manner.

We believe also that the NATO Parliamentarians' Conference, the NATO Council, the member governments, and all nongovernmental bodies concerned should maintain and enlarge their programs for focusing public attention on the continuing importance of raising the level of scientific excellence within the Atlantic world.

Unless member states come squarely to grips with the problem and unless national programs receive widespread popular support, internatinal measures, however desirable in principle, will be of little worth.

In addition, we make the following specific recommendations for strengthening existing programs and for initiating new programs during the coming year:

1. NATO science fellowship program: It is gratifying that this promising program is now underway, and that the first fellowships will be awarded next year. But we have to measure the size of this program against the challenge. The contemplated annual cost of $4 million, when the program is in full operation, is only half the cost of one long-range bomber, and a tiny fraction of the cost of a single peace-time atomic powerplant.

Thousands of gifted students who could profit by training abroad at key centers for their particular discipline, do not now have the chance to go abroad. A $4 million fellowship program will help immensely. Considering the need, however, a larger program seems justified so that even more of the really able students can obtain the best training available, and at a time in their careers when that training can be most useful.

If this porgram discovers one truly exceptional mind—a Maxwell, a Fermi, an Einstein, or a Bohr of the coming generation—then our investment will have more than paid off. If it gives the Atlantic community one path-breaking idea we would not otherwise get we will have struck an excellent bargain.

We think that money used to discover and nurture top-flight talent is money very well spent.

Therefore, we recommend that the NATO Council look forward to increasing the Science Fellowship Program. We believe a reasonable annual budget would be $8 million, when the program is in full operation.

2. Cooperative research centers under NATO sponsorship: Here are three examples of cooperative research programs which are specially needed at this time and which would particularly benefit from the joint action of NATO members.

(a) A NATO center of materials research: Technological advances since World War II, in both peacetime and military fields, have strained metallurgical knowledge to the limit. In many cases further progress cannot be made without major steps forward both in basic and applied metallurgy.

An example: Aluminum is an excellent structural material for subsonic and transonic aircraft, but it cannot withstand the high temperatures met by ultra-high-performance aircraft now being designed. The broader application of molybdenum and columbium is essential. Our knowledge of the properties and behavior of these materials is very meager.

Another example: The phenomenon of nuclear radiation has created an entirely new and crucially important field of metallurgical research. Nuclear powerplant design is now seriously inhibited by our failure to develop economical and practical materials capable of long-life use in the high-temperature, high-radiation environment of nuclear reactors.

Still enother example: One of the major areas of concern in missile development and space research is the reentry problem, which revolves around finding materials which do not disintegrate when traveling through the atmosphere at hypersonic speeds.

Many universities and research centers, both in Europe and North America, now have excellent materials research programs under way. The OEEC is conducting a modest study in the metallurgical field. Yet no full-scale integrated program has been developed which would focus the best talents in the entire Atlantic Community on the really critical technical problems.

The possibilities of such a joint program might well be the subject of a study financed with NATO funds in 1959.

(b) An upper atmosphere and space research program: The technical problems confronting us in the new science of astronautics are immensely difficult. They will grow in magnitude and complexity as we reach further into space and as manned vehicles substitute for manned satellites. Space research and exploration will cut across every scientific discipline—theoretical and applied mathematics, physics, meteorology, chemistry, electronics, geology, biology, and medicine.

Designing and launching a carrier vehicle is an extremely complex undertaking. Large scale experiments in the upper atmosphere and outer space, in fact, might well be regarded as beyond the means of some of member states. As against this, there are numerous less costly but still critically important research projects which do lie within the competence of the smaller members of the community. Space medicine is an example. Fortunately we have among the European nations some of the world leaders in upper atmosphere studies.

Clearly, the scientific challenge in prospect far transcends the resources of even the most technically advanced members of NATO. There is work for all to do, and the job will go forward at maximum speed only if all take part. A cooperative effort in this area would seem eminently worthwhile.

(c) A NATO program for oceanographic research: Viewed in terms of political geography, the NATO Community is essentially a maritime confederation. Its survival depends upon the free transport of materials and peoples across the Atlantic basin and the littoral seas.

In time of peace, the ocean is a vast highway for commerce between the Old and the New World. In time of war, effective control of the ocean would be indispensable.

Although the continents are now giving up their last secrets, and although man has

already taken the first step into space, the knowledge of the oceans, which make up three-fouths of the earth's surface, is meager and fragmentary.

Even roughly accurate maps of the deep sea floor exist for only about 2 percent of the total ocean area. We know but little about the properties of the ocean's waters and its bottoms, including the nature of the deep sea currents, the acoustic properties of the water, and the acoustic and magnetic properties of the bottom.

Recently, the advent of nuclear submarines or submarine-launched missiles has exposed the NATO Community to the threat of devastating attack from the sea. An effective system of defense is contingent upon a thorough knowledge of the environment in which submarines operate—the ocean.

Here is another area which appears to be a natural for cooperative research.

We recommend that the NATO Council, in its consideration of projects for cooperative research, give particular attention to the desirability of establishing joint research programs or centers in one or more of these fields; in materials, in upper atmosphere and space, and in oceanography.

(3) NATO policy for scientific research and development: As the NATO Council launches programs of scientific cooperation, including fellowships and advanced research institutes, the need increases for a basic NATO policy of scientific research and development. Without such a policy there is danger that efforts will be dissipated in too many directions and on less critical programs.

It is also essential to avoid overlapping and duplicating research and development, both in peacetime and military fields. Our scientific talent is too limited to be wasted in this way.

It is important to focus on a few of the most urgent objectives to achieve decisive results. A clear overall policy established by the Science Committee would guide member states in the award of NATO fellowships. It would also guide the Science Committee in selecting subjects for advanced research institutes, and in identifying the most promising fields for NATO-sponsored research centers and research grants.

We believe that NATO funds for scientific cooperation should be used to support the healthy evolution of a carefully planned international program for research and development.

Therefore, we recommend that the Science Committee give prompt attention to the formulation of an integrated and long-range policy for scientific research and development in the NATO area.

4. A NATO program to promote the exchange of technical information: A system to facilitate the exchange of technical documentation is believed essential to an expeditious and economically sound NATO research and development effort.

It is recommended, therefore, that an appropriate mechanism be established by NATO to promote the exchange of technical information, studies, and so forth, between the member nations.

THE CONTINUING CHALLENGE

With each passing month and week, the memory of the first sputnik is receding. Yet the need for urgent action is as great as last year.

The Soviet world is determined to reach and overreach our community in scientific and industrial achievement and in advanced weapons. They are bidding for the role of chief exporter of science and technology to critical underdeveloped areas.

And Soviet policy is characterized by infinite patience.

Free nations commonly respond grandly and vigorously to the dramatic challenge, but too often they are weak on the follow-through.

Our problem now is to stay on the job even without the kind of psychological shot in the arm provided by the first sputnik.

But nothing could be more wrong than to believe that we should improve the state of science solely because of dangers from without. We live in an age when all our future hopes for economic well-being go back to successes or failures in our laboratories.

Almost two centuries ago, the industrial revolution which changed the face of the world, was born in our Atlantic Community. That revolution raised standards of life in the Atlantic world to an unprecedented new plateau.

Now we are in a new revolution—the scientific revolution. The destiny of our community in this and the coming centuries will depend upon our imagination and perseverance in devising new solutions to the new problems posed by the scientific age.

ANNEX 1

NORTH ATLANTIC COUNCIL'S AGREEMENT ON NATO SCIENCE FELLOWSHIP PROGRAM

Note by the science adviser: The accompanying document describes the NATO science fellowship program that has been agreed to by the North Atlantic Council.—(N. F. Ramsey, Palais de Chaillot, Paris.)

NATO science fellowship program

The North Atlantic Council has agreed to establish a NATO science fellowship program with the joint purpose of stimulating the international exchange postgraduate and postdoctoral students of the pure and applied sciences between member countries and of increasing the scientific strength of the NATO alliance.

2. While the emphasis of the program should be on international exchange, it is appreciated that it may be necessary, and even desirable, for students or scientific workers of NATO countries who participate in this program to continue their studies in their countries of origin or in non-NATO countries. It is also appreciated that the stages of education which need to be encouraged may differ in different countries.

3. The fellowship program should be chiefly administered by the appropriate agencies within the member countries of NATO. The selection of students eligible for the program and determination of the magnitude of the stipends should be made nationally. The fellowships should be open to nationals of the participating countries and the selection of students should be made solely on the basis of scientific ability and merit. The recipient of the fellowship or his national group should arrange for the acceptance of fellowship holders.

4. The distribution of the funds by NATO is to be done by a simple formula, as given below. There will be a central organization of modest size in the office of the chairman of the science committee, to supervise the whole operation so that the chairman can report to the committee on the operation of the program. A panel of independent experts will be appointed as consultants to the science adviser to review each year the results of the program and to advise on the methods of operation of different countries. The central organization will assist the national agencies in the exchange of information about practice regarding stipends, standards, etc. Close liaison will be maintained with the AGARD and OEEC exchange and fellowship programs.

5. It is recommended that the distribution of the funds to the member countries should initially be proportionate to the population of the country concerned, with no nation receiving more than 15 percent of the total fellowship funds. This distribution formula should be subject to review by the science committee, which might at a later date recommend a different one to the North Atlantic Council.

6. The council has agreed that for the first year of the program the total amount should be for $1 million.

7. With the above procedure the magnitude of the fellowship program in each country for the first year is as follows:

Belgium	$26,900
Canada	48,300
Denmark	13,180
France	132,400
Germany	150,000
Greece	24,600
Iceland	480
Italy	149,800
Luxembourg	950
Netherlands	33,100
Norway	10,090
Portugal	26,000
Turkey	74,200
United Kingdom	150,000
USA	150,000

ANNEX 2

NORTH ATLANTIC COUNCIL'S AGREEMENT ON NATO ADVANCED STUDY INSTITUTE PROGRAM

Note by the science adviser: The accompanying document describes the NATO advanced study institute program that has been agreed to by the North Atlantic Council. (N. F. Ramsey, Palais de Chaillot, Paris.)

Advanced study institute program

The North Atlantic Council has agreed that there should be a program for the support of scientific study institutes for advanced or special topics. The highly successful summer institutes at Les Houches and Varenna with intensive lectures and seminars extending over a 2-week to 2-month period are examples of such activities.

2. The council has agreed that during the first year the program will be for $150,000. The distribution of the money is to be made by the office of the science adviser with the guidance of a panel of experts who will be representatives of various aspects of science rather than national representatives.

3. The money for the support of summer study institutes should be used both for direct grants to the institute, partially to cover teaching and administrative costs, and for living and travel expenses of participants from NATO countries. The grants to the summer study institutes should be made as unrestricted grants so as not to influence the policy of the institute nor its selection of students or staff.

4. The method of administration of this program will be reviewed annually.

Salute to the Coast Guard

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. BONNER. Mr. Speaker, the least appreciated branch of our uniformed forces is the Coast Guard. Its peacetime mission of saving lives does not compare in glamour with the more spectacular exploits of the Army, the Navy, the Marines, or the Air Force, and public recognition of its services is far less than it deserves. It is with pleasure and pride, therefore, that I call attention to the following editorial in the January 3, 1959, Daily Advance, of Elizabeth City, N.C., entitled "Salute to Coast Guard":

SALUTE TO COAST GUARD

Elizabeth City long has been the site of a Coast Guard Air Station and we have come to take the organization here for granted. That is bad because we lose sight of the outstanding work that is done with so little to work with and with so few people to do it.

A good insight into the activities of the Coast Guard, especially as it pertains to Elizabeth City, was provided earlier this week in a fine feature story written by Jack Williams, photographer-reporter for the Daily Advance. The story has been given wide circulation by the Associated Press. In his article Williams vividly pictured the various phases of the Coast Guard's program. Too many people lose sight of the fact that the Coast Guard, on the bottom of the list so far as appropriations are concerned, is called upon daily to go to the aid of people who are sick, or lost; to ships that are in trouble, or scores of other errands.

A good example of what the Coast Guard faces appeared in a front-page story on Tuesday, along with the feature article. That story revealed that 47 crewmen aboard a Liberian tanker which had broken in two off Chincoteague, Va., had been rescued safely. Mainly responsible for the rescue was the Coast Guard which rushed planes, helicopters, and boats to the scene as soon as the call for aid was received. The fact that weather conditions were not good and that the Coast Guard men on the mission were risking their own lives didn't matter. What did matter was that the Coast Guard always stands ready. One of these days our Congressmen are going to realize and appreciate that fact and come through with much-needed funds. That time cannot come too soon.

Hawaiian Statehood

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, January 14, 1959

Mr. CHURCH. Mr. President, I was happy to note that in the opening remarks of his State of the Union message, the President welcomed our distinguished colleagues from Alaska, and called for the addition of another new State—Hawaii—and a new star in the flag.

With Alaska safely in the fold, we should now proceed at the earliest possible moment to embrace Hawaii, and thus shore up our Pacific bastions, our democracy, and our ideological position in the eyes of the world.

Perhaps no individual has presented a more satisfactory brief for Hawaiian statehood than has James A. Michener, the noted author, in the December issue of the Reader's Digest.

I ask unanimous consent to insert in the Appendix of the RECORD Mr. Michener's article entitled "Hawaii—The Case for Our 50th State."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAWAII: THE CASE FOR OUR 50TH STATE

(By James A. Michener)

If the next Congress decides to welcome Hawaii into the Union our existing States are going to get as a new partner one of the loveliest spots on earth. Just barely inside the tropics, so that Hawaii will be the only place in the Union where the sun ever shines directly overhead, the islands are spectacularly beautiful. They boast great snow-covered mountains that rise abruptly from the sea to nearly 14,000 feet. They have dazzling beaches, marvelous cool forests, cliffs that drop thousands of feet sheer into the sea, areas where you can see 400 waterfalls within a short distance, and others where blazing red canyons cut deep into the earth.

But the islands are much more than a visual paradise. They are also a mature, civilized, sophisticated community, fully qualified for statehood. The best way to explain Hawaii's extraordinary accomplishments is to answer the questions which are most often asked throughout the United States. I think the replies may surprise mainlanders:

If Hawaii joins the Union won't it be a burden on the other 49 States? It's just the other way around. Americans like to think of Hawaii as a grass-skirted, ukulele-strumming poor relation. The fact is, as shown in one yearly report, that the average resident of Hawaii gets a cash income of $1,821 per year—which is just $206 less than the national average and more than the average of such wealthy States as Virginia, Texas, Kansas, or Iowa. Hawii is really loaded.

The islands pay more actual cash—taxes—into the Federal Government than many existing States. Per capita, Hawaiians pay more to Uncle Sam than the national average from all the States. In short, these islands are a gold mine. Instead of draining money out of the economy, they pump it in. But because they are only a territory they have no representation. In spite of all the taxes they pay, the people of Hawaii are not able to elect their own Governor or judges; they cannot send Senators or Representatives to Congress; they cannot vote for President. That is why Hawaii wants to become a State.

What status does Hawaii now have—in relation to the United States? In 1898 it was accepted firmly and forever as an integral part of the United States, its position being comparable to that of the former territories of Tennessee or Arizona. Since then Hawaii has used our currency, our stamps, our armed services, our FBI, and our educational system. Anyone born in Hawaii is automatically a full-fledged American citizen and may travel or live wherever he wishes in the 49 States. A boy born in Hawaii is eligible to become President of the United States.

Does Hawaii have enough people to make a State? It has 554,000 residents, which is more than the population of Alaska, or Delaware, or Nevada, or Vermont, or Wyoming. It contains more people than any previous territory gaining statehood, except Oklahoma, where the oil rush had crowded the land.

Does it have enough land? It consists of 7 major islands, and several dozen small ones, with a total land area of 6,423 square miles, which makes it larger than Delaware, Rhode Island, or Connecticut, and just a little smaller than New Jersey.

Are the people worthy of becoming American citizens? Most of them already are citizens. If you were to go down today to a Honolulu store—Sears, Roebuck, or Woolworth's—and if you were to meet 100 average islanders, they would look like this.

About three of the shoppers would be Hawaiians, tall handsome people, the original settlers of the islands and the same kind of people who now live in Tahiti and Samoa. Fifteen would be part-Hawaiian. Twenty would be ordinary-looking white people, mostly from mainland cities. Thirteen would be Filipinos, brought in to work the sugar fields. Seven would be Chinese, usually slim, attractive people with skilled jobs or professions. There would be two Puerto Ricans, one Korean and one who might be from any part of the world.

So far you have met 62 of your 100 fellow American citizens. The other 38, and the largest single group in the islands, are Japanese, who were also imported to work the sugar fields but who now do practically everything else in the islands. We will have more to say about them later on.

Here are other things Hawaiians would like you to know about their islands. The literacy rate is very high. An enormous part of the budget is spent on education. Medical services are top-notch and the general health is the same. Hawaiians go to excellent movie houses, have fine radio stations, strong newspapers, a first-rate civil government. On the mainland an election turnout is considered high if 60 percent of the eligible people vote. In Hawaii over 90 percent of the people vote.

Is life as much fun in Hawaii as the advertisements say? It's really better. You won't be in Hawaii long before you hear people confess, "We came out here on a vacation and have never gone home." Entertaining is done on broad, open lanais that link the inside dining room with the green outdoors. Food is magnificent, with emphasis on fruit and salad. Much of the charm of Hawaii stems from the wonderful Polynesians who founded the islands. Handsome, lovable, carefree people, their manner of life infects everyone, and their songs fill the islands.

Only two things make local citizens boil. Don't joke about Waikiki. Where I swim, at one of the few really good beaches, the sandy area is only 40 feet wide and I have to wade more than 200 yards before the water gets over my head. But I'd be run out of the islands if I made a crack about it.

And never, never call the islands How-why-ya. The correct name is Huh-va'-ee, with a strong accent on the second syllable, but gradually the pronunciation has become Huh-wa'-ee.

How much American culture is there in Hawaii? The Americans who settled in Hawaii came from New England, and even today any family that can afford to sends its sons to Yale. Basically, Honolulu is a New England community. Its language, manner of doing business, legal system, religious pattern, and general family life are much closer to Boston than to San Francisco.

Young people in Hawaii speak only English. They go to American schools, a fine American university and on to mainland centers for graduate work. The entire cultural pattern of the islands is increasingly American. There is an excellent symphony orchestra and, to complete the picture, a set of libraries creaking with historical materials and people who know how to use them. No Territory that has sought admission to our Union ever did so with such an impressive cultural background.

Boasts former Gov. Oren E. Long, "We had the first good schools west of the Rockies, a printing press when California was a wilderness and the first golf links west of the Mississippi."

But isn't Hawaii awfully far away from the rest of the United States? When New Hampshire became one of the original 13 States, its Congressmen required more than a week to reach Congress in Philadelphia if they hurried by ship, as much as a month if they traveled overland. One day recently I had breakfast in New York, lunch in San Francisco and cocktails in Hawaii. With jets you'll have an early lunch in New York and dinner in Hawaii.

Wouldn't admission of Hawaii with two Senators mean that the representation of States like New York and California would be diluted? Absolutely. Today the 16,021,000 people in New York elect only 1/49

of the Senate, whereas in Nevada it takes only 257,000 to do the same thing. Thus one Nevadan is worth 62 New Yorkers. Adding Hawaii would make matters worse.

Well, this inequity was foreseen by our founding fathers and it was upon their compromise between large and small States that our Union was built. Therefore, in the powerful House of Representatives, the big States would still reign supreme (New York 43 votes, Hawaii 1) as our founding fathers intended.

How will Hawaii vote if it becomes a State? From 1900, Hawaii enjoyed 54 unbroken years of Republican control. Citizens pointed out, "Everything good that has ever happened to these islands came when Republicans were in power in Washington." President Cleveland, a Democrat, refused to accept Hawaii as American territory; McKinley, a Republican, did. Many people in Hawaii could not recall ever having seen a Democrat.

Then, following World War II, thousands of young men came home determined to enter politics, but the fat and happy Republicans could find no place for them. So they became Democrats and, to the astonishment of the islands, proceeded to gain control of both House and Senate. The governor, of course, remained Republican, appointed by President Eisenhower.

A good many canny observers think this will probably be the pattern of future voting: For Governor, possibly a Republican; senior Senator, possibly Republican; junior Senator, probably Democrat; Representative, probably Democrat. In other words, Hawaii will probably split its vote the way States like Colorado and Massachusetts do.

What about the Japanese population? Sooner or later in any discussion of Hawaiian statehood, mainland people ask, "Would you want a Japanese sitting in Congress?" If democracy means what it says, and if Hawaii has so many Japanese voters—all American citizens—it is obvious that before long some Japanese will go to Washington.

My personal guess is that this won't happen during the first two congressional elections, because local Oriental politicians are not yet as far advanced as more experienced hands. But sooner or later, it will happen, and there should be no cause for alarm.

Can the Japanese in Hawaii be trusted? Before Pearl Harbor this was a sensible question, and Hawaii did not know the answer. There were over 100,000 Japanese in the islands, and by law many had been forbidden even to consider becoming American citizens. Ties with Japan were therefore strong and it is understandable that many cautious Americans questioned Japanese loyalty.

But Pearl Harbor gave the answer. The Japanese in Hawaii remained loyal to the United States. There was no sabotage, no dragging of the feet. The record of the Japanese was remarkable.

Their sons literally fought to get into uniform. When the Army announced, after understandable soul searching, that it would accept 1,500 Japanese boys on a trial basis, 10,000 rushed forward in the first 3 days, 15,000 by the end of the week. In Italy these young men rolled up an unparalleled record for bravery. For every 1,000 of the original Japanese soldiers, they and their replacements accumulated 3,146 battle wounds. Their unit picked up 18,143 individual decorations, 7 Presidential citations for the outfit and a nickname that will live in Hawaiian history: "The Purple Heart Battalion." If you count all the Hawaiian men who died on all battlefronts, Hawaii lost on a percentage basis 4½ times more men killed in action than any State in the Union. An appalling number of the dead were Japanese, and there are places in the United States where their valor is not forgotten.

Not long ago Tosh Sovetani, a Hawaiian veteran, was speeding through Texas, trying to keep an appointment in Amarillo. A Texas trooper whistled him to the side of the road and started tearing him apart. "What the hell is a Jap doing speeding across Texas?" The veteran took it for a moment, then got mad and ripped out his wallet.

Shoving a treasured card into the policeman's face, he said, "Don't yell at me. I'm a Texan."

The traffic officer looked at the card and stammered, "Are you from Hawaii? Are you one of the Japanese that saved us Texans at the Rapido?"

"I am," the veteran said.

"Mister, I'm proud to meet you." And the officer took off his cap, bowed, handed back the card and said proudly, "You follow me, son. I'm indebted to you." Then he escorted the visitor into Amarillo. By proclamation any Hawaiian Japanese who served in Italy is an honorary Texan.

Has Hawaii solved the problem of interracial tension? In a world troubled by racial worries, Hawaii proves that people of many diverse backgrounds can exist in reasonable harmony. But anyone who claimed that Hawaii had licked the problem would be naive. The three top clubs in the islands admit no Orientals and many of the better families who have always had Japanese servants would find it embarrassing to have other Japanese as guests. The Chinese maintain their own chamber of commerce, and so do the Japanese. Only this year the latter completely broke up because an Okinawah was proposed as president, and some Japanese refuse to recognize Okinawans.

Hawaii has no Fair Employment Practices Commission because we like things as they are and don't want to upset any apple carts. Newspapers are free to advertise openly: "Haoles (whites) Only," or "Japanese Only." The islands permit racial discrimination in housing in a way no northern city would because Chinese and Japanese real estate men make more money if areas are kept segregated." Socially, each race keeps pretty much to itself, but new patterns are developing slowly. Hawaii, more than any other place in the world, is trying to lick this difficult problem. Maybe an Oriental can't join the golf club or live where he wants. But he can get elected to government, or become principal of a fine high school, or make a million dollars running a supermarket. He is free where it matters, and that is what counts. The other freedoms will come later.

Now for the biggest question: Do Communists run Hawaii? Hawaii lives on four industries: sugar, pineapple, tourists, and the military. All require shipping. Also, Hawaii, like England, cannot grow enough food to feed itself, or produce enough timber to build homes. It imports these things from the mainland. Therefore, anyone who controls the waterfront controls Hawaii.

For some years the International Longshoremen's and Warehousemen's Union has controlled the harbors. And Harry Bridges, aided by a gang of supersmart associates, has controlled the ILWU; some ILWU leaders have been confessed Communists; others have been identified by their associates as such.

The problem goes one step further. Because in the old days unions were ruggedly kept out of Hawaii, when the ILWU did arrive it captured not only the harbors but also swept like a raging flood through the plantations, which it now also controls. When an ILWU man threatens, "Give us what we want, or we'll tie these islands up completely," he isn't kidding. He can do it. In fact, he did it in 1949, and the islands almost collapsed.

Two further facts demonstrate the sinister power of communism in Hawaii. When Senator JAMES O. EASTLAND led an investigating committee to Honolulu in 1956, the ILWU conducted a mass parade against the hearing. In 1955 the islands were shocked when the speaker of the house in Hawaii actually sent Harry Bridges an honorary gavel, which was interpreted locally as encouraging Bridges to take over the legislature as well as the docks and the plantations.

It was events like these that led Congressman James B. Utt of California to cry, "Hawaii is a Communist-dominated province."

Hawaii does suffer from a Communist threat. So do San Francisco and Baltimore—and all America. Hawaii's problem is no different from that of any other area. The big question is, "What's being done about it?" In Hawaii, plenty.

In 1958 the ILWU campaigned bitterly against a proposed charter form of government for Honolulu. They threatened and begged the voters: "Reject the charter!" but when the votes were in, the charter was accepted by 4 to 1.

There is one law, above all others, that the ILWU is determined to repeal. It is the one that will prevent a recurrence of the 1949 tie-up, for it gives government the right to take over the docks and operate them during an emergency. Against this law the ILWU has thrown all its massive power—and there are many local citizens in no way subservient to the ILWU who also want to see the law changed—but when the last test came the Senate voted 13 to 2 in favor of the law and the House voted 24 to 6. Hawaii is not a captive of the Communists. It is fighting back exactly like any mainland community. Its record is impressive.

Will Hawaii get statehood in 1959? Hawaii is like Brooklyn used to be before the Dodgers moved west. At the end of each disappointing year someone shouts, "Boy, wait'll next year!" When Alaska astonished the locals by gaining statehood, Hawaiians began chanting, "Next year for sure!"

Things do look better. The psychological attachment to the happy phrase "48 States" has been removed. The fair play of the American people can be counted on to support Hawaii, while both parties and most newspapers have come out in favor of statehood.

I am not hopeful. I fear there will be a strong temptation to sidetrack Hawaii. The honest fears of the South, arising from Little Rock, may encourage southern Senators once more to kill Hawaii's chances. A completely new House of Representatives and many new Senators will need to be indoctrinated with facts in the case. Attention to overseas problems will obscure Hawaii's claim. And with Russia kicking up on all fronts, it will be easy to focus on the communism issue.

I would not be surprised if Hawaii is again denied statehood. But if it is, I can say this with certainty: It will be interpreted throughout the world as an act of supreme unfairness. To deny Hawaii statehood now will injure the United States greatly.

Why is statehood important? In Asia, Hawaii has become a symbol of the fair and just manner in which we treat Orientals. Quietly, the word has circulated that in Hawaii Chinese do well, that Japanese get elected to office, that Filipinos get a fair shake. If now we slap Hawaii in the face and say, "You cannot have statehood," the slap will reverberate.

In recent years I have spent a lot of time in the former Dutch territory of Indonesia and in the former French territory of Indochina. I am really afraid that the United States will make the same mistakes the Dutch and the French made. There was a time when the people of Indonesia and Indochina dreamed only of full participation in national life, of escape from second-class citizenship and from taxation without representation. But those natural desires were

frustrated and the territories were lost in bitterness and defeat. Today Hawaii can be bound forever to the United States. To refuse to do so is to invite the dangers that overcame Indonesia and Indochina.

The specific danger is this. No one can foresee what is going to happen in Asia. Perhaps Japan and China will unite into one great empire. Or Russia may establish leadership over the entire area. Or China and India may combine. Surely, present arrangements will not continue permanently. When the new face of Asia apepars, it will be very inconvenient for the United States if we hold in the mid-Pacific a paradise of islands which we have refused either to accept or to turn loose. At that time, and I think it will come before 1990, whoever rules Asia is going to say, "If you don't want Hawaii, we'll accept it." Then there will be real trouble.

But if Hawaii, like Alaska, is bound indissolubly to America, we will have transformed a source of potential trouble into one of strength. That is the major reason why I am for Hawaiian statehood now.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Time To Come to Our Senses

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a masterful sermon delivered a short time ago by my good friend, Rabbi Jacob Pressman, of Temple Beth Am, which I feel has a message for each one of us. I commend it to my colleagues:

TIME TO COME TO OUR SENSES

Thirteen years ago 125,000 human beings perished in the flame of a new, manmade hell on earth, when the most devastating toy man has ever played with was dropped on Hiroshima and Nagasaki. Today, 13 years later, the survivors are still regarded with fear and suspicion, as a greater and greater number fall prey to the "white sickness", lukemia, sicken and die. Ah, but progress did not stop there, 13 years ago. We have since harnessed the very heat of the sun and can unleash it with devastation which makes the original blasts seem like firecrackers by comparison. Stockpiled in many secret places all over the world, these blind engines of destruction await only the gentle application of civilized man's hand to blow his civilization to smithereens and poison his flesh, the soil, the very air he breathes, for an unknown length of time into the distant future. Not even when his life is at stake is man able to stop playing.

These facts, known to you and me, charge with new urgency the words most characteristic of this season, the words of the "U'nsaneh Tokef" prayer:

"We will observe the mighty holiness of this day, for it is full of awe and anxiety.

"On New Year's Day the decree is inscribed and on Yom Kippur it is sealed, how many shall pass away and how many shall be born; who shall live and who shall die; who shall attain the measure of man's days and who shall not attain it."

Was there ever a time in the history of man when these questions were more real, more immediate, more terrifying? The stage has already been set for what will happen in the next 12 months, and it would take only the eruption of one of the many volcanic trouble-spots dotting the earth—Berlin, the Middle East, Formosa, the polar regions—the unleashing of the inferno in which humanity would writhe in agony for its sins. If ever we read the U'nsaneh Tokef as a true expression of prayer coming from the very depths of our being, this is the year, and your Rabbi could no more ignore the world situation this Rosh Hashanah and refrain from troubling you with it than he could ignore the jaws of a mad dog gripping him by the throat. There is no more important matter confronting us than the question of life or death in the New Year.

How is it that in this age of enlightenment and progress, we have permitted ourselves to be pushed to the very brink of destruction? It is because of failure after failure, not so much in the political, economic, military affairs of man, but in his moral life, where he has fallen so far behind his material advances. It is to the moral near-bankruptcy of man that we must address ourselves this Rosh Hashanah, and it is for God to forgive us and help us avoid that bankruptcy and its consequences that we must pray. That bankruptcy is evident in the conduct of the nations, in the conduct of these United States, and in the final analysis, in your conduct and mine.

What is the moral failure of the nations? I remember when the call came, also 13 years ago, for the formation of the United Nations, it seemed to me the realization of the hope expressed in the U'vchen ten Pachdechah prayer we read today:

"May all Thy children unite in one fellowship to do Thy will with wholeheartedness." There was a new hope born in the world in the very midst of the ashes of world war, that the sovereign states of the world would unite, and ultimately form a world government, to preserve the peace of the world and work for the improvement of every man's lot: "Agudah echas—one fellowship."

What a beautiful dream, the dream of the ancient Hebrew prophets, and the dream of our own prayers today, but it just did not happen. The nations were not and are not ready to relinquish their sovereignty to any world government or tribunal. Every nation considers itself wise enough to suggest what other nations should do, but too wise to be told what to do in return. Without a world government, in which all of God's children unite in one fellowship and wholeheartedly put self-interest second to the international good there will never be peace.

Instead of cultivating morality in international affairs in order to keep the peace, we have put our trust in the sword, once again, in the same bankrupt policies of racing to arms which have always resulted in war in the past and must again. Our Nation, Russia, China, England, and France, as well as many smaller nations, have rationalized their frantic massing of armaments by saying, "If you want peace, prepare for war." But that rationalization simply won't stand up. If we take it as a model, then we should be able to say, "If you want to be happily married, prepare for divorce; if you want to be honest, buy yourself a set of burglar tools, if you want to enjoy good health, put disease germs under your pillow." How many times will man be able to get away with ignoring the moral imperatives of international affairs? Is the truth so complicated, so abstruse that the common man, let alone the heads of states, cannot understand it? Little Mother Hannah, praying to God in the obscurity of the little village of Shiloh 3,000 years ago, in five words we just finished reading again, stated the truth to which the nations of the world must yield, "For not by might shall man prevail."

The day must come, and soon, when not might, not bombs or missiles will hold the balance of power determining whether or not we live in peace, but submission to international law. The vision of Hannah, and Isaiah, and the author of "U'vchen ten paohdechah" was premature, impossible to realize in the ancient world, but possible to realize in our day of instantaneous communication of sight and sound and print when the world has shrunk to a neighborhood, and will destroy itself unless it becomes a brotherhood. Nothing is so powerful as an idea whose time has come, and believe me, the time is ripe for a world government, a world court, a world police force, and a world education and welfare program, when our anxious prayer of this day will be answered, "And all Thy children shall unite in one fellowship to do Thy will with wholeheartedness."

One of the principal supporters, financially and otherwise of the United Nations efforts, has been our own country, but we too, on this day of self-examination, must admit to having lost the moral leadership of the world. You and I want to think and tend to think of the United States as the leading nation of the world. Well, wherein lies its leadership? We are not the most populous; several countries have double or triple our population. We are not the largest in area by any means. We are not the richest in natural resources. Nor, and this accounts for the panic in American hearts, are we the most powerfully armed, compared with Russia's ships under the sea, her huge standing armies on land, and her sputniks carrying heavier loads, farther and faster and first.

The greatness of our country has rested on its moral leadership in the world, the principles for which it stood, the refuge it represented for the oppressed, the hope it held out to small, underprivileged peoples, the enlightenment of its people through education, and the example of human equality and human freedom it symbolized. What has happened to these principles? One by one we have retreated from them. Did we once represent a refuge for the oppressed? Indeed we did, and the descendants of the Mayflower, and the huddled immigrants who came over in steerage in more recent decades, some of you and your parents and grandparents, are equally indebted to the great heart of liberty who lifted her lamp beside the golden door. But that door is shut, sealed by acts of Congress, so that you or your forebears would not be admitted if you were applying now. The other nations know it, and wonder at it, and are disillusioned by it.

Did we once hold out hope to the small, underprivileged peoples? We did, we who had our birth in a Revolutionary War which rebelled against colonialism and tyrannical and despotic dictatorship, once were the world's greatest symbol of hope for the victims of tyranny. We, who stepped in and supported the emergence of new republics, we who first defended then freed Cuba and the Philippines, we have of late been the mainstay of feudal Arab lords and desert sheiks, of dictators in the banana republics, of corrupt and reactionary government in China and Korea, and of dictator Franco in Spain. Here is the world's foremost democracy maintaining friendly relations with governments whose basic philosophy is repugnant to us, in order to counter a Soviet threat to the free world. But we have lost the faith of Spanish liberals, and Chinese, and African, no less anti-Communist, who are trying to establish governments based on democratic principles. Uncle Sam, once the benevolent friend of the underdog, has assumed the opposite role in the eyes of a heaving world, who will still accept his gifts, but do not look to him for moral leadership any longer.

Once we were the symbol of enlightenment, the proud examples of the benefits of a universally educated populace. Suddenly the world and we ourselves are shocked to discover that our leadership in this field too is challenged. When Russia's satellite took to the skies we pushed the panic button and found we were not preparing our youth as intensively. While in terms of numbers, our educational structure may still prove more universal, in terms of curriculum it is subject to reconsideration. We were shocked to learn that in Russian secondary schools, students get three years of chemistry, four of physics, five of mathematics, and six of foreign language. Ten million Russians are learning English—10 million. Four thousand Americans are learning Russian. The debate over the ultimate advantages of one educational system over another in terms of human happiness, is a debate which will rage for a long time to come, and need not be pursued here, but the fact remains that the eyes of the world are turning elsewhere for a shining example of educational practice, especially when it is for the morally doubtful purpose of achieving supremacy, military or otherwise. Nor do I believe that the answer lies in our current hysterical emphasis upon countering this threat with the grinding out of comparable students, also capable of creating great and costly engines of destruction and propulsion. It is not only electronic engineers the world needs, but men who can attack the real problems which face the common man in Africa, India, South America—poverty, disease, crowding. We need social engineers, and men of medical science to attack the real enemies of man—the plagues, the cancers, the malnutrition, the privation. Let whoever will stand for destruction of human life in the eyes of the world. Our country could capture the imagination and fire the hope of over half the world if tomorrow she identified herself as standing for the preservation, the healing, and the enrichment of human life.

Once these United States represented a symbol of human equality. Our Constitution emphasized what our Declaration of Independence proclaimed, "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among those rights are life, liberty, and the pursuit of happiness." Our 16th President spoke at Gettysburg of a Nation "dedicated to the proposition that all men are created equal." Today, almost exactly a century later, our land is being torn by the issue of segregation. Out across the world go the news and the pictures of hate-contorted white faces spitting at, jeering at, striking at darker faces; of threats to close schools rather than integrate them; of beatings and bombings and harrassment of the Negro; of Jimmy Wilson, Alabama Negro, sentenced to die for stealing $1.95 from a white woman; of violent verbal, legal, and physical resistance to upholding the decision of the U.S. Supreme Court. What do we suppose this has done to the position of moral leadership we would occupy, when darker pigmented peoples, a billion and a half of them, all over the world read and listen and wonder? We cannot possibly overestimate the significance of what is taking place in Little Rock at this very moment, for while Little Rock is not the only troubled spot, it has become the testing ground of America's most cherished principles and could very well become the rock upon which our hopes of retaining the admiration and the friendship of colored peoples everywhere may be shipwrecked. This great land of ours is wrestling with its conscience with greater intensity and for greater stakes than any one of us has witnessed in all his lifetime, and upon the outcome depends whether or not we shall lose or recapture the position of moral leadership we must hold in the eyes of the world's colored population in order to survive.

You and I believe in the greatness of our land, for we have experienced its privileges and understand its basic virtue, that is why we want to see it remain a land of refuge, of hope for the oppressed, of enlightenment, and of freedom. But, in the final analysis, whether or not it remains all these things depends upon us. And there is evident in our land these days a terrifying passiveness, an apathy which is incomprehensible in view of all that is at stake. Very few Americans seem to care whether or not we lose our role of moral leadership, or where or how our foreign policies are taking us. Some say this apathy is the result of a feeling of futility, a feeling that it doesn't matter what you or I say or do; the problems I have been describing are too tremendous, too overwhelming for the average man. Others say, and I among them, that this apathy is just a veneer, hiding the feeling of doom which immobilizes the little man, so that rather than go out of his mind in frustration, he just refuses to think about it.

Americanism will be as strong or as weak as you and I choose to make it. We are largely responsible for its quality and that quality will be poor only if we make it so. We elected its present leadership and by our votes approved their policies, not the citizenry of any other country. We might very well echo the words of Cassius in Shakespeare's "Julius Caesar," "The fault, dear Brutus, is not in our stars but in ourselves, that we are underlings." In the final analysis, the blame rests within ourselves. How much are you and I prepared to sacrifice for peace and survival and morality, the things I have been talking about? How much does the principle of freedom mean to us, not in Little Rock about which we can be indignant because we are in Los Angeles—but in Los Angeles itself? You and I know we run as from a plague before the expanding Negro population, or Mexican, or oriental. The Jews deserted West Adams because of the Negro, Boyle Heights because of the Mexican, and Leimert Park because of the oriental. I am still wondering how you will react—how I will react—when the first Negro applies for conversion to Judaism and admission to this congregation, or any congregation. How much does the principle of freedom and equality, which did not begin with the American Revolution, but with the first chapter of our Bible, actually mean to you and me?

How much does learning mean to us, we who decry the lagging behind of the American school system? How many of us will permit our sons and daughters to become and remain Rabbis and teachers of the young? You all know the joke about the Rabbinate not being a proper profession for a Jewish boy. Well, it is no joke, because that is the way most parents express themselves, not only about the Rabbinate, but teaching and academic life. How many of us are encouraging our children to learn in order to be wise, to be cultured, to be sensitive? Not many. We tell them they must study, to get to college, to be a big success. How many of us will permit our children to become pure and maybe poor research scientists, nurses, case workers, philosophers, linguists, scholars?

Before we criticise our Government's coolness to new immigration, let us ask ourselves if we would sign affidavits wholesale and bring in, and house, and share our food and our money with ragged and oppressed refugees the way the last generation did, the way Jews in Israel have done? How much does America's image of welcome as represented by the Statue of Liberty mean to us? And how well do we remember our Jewish tradition of hospitality as symbolized by the man of whom we read this morning, Abraham—Abraham, who saw three travelers and ran to greet them, and invited them into his tent, and washed their feet, and killed the fatted calf for them? What do these things mean to you and me, practically speaking?

How much does peace, and the end of atom bomb testing mean to us? There is talk of an end to the armaments race. Are we prepared to take the consequences? Forty billion dollars would be lopped off our Government's expenditures. Factories would close in the airplane, electronic, missile industries. Contracts would be canceled, profits cease, jobs disappear. At the very threat of the possibility that peace might break out we have just been experiencing a recession. What would we really do if it happened? Some of us would have to reduce our standard of living, lose our homes, change our life patterns. The synagogue would suffer * * * because our economy has been undergirded by anxiety. If we are not ready to suffer the consequences of shifting from a war economy to a peace economy, then we are hypocrites every time we bless God's name or even say "Shalom"; we are morally bankrupt. But if we are prepared to make any sacrifice in order to leave an unscarred, beautiful world to the generations to come, then we have the right to come before the Lord and our conscience and pray for life in the new year.

"On Rosh Hashanah the decree is inscribed and on Yom Kippur it is sealed * * * who shall live and who shall die." Is this a fatalistic approach to life? Does it mean, with regard to all that we have been saying, that there is absolutely nothing we can do about it? Not at all. The U'Nsaneh Tokef prayer concludes with a remarkable statement:

"But repentance, prayer and righteousness avert the evil decree." Repentance means a change of conduct; prayer means an appeal for enlightenment and strength; and righteousness means a return to the high moral principles which are ours by the twin attributes of our American and Jewish heritage. Ominous as the current state of the world may be, it is not hopeless. What better time than Rosh Hashanah to meditate upon the road we are traveling, and to pray that the evil decree of strife may be averted, that the nations will submit themselves to righteous laws, that this Nation, which holds out the greatest hope and cherishes the greatest good will, may regain its primacy in the moral leadership of the nations; and that all these things may begin in our lives today, because we have examined ourselves honestly and determined that a better world, a world of peace, of freedom, and of enlightenment must begin with us, now, today, here.

I believe our Jewish sages stated the case for us when they taught that at this season each man should regard the world as "chatzi chayav, v'chatzi zakai—half guilty and deserving punishment and half innocent and deserving acquittal," and that he the individual, can swing the scale one way or the other. Without that faith in the significance of the individual, we shall abandon ourselves to despair and permit democracy and peace to be lost. With that faith, we can change ourselves, our land, our world, for that faith is our only hope in these days when the whole future hangs in the balance. So we pray,

Now, therefore, O Lord our God, let Thine awe be manifest in all Thy works, and a reverence for Thee fill all that Thou hast created. May all Thy children unite in one fellowship to do Thy will with a perfect heart, and let us say, "Amen."

Resolutions Adopted by the New Jersey Presbytery of the Bible Presbyterian Church

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. WALTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following resolutions:

RESOLUTION 1: IN OPPOSITION TO RECOGNITION OF RED CHINA

The New Jersey Presbytery of the Bible Presbyterian Church, meeting in Collingswood, January 10, 1959, completely repudiates and denounces the letter of the fifth world order study conference of the National Council of Churches adopted in Cleveland, November 21, 1958, and sent down to the churches, calling for the recognition of Red China by the U.S. Government and the admission of Red China to the U.N.

This Presbytery would call attention to the fundamental principles of separation of church and state which enter into the preservation of our liberties. No church gathering presuming to speak for American people should attempt to direct or instruct our Government or its State Department in matters of national policy which are to be determined by the duly elected representatives and the democratic procedures under the order established in our State and national constitutions.

Moreover, for church leaders to call for the recognition of Communist China, with which we are still at war and which involves the assistance of atheistic, materialistic, godless communism, is a violation of Christian principles and subversion of sound morality.

Christian people in the United States who desire to influence their Government's actions may do so through the normal and proper channels of our representative form of government.

When church agencies or church bodies are constantly seeking to direct the affairs of government in its national and international decisions we are witnessing the development of a 20th century clericalism which the experience of history testifies can only bring mischief and disaster. A representative government cannot function when ecclesiastics attempt to intervene in behalf of their people whom they are not entitled to represent in government matters.

RESOLUTION 2: IN SUPPORT OF COMMITTEE ON UN-AMERICAN ACTIVITIES

The petition published in the public press and including among its signers prominent American clergymen, declaring "the Un-American Activities Committee should be abolished * * *" and concluding "let us rid ourselves of this agent of weakness and folly," is an arrogant and insolent expression and completely misrepresents the position which God-fearing Christian people have always taken.

Among the church leaders signing the petition are Eugene Sarson Blake, chief administrative officer and stated clerk of the United Presbyterian Church, U.S.A.; Dr. John A. Mackay, Princeton, N.J., president of the World Presbyterian Alliance; Dr. John C. Bennett, dean of Union Theological Seminary, New York City; and Dr. Rheinhold Niebuhr, renowned theologian of Union Theological Seminary, who represent top leadership in the ecumenical movement and the National Council of Churches in this country. We call the attention of Christians to the fact that John C. Bennett is the author of the recent 5,000-word letter adopted by the Fifth World Order Study Conference of the National Council of Churches, calling for the recognition of Red China by the United States Government. When ecclesiastical leadership in this country espouses causes which give aid and comfort to the Communists in their cold war struggle, this presbytery feels that there should be strong opposition by the Lord's people.

This liberal leadership which has indeed departed from and compromised the historic position of the Christian faith is now seeking to influence the affairs of the Nation for the accomplishment of the very things the Communists at present are working for in relation to China and the Committee on Un-American Activities.

This presbytery further assures the leaders of Congress and of this committee that they shall have our prayers as the committee continues faithfully to perform its functions of investigating and exposing Communist espionage, intrigue, and subversion, and recommends to our Congress legislation appropriate for the maintenance of the security of our country and the preservation of our religious liberty.

The presbytery further directs that copies of this action be directed to the chairman of the committee, FRANCIS C. WALTER, to the two Senators and the Congressmen from the State of New Jersey.

Ukrainian-Americans Commemorate the 25th Anniversary of the Famine in the Ukraine

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. DINGELL. Mr. Speaker, in Hamtramck, Mich., on October 11, 1958, a number of Americans of Ukrainian descent and representatives of Ukrainian-American organizations met to condemn one of the most vicious atrocities in the black record of Stalin, Lenin, and the Communists who have oppressed the Ukraine. At that meeting, attended by large numbers of Americans of Ukrainian descent, the following resolution was adopted unanimously:

THE 25TH ANNIVERSARY OF A HEINOUS CRIME, PERPETRATED BY COMMUNIST MOSCOW IN UKRAINE

The Communist empire of the Moscow dictators came into being, grew, spread, gained power, existed and exists by terror, genocide, and injustice, violating God's commandments and trampling the rights of man, enslaving, subjugating, and destroying entire nations.

Lenin, Stalin, Khrushchev—different names, but the same rule; different persons, but the same methods of merciless dictatorship: an uninterrupted chain of crimes against mankind, based on relentless physical terror and mass murder.

The massacre of innocent population of the capital of Ukraine, Kiev, and her towns and villages in the spring of 1918—Lenin.

Mass deportations and murder of the population of Ukrainian villages in the fall of the thirties—Stalin.

The massacre of the population of Budapest and Hungarian towns and villages in the fall of 1956—Khrushchev.

Mass deportations of Ukrainian youth from their homeland to the deserts of Kazakhstan, now—Khrushchev.

A chain with innumerable links.

Lenin, Stalin, Khrushchev—merely stages of Moscow's Communist imperialism, moves toward ever more perfect methods of aggression, toward subjugation of the entire world.

Ukraine was first to experience Communist Moscow's aggression in its most deadly form. It paid for this experience with the loss of millions of people and its nationally independent existence.

This gathering is dedicated to the memory of one of the most horrible manifestations of Moscow's aggression: Twenty-five years ago Communist Moscow, in its role as occupant of Ukraine, committed a crime unprecedented in the history of mankind. It organized and fostered an artificial famine on the Ukrainian territories, thus destroying more than 6 million Ukrainians.

Today, we observe the 25th anniversary of this tragedy. We honor the memory of the dead, and call the attention of the world to this dreadful crime perpetrated by Communist Moscow, at a moment when contemporary Moscow became a constantly growing menace to the free world and this great country of ours.

We declare:

Whereas Moscow's aggression began 40 years ago when it first attacked the then free and independent Republic of the Ukrainian people;

Whereas the Ukrainians were the first to fight the aggressor and to defend their freedom and the right to their own territory;

Whereas the Ukrainian people, by rendering staunch resistance, kept Moscow from subjugating the countries of Europe still feeble after the war, thus enabling them to live in freedom for many more years;

Whereas Communist Moscow paralyzed the resistance of the Ukrainian population by means of terror and destruction and, in order to subdue the freedom-loving people, in 1932 and 1933 staged a man-made famine that exterminated more than 6 million Ukrainians;

Whereas Communist Moscow perpetrated genocide in Ukraine and for this crime should be condemned by the free world;

Whereas one of the accomplices in this crime and the organizer of the other criminal activities committed in Ukraine, is the present dictator and responsible leader of the Communist Moscow empire;

Whereas Communist Moscow, and especially its present dictators, used similar though less extensive methods of genocide after having occupied the territories of other nations;

Whereas Communist Moscow's aggressive aspirations have become an ever-growing menace to all nations of the free world, and also to the freedom-loving and independent people in this great country of liberty; and

Whereas the Ukrainian people who still struggle for freedom from captivity and for their own, independent state, should be rendered support and assistance by the free world;

Now, therefore, we Americans of Ukrainian descent, at our gathering in Hamtramck, Mich., on October 11, 1958, in commemoration of the 25th anniversary of the famine in Ukraine—

1. Denounce before the free world and history this horrible crime, perpetrated by Communist Moscow on Ukrainian territory, in consequence of which more than 6 million of our brothers and sisters starved to death.

2. Pay our tribute to the memory of their sufferings, and join the Ukrainian people in mourning the victims of the famine:

3. Call on the nations of the free world, above all the people of our great Country

of Liberty, to condemn this crime perpetrated by Communist Moscow in Ukraine, and to do everything in their power to prevent Moscow from committing like crimes on their territories.

4. Request the Government of our country and all governments in the free world to direct their representatives at the United Nations to take action pertaining to the placement of the crime of genocide, committed by Communist Moscow in Ukraine in 1932–33, on the agenda for discussion and the adoption of appropriate resolutions.

5. Call on all countries in the free world to sign the Convention of Genocide.

HAMTRAMCK, *October 11, 1958.*

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. DULSKI. Mr. Speaker, the 86th Congress will have an opportunity to perform a significant act of justice, equity, and diplomacy this coming year by granting Hawaii's request for statehood.

As a matter of justice, Hawaii meets every historical standard we have required for the admission of new States. Hawaiians have been immersed in American traditions since 1820. They have demonstrated their devotion to the principles of democracy and to the American form of government in numerous ways, including the adoption of a constitution, in 1950, which has been commended as a model among such instruments.

In 1950, about 84 percent of the Hawaiians were native-born American citizens. The record of island troops in combat is impressive testimony to their loyalty. Gen. Mark Clark described the Hawaiian organization as "the most decorated unit in the entire military history of the United States." They served with equal valor in Korea.

That the majority of Hawaiians desire statehood is unquestionable. In 1940 they voted two to one for admission. In 1950 they approved the proposed State constitution by more than three to one.

Hawaii has first-class qualifications insofar as population and resources are concerned. It has more people than five of the present States—more than twice as many as Alaska. It has a well-developed, prosperous economy. Its citizens support a per capita tax burden considerably higher than the national average—larger, in fact, than in 33 States.

Hawaii richly merits statehood as a matter of equity as well as justice. Permanent political inferiority for American citizens in American Territories is simply too foreign to our ideals to be tolerated for long. Hawaii is the only incorporated Territory not yet welcomed into the Union. It has been petitioning for entrance since 1903. It has more people and a better developed economy than Alaska, our newest State. Both political parties have, in their platforms, approved Hawaiian statehood. Both President Eisenhower and former President Truman are for it. According to recent polls, the people of the United States are also for it by a ratio of more than 4½ to 1.

Finally, as an act of diplomacy, the admission of Hawaii would be of incalculable value. It would reverberate to our credit throughout the Far East. It would stand as an irrefutable proof that we really live by the principles of freedom and self-government we preach.

For these and many other reasons, I shall, in Congress, support passage of a Hawaiian statehood bill, which I am introducing today.

Up to Congress

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Rockford (Ill.) Morning Star of January 11, 1959, entitled "Up to Congress":

UP TO CONGRESS

President Eisenhower has hurled a challenge which the Democratic-controlled 86th Congress cannot sidestep. In his state of the Union message, he called upon Congress to face up to its responsibility in helping to overcome grave hazards which beset our national economy. The President reaffirmed his determination to use the full power of his office to hold inflation in check and to provide other safeguards in the economy, but he pointed out that Congress holds the purse strings and makes the laws.

The inference was clear in the President's address that if the Democratic Congress runs wild, it will be held accountable when the Nation chooses its leadership again in 1960.

The President urged Congress to help maintain the present forward thrust of the economy by cutting the costs of Government and adopting his forthcoming balanced budget. He insisted the balanced budget of $77 billion he will submit to Congress January 19 is realistic and that its objectives are wholly attainable. The President's budget is balanced at a figure approximately $3 billion under what had been anticipated.

Whether hope for tax reduction in the foreseeable future is to be kept alive depends upon the willingness of Congress to face up to the need for economy in government, the President said. If the growing menace of inflation is to be overcome, he reminded Congress, the Federal Government must begin now to live within its means, to meet current costs from current revenue. Every item of Government expense, he said, must be examined critically. To do otherwise would be to betray our Nation's future.

President Eisenhower said 60 percent of the budget is allocated to national security, an estimate covering the Armed Forces, the Atomic Energy Commission, and foreign military aid. But, he emphasized, it is possible to maintain a strong defense and still have less expensive Federal Government. We can have everything we need, he told Congress, but we can't afford one cent for waste. He cautioned against defense overemphasis and needless duplication of quickly outdated weapons.

The President also called upon Congress to enact corrective legislation in the labor field. He asked for prompt enactment of legislation to stop corruption, racketeering, and abuse of power in labor unions. The President has made it clear that he wants intelligent labor reform, not ineffective legislation such as that embodied in the phony Kennedy-Ives bill which the Democrats supported last year as a means of courting the favor of labor in an election year.

President Eisenhower pointed to farm subsidies as a field in which Government spending can be reduced. He also called for decreases in Federal operations in areas where private enterprise can do the job.

It is up to Congress to join with the President in putting into effect these sound recommendations which are mandated by present-day conditions.

The Coast Guard Academy

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. DADDARIO. Mr. Speaker, one of my constituents has written me of her concern over the present condition of the U.S. Coast Guard Academy facilities in my home State of Connecticut. Because of the nature of her appeal, I have requested unanimous consent that pertinent extracts of the letter be presented in the Appendix of the CONGRESSIONAL RECORD:

JANUARY 7, 1959.

I have a son who is at present a cadet at the U.S. Coast Guard Academy in New London. Therefore, I am personally interested in conditions there, particularly, and I quote directly from the "Specific Recommendations" of the Report of Visitors, "Replacement of Deteriorated Temporary World War II Structures: These buildings are old wooden structures that are dangerous to personnel, extremely costly to keep in repair and near the end of their existence." I believe that now is the time to ask Congress for additional funds, particularly in view of the recent nationwide publicity concerning the Chicago parochial school fire and the fire in a similar barracks dormitory at Syracuse University, where seven student airmen lost their lives and 13 were injured. This horrible disaster could so easily be repeated at the Coast Guard Academy, where I am told the cadets can see outside through the cracks in the walls.

It seems unjustifiable that the Air Force Academy in Denver, Colo., should be elaborately constructed, while the Coast Guard Academy, which has served our country for such a long period of time, should be so sadly neglected.

We are told that our boys at the service Academies who are dedicating their lives to the service of their country, are considered the cream of the crop of all American boys, physically, mentally, and morally. Why, therefore, must they be obliged to live under such hazardous conditions?

It is particularly important that the members of the subcommittee and committee considering Treasury Department appropriations be notified that they want the Coast Guard appropriations for the fiscal year ending June 30, 1960, to be increased by the sum of $6,650,000 for the necessary acquisition, construction, rebuilding and improvements to the Coast Guard Academy as recommended by the Congressional Board of Visi-

tors in their report of May 2, 1958, published in the CONGRESSIONAL RECORD, volume 104, No. 151, Thursday, September 4, 1958.

Please, Representative DADDARIO, will you do all that you can for our boys at the U.S. Coast Guard Academy?

Very truly yours,

MRS. JOHN T. SULLIVAN.

Reaching for the Moon

EXTENSION OF REMARKS

OF

HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. RAY. Mr. Speaker, under leave heretofore granted, I place in the RECORD a timely and thoughtful article by David Lawrence entitled "Reaching for the Moon," which appeared in the U.S. News & World Report for January 16, 1959:

REACHING FOR THE MOON

(By David Lawrence)

As we reach for the moon, shall we lose the battle on earth? Will moon gazing become a national pastime? The game is harmless so long as it is confined to those tired souls who long to get away from their earthly chores, but it becomes harmful indeed when we are asked to spend billions of dollars to win a stunt contest in outer space.

Laudable is the spirit of patriotism which seeks to win every race for our country. But we haven't always won the Olympics, and we have managed to adjust our lives to such ephemeral disappointments.

Military values are preeminent. Whatever is necessary to test out guidance systems for missiles must have a proper place in our defense budget. But a contest in launching satellites merely to outdo the Soviets makes little sense.

The sputniks last year threw us off our course and started a wave of spending in Congress. It is to be hoped that the psychological effect of the luniks will not be such as to open the floodgates to more indiscriminate expenditures for the spinning of metal balls in orbit around the sun or the moon.

Many Members of Congress seem to have become intrigued with the possibilities of space travel. They look upon the competition of our scientists with those of the Soviet Union as a gripping matter deserving priority above all else.

But the fact remains that the votes which elect our Representatives and Senators are to be found among the peoples living on the firm ground of the 49 States of the Union—not in outer space.

There is great need for a down-to-earth point of view in the present Congress. All the artificial planets that whirl around the sun will not create employment here in America where there is unemployment, nor bring taxes down from their painful heights, nor stop the raids on the American dollar.

The most important task for our legislators today is to conserve the economic strength of the United States of America. We are engaged in a "cold war" of frightening proportions. The war of missiles and nuclear bombs may never take place, but the economic war throughout the world is actually in progress now on a dozen fronts and on every continent.

This is not just a matter of distributing grants of money to buy allies, but of assuring economic stability for the United States, too. The world is a trade unit. We are dependent on continuing trade arrangements that encourage the sale of our domestic production in various parts of the world and that make possible the purchase abroad of materials needed for use here in our own country.

Our biggest concern today is the constant infiltration by the Moscow regime in certain countries of the free world by means of loans and by barter exchange of commodities. We are witnessing an economic war such as the world has never known. The stakes are high. It could mean political control of vast areas for the Communists. Their strategy is to burrow in and subvert the recipients of Soviet favors.

Once our own fiscal position is improved, we can look forward to using more and more funds to check the Soviet advances on the economic front in Asia, Africa, and Europe, as well as in Latin America. This is not a battle that will be settled in 1 year—it is a struggle that will last for many years to come.

There is already a significant counter-offensive being made by the free world with financial weapons. The expansion of the various governmental lending agencies—such as the World Bank, the International Monetary Fund, the Export-Import Bank and the new Development Loan Fund, for which Congress has been appropriating relatively small sums—will mean a multiplication of private loans. The way is being opened in several countries already to sound development where foreign credit is needed and can be repaid.

But all this can be nullified unless there is respect for integrity of contracts. It is discouraging to find a government, such as the new one in Venezuela, becoming hostile to American investors after they have for decades poured their savings into that country.

If the end result after an era of lending is the emergence of nationalistic governments which, under Communist prodding, repudiate their obligations and welsh on their commitments to foreign property owners, private investors will be discouraged from again risking their savings.

Moral standards apply to nations—they must respect property, for it is never right to rob Peter to pay Paul.

We have many perplexing problems to solve in the economic field today. These involve down-to-earth questions of great difficulty. It is not a time for moongazing. We have plenty of work to do on earth.

Congress might well bear in mind that it is the people of the United States whose interests are paramount and that just now we are engaged in a battle for survival on this planet and not in the vapors of outer space.

Korkosz Brothers Honored

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. BOLAND. Mr. Speaker, early in December I had the distinct pleasure of participating in Korkosz Day being celebrated in Chicopee, Mass., and that evening had the honor of attending a testimonial dinner for Frank and John Korkosz who built one of the world's most unique projectors, a 3-ton, 13½-foot instrument for the Hayden Planetarium at the Museum of Science in Boston.

Frank Korkosz is director of the Springfield Museum of Natural History, and he built the smaller Seymour Planetarium at the Springfield Museum in 1937. His brother, John Korkosz, is the manager of the Chicopee Electric Light Co.

Their recently finished projector at the Hayden Planetarium will show all of the planets, including Uranus, which is not shown in any of the other major planetariums of the country. It projects more than 9,500 stars, each according to its own brightness in the skies. The system allows the brightest stars to be shown alone; then in combination with the less luminous stars, and, finally with the dimmest stars.

The Hayden Planetarium and the Korkosz projector system has been referred to as New England's first major theater of the skies, and it is the ninth major planetarium in the United States. John Patterson, director of the Boston museum, said the Korkosz projector is the world's finest and puts the Hayden Planetarium in a class by itself.

The Springfield Union of October 21, 1958, said of Korkosz projector:

Considered the most realistic projector in the world, the 3-ton instrument gives a sky show complete with nearly 10,000 twinkling stars, a satellite and even a roaring jet plane.

The Korkosz brothers first designed and built the 13-foot blue and silver instrument in their Chicopee workshop. They then took it apart and reassembled it at the museum. The projector uses over 200 camera lenses and can reproduce 25,000 years of star motions at the touch of a finger.

Museum officials even brought the Boston skyline indoors to add to the realism.

Even buildings still on drawing boards or under construction are shown as they will appear in the future.

Museum officials, not wishing to leave a dollar unturned in their zeal to finance the project, also received contributions from the firms whose miniature signs appear on the indoor skyline.

ACTUAL SITUATIONS

The optical system of the Korkosz projector simulates, for the first time in any planetarium, the actual situation in nature where even the brightest stars—the sun excepted—show only as points of light. Other planetariums make bright stars larger, the Museum of Science instrument makes them of varying intensity but still points in space.

Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the news story that appeared in the Springfield Union on December 11, 1958, the morning following the testimonial dinner for the Korkosz brothers:

TWO KORKOSZ BROTHERS ARE GIVEN HONOR—BUILDERS OF HAYDEN PLANETARIUM PROJECTOR ARE FETED IN CHICOPEE

CHICOPEE.—Wednesday was Korkosz Day in Chicopee as citizens honored the brothers, Frank and John, for the national recognition they have received as creators and builders of a 200 camera lens, million-dollar projector for the Hayden Planetarium at the Museum of Science in Boston. More than 400 persons feted the brothers at a testimonial dinner at the Officers' Club at Westover.

The 3-ton projector was built by the Korkosz brothers in their spare time over a 7-year period. It can reproduce 25,000 years of star motions and is complete with 10,000 twinkling stars, a satellite and a jet plane. The projector can be used by the Air Force as a training aid in celestial navigation.

The Korkosz projector optical system simulates for the first time in any planetarium the actual situation in nature where even the brightest stars, the sun excepted, show only as points of lights of varying intensity rather than having bright stars as larger bodies as other planetariums do.

The speaker at the affair was Dr. Bradford Washburn, director of Boston's Museum of Science, where the projector is set up. Dr. Washburn declared the projector is the best in the world, as well as being a thrilling piece of equipment.

Col. Edward D. Wooten, Westover Air Force Base commander, declared that the projector will some day chart our roadways into the world of tomorrow.

"The projector fits the needs of a nation during such a space age as ours," U.S. Representative EDWARD BOLAND said.

Mayor Walter M. Grocki, of Chicopee, presented the brothers with plaques commemorating their services to science and their country.

The brothers declared that the projector would never have been possible without the aid and encouragement given by Hayden Planetarium directors, consultants, craftsmen, families, and friends.

The invocation was given by Rev. Simeon Kaczmarek of St. Stanislaus Church, and benediction by Rev. Edgar Redfern of the Chicopee Falls Methodist Church. Superintendent of School John L. Fitzpatrick acted as the master of ceremonies.

Guests at the head table were: Mayor Grocki; U.S. Representative Boland; John Patterson, Hayden Planetarium director; Charles Oates, Boston Museum lecturer; Jack Wilcox, Boston Museum engineer and lecturer; Mayor Samuel Resnic of Holyoke; Representative Joseph Wisniowski, Percy Gilbert, deputy director of the Boston Museum; Mr. Redfern; Friar Kaczmarek; Mr. Washburn; Superintendent Fitzpatrick; Colonel Wooten; Col. David C. Jolly, Westover representative; William Sheehan; N. P. Ames Carter; and Dr. Lewis Ayers.

Land, Wood, and Water

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Sapulpa Herald, Sapulpa, Okla., for December 17, 1958. This editorial entitled "Land, Wood, and Water" relates the progress made by Oklahoma's senior Senator ROBERT S. KERR in carrying forward a dynamic program of land, wood, and water for our great State.

The editorial reads as follows:

LAND, WOOD, AND WATER

Yesterday at Rotary the cardinal philosophy of Senator ROBERT S. KERR kept running through my mind as I listened to the discussion of the Deep Fork drainage area by the speaker, Charles Evans.

Land, wood, and water.

And I thought of the sneers, jeers, and jibes that have been loosed in KERR's direction down through the years as he went over the State and Nation talking about land, wood, and water.

Where is the man or woman now who thinks that the Kerr program is "corny," a mere political hunk of baloney?

Where are those who derided land, wood, and water as being part and parcel of the same cynicism as those who expounded home and motherhood as a political dogma?

Recently I pondered over a map of eastern Oklahoma. It disclosed Sapulpa as nestling quite near the hub of a vast network of lakes and reclamational areas.

Lakes both in and projected.

Count 'em off on your fingers, going clockwise or anticlockwise. It makes no difference, for you start running into water in any direction out of Sapulpa—big water.

Keystone, Heyburn, Hulah, Oolagah, Grand, Gibson, Tenkiller, Texoma, Wister, and what is that big one that will start over by Eufaula and run almost to Okmulgee?

Water for municipalities, water for industry, water for fish and boats, water for transportation, water for irrigation—eastern Oklahoma is the last great frontier in these United States for water.

How wise Senator KERR was years ago when he jumped out in front in leadership with his land, wood, and water ideas.

As a result of his foresight, Oklahoma is years ahead of the rest of the Nation in the development of waterways and the improvement of drainage systems of innumerable creeks and streams.

I sat in a hotel room in Fort Smith, years ago, with Senator KERR and Claude Wickard, who was then the Secretary of Agriculture, and listened to their reactions to a terrible flood which swept down the Arkansas and laid scars on the fertile bottom lands west of Fort Smith that can still be seen.

We had toured the Arkansas River flood area that day.

This was before the huge stream control of Oklahoma rivers, that is now an actuality, was launched and completed.

As a matter of fact I think it was that trip down the Arkansas which solidified in KERR's mind the necessity of discipline and control of Oklahoma's waters.

Thus land and water, two prongs of his program, were either born that day or solidified in his mind and this State is enriched thereby and the benefits will snowball down through the upcoming years in a manner too vast for proper calculation.

Only trees are left—the "wood' part of his philosophy.

Oklahoma only has about three kinds of trees that are in any profusion and capable of being exploited commercially.

Two of them already are the pine and the pecan.

Only the blackjack is left for "a working over."

Does anyone wanna bet that KERR doesn't have any ideas about the blackjack?

If so, count me out.

Unwary, indeed, will be the person who gets caught out on that limb.

It might get sawed off.

For he has the ability to run his detractors out on a limb and then sawing it off.

Come to think of it this might be the "wood" phase of his three-part program.

A Challenge to Young People

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at the first convention of youth for the diocese of Ogdensburg, N.Y., held at the Olympic Arena in Lake Placid, N.Y., on September 26, 1958, together with an editorial from the Adirondack Daily Enterprise of Saranac Lake, N.Y., of September 27, 1958, entitled, "A Challenge to Young People":

ADDRESS BY HON. JAMES A. FARLEY

I would not pretend to be an orator or a philosopher. I have never envied, however, those who can sway the minds of men by limpid accents and the dramatic marshaling of arguments. I can only give you the facts as I see them. Neither do I claim to be a man of special learning, because my education stopped far short of my desires. Yet I like to think I know something of my fellow men. I stand before you, too, as a Catholic, who regards his religious faith as his greatest blessing. Besides that love of my faith, I cherish with a fierce love my parents and family and, of course, I have warm affection for my political party.

In my youth I sought the company of my elders to learn the ways of life. In my manhood I was fortunate in having been part of the tremendous drama of my time. I was privileged not only to play a role, but to meet and know most of the great figures of our time. I have met and spoken with thousands of my fellow citizens. From all of them I have learned what I could. For there is no snobbery in man's greatest study, which is man. We can learn as readily from the humblest of our fellows as from the most respected among us.

My times have been eventful, indeed. I have seen the twilight of kings in World War I and the twilight of the dictators in World War II. Kings lost their thrones by establishing hell on earth in war. They perished because they treated politics and morality as things apart. In World War II the days of two of the most powerful dictators ended shamefully because they attempted to put politics above morality.

For some time, East and West have been locked in a mighty conflict. We in America know we are armed with right because we are concerned with the dignity of man. Yet, because of our concern we must not take the role of aggressor, even for the right. A world system based upon any one country's idea of freedom stifles freedom by denying others the choice which is essential to freedom.

People have often asked me why I chose a career in politics. Sometimes I ask myself, too, what inducement drew me to a life of public service. Let me try to explain today, as I have explained so often to those who questioned me, the grandeur of such a calling, as I look back on over 40 years of my life devoted to it.

Politics is a science and ethics of government. As a science it deals with the administration, organization, and regulation of political entities from the town meeting to the State in both internal and external affairs. In their best sense political ethics are as rigid as the moral code. The same ethics, it may be noted, apply alike to Catholic and non-Catholic. There is no wavering on the line of morality. In their worst sense political ethics are the artful and expeditious management of political affairs for personal or party advantage.

It must be recognized that politics and morality are one and indivisible. Merit and good works are the end of man and they are the end of politics. Power to do good is the true and lawful end of political aspiration. This power to do good is not to be confused with political zeal, which can be good but which is often mistaken. Politics should bring man ordered progress toward general convenience and usefulness.

In following politics as a career, man adopts the most dangerous as well as the most noble worldly career. It is noble be-

cause the power to do good is noble. It is dangerous because the practice of politics is beset by hazards, temptations, and delusions by which man may well lose his immortal soul. This is of gravest concern to any man.

I have no intention of turning my attention to a public examination of my own political conscience or to a dissection of the weaknesses of my fellow men. We all should be most meticulous in observing the code of our religion in our public conduct; most especially we should not treat politics and morality differently, because once we attempt to differentiate we lose understanding and honor.

Political power is a terrible force. Wisely and judiciously handled, it can do untold good. Abuse of power corrupts and destroys. By the uses of political power man can lead his fellows out of the mire of dejection into the light of freedom. And by the same uses, if unbridled, he can lead his fellow men from the light of freedom into the darkness of slavery.

So I say to you, seek power but respect liberty. In our ideal, which we as Catholics share with non-Catholics, our Government should rest upon Christian ideals of love and the brotherhood of man. This does not mean that we must all be perfect before we can have a truly free government. We can even be selfish and promote free government by allowing self-interests to balance one another. But we cannot be vicious in self-interest, even though we persuade others that we are doing so merely to advance the common good. The truth is we are trying to justify absolute, irresistible power for its own sake.

We recognize that freedom must give way to power in time of great internal or external danger. For revolution or war must find the government clothed with power to muster the resources of the country for its own protection. Once the danger is past, these powers should be returned to the people, where they belong. They should not be retained. Power feeds voraciously upon itself, growing ever hungrier until at length it imprisons reason in self-interest and destroys the capacity of judgment, to the great danger of the people.

Abuse of power is the root of all evil both for the politician who governs and for those he governs. Abuse of power encourages corruption, breeds delays, fosters incivility and makes for insincerity. Unhappily, some Catholics in power have been prone to abuse their trust. We cannot evade facts. We should not bury our heads in the sand after the manner of the fabled ostrich. What I have said does not mean that Catholics are not to be trusted in government. But it does mean that we should be careful to entrust our lives, our fortunes and our sacred honor to honorable men, just as we are most careful and exacting in entrusting our watches for repair, or our jewelry, to experienced, trustworthy hands.

Political aspiring is entirely commendable—no one can quarrel with a noble ambition. But power in politics is not a license to do good and evil. Its only justifiable end is the good and it can be truly successful only when it shuns evil.

Political machines tend to grow arrogant and contemptuous of the rights of those outside their orbit. This is true whether machines are long entrenched or lately come to power as the result of a reform wave. They resort to force or threats. Too often their philosophy is that what is good for the machine is good for the people. This is just another way of saying that the end justifies the means.

In time, political machines tend to become the creatures of one man or at best a clique of men. The leader regards himself as an uncrowned king and refuses to surrender power even when his talent for leadership is impaired by the relentless course of time. He becomes capricious in the distribution of favors and scornful of interests not identified with the machine. He becomes exacting in his demand for loyalty, so much so as to confuse personal loyalty toward him with true political ethics.

Corruption is the most familiar of the evils of the abuse of power. Man has always been tempted by easy money. From early days some men have looked at bribes as the proper reward of public service. Some regard fees they collect as their own funds. In their enthusiasm to win office, men frequently spend far more than they can hope to take home. They turn then to making up the difference—and a little bit more—by demanding or accepting returns for favors.

In all fairness it must be noted that many men see so little wrong in such conduct that they scarcely cover up their crooked operations. As a result, such cases are frequently easy to press in court. Many men in public office who are entirely reputable in their business dealings are most careless in their official conduct. Too often, I am sorry to say, some Catholics in public office feel that there is one code of conduct for their private lives and an entirely different code for their public lives. Of course, one cannot be a good Catholic on Sunday and a bad Catholic during the week.

Procrastination is another evil of political power. It is so easy to delay doing a public good, especially in a nonelection year. It is so easy to forget political promises until the next election. It is so easy to put off doing what is right when courageous action might cost votes. It is so easy to keep feeding on power and to forget the public good.

Incivility is no less frequent a fault. We have all known men to grow pompous and arrogant in power. Such men come to regard themselves as masters of the people rather than as servants of the people. It is perhaps too much to ask that every man in public life be free and easy of access. Many public men are harassed by the press of their duties. It is proper even that a public man be brusque in private and resentful of any invasion of his privacy, but when he assumes his public functions he must become another man—fair, patient, understanding and, above all, just.

Insincerity is the last of the mortal sins of abuse of power. Many espouse causes, not because they believe them to be good, but solely as the road to power. Many bury convictions to retain power. Some seek temporary power in order to reap financial reward by joining with those they opposed and even persecuted while in public service. Others pretend to be friends of the poor and needy, but have only been interested in heaping power upon power. All of these evils and a host of lesser ones can be avoided by those who scrupulously preserve the single standard of morality for public office against the double standard of one code of ethics for private life and another for public life. One's aim in politics should not be personal advancement and self-exaltation. The means one uses should not be log-rolling, back-scratching, and favors for favors received.

Politics should be directed toward bringing general security and prosperity. Yet, if in politics the majority rules, it does not dictate. Not everything a majority does is right, any more than everything a leader might do would be right of itself. It is entirely possible, to give a farfetched example, that a majority might decree that we again legalize slavery, but that would not make slavery right.

Fortunately for us, I think, we have a two-party Government. Each party is made up of various groups. Some of these have interests which sharply conflict and may be difficult to reconcile. Yet, each of these interests has a voice in making and executing laws through the party. Much of what is done is achieved by compromise among the interests, which is good. There should be no compromise of principles, but there can be recognition of those who are honestly and sincerely in the opposition.

Under our system both parties must recognize and allow for the interests of farmers, labor, financiers, and industrialists, as well as for racial and religious groups. I would be less than honest if I did not think that the Democratic Party offers the most effective programs for security and welfare. Yet, I would not do away with the opposition party, nor would I see any fragmentation of the party system such as that which has brought confusion to many European nations.

Security and prosperity have been promised by dictators and are still being promised by the most powerful dictatorship of our time. In Soviet Russia the security of prison is being offered to those who dare to question the accomplishment of any of the various 5-year plans. This is the road to fear. About a hundred years ago we gave up security by force, the security of slavery, which, while for the most part benevolent, was purchased at the price of freedom.

The Socialists promise the same ends of security and prosperity. They madly throw money away and avidly confiscate private property, seemingly unmindful of the fact that the three greatest experiments in socialism ended in dictatorship in Russia, Germany, and Italy. They would have us believe that it was the fault of men rather than the fault of a system which is long on materialism and short on faith.

The people must guard their liberties most jealously. If men go wrong in public office, part of the responsibility is ours in not being more vigilant against concentration of political power into the hands of a few. It is our good fortune to be part of a nation which has given its citizens a greater degree of freedom than has been enjoyed by any other nation at any time in the history of the world. It is our responsibility to keep this torch of liberty lit in a dark world. Millions in bondage must be heartened to realize that this great candle still gives light in darkness.

We must not despair because a few men have gone wrong from time to time. It is sad that they have besmirched our code by their conduct. But the fact that they did so does not bring disrepute upon the code of the most reverend among men, any more than it should bring disrepute on the many men who have been devout and humble in the exercise of power.

I have known men who have yielded to temptation in public office. I wish that any person so tempted and so beset by insatiable ambition could see, as I have seen, these poor, miserable, shattered men. I have seen them shed bitter tears of remorse, of regret, and of repentance. I have seen them crushed by the weight of their disgraces, not so much on themselves as on those they loved—their parents, their families, and their friends. And I have seen them numbed by the realization that they had seen the value of morality too late. For them, disgrace was forever.

It is a frightening fate to contemplate. The judgment of history and the judgment of men are alike unyielding for the violator of morality in politics. It is of utmost importance that men in public life exercise power most judiciously for the common good. They must not only shun temptation but avoid the suspicion of temptation. There is no greater crowning jewel in public men than true virtue. Virtue in politics can bring eternal fame, but it always gives the reward of a clear conscience and a deep sense of accomplishment.

Leadership is a precious and favored gift. We cannot all aspire to it in politics. It is not essential that we have it in the heroic degree of a Washington, a Jefferson, a Jack-

son, a Calhoun, Lincoln, or Cleveland. Yet we can all be politicians. They truly serve who do no more than cast their votes. It is important that we be jealous in doling out power and that we be exacting in our demands on those in power, so that they will not fail us.

I hold that so long as we maintain intellectual honesty by measuring our own interests against the rights of others, we perform an important political role. We will serve by demonstrating faith in our country, by going to the polls to tell our political leaders what we think of them and their programs. In that way we exercise a vital role in maintaining our freedom and working to advance our own security and well-being.

For most of us this will be the sum total of our political activity. That is good in itself, but it is not enough for all. The great and crying need of our country is for more good men and good women—especially young men and young women—to make at least part-time careers of politics. In the earlier days in our country it was a common feeling that men of families of wealth and position owed some portion of their lives to public service. This feeling brought generations of public service from various families. We are thankful that such traditions of service still continue among us.

My generation is passing. Maybe we did not handle our problems too well. Maybe we were too tolerant of political transgressors among us. That could be. If so, as a member of an older generation, I would be most remiss if I failed to appeal to young people to take up politics. We must not shrug off our responsibility by washing our hands of politics as a dirty business. Politics is not a dirty business unless we allow it to become so. It is rather a most serious business which has need of the most high minded and the most generous hearted among us.

I cannot urge upon you too strongly the necessity for citizens to take part in politics. I appeal especially, as I said, to the young people. If you brush politics aside as unclean, as something no decent person would enter, not only our Republic but our faith would perish. Politics needs persons of high purpose and high moral courage. If high-minded and moral hearted young people enter politics we can save the Nation and perhaps the world while we keep the faith.

Over the last decade and more especially in recent months, we have been hearing much of integrity in public office. I am not being partisan in this, because charges have been leveled, not without justification, against both parties. There have been suggestions that new ethical codes be written and enforced. This, while commendable perhaps, is actually silly. The code exists in every clean heart. Each of us knows the rules of the game. What our country and every country needs is more clean players.

In this connection I am reminded of the words of the late great American philosopher, George Santayana. Santayana, whose warm Spanish ancestry and chill New England upbringing combined to give him a mind of cold judgment and sympathetic analysis, said: "If a noble and civilized democracy is to subsist, the common citizen must be something of a saint and something of a hero. We see, therefore, how justly flattering and profound, and at the same time how ominous, was Montesquieu's saying that 'the principle of democracy is virtue.'"

Politics should be a joyous, dedicated effort toward man's advancement on earth, just as religion is a glorious effort toward bringing final, happy fulfillment in eternity. Moral strength must arm the political leaders of the future if we are to keep the country free and by example set the world free.

It is our good fortune that we had among us many men and women in politics who were motivated in their public lives not only by good political considerations but by highest moral principles. To these we owe our survival amid varying difficulties, misfortunes, and calamities. We are beset by fears and doubts and difficulties of highest magnitude, although if we will but look back in history, we will find that every generation of every country was threatened by disaster. Some generations met the challenge and others succumbed. If we look closely enough we find that progress was ever forward although man at times seemed to fall back.

We today should take heart for the future. It is for our leaders today and the many noble young people we will recruit for political careers to bring us greater and more rewarding service. We must not despair. Let us dedicate ourselves for as long as our way goes here below to seeking the best among us, mentally and morally, as leaders.

[From the Adirondack Daily Enterprise, Saranac Lake, N.Y., Sept. 27, 1958]

A CHALLENGE TO YOUNG PEOPLE

James A. Farley, former chairman of the Democratic National Committee and Postmaster General of the United States, yesterday spoke to the Catholic Youth Organization Council convention at Lake Placid.

A man of great experience in politics, Mr. Farley spoke of the good that politics can do, while warning of the pitfalls of power.

"The great and crying need of our country" he said, "is for more good men and good women—especially young men and young women—to make at least a part-time career of politics. * * * Politics should be a joyous, dedicated effort toward man's advancement on earth. * * * Moral strength must arm the political leaders of the future if we are to keep the country free and by example set the world free."

"It is our good fortune", Mr. Farley declared, "that we have had among us many men and women in politics who were motivated in their public lives not only by good political considerations but by highest moral principles. To these we owe our survival amid varying difficulties, misfortunes and calamities. We are beset by fears and doubts and difficulties of the highest magnitude, although if we will but look back in history, we will find that every generation of every country was threatened by disaster. Some generations met the challenge and others succumbed."

Mr. Farley set his sights high in challenging the imagination of the young people at Lake Placid.

It is easy enough to shrug off politics and politicians as of no great account. If we do this we are condemning ourselves and our democratic way of life. Nothing is more important to our successful survival, as Mr. Farley eloquently pointed out, than that we have intelligent and courageous people in politics, in both parties.

Fighting Inflation

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. RAY. Mr. Speaker, under leave heretofore granted, I place in the RECORD a resolution approved and adopted by the United States Savings and Loan League at its 66th annual convention held in San Francisco, November 17–21, 1958, on fighting inflation:

FIGHTING INFLATION

(A resolution approved and adopted by the United States Savings and Loan League at its 66th annual convention held in San Francisco, Calif., November 17–21, 1958)

Erosion of the purchasing power of the American dollar has been a major economic problem throughout the postwar years. Despite periods of price stability in 1948–50 and 1952–55, some declines in the value of the dollar have occurred.

The business recesison which started in the fall of 1957 had less effect in restoring the purchasing power of the dollar than had been hoped for by many segments of the American economy. Inflationary tendencies, however, were arrested. There is some danger now that a resurgence of business activity will bring additional inflational pressures.

Psychological as well as economic forces are at work in relation to inflationary tendencies. In the thinking of a not insignificant number of business, agricultural, labor, and governmental leaders inflation is regarded as inevitable. Some political leaders in both parties are so convinced of this that they have proposed price and wage controls.

The United States Savings and Loan League is convinced that further inflation is not inevitable, that increasing competition will restrain future inflationary tendencies, and hence that direct Government controls of wages and prices are not now and will not be required in the future. It regards such controls as dangerous threats to the American business system. It applauds the Secretary of the Treasury in his stand for the position that inflation is manmade and can be man controlled. It pledges itself to continuous battle in what it believes to be one of the most important of all struggles to maintain a free and prosperous society.

The league suggests that an improvement in the will of the Nation to fight inflation could be aided by congressional action. The Employment Act of 1946, which has come to be regarded as the basic charter of the Federal Government's responsibility and policy in promoting prosperity, has frequently been used to defend public policies which are inflationary; at the same time other interpreters of the act hold that price stability is an implied ingredient of the economic goals there listed. The league applauds the study made by a subcommittee of the Joint Economic Committee of Congress of the relationship of price stability to the goals of the Employment Act. The league urges a declaration by the 86th Congress, either as an amendment to section 2 of the Employment Act of 1946 or as a separate resolution, specifically stating that maximum price stability is a goal of Federal Government policy and leaving no doubt that this goal is of equal importance with maximum employment and maximum production.

A. W. Wainwright Receives Award for Faithful Service

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. WAINWRIGHT. Mr. Speaker, we have in this country a large group of faithful workers who make a tremendous contribution to our country. Their services should be recognized and ap-

preciated by the American people. I refer to the men who serve so unselfishly in the Selective Service System. From time to time a local member of a selective service board receives a Presidential citation for faithful service.

A gentleman from Bonham, Tex., with whom I have corresponded for many years, recently received a Presidential citation for 10 years of loyal and faithful service to the United States. The local paper in Bonham, Tex., should be commended for publicizing this award, and I take pleasure in quoting it for the RECORD:

A. W. WAINWRIGHT RECEIVES AWARD FOR FAITHFUL SERVICE

A. W. Wainwright, chairman of the Fannin County Draft Board, has been presented a Presidential citation for 10 years of loyal and faithful service to the United States.

The presentation was made by Charlie A. Foster, district supervisor for the Selective Service System, who was acting on behalf of President Eisenhower, Gov. Price Daniel, Lt. Gen. Lewis B. Hershey, National Selective Service Director, and Col. Morris E. Schwartz, State director.

The award is in the form of a Presidential certificate of appreciation and is signed by the President, the Governor, and the National and State Directors of Selective Service.

"Mr. Wainwright has served his country and community well all these years without pay or thought of pay," Mr. Foster said. "It is my pleasure to carry out the directions of the President in making the award to him."

Panama Canal: More on "Digging the Ditch"

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. THOMPSON of Texas. Mr. Speaker, in my remarks in the CONGRESSIONAL RECORD of June 9, 1958, I included a book review in the New York Times by Elting E. Morison on a recent volume on Panama Canal history by W. Storrs Lee.

Another review of that work by Capt. Miles P. DuVal, Jr., U.S. Navy, retired, was published in the September 1958 issue of the U.S. Naval Institute Proceedings, the well-known monthly magazine for the advance of professional, literary, and scientific knowledge in the Navy.

In contrast with other reviews on Dean Lee's book, which emphasize its historical and human interest features, Captain DuVal stresses points of fundamental character and should be of special interest to the Congress, especially those committees concerned with interoceanic canal problems.

The review with an editorial note follows:

THE STRENGTH TO MOVE A MOUNTAIN

(By W. Storrs Lee—Reviewed by Capt. Miles P. DuVal, USN (retired))

(Captain DuVal is author of two important volumes on the Panama Canal, "Cadiz to Cathay," and "And the Mountains Will Move," a former captain of the Port of Balboa, C.Z., 1941–44, in charge of marine operations of the Pacific sector of the canal; and later, head of the Panama Canal Liaison Organization and Isthmian Canal Studies of the Navy Department under the Chief of Naval Operations, 1946–49, by order of the Secretary of the Navy, James Forrestal. Attention is invited to his article, "Isthmian Canal Policy—An Evaluation," in the March 1955 issue of the U.S. Naval Institute Proceedings.)

A most timely and instructive contribution that tells the dramatic story of building the Panama Canal, now verging toward another crucial period with respect to the type of its modernization. Consideration of this major element of our national policy, which will eventually involve the expenditure of vast sums has been immeasurably complicated by widespread agitations for wrenching canal ownership and control from the United States.

Dean Lee, recognizing the necessity for an informed public interest in interoceanic canal problems and an informed reaction, undertakes to reexamine our stake in the canal enterprise and to reassess the significance of its construction half a century ago.

Drawing upon many sources, independent as well as official, he has thus been able to capture the spirit of the times covered and to present his narrative with a refreshing degree of candor and objectivity. Listed in his references, these sources will be invaluable for those who may wish to delve more deeply into the complicated canal question.

Unfortunately, the book is not supplied with maps and schematic diagrams essential for those not intimately familiar with the subject to follow with proper understanding. For a work of its appeal, however, it is remarkably free of errors in terminology.

In a clarifying foreword, the author recognizes the advantageous geographical location of the Panama Canal, describes the impact of the Suez Canal seizure by Egypt in 1956 on the Panama Canal with resulting demands for relinquishment or reduction of U.S. jurisdiction, mentions the ill-fated 1939 Third Locks project that was suspended in 1942 after the expenditure of some $75 million, and stresses the two principal plans for major increase of canal capacity.

The first proposal described is the 1943 Terminal Lake-Third Locks plan for the economic increase of capacity and improvement of operating conditions. This solution was developed within the Panama Canal organization as the result of experience in World War II, approved in principle by the Governor of the Canal Zone, and supported by the Secretary of the Navy in a report to the President. The author obviously sensed its historical significance, for he states that it was the "kick-off for a new 'battle of the levels' almost as bitter as the controversy of 1906."

The other is the 1947 sea-level plan, recommended by the Governor of the Canal Zone primarily to make the waterway less destructible under atomic attack. Though mentioning the report of which this recommendation was based as one of the most meticulous engineering reports ever written, Dean Lee balances the description by leveling charges from eminent, independent canal, naval, and nuclear warfare experts, as summarized by George M. Wells and Representative Willis W. Bradley, which challenge the primary assumptions on which the sea-level justification was attempted. Evidently through inadvertence, he did not state the facts that the sea-level report failed to receive presidential approval, and was transmitted by the President to the Congress on December 1, 1947, quite significantly without comment, or recommendation; and that the Congress took no action thereon.

As to demands and proposals for giving up U.S. jurisdiction over the Canal Zone and Panama Canal, the author emphasizes the views of the Honorable Maurice H. Thatcher, sole surviving member of the Isthmian Canal Commission and former civil Governor of the Canal Zone, also a distinguished former Member of Congress, as strongly opposing any surrender of our rights and authority over the canal enterprise, either by internationalization or otherwise.

Most of Dean Lee's book concerns matters of great human interest and is fascinating reading. Yet woven through its fabric are points of fundamental character, which include explorations into the backbround of Culebra Cut, Gatun Dam, and some important facts about the long obscured history of the presently separated Pacific locks.

The author describes the location of these locks as the major weakness of the whole canal plan, a very expensive one. This error in design, which was inherited from the French, was first recognized by Chief Engineer John F. Stevens, who, early in 1906 recommended the combination of all Pacific locks in one structure as a desirable change in the adopted canal plan. On August 3 of that year, he approved an arrangement that placed these locks in three lifts south of Miraflores with the main terminal dam between two hills, Cerro Aguadulce on the west side of the present sea-level channel and Cerro de Puente on the east. This plan, afterward studied in more detail and unavailingly recommended by Col. William L. Sibert, a member of the Isthmian Canal Commission, would have enabled summit-lake navigation from the Atlantic to the Pacific with a summit-level anchorage at the Pacific end of the canal to match that of the Atlantic end.

Unfortunately, an obvious lack of appreciation on the part of canal planners of marine needs and failure to seek the views of adequately experienced navigators on questions of fundamental planning continued, generally speaking, through many years. This policy was well illustrated in the design of the 1939 Third Locks Project, authorized primarily as a defense measure to accommodate larger naval vessels. Its complicated layout in the Pacific sector of the canal, tortuous channels, failure to remove the dangerous bottleneck at Pedro Miguel, and to provide other correlated operational improvements, are the bases for opposition by important navigation interests to the completion of that project as originally planned.

Though treated at some length by Dean Lee, the Pacific lock question has far-reaching angles that are not covered by him. Moreover, as was clearly foreseen by Stevens, it still remains a key problem of vital import to the future, and thus merits far greater attention.

In extending credit, the author is quite generous and just, with the result that the key figures in Panama Canal history are placed in much better perspective. Although Goethals and his associates, civilian as well as military, who took over the task of construction from Stevens, attained great fame as canal builders, Dean Lee rightly describes John F. Stevens as the basic architect of the Panama Canal.

Thus, it is most fitting that, in his conclusion, Dean Lee should revive the 1928 plan of Governor Thatcher for adequate memorialization of all who in significant ways contributed to the success of the great enterprise, for there is glory and honor enough for all.

Though not expressing his own preference as to future plans. The author ends his volume with a stirring appeal: "The United States rallied to a noble challenge in 1904. The country has another challenge now: The old canal is gradually becoming inadequate, and if the present rate of increase in shipping

through the cut continues, the waterway will be obsolescent in less than 2 decades. That leaves all too short a time to remodel the master work."

Faith: Address of Hon. James A. Farley at New York State Fair

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BOLAND. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley on the "State Fair Pauses Before God Program" of the New York State Fair at Syracuse, N.Y., on August 31, 1958:

FAITH

Over the years I have made many speeches. In the past, I must confess, I have never done so without some uneasiness. I have always been aware I am no orator, one who can fire the minds of men by poetic imagery and limpid accents, and that I am no philosopher, one who can elevate the minds of men by clarity of thought toward the level of angels. On this day devoted to religion, a new anxiety has been added for me to the speaking platform; I am not a theologian, skilled in matters of morals and dogma, nor am I a man of learning, versed in metaphysics, science, history, or art.

I am a man of business. In business I have been fortunate and happy. I used to be a man of politics. In politics I have had my successes and my defeats, all of which have added to my knowledge and understanding of my fellow man, including my most recent decisive venture. It is this knowledge and understanding, along with my years—a full 3 score and 10—glowing with bright memories and unsullied by bitter cynicism, that moved the planning committee to select me as speaker for the religious day ceremonies.

I am a Catholic, rooted in my faith. In speaking at these ceremonies, I follow a Jew and a Protestant. All of us are Americans and don't let anyone tell you differently. The greater our devotion to our faiths, the deeper our dedication to America; and let none of us forget that for a single instant, because if we do, we place ourselves in jeopardy to the godlessness of materialistic totalitarianism.

The days of my years have covered the appearance of virtually all the great discoveries by which man has changed the face of the earth, approached the conquest of time and space, and armed himself with the power to destroy the world. Unhappily man has not learned how to control himself as well as he has learned to harness and transmute the bounties of nature.

Man has always had the power to destroy himself, using it first when Cain slew Abel. Succeeding generations have magnified that power until in this century we have seen two terrible world conflicts and a number of lesser wars, which have taken a frightful toll of lives, destroyed staggering totals of property and culture, and squandered many bounties of nature. Today we face the threat of a third world conflict, which might not only take even more fearsome tolls but could obliterate civilization as we know it.

But horrible as destruction and such a threat may be, we are confronted with a more terrifying prospect. Man has always had the power to lose his immortal soul. Now, mankind is confronted with organized and regimented secularism or materialism, which would have him take a nonreligious view of everything. It would obliterate all faiths and have man deny God.

By nature man is religious. Man is an animal and has much in common with other animals from the ant to the elephant, not only in senses, passions, and instincts but some resemblances of body. He differs from other animals in two important respects; he has intellect and he has free will. By his intellect he can reason so as to pass from one idea to another. He can turn his intellect on himself, on the universe and on God. By his freedom of will he—and he alone of all living creatures—can subdue impulses and act against them.

At every turn as an individual or as a member of society, man is confronted by risks and must make decisions. In making decisions man alone has the power among living creatures to weigh concepts such as freedom, truth, and justice—against images.

From the beginning of time man has sought to relate himself to the unseen, the transcending power that makes for the thirst for righteousness—God. In this respect we might say that man is metephysical as well as religious, but he has not arrived at his understanding of God through intellect alone. Materialistic men would have us believe that we have created a fantasy for lulling ourselves to unreality, by pronouncing religion the opiate of the people.

No; we of the three faiths know God has spoken to man Himself and through men. To accept anything on the authority of man we must be convinced, by reason, of his credibility. Revelation is credible when we are convinced he is telling us what he knows. Faith does not ask the surrender of reason; rather, reason is what supports faith.

In opposition to faith we have the materialists and the secularists who oblige others to accept what they say as truth because they say it. Those who would oblige others to accept what they say as truth are dictators lustful for power or men swollen with the pride of intellect, the sin by which angels fell so that it is no wonder it devours their reason by the insidious flattery or egotism.

By its nature materialism is a force for slavery as faith is a force for freedom. Today we are engaged in a titanic struggle between the forces of freedom and the forces of slavery. The forces for slavery have organized a powerful and lawless conspiracy which we know as communism. These would subvert the forces for freedom by lies, deceit, ridicule, distortion, hate, and treachery, with strife in reserve as a last resort.

The tyrants of world communism are strangers to truth. They were able to conclude an unholy alliance with Hitlerian forces of aggression, which loosed World War II, sealing this foul pact with the blood of an outraged nation whose security they had pledged. They were able to attack a tiny nation and scream they were protecting themselves against aggression. They were able to gorge themselves on nation after nation on a tidal wave of imperialism such as the world has never known before and pose as lovers of independence. They have posed as lovers of peace while threatening all who oppose them with destruction.

Over the 40 years they have been in control, the leaders of Red totalitarianism have broken their signed and pledged word in a thousand pacts and treaties. Their word is as changeable as it is hollow. If we had no other proof of this, the voices of the patriot dead of Hungary, led by the recently executed Premier Imre Nagy, blare their condemnation trumpet-tongued for all time down the corridors of history.

Even while professing to call for peace, the leaders of the Kremlin boast that they are now powerful enough to loose the monsters of nuclear war. They have threatened to destroy the United States and Britain while calling for a summit meeting at which they would have the great powers of the world dictate and enforce Communist imperialism on the smaller nations of the world. While professing to prefer the gentle fluttering of the wings of the dove of peace, the dictatorial oracle of the Kremlin ranted, "We bolsheviks are a ravenous people * * * we want more and more." This same leader boastfully predicted that grandchildren of those now living would live under Communists and that communism would destroy us.

Let us take a look at the situation of this proclaimed Communist enemy. It is now 40 years since the last czar of Russia was done to his death, with most of his family in a Russian cellar, by frightened bolsheviks. Leaders of this revolution have now had four decades to reconstruct Russia and make its people happy. In the same initial period we made tremendous strides toward our present prosperity. From the scraps of news that come out of Russia, it is evident that the Russian people are living on a very meager diet and in the barest of comfort. Even granting that the crudest Russian peasant and the poorest Russian worker in the cities is better off than he was under the czars, the advance has not been anywhere near the world of plenty and happiness the Communist leaders promised when they began making over Russia.

It is now evident that the Iron Curtain has been erected not so much to keep the rest of the world out of Russia as to keep the Russians satisfied within. The Soviet leaders do not want faith and the truth entering with foreign visitors. For almost 40 years the leaders of the Red revolution have been educating the Russian young people, but there is no doubt that some 60 million young Russians, whose minds have been partially awakened, are becoming more and more of a problem. These young people have been aroused to question what they are told, because their tastes have been expanded and their appetities sharpened. Some have seen the Western World in their marching in war. They have seen that the Soviet promises of a better and fuller life are a shocking disappointment by way of contrast with what the poorest people enjoy in the freer outer world.

Many Russians under the age of 40 know now that they have been getting sputniks and arms instead of bread and butter. They have been getting uniforms and drill and more work at more hours instead of better homes, simple luxuries and a peaceful life. There can be no doubt that many millions of young Russians are unhappy, to say nothing of millions upon millions of people who have been enslaved by the violent energy the Communist leaders put into building weapons to defend their regime while professing to defend Russia.

The greatest threat to Russia at it is constituted today is not what the Communist leaders rant about day and night—the alleged imperialism of the United States or the alleged belligerency of the Western Powers. The great threat to the Soviet leaders lies partly in the unhappy and disgruntled millions in Communist slavery and largely in the vigorous, hungry, and ambitious young Russians who may awaken to faith. Almost four decades ago Communist leaders told the Russian people: "You have nothing to lose but your chains; you have a world to gain." Today, from the trickle of information that comes out of Russia, we learn young Russians are awakening to a growing realization that they have not gained anything of the world's abundant freedom, but have merely added to the weight of their chains.

For this reason I am convinced that Soviet Russia does not want war. For this reason I am also convinced that Soviet Russia does not want peace. If Russia goes to war, the discontented young Russians might turn on their leaders and seize the government for themselves. It is always easier to turn upon a tormentor at home than an enemy abroad. I am certain that the Russian leaders are aware that in launching any conflict, they would risk their future and lives, just as certainly as did Czar Nicholas in 1918 and Kaiser Wilhelm in 1914.

I have said that I do not believe that the Russians will launch a war, but neither do I believe that they will ever agree to a lasting peace. They will not execute a solemn and binding treaty at any conference between the East and West, no matter how high the summit, because peace will hasten what I believe to be their inevitable destruction. Russia's present leadership cannot survive war and Russia's present leadership cannot survive peace. That is their great dilemma.

They cannot survive war because they will be destroyed by an outraged citizenry. They cannot survive peace because they will be destroyed by faith born of learning. The learning which they are implanting in the minds of their young in their desperate striving to dominate the world in the space age is the devasting time bomb that will blast the materialistic tyrants.

The tyrants of communism fear force, but more than they fear force, they fear faith. Let each of us then keep the faith, knowing that those who keep the light of faith a sacred flame on our altars of catholicism, protestantism, and judaism truly save the race, as it was in the beginning, is now and ever shall be, world without end.

Jimmie John Jarnagin, of Jetmore, Kans.

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of this body an article appearing in the October issue of the Kansas Future Farmer pertaining to Jimmie John Jarnagin, of Jetmore, Kans., who has received the highest possible honor in the Future Farmer organization—that of Star Farmer of America. This young man has brought great honor to the State of Kansas, and to his city and country. He is to be highly commended for the contribution he has made to agriculture.

The article follows:

A young Kansas wheat and cattle farmer by the name of Jimmie John Jarnagin, Jr., has been judged winner of the Nation's most coveted farm youth award, the 1958 Star Farmer of America.

He is 21 years old, lives near Hanston, Kans., just 20 miles north of the famed Gunsmoke town of Dodge City, Kans., and is a vocational agriculture graduate from the Hodgeman County Community High School at Jetmore.

The award, carrying with it a $1,000 check from the Future Farmers of America Foundation, Inc., was made October 14, during colorful ceremonies at the Tuesday evening session of the 30th anniversary national FFA convention in Kansas City's Municipal Auditorium.

The 1958 Star Farmer of America is a wheat and cattle farmer from the dryland farming section of southwestern Kansas where agriculture is largely influenced by the whims of nature, and prosperity depends upon the farmer's fortitude to stick when times are hard, and management foresight to strike for big stakes when the rains come.

Such is the story of Jimmie John Jarnagin, Jr., who weathered 2 years of searing drought in 1955 and 1956 and came back during the past 2 years to earn more than $30,000.

Jimmie had unusual help from his father, J. J. Jarnagin, Sr., in getting started in farming. He added unusual management ability and hard work of his own to develop a 1,600-acre farming and ranching program with a gross value of $111,071.11. His program this year included 413 head of beef cattle, 230 acres of wheat, 155 acres of silage and grain sorghums, and about 1,200 acres in grass. He owns 1,280 acres; rents the remaining 320.

Jimmie is married and has a 2-year-old son. He and his wife, Charlene, with some help from her father, have built an attractive rambler-style home on the ranch. They're still working on the development of landscaping, a garage, shop, corrals, and other structures needed around the farmstead.

Jimmie's early years as a vocational agriculture student were not particularly impressive. Even though his father had bought a 160-acre farm in Jimmie's name in 1945, the boy's supervised farming program as a freshman in Hodgeman County Community High School at Jetmore consisted of only two registered Hereford heifers to begin his beef cattle herd. As a sophomore he added 12 sheep and half-interest in 70 acres of milo. Drought got most of the milo, and he lost money on both the sheep and the cattle. His net labor income for those first 2 years was $126.

It was then, in 1954, that his high school vocational agriculture instructor, George Turnbull, got father and son together for a long and searching talk about the boy's future. The elder Mr. Jarnagin had a large farming operation. He was past 65. His older son and two daughters already were married and away from home.

Mr. Jarnagin made arrangements for Jimmie to purchase 800 acres of the home farm for $24,000 on a time-payment basis. There was a 450-acre growing crop of wheat on the land at the time of the purchase. Jimmie expanded his beef herd to 24 and his sheep to 20. The wheat crop was good, and he harvested 6,500 bushels. His labor income at the end of the year amounted to $13,889.50. With it he paid off $12,000 of the amount owed his father.

That was to be his last good wheat crop until this past summer. In 1955 he netted $142 from 400 acres. There were failures again in 1956 and 1957, although he did get returns of about $2,400 during each of those 2 years from land placed in the soil bank.

In the meantime, Jimmie sold his sheep and attempted to expand his beef herd. In 1955 he pastured and fed 70 head of his father's cows for one-half of the calf crop. Selling his share of the calves, he bought more cows. Then the drought got worse. At the beginning of 1956, Jimmie had 52 cows, 4 heifers, and 2 bulls. Because of feed and water shortage, he sold his entire calf crop and 20 of the poorer cows.

The rains came in the spring of 1957, too late for that year's wheat crop, but a blessing on the pastures. Native buffalo and bluestem grasses greened up once more and started growing. Jimmie bought 320 acres more of grassland from his father for $15,000 and leased 320 acres from his mother at $2.50 per acre per year. He got 31 calves from his 34 cows. In the fall he borrowed more money to buy 214 head of stocker steers and cows. He was so heavily in debt by this time that another failure of wheat and pasture could have resulted in his loss of the entire farm.

But the 214 cattle represented a particularly timely purchase. He paid $21 per hundred pounds for them, wintered them on wheat pasture and milo stubble. By last spring the steers had gained an average of 200 pounds each and prices had gone up. He sold 106 at a good margin, getting enough to pay off his note and still keep the remainder of the steers and cows to eat this year's good pastures.

At the time he filed his application for the FFA's American Farmer degree last spring, young Jarnagin had nearly $30,000 worth of cattle, $70,000 in land and buildings, with machinery and other miscellaneous items to bring the gross value of his holdings to $111,071.11. He still owed $33,000 on the land, $14,500 on the cattle, and $965 in other liabilities, for a net worth of $62,606.11.

Of that amount, he could count $53,634.05 gained in actual earnings from farming and other sources over a period of 6 years. The remainder represented his father's gift of the original 160-acre farm and increased inventory value of the land he had purchased.

Jimmie was graduated from high school in 1955 and in August of that year married a classmate, Miss Charlene Bamberger. They chose a site on the 800 acres he had bought, and with the help of Charlene's father in the framing, wiring, and plumbing, built their home. They have modern equipment and furniture in the house, and plans for other improvements.

"That takes a back seat to reduction of the mortgage on the farm, though," says Jimmie.

In high school, Jimmie was a leader in the FFA, student council president, captain of the football and basketball teams and played in the school band. He and Charlene are active in community affairs now, particularly in the activities of Farm Bureau and their local United Presbyterian Church.

Jimmie continues his interest in vocational agriculture by participating in a young farmers class, conducted by the present teacher, Hubert Mai, at the Jetmore School. Mai visits the Jarnagin farm frequently to help with the development of plans for improving the farm.

Jimmie has plans for joining the soil conservation district and is in the process of developing a complete conservation program for the farm. Also in the planning stage is a large farm pond where he hopes to store enough water to irrigate some of his crops.

"My immediate goal is to maintain a herd of 200 cows which will be used to produce feeder calves," Jimmie said. "I plan to continue to winter stocker steers whenever feed and pasture are plentiful."

Jimmie started building a garage last spring, and had plans ready for a machine shed. Most of the lumber needed for corrals and loading facilities was on hand.

"My farmstead will grow as rapidly as my time and funds are available," he said.

There were many times when it would have been easy for young Jimmie Jarnagin to quit, but Jimmie did not quit, and today he has received an honor which makes every FFA boy in Kansas proud to be a member of the Future Farmers of America. It is true that the Star Farmer of America had unusually good fortune in securing land which is not available to every FFA member who would be a farmer, but also it must be remembered that when that opportunity came, Jim Jarnagin was ready and waiting to accept it as the challenge of his lifetime. What Jim did when faced by this challenge in extremely adverse farming conditions will serve as a real inspiration to every FFA member in Kansas and the United States to be ready to take advan-

tage of opportunity which may come his way.

Much of the credit for Jim's success goes to his parents and vocational agriculture teacher, Mr. George Turnbull. It was through their sound advice and counsel that Jim has been able to take the giant steps to establishment in farming. Jims' wife, Charlene, has also been a major factor in his success. Not only has Charlene offered moral support and encouragement but has many times been seen in the feed lots or fields helping wherever necessary.

Attack on HUAC

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a fine and objective editorial "Attack on HUAC" appearing in the January 12, 1959 issue of the Daily News of New York City:

ATTACK ON HUAC

We congratulate today the House Un-American Activities Committee, hereinafter designated as HUAC, and its current chairman, Representative FRANCIS E. WALTER (Democrat, of Pensylvania).

Our reason for congratulating HUAC is that it is now under ferocious attack from all the Communists in the country and a raft of pinks, liberals and habitual joiners of Red front organizations.

For example, a big advertisement was printed in a Washington newspaper last week, petitioning Congress to eliminate the House Committee on Un-American Activities as a Standing Committee.

The blast was signed by, among others, Stringfellow Barr, Eugene Carson Blake, John A. Mackay, Alexander Meiklejohn, A. J. Muste, Mrs. Eleanor Roosevelt, and Aubrey Williams.

It accused HUAC of many things—ruining individual reputations or even lives, perverting Congress' powers of investigation, discouraging U.S. students and scholars from "studying in countries which we Americans desperately need to understand," and so on.

This advertisement was and is part of the abovementioned mass Red, pink and liberal drive to persuade the heavily Democratic 86th Congress to sack HUAC.

ENEMY OF ENEMIES OF THE REPUBLIC

The truth is that HUAC, ever since it was set up in 1945, has been a powerful and effective enemy of the Kremlin's fifth column in the United States.

HUAC took up where the old special House antisubversive committee headed by Representative Martin Dies (Democrat, of Texas) left off. Dies and his colleagues dug many a Communist and Fascist out from under the rocks and started him toward jail or oblivion—Fritz Kuhn, William Detherage, William Dudley Pelley, and Earl Browder, to mention only a few.

HUAC's most distinguished single achievement to date, we'd say, was its relentless digging into the Alger Hiss case, with RICHARD M. NIXON (now Vice President) doing most of the pick-and-shovel work. For that, U.S. leftists have never forgiven Mr. NIXON.

Under Representative WALTER's chairmanship, HUAC has continued the fight against subversives and traitors of all kinds. In doing so, it has had to steel itself against smears, character assassination and all the other dirty tactics and strategies habitually used by leftists everywhere.

Its latest work in the service of the Republic is a booklet entitled "Patterns of Communists Espionage," in which HUAC (naming names and summarizing cases) shows how widely and dangerously the United States is still infested with Soviet agents.

To repeat, congratulations to HUAC on this newest attack. The nature of its enemies is a tribute to its courage and effectiveness—and a tipoff to Congress to let HUAC go right on operating, with ample funds.

Defense of the Small Tobacco Farmer of West Virginia

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to the excellent presentation made by my colleague, KENNETH HECHLER, of West Virginia, before the Tobacco Division of the Agriculture Department on the controversial question of acreage allotments to burley tobacco growers of his State.

Mr. HECHLER's remarks, which appear under the caption "Defense of the Small Tobacco Farmer of West Virginia," are pertinent because they attribute the plight of the tobacco industry in the State as one of the contributing causes to West Virginia's overall sad economic situation.

Congressman HECHLER's remarks follow:

I represent the Fourth Congressional District of West Virginia, along the Ohio River. In this district live virtually all of the more than 4,000 tobacco farmers in our State. It is on their behalf that I am appearing before you today.

None of these West Virginia tobacco farmers own large, prosperous farms. Their farms aren't mechanized to any great extent. None of them surveys vast tracts of land from the shade of a veranda, with a mint julep in his hand.

Instead, these are, in the main, poor people. The smallness of their farms is matched only by the smallness of the tobacco quotas assigned to them. In fact, each farmer in my district grows an average of less than six-tenths of an acre each year under the present quota system.

With an average yield of 1,600 pounds an acre, at 60 cents a pound, this means that the average farmer in my district receives only about $576 a year from the growth and sale of tobacco.

This, I am sure, sounds trivial to you. You may be asking yourselves, "Why should we concern ourselves with a small group of farmers who produce only a small amount of tobacco?"

May I answer by pointing out that for a majority of these 4,000 farmers, tobacco is the only major cash-producing crop. For many of them, it is the one crop that brings any dollar income into their homes. For a large number of these people, it is the only way they have of making cash for themselves as they eke out a rustic, precarious living in the mountains of our State.

Considering these farm families, it is possible that the actions you agree upon here will determine directly whether or not upwards of 20,000 West Virginia citizens will have their pitifully low income slashed even further.

May I offer a corollary to this problem: Other sections of our Nation have recovered from the recent recession. West Virginia has not.

In the past 18 months, 45,856 persons have exhausted the unemployment benefits they merited under West Virginia's regular job-security program.

More than 300,000 persons in the State of West Virginia are subsisting on Federal surplus commodities. This constitutes more than 15 percent of the people in the State—the highest percentage of any State in the Union.

What this all means is that if these small tobacco farmers are not permitted to continue to make a small amount of cash income from their burley crop, they have no place to go to find new sources of cash income. I sincerely trust that no action will be taken by the Department of Agriculture that would add more of these hard-working people to the relief rolls. If they are driven to the cities in search of jobs, this will make the urban unemployment problem much more acute.

The economic fate of the tobacco farmer is so closely bound to the actions you take here, I am certain you will do nothing to damage his already hazardous position.

The West Virginia tobacco farmer has stood by passively and cooperatively while acreage controls have been drastically reduced. The number of acres harvested in our State has dropped from a high of about 19,000 acres in 1910 to 2,300 acres in 1958. This is the lowest figure since records of tobacco acreage were begun in 1866.

Even more recently, we can see how the production of burley in West Virginia has declined. In 1954 the poundage marketed at our warehouses in Huntington totaled 7,930,874 pounds. By 1957 this figure had dropped to 5,633,013.

Now this all has come about because of quota cutbacks. I have been informed by Charles E. Campbell, tobacco specialist with the West Virginia State department of agriculture, that West Virginia tobacco farmers have notably good records of support for the control program.

This means that although the Government was cutting back acreage in the only money crop many of these farmers grew, they still were willing, in a spirit of cooperation and good will, to accept these controls and, indeed, roll up an enviable record of compliance with the Government's orders.

Now it would be a gross distortion of the truth to say that these small West Virginia farmers are happy with these small quotas. I don't think we can expect them to be happy with quotas that limit their cash income to an average of less than $600 a year.

But I can say that these farmers are good people; they recognize and agree with the theory behind crop controls and adjustments. They realize that maintaining a good price for tobacco is essential, and they want the burley export market to remain strong.

If it is in the best national interest to keep quotas at their present levels, I am sure the West Virginia tobacco farmers will accept them. But any effort to cut quotas below their perilously low level will cause havoc and additional economic misery in the State.

This is the general viewpoint of tobacco farmers in my district regarding the present system of figuring acreage allotments.

Now may I pass to another phase of the problem.

I would like to comment for a few moments on a series of recommendations made to the Secretary of Agriculture by a group of representatives of growers, auction warehousemen and leaf exporters of burley tobacco. These recommendations were handed to Secretary Benson on November 17, 1958.

Recommendations concerning a return to the old parity formula—that is, parity as calculated prior to the Agriculture Act of 1948—receive our understanding. Also, we might add that we support these tobacco men in advocating acreage allotments for 1959 the same as those for 1958—since there seems little prospect for any increase in quotas.

I believe this is a sound proposal, because the facts indicate that the surplus of burley tobacco is declining. I would like to point out that the production of burley tobacco has been below the level at which total stocks have been depleted for four consecutive years.

It is a third proposal put forward by these tobacco experts which disturbs me, and places me sharply at odds with the men who drafted these recommendations.

That would be the proposal which states "that the Department assign a task force to work with leaders representing various segments of tobacco production and trade, including college of agriculture personnel, in studying, developing, and preparing in legislative form an acreage-poundage control program for tobacco."

This recommendation, which would take tobacco off an acreage system and put it under a pounds-per-acre system, is a very serious mistake, in my opinion. It might prove harmful to the large tobacco farmer under certain circumstances. It would surely prove disastrous to the small farmer, such as we have in West Virginia.

And why is this so?

For one thing, the regulation of pounds per acre is a difficult business at best. It is well known that annual rainfall—or lack of it—has a powerful influence on the weight and quality of tobacco yielded by any given field.

For a more important reason, however, I must assert again that this bill would hurt the small farmer.

The small farmer has a small tract of land to nurture and coddle. Because he is so severely limited by acreage, he devotes tender care to his tobacco plot, and often is rewarded with a heavy yield. The big tobacco farmer, who uses mass-production methods, consequently is willing to forego the higher yield in order to cut production and labor costs.

I am told that acreage limitations of something in the neighborhood of 1,600 to 1,800 pounds may be advised for the 1960 crop year. This would work a serious hardship on many West Virginia farmers, who by diligent work and unstinting effort obtain a yield of 2,300 to 2,500 pounds per acre on some of their pitifully meager tracts. Sometimes their output rises into the vicinity of 2,800 to 3,000 pounds.

Surely we are not going to reward these small farmers who obtain superior production by dint of long hours and unceasing care by altering the formula for calculating the amount they may produce, so that it will wipe out the fruits of their efforts.

It also can be argued that the small farmer deserves a better break than this because he must spend a longer time cultivating his crop, regardless of the methods and yield. It is estimated that in our West Virginia mountains, a minimum of 500 man-hours must be spent in cultivation of 1 acre. In Kentucky's bluegrass area, this figure drops to a comparatively low 300 hours. Thus, the extra hours put in by the hill-country farmer will go unrewarded if we make such an alteration in the quota-figuring formula.

The pound-acre formula is specifically designed to help the large, big-quota, mass-production farmer. The Secretary of Agriculture has argued that he wants to return agriculture to the free enterprise system. But can this be free enterprise, when a system is devised that takes money from the pockets of the man who is willing to spend long hours and devote tender care to his crop, and favors the man who operates on impersonal, businesslike lines?

You must agree that this is not free enterprise, as we understand it, in any sense. It is instead, I fear, a callous and heartless policy which builds a monument to massive, factory-type, mass-production farms upon the graves of small, marginal farms. This may seem to be efficiency, but it is a false efficiency if it is achieved by driving our small farmers into bankruptcy and starvation.

But, as I said, this program was evolved by tobacco men, not Federal officials.

However, it is significant that West Virginia's tobacco farmers were not even invited to the meeting at which these policies were adopted and endorsed.

I protest against the unfeeling and cruel attitude toward the little farmer, and I strongly urge that action be taken to protect this little man in the tobacco business, who apparently is being thrown to the wolves by his big brothers.

The West Virginia tobacco farmer is, in his way, as efficient as the big men in the field. Although West Virginia rates a rather low 18th in production, it rates 13th in yield per acre. And when we consider that tobacco is the State's fifth most important crop, the effect on the already troubled West Virginia economy can be appreciated.

So stringently do West Virginia burley farmers oppose this new formula that the State's department of agriculture has informed me that "this program, if adopted, could put the State out of the tobacco business."

I do not dispute the right of the big tobacco interests to present their case before you here today. I do not dispute that their share of the tobacco economy is larger than ours.

I ask you only to remember that any action you take here which is detrimental to the small tobacco farmer will be disastrous to 20,000 people in my home State. Therefore, I urge that you take no steps which would strike another blow at West Virginia's economy.

I do not want the famous old tobacco slogan "LSMFT" to come to mean "let's starve mountaineer farmers of tobacco."

A Great Teacher Teaches Much More Than Books

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. MINSHALL. Mr. Speaker, Louis Seltzer's fame as a journalist is widespread. While the Cleveland area shares much of his talent with the rest of the world, we are fortunate in having something of a monopoly on the local sketches he writes for the Cleveland Press. In a recent profile of Dr. Harry A. Peters in that newspaper, Mr. Seltzer is particularly accurate in capturing the essence of the man who for 40 years has served as headmaster of the University School in Cleveland.

Dr. Peters probably would modestly try to deprecate the fact that he is an American Mr. Chips in the eyes of thousands of boys who attended the school. My good friend and very able colleague, Representative FRANK BOW, of the 16th District of Ohio, shares with me the good fortune of having studied under Dr. Peters.

When I needed a chairman for my Service Academy Advisory Board, which selects candidates for the service schools, Dr. Peters graciously added this duty to his many others. He has served in that post 4 years, bringing to it the wisdom, integrity, and insight into youth which continues to enrich the lives of University School boys, young and old.

Under the unanimous consent of my colleagues, I insert in the RECORD the following article by Louis Seltzer from the January 13 Cleveland Press:

A GREAT TEACHER TEACHES MUCH MORE THAN BOOKS

Any man who makes of himself a tradition during his lifetime must be endowed with unusual qualities.

Harry A. Peters is a tradition.

Let me tell you why.

First, he was a druggist's son in Mauch Chunk, Pa. He had a passion for learning. To get $200 to enter Phillips Academy at Andover, Mass., he did odd jobs, worked in a railroad paymaster's office, ran errands, did whatever would help acquire enough for Phillips.

As a boy he was a stern self-disciplinarian. It became an integral part of his life and philosophy. He was sure the first challenge of a man, particularly an educated man, was supremacy over himself before he could exert influence over others.

At Andover he became from the beginning a standout scholar. He won prizes in Latin and Greek. He did the same thing at Yale, where he acquired the Phi Beta Kappa key. He entered Yale Law School, but then switched to accept an opportunity to teach French at University School in Cleveland.

This was in 1902. The school, located then at East 71st and Hough, was a single building. The football field was a sandlot. It was infested with sandburs. The bleachers were alongside the field and the ends were jammed with buggies—and a few horseless carriages. The school was only a dozen years old when Harry Peters joined its faculty.

Boys knew from the start he would tolerate no monkey business. They were there to learn. They were also there, Harry Peters believed, as he believed through a subsequent lifetime of teaching, to have strong characters, strong bodies, strong control, healthful, inquisitive, searching minds, and, above all, an enduring sense of integrity—plus the ability at all times to win and lose with equal grace.

In 1908, the young man who came to teach French became headmaster of University School and distinguished himself for 40 years thereafter in that job.

Now, that's the somewhat biographical nature of Harry Peters and University School. To it could be added the great multi-million-dollar grouping of buildings in Shaker Heights that went up in 1924 and have been steadily added to since.

To it, also, could be added that in his time 2,700 students went through University School, which, under Harry Peters' headmastership, became world renowned for its mind and character and body building. Of these, 2,200 were graduated. The score of some of his boys, as he unfailingly called all, is significant. Like a batch of 416 alumni. The

batch divided like this: Chairmen of boards or presidents at the time of his retirement in 1946 as headmaster, 111; high executive officers, 159; attorneys, 67; doctors, 31; teachers, 12; ministers, 4; engineers, 22; public officials, 10.

While statistics of current vintage as to the further progress of Harry Peters' boys are not available, they would represent an extension of those set down above.

And yet not even this tells the why of the Harry Peters-University School tradition—the inseparableness of them even a decade after his retirement.

Why, then?

There was the boy from a rich family. He had a swagger.

Anything he wanted he got. His family lived in fear of him. His fellow students not only feared but disliked him. He had thoroughly insulated himself against everything and everybody by an ego built not by his own accomplishment but by his parents' money.

Headmaster Peters booted him out of school. As he knew, the family instantly created a furor. Peters stood his ground. The boy was out. And he stayed out.

One day, again as Dr. Peters suspected would happen, the boy showed up in his office. He wanted to return to school. It was his life. It was more important than anything else.

"You come to school only on my terms," Headmaster Peters said. "You earn your own way. You take nothing from your parents. You don't ride. You walk. You don't require others to do for you. You do for them. You go on the second squad of all the athletic teams and you win your way back on them, yourself. You study yourself. You don't get or seek any help."

The boy did. He is the head of one of America's great corporations. He became—on his own, and without his family's help—completely different, and one of the most popular students and athletes in the school's history.

There was a meeting. There were about 100 students around a fireplace. Dr. Peters started it off. No punches pulled, he said. No questions barred.

"Only one condition—the usual one, we conduct ourselves as gentlemen," he said.

I was the speaker. For 2 hours, and this was in 1929, when the economic bottom dropped out of America, I was bombarded by questions. Dr. Peters let it go on. He offered me no help. On the contrary, he urged his students on.

"He's getting off light," he said. "Bear down on him."

They did. After the questions, Dr. Peters rose. He said:

"There are two things about this I want you to remember. One, you had a good time. You went at it hammer and tongs. You got answers. Maybe not all satisfied you. But even more important is this. Some of you in this school don't like to be asked questions. You offend easily. You think you know everything. Here's a man who came out today and exposed himself to a whole afternoon of questions, many of them embarrassingly personal and frank. He answered them all—without flinching, becoming mad or irritated. Go thou and do likewise. Meeting adjourned."

Harry Peters became a tradition for these and many other reasons—better reasons than I have set down here as character-revealing anecdotes. He is a great man. He is today a great and useful citizen of Greater Cleveland.

His mind is like a steel trap. He is as keen a student today as he was when he came out of Mauch Chunk to go to Phillips Academy. His outlook is youthful, his belief in the future great, his love of boys even keener than ever.

The silver haired, slightly bent figure, with the keen, intellectual countenance, and merry twinkle in his eyes, is a great university school tradition. He is an even greater tradition as one of Greater Cleveland's finest citizens.

L. B. S.

Inspection of Alcatraz and Terminal Island Prisons

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. WILLIS. Mr. Speaker, having drafted legislation affecting Federal prisons in the 85th Congress, members of the House Judiciary Committee's Subcommittee No. 3, of which I am chairman, visited two Federal institutions during the latter part of August 1958, to study at firsthand the problems associated with the confinement of Federal offenders. Representatives WILLIAM M. TUCK, ROLAND V. LIBONATI, and I, accompanied by Mr. Cyril F. Brickfield, counsel to the committee, inspected the Federal correctional institution, Terminal Island, Calif., on August 25, 1958, and the U.S. penitentiary, Alcatraz, Calif., on August 28, 1958.

TERMINAL ISLAND

Terminal Island is headed by Warden Preston G. Smith and is the only Federal institution in which both men and women prisoners are confined. Terminal Island is a medium security institution located in the heart of Los Angeles Harbor on a small peninsula known as Reservation Point. On the day of our visit the total prison population was 845, with 688 men and 157 women. It has a staff of 163 persons, 129 of whom are assigned to the men's prison and 34 to the women's division. The ratio of prisoners to employees is quite excessive, especially when it is remembered that the employee staff must be spread out over a 24-hour day, 7 days a week.

Terminal Island receives men prisoners, with sentences of 5 years or less, and women prisoners, regardless of length of sentence, from the area west of the Rockies, Alaska, and Hawaii.

The largest offense group is made up of prisoners convicted of narcotic law violations. Other offenses represented most numerously in the population are forgery, car theft, and illegal entry into the United States. The average length of sentence for the men is about 39 months and for the women about 50 months. However, the committee noted the length of sentences varied over a wide range even in virtually identical car theft or forgery cases. Public Law 85–752, enacted in August 1958 by the 85th Congress, was drafted in subcommittee No. 3 to minimize such disparities, and the members of the subcommittee are hopeful that the prevalence of the noted disparities will dwindle as the new law becomes more commonly used by the Federal courts.

The subcommittee visited the recently overhauled admission-orientation unit where the men are housed during their first month in the institution. This is a clean, well-lighted and well-ventilated area consisting of a dormitory with a capacity of 46 beds, 8 individual cells, a combination day-lecture room and 2 small interview rooms. It was explained that the capacity of this unit would be increased shortly by the addition of double-deck beds, required because the population of this unit frequently exceeds the present 54-man capacity.

During the month that the men spend in this unit they are given a program of orientation geared to help them adjust to the routine of the months and years ahead and to encourage them to make the best possible use of their time in prison. A good many of the men begin various types of study courses while they are still in this unit.

At the end of their first month the men appear before the classification committee, composed of the warden, associate warden, classification and parole chief, educational supervisor, social worker, chief medical officer, and chaplain. This committee advises the inmate on the type of program considered best suited to his needs and assigns him to living quarters, work program and custody classification. For those who test below fifth-grade level one-half day school attendance is compulsory. All other school work is voluntary but the committee encourages attendance at evening classes on this basis. The school is staffed by two full-time staff instructors, two part-time instructors from the local school system and a number of inmate teachers. The program is accredited by the Los Angeles school system and certificates and diplomas are awarded for attainment of elementary or high-school graduation.

An active vocational training program and on-the-job training is carried on in the various shops, powerplant and culinary department. A concerted effort is made to install good work habits, to promote a high standard of personal appearance, to maintain excellent sanitation in living quarters and places of employment, and to discourage vulgar and profane speech.

The committee was pleased to note that Terminal Island has two full-time chaplains. These are young and vigorous men who appear to be keenly interested in their work. The Catholic chaplain speaks Spanish fluently and acts as interpreter for the classification committee in dealing with the considerable number of Mexican inmates who speak and understand very little English.

The medical staff is composed of two doctors, a dentist, and four male nurses for the men's division and two female nurses for the women's division. They are supplemented by part-time consultants in the various specialties form the local community, available on an as-needed basis.

The subcommittee visited the institution's library, and the hobby shop where men can spend their leisure hours working upon articles of handicraft. Television sets were observed in some of the

housing units and Warden Smith explained that these sets were rotated weekly among the several units on an incentive basis. Each group is anxious to have the benefit of television and competition for these sets is quite keen. One of the results of this system was seen in the extreme orderliness and sanitation in the living quarters. These sets, incidentally, were acquired partly through donation and partly through purchase from commissary profits. No appropriated funds were expended for this purpose.

The work program at Terminal Island poses some unusual problems because of the site, the dual nature of operations and the restricted area of the reservation which precludes the farming operations normally carried on at a penal institution. To offset the lack of a farm to some extent the institution has developed with neighboring government agencies working arrangements which permit the use of labor details at those installations for grounds maintenance, shop operations, and various similar services. Approximately 50 inmates are assigned to details of this type at the Coast Guard station and immigration and naturalization offices just across the street from the institution and at Fort MacArthur in San Pedro.

On industrial activity, furniture refinishing, is now operated at the prison and employs 40 to 45 prisoners. Construction of a new building to accommodate additional industrial activities is underway. It is planned to use this new space for metals industry fabricating steel shelving, lockers, and various small metals products. With institutional maintenance requirements, the services performed for other agencies, and the expanding industrial program, sufficient employment to keep approximately 700 men usefully occupied will eventually be furnished.

Keeping the women inmates usefully employed is more of a problem and an industrial activity for them is being developed. Meanwhile job training is being afforded by such activities as cooking and baking, sewing, landscape gardening, cosmetology, and various other lines.

Terminal Island uses the standard ration allowance common to the entire prison service. Its food costs are higher than those of prisons having farms but notwithstanding this circumstance the food costs slightly less than 59 cents per inmate per day, including raw food, minor equipment, repairs, and the supplies involved in meal preparation and serving.

When the institution was returned to the Bureau of Prisons in 1955—it was used by the Navy from 1942 to 1950 and by the State of California from then until 1955—funds provided for its reactivation were sufficient to cover only a part of the total job required to restore the plant to minimum standards. The dining hall, kitchen, and dormitories are in need of overhauling. The hospital also requires a number of alterations and improvements, including adequate facilities for disturbed patients, modernization of the operating room, ceiling and floor treatment in the wards and corridors. A chapel is needed to replace the present makeshift space that is being used for religious services.

The women's unit is housed in a temporary type of barracks buildings which were constructed by the Navy during World War II. These buildings offer no security and constitute a fire hazard. Replacing the women's unit with buildings of fireproof construction, designed and equipped for their intended purpose, is perhaps the most urgent need at Terminal Island at this time.

CONCLUSION

On the whole, the Terminal Island institution seemed to be operated efficiently. Morale among both staff and inmates appeared to be at a high level. Sanitation and orderliness were especially noteworthy throughout the instution and the personal appearance of employees and inmates was excellent. It was the feeling of the members of the subcommittee that the Terminal Island staff is doing a good job in attempting to rehabilitate the men and women prisoners committed to their custody and that Federal funds are being expended economically and judiciously at this institution.

The problem of disparity of sentences will, it is clear, remain an important concern of our subcommittee. The new law, we hope, will reduce the prevalence of such disparities.

THE BAR ASSOCIATION

The members of the subcommittee also had an opportunity to attend several sessions of the American Bar Association which was meeting at the same time in Los Angeles.

We attended the dinner of the section on judicial administration and some of the meetings of the criminal law section dealing with the problem of representation of indigent clients and the administration of criminal law. A very interesting paper, entitled "What Price Justice?" was delivered by the Honorable Irving R. Kaufman, of the U.S. district court of New York. A number of suggested improvements in the administration of Federal law were discussed and these doubtless will be presented later to the full committee for consideration.

ALCATRAZ

On Thursday, August 28, 1958, the members and counsel of the subcommittee, accompanied by Representative T. ASHTON THOMPSON, visited the U.S. Penitentiary, Alcatraz, Calif. This institution, of course, is much different from Terminal Island and holds some of the most hardened criminals in America.

The 290 prisoners at Alcatraz were transferred there because they were too unmanageable even for such penitentiaries as Leavenworth and Atlanta, or because they were considered to be dangerous men whose escape would represent a distinct threat to the public safety. They were convicted, typically, for committing quite serious crimes and their sentences are long, averaging well in excess of 20 years, and including about 30 life terms. Alcatraz, in the opinion of Director James V. Bennett, must be considered one of the most difficult and complex prisons in the world to administer.

The subcommittee was transported from Fort Mason to the island by the penitentiary's boat. Upon arriving at the landing the committee observed a metal detector and stepped through it to test its operations. The manner in which the inspectoscope worked was explained by the operating officer and its was obvious to the subcommittee that this type of equipment is needed for a super-security institution where both prisoners on the inside and their friends on the outside are constantly trying to devise some means of outwitting the institution's security system. This was sharply dramatized in an episode several weeks after the committee's visit when two long-term prisoners made an abortive attempt to escape from the island by overpowering their supervisory officer and swimming away with sets of makeshift waterwings.

Warden Paul J. Madigan, a veteran of over 25 years in the prison service, is in charge of operations at Alcatraz. It is run on a surprisingly economical basis, considering the fact that everything that is used and consumed, including water, must be ferried to the island. Each prisoner, for example, is fed three meals a day for the relatively small sum of 59 cents. The subcommittee learned that the Government expends an average of $10.34 a day to keep one prisoner at Alcatraz, as contrasted to $3.05 at Leavenworth and the $4.58 average for the entire Federal prison system. Yet Alcatraz is performing a valuable service for the protection of the public.

The penitentiary has a rather ancient physical plant which presents a difficult maintenance problem. The climate surrounding the island is highly damaging to physical structures, and while at other prisons, inmates can be used to make repairs, the custodial requirements of Alcatraz permit very little use of inmates outside the security of the inner compound. Consequently, practically all repairs to the physical plant must be made by civilian tradesmen.

Upon entering the cellhouse the subcommittee observed that the visiting room was being renovated. The area for the outside visitors was partitioned off solidly from that for the prisoners. Speakers were being installed which would permit two or three visitors to converse at one time with a single inmate. The subcommittee was informed that each prisoner was allowed one visit of 90 minutes duration each month. However, of the population of 290, an average of only 15 inmates received visitors each month.

The subcommittee first visited the cellhouse which contains 2 inside cellblocks, each with 168 cells. The cellhouse was immaculate, and the cells themselves were sparely but comfortably equipped. The committee then went to the kitchen area where feeding arrangements were discussed and the menu for the current 10-day period was displayed. It was obvious that although the Alcatraz prisoners have few privileges and no commissary as in other Federal prisons, they were well fed. The kitchen and dining room looked exceptionally neat and clean.

At the prison hospital the committee talked to the chief medical officer and his medical technician. The subcommittee was informed that on the average about three prisoners a day were in hospital status, which would indicate that the health of the Alcatraz population was safeguarded well. The subcommittee inspected the operating room, the outpatient clinic, and the wards which were equipped with beds recently acquired from surplus property lists. Like the rest of the penitentiary, the hospital was neat and orderly. While Alcatraz does not have a full-time dentist, a local dentist visits Alcatraz one day each week, and, according to the warden, this time has been sufficient to provide adequate dental care for the men.

The subcommittee visited the treatment unit, where men who are in punitive status or who must be segregated from the rest of the population for various reasons are housed. At the time of the subcommittee's visit, 20 prisoners were in segregation status and 1 in punishment status.

Returning from the disciplinary unit, the subcommittee stopped at the library and examined the bookshelves. The warden pointed out that Alcatraz had recently received a number of surplus books from the Navy and now had about 14,000 volumes. He explained that the average Alcatraz prisoner read about 85 books a year. The books, selected from a published list, are delivered to the cells. After the working day is over, the prisoner can also listen to the radio, if he wishes, by means of the earphones installed in each cell. The radio is turned on at 6 p.m. each night and turned off at 9:30.

Following lunch, the committee went to the industrial area and entered the laundry. This unit performs work for local government agencies; and while 40 inmates were assigned at the time of the subcommittee's visit, the laundry was being disbanded because local government agencies do not furnish enough work to keep 60 or 70 men busy.

Visiting the clothing factory next, the subcommittee observed 36 inmates working on an order from the U.S. Army for cooks' and bakers' white trousers. The members circulated through the cutting room and through the main shop, stopping occasionally to talk to the prisoners. Warden Madigan advised me that this was the most efficient industrial activity at Alcatraz and that there was little difficulty in securing enough work to keep the factory busy. The morale of the inmate workers seemed high, considering the circumstances, and few of them stopped work long enough even to inspect their visitors.

In the glove factory the members observed operations in the leather cutting department and the sewing shop, where 35 men were making leather gloves for the Army Quartermaster. According to Warden Madigan, the shop had enough orders on hand to keep the activity busy for several months.

In the furniture refinishing shop, 20 prisoners were renovating desks and chairs for Travis Air Force Base, one of several air bases in the area served by the unit. The quality of the work turned out by the prisoners was very high, with the finished product not readily detectable from a newly manufactured article. The issue of tools was carefully controlled by means of a carefully designed tool board, with the absence of a tool evident at a glance.

In the brush shop, the last industrial activity visited by the subcommittee, 22 men were making 14-inch brushes for the Navy. The brushes were turned out with rapidity, and it was obvious that the inmate workers had acquired high skill.

After leaving the work area, the subcommittee inspected the powerplant. Warden Madigan explained that the electricity supply was a source of difficulty, inasmuch as it generated chiefly d.c. current. For example, it was troublesome to operate the prison's metal detectors with only a small amount of a.c. current. The powerplant itself was operated by a chief engineer and five assistants, who rotate on shifts around the clock.

The committee was interested in noting that many of the staff lived on the island with their families and were dependent upon the institution's boats to get to San Francisco for shopping, attending school, and securing other community services. Normally a boat makes round trips every hour or two between 6 a.m. and 12 midnight. However, it is apparent that the life of the island's civilian residents is rather restricted, and the dedication of these public servants must be admired.

CONCLUSION

Although it might be considered regrettable that the United States has need for a supersecurity prison such as Alcatraz, the prisoners confined there are being accorded treatment which is as humane and reasonable as the circumstances permit. The primary function of Alcatraz is to protect the public, and this task is being performed well, under rather trying and difficult circumstances, in the opinion of the members of the subcommittee who visited the insitution.

The Military Significance of Space

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an informative address, "The Military Significance of Space," made by Rear Adm. John E. Clark, U.S. Navy, Deputy Director of the Advanced Research Projects Agency, before the Shrine Luncheon Club of Cleveland, Ohio, on February 7, 1958:

THE MILITARY SIGNIFICANCE OF SPACE

The role of technology in the conduct of military operations has risen fantastically in relatively few years. The fighting power of the Armed Forces, as never in the past, now depends on the attainments of technology, on the potentiality for the mass production of new kinds of weapons, and on the level of the technological preparation and the education of the many millioned masses of the population.

Recognizing this fact, as well as an expression of our national desire to get on with the broad research and development necessary for scientific progress, two new agencies have been created within our Executive Government. A new National Aeronautics and Space Administration is now getting organized to pursue those of our national and international space programs which are purely scientific in character. Thus, the United States seeks to keep scientific progress within the framework of the peaceful intentions that are inherent to a working democracy.

On the other hand, the Advanced Research Projects Agency (ARPA) was established in February of this year to plan and direct advanced research projects vital to our national security.

I am not sure what you have heard about ARPA and its way of doing business, but it is a fact that we are a different kind of organization insofar as the Department of Defense is concerned.

I should like, therefore, to review for you briefly how ARPA works—its functions, its objectives, its method of operation, and its relationship with other Government agencies.

There has grown up, in the very brief period of ARPA's existence, an impression that we are a space agency. This is understandable since the specific assignments made to ARPA include the entire field of space technology, ballistic missiles defense, and related research in chemistry of propellants. Nonetheless, the directive under which we operate does not limit us to these assignments, and the Secretary of Defense does not intend that our task be as simply stated as this. ARPA is now seeking to develop this broader area of our undefined but understood responsibility.

Ordinarily projects assigned to ARPA will fall into one or more of three categories: (1) Those which, by virtue of their advanced nature, cannot be identified within the stated military mission of an individual military department; (2) those for which a military mission can be identified as being of interest to more than one of the military departments; and (3) those which, for various reasons, must be pursued by an agency not subordinate to one or more of the military departments.

Military research and development has, we believe, been hampered in the past by the requirement that funds be allocated to research only when the product could be immediately identified with a weapons system. ARPA does not have this limitation.

This means that for the first time the Defense Department is prepared to sponsor pure research against the judgment that it might lead to a valid military application without proving the judgment in advance. The pace of scientific progress is undoubtedly one of the distinguishing features of this century. As it applies to the military, the President has clearly stated the fact that the days of wholly independent ground, naval, and air forces are gone. There can be no doubt but that many present development projects and many of those to come will have application to more than one of the military departments. This is certainly true of ballistic missile defense, as an example.

Research in such areas must take the fullest advantage of all our U.S. capabilities. It cannot be limited to a portion of our laboratory skill that happens to be employed by a single service or a single company. Since we cannot, and should not, deprive ourselves of the traditional value of military decentralization, we must achieve effective management at a higher level if we are to

take advantage of all the skills and resources available.

Essentially, this boils down to a matter of personal integrity on the part of each officer and each civilian official of the Army, Navy, Air Force, and Marine Corps. Intense service viewpoints, the outward products of which are inordinate degrees of service rivalry, competition, and duplication, must yield to thinking that is total defense in scope. We cannot—we absolutely must not—permit excessive Army, Navy, Air Force, and Marine Corps partisanships to diffuse the defense effort and dissipate resources.

We have many programs underway. I am going to show you a number of view graphs now that illustrate as an artist's conception the sort of things that might be done to enhance basic military operations and scientific exploration by means of satellites.

Often research which at first glance seems to be of no anticipated special significance militarily, works out in practice to accomplish a revolution in technology and exercises a revolutionary influence on weapons systems. As an example, one might refer to the research in semiconductors like the germanium crystals. Research has shown that the semiconductors can replace many types of electronic tubes in complex radio technical and electronic instruments. This permits the making of both very compact and reliable radio devices. From this arise great possibilities in the manufacture of guided and automatic weapons and other important types of modern military equipment.

Even such sciences as celestial mechanics and astrophysics have now acquired decisive significance for military affairs. Celestial mechanics until recent times has been interested in calculating the motion of celestial bodies. Now this science is employed to calculate the flight of long-range rockets and artificial earth satellites. Astrophysics is concerned in part with the study of the physical characteristics of cosmic space. Information about these characteristics is now used in order to forecast the environment within which artificial satellites and rockets must work. It is necessary to know how cosmic rays would act upon their delicate mechanisms, what the temperature of the rockets would be when heated by the sun, and what would happen in the event of their collision with a meteorite. The research of astrophysicists regarding the condition of the matter within the sun and the stars at temperatures of millions of degrees and pressures in billions of atmospheres has great significance for the correct understanding of the essence of the atomic explosion.

Guided and self-homing missiles are swiftly replacing guns and some types of aircraft. They have special components making possible the change of direction of the flight of the missile in flight. This is achieved in various ways. One can place instruments in the missile which sense the target and guide the missile to it, or have the missile ride a radar beam, or by following the target path one may direct the missile to it by radio command.

These things are done on the basis of a new sphere of science called cybernetics, the theory of the guidance of machines and mechanisms with the assistance of automatic devices. This science obviously has great significance for the automatization and mechanization of commercial production.

Everything that I have said up to this point leads to but one conclusion—war is no longer an art but a science. Technology and science in warfare have advanced so fast and far, and are advancing faster and farther, so that in any kind of war, be it limited—which is far more likely—or all-out nuclear, that side with the highest order of technology and science on its side will prevail.

In past wars there has been time after the war started to initiate and carry out massive, expensive crash programs in technological fields. In the last great war such things as radar, influence fuses for antiaircraft guns, and atomic bombs were developed during the course of the war. If we aren't ready to use advanced technology and have in hand superior weapons if any war starts in the future, we may not survive the first operation.

With continuing hope in the essential good in man, the United States has lived in a glass house during the International Geophysical Year. Recognizing that penetration of the secrets unfolding before us requires the efforts of philosophers and scientists the world over, the United States has sought a truly international effort.

And what has this meant to the U.S.S.R., the other national participant in earth satellite launchings? It has meant great benefit to itself with little return to others in kind. We should ask ourselves why, and we should keep putting this question to ourselves until we make the honest answer. Why are we told little or nothing about Soviet launchings, launching equipment, experimental results, and the like? Why do the Soviet leaders and scientists play coy and superior in an international effort purportedly devoted to all mankind?

We don't like the real answer because it means a long pull effort during which consumer sacrifices will be made. It means a devotion to research which will grant progress at the expense of present-day luxuries. It means intense work, resolution, and character, expended perhaps over our entire lifetimes, and a few generations beyond us. Nevertheless, the answer has not changed since the Communist Manifesto, it has not changed since Stalin, it will not change after Mao and Khrushchev.

Communism has short-term tactics; it does not have short-term strategy. Its strategy is domination of all there is to dominate, whether in earth or in space. Until communism as a way of life has faded from control over key areas on this earth, the United States and the free world must go forward by giant steps, on the long legs of advanced research.

There has been great concern throughout the free world that space will not be used strictly for peaceful purposes. There has been no such concern evident in the Communist camp. Again, why? And again, let's face up to the answer. The Communist leaders know beyond a shadow of a doubt that the free world longs with all of its collective heart to keep free space free. They rely on this longing, they abet it with hollow pronouncements, while pursuing secure programs under strict military discipline. Their few scientists who are not also generals receive laurels and medals, speak eloquently, but apparently are isolated from the actual space programs of the U.S.S.R. and the absolute military applications securely tied thereto.

Is there anyone here who doubts the grave military and political implications of a Soviet man circling the earth in a space vehicle beyond our power to counter? Does anyone doubt the military profit inherent in a manned lunar base? I can assure you, there is no doubt in Moscow.

I am certain you recognize that the effort to maintain technological leadership adds up to hundreds of millions of dollars annually and therefore demands not only the understanding of research-oriented individuals but also of the entire American people. Dollar signs cannot be placed on freedom. They cannot be placed upon a progress that leads to the basic truths of our existence.

We must have the courage to look to the future and to invest in it through research. We must further have the courage and confidence in our way of life not to scare easily; but to pursue our scientific and military programs on earth and in space with the dynamic quality of a nation seeking to express its integrity and the strength of its form of government.

Unless we as a nation can achieve this kind of deep conviction and resolution, we are surely lost. Until we are ready to make sacrifices, we cannot turn the tide unmistakably in our favor. In the situation we find ourselves today, the armed services must be ready for maximum effort at any minute. There would be no time to get ready after it starts this time. And we must be ready for any kind of war, and ready for it in any of several localities, including here at home.

Current budgets are marginal for this kind of readiness and I ask you, Where do we get the money to support the terrifically expensive competitive effort in space exploration, space travel, and space research for defense? As surely as we weaken our defense structure in some category or categories to fund a space effort, we may be sure that when trouble starts, it will make a concentrated appearance in an area previously covered by those categories.

And yet support it we must. The era of space travel is here. I expect to witness unmanned space flights to the moon and manned round trip flights into orbit in my lifetime. Truly the sky is the limit, and every paper in the country is full of questions. Also, they are full of suggestions and demands. Every conceivable idea has been advanced, and some violently championed, except one. I have yet to see one single suggestion as to how to pay for it. I have yet to hear one single person suggest that this is equivalent to wartime emergency and therefore should be supported by increased taxes. The nation that controls space may well control the world, and we will never achieve it if our first objective is an automobile for each member of the family.

Changing the Level of Imposing the Federal Tax on Gasoline

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. SCHWENGEL. Mr. Speaker, because I feel that all segments of small business in this country should be entitled to compete equitably with larger concerns, I have introduced H.R. 1343, which is designed to give the independent oil jobber and wholesaler the same break as the major oil company has with reference to the payment of the Federal tax on gasoline.

Under existing law the 3-cent Federal tax on gasoline is imposed at the time of sale by the producer. The producer is the refiner and, from the standpoint of volume, this really means the major oil companies. The word "producer," as defined by section 4082 of the Internal Revenue Code, includes "blenders" and "importers"; however, the volume of gasoline handled by these last two categories is relatively insignificant.

When the existing language of the code—as implemented by regulations—is translated into actual operation what it means is that the refiner or major oil company does not pay the Federal gasoline tax until up to 45 days after the time of sale, whether that sale be direct to a consumer, to a service station, or to

a reseller, such as a jobber or wholesale distributor. It also means that the wholesale distributor who pays this tax at the time of purchase must not only permanently encumber approximately 20 percent of his inventory capital but, in addition, he must suffer tax losses due to evaporation and unavoidable spillage between the time of purchase and the time of delivery into the tank of the person to whom he sells. Neither of these burdens is imposed on the major oil company with whom this small, independent jobber must compete. It is estimated that the jobber's losses due to evaporation and unavoidable spillage amount to approximately 2 percent of the total volume of gasoline handled. A majority of the States imposing gasoline taxes recognize this inequity and allow the jobber varying percentages to compensate for these losses and some of them allow additional percentages for the handling of this tax burden, collection of the tax and the maintenance of the necessary records required by the collector. The Federal Government, however, has refused to either recognize or remedy this inequity.

My bill would change the definitions in the code in such a way that the independent jobber or wholesale distributor will be placed on the same basis as his major oil company competitor insofar as payment of the Federal gasoline tax is concerned. In my bill the jobber will pay the tax at the time he sells the gasoline rather than at the time of purchase. This will not only release badly needed capital which this category of small businessmen can use to improve their competitive position but, in addition, will relieve them from paying taxes on a product which has evaporated before the time of sale. This method of collection will not add any appreciable number of taxpayers to the rolls nor will it cause any loss of revenues to which the Government is equitably entitled. The bill, in brief, will at little or no cost to the Federal Government remove an existing inequity between a group of deserving small businessmen and the major integrated oil companies. I can conceive of no cheaper way to help some small businessmen than the passage of this legislation which I have introduced.

Colorful "Doc" Miller to Sea Again

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. CUNNINGHAM. Mr. Speaker, among the distinguished Members of Congress who were not returned to office in November was Representative A. L. Miller, of Nebraska. "Doc" Miller served the people of Nebraska's Fourth District for 16 years and served as chairman of the House Committee on Interior and Insular Affairs during the 83d Congress. The House certainly loses one of its most respected and earnest Members in A. L. Miller. Under leave to extend my remarks, I include a newspaper article on "Doc" Miller, written by John Jarrell, chief of the Washington Bureau of the Omaha World-Herald:

COLORFUL "DOC" MILLER TO SEA AGAIN

(By John Jarrell)

Representative A. L. Miller, who perhaps didn't leave enough thumbprints on enough doorknobs, left Congress in January; and Congress loses another of its more colorful Members.

"Doc" Miller wasn't a flamboyant orator, and he wasn't particularly striking in appearance, but nevertheless he had that something called color.

Most people in Washington figured Dr. Miller would continue to represent the Fourth Nebraska District as long as he lived. It didn't turn out that way. He was defeated November 4.

It was after his victory in 1956 that a national magazine asked him to outline the basis of his success at the polls, which had brought him eight straight terms in the House.

"Hard work with a smile," he replied. "Leave thumbprints on as many hands and doorknobs as possible. * * * No substitute for personal contact, telephone, friendly letter, or wave of hand."

"SCOOTED" TO CAPITOL

Dr. Miller has been a familiar figure in the subway between his office and the Capitol—breezing along on his motor scooter.

Several years ago, the several-times-daily walk between office and House Chamber became too much for the legless Nebraskan, who lost both lower legs in a hunting accident years ago, and has artificial limbs.

So he bought a scooter. Now and then an intrepid passenger would ride with him, hair flying and frightened expression on face. Not Dr. Miller, though. He thoroughly enjoyed it.

If Dr. Miller takes a long sea trip soon, as he has indicated he will, it will be history repeating itself.

When he first announced for Congress, Dr. Miller mailed receipted bills to all his patients—some $40,000 worth—then proceeded to get himself elected. Right away, and before he took office, he went around the world in a slow ship.

Dr. Miller wasn't averse to controversy. He and the National Rural Electric Cooperative Association didn't see eye to eye, and Dr. Miller lashed out at it with characteristic vigor.

He feuded for several years with Representative MIKE KIRWAN, Democrat, of Ohio, because the Ohioan claimed he only voted for public power projects in Nebraska, never in other States.

QUITE A SOOTHSAYER

He was a strong supporter of Gen. Douglas MacArthur and both in 1944 and 1948, General MacArthur was his candidate for President. He corresponded at length with the general in Japan on the subject.

Every year, Dr. Miller offered his prediction of things to come. He didn't confine it to legislation—he was worldly in scope. He had a pretty good batting average, but it was by no means perfect.

Once he raised a furor when he said American battleships in foreign waters were carrying atomic bombs. Some top braid at the Pentagon blew up over that one.

Dr. Miller got along well with reporters generally, but when he differed with the press, he did not keep it a secret. Usually, he wrote a letter to the editor about it.

He displayed a lot of personal courage that people generally did not know about. There have been times when the stumps of his legs pained him greatly, from their constant rubbing against his artificial limbs. No one ever heard him complain about it.

COLUMNIST ERRED

He got one of the biggest laughs a few years ago over an item carried in the column of a widely quoted syndicated columnist.

It was at a time that the Republicans controlled Congress. Dr. Miller was chairman of the House Interior Committee. His fellow Nebraskan, the late Senator Hugh Butler, was chairman of the Senate Interior Committee.

The columnist wrote that the two chairmen from the same State were engaged in a bitter feud, so savage that they refused to speak to one another.

The day it appeared, Dr. Miller and Senator Butler were together on a hunting trip. Three days earlier Senator Butler had Christmas dinner with Dr. and Mrs. Miller. And for years the two men had got together about three times weekly to play pitch.

When he read the item, Dr. Miller exploded with laughter, called up Senator Butler and the two of them chortled together.

FOUGHT MARTIN, BENSON

He wasn't afraid to rush in where angels feared to tread. A case in point related to the almost-sacrosanct Republican House leadership of Representative JOE MARTIN of Massachusetts.

Dr. Miller decided Mr. MARTIN wasn't a good leader, so he announced it openly, rather than work in the background. He found Mr. MARTIN too solidly entrenched, however, and had no success in finding a successor—though he won some converts.

It was Dr. Miller, too, who was in the vanguard of House Members who felt the farm policies of Secretary of Agriculture Ezra Taft Benson would cost the Republicans House seats in the 1958 election. So he went to the President and told him that 25 to 30 GOP Members would lose if Mr. Benson remained in the Cabinet.

Whether or not Ezra Benson was responsible, as it turned out, Dr. Miller was too conservative and more than 40 GOP House Members lost their seats. Including Doc Miller.

Why Not Use Food Surplus for Foreign Aid

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. McDONOUGH. Mr. Speaker, there could be no better use of the farm surplus than to use this vast surplus in aiding our foreign allies.

I have advocated the use of surplus food for this purpose for many years, and I am glad to find my opinion on this subject agreed with by the editor of the Radio Post, of Fredericksburg, Tex., Mr. Norman J. Dietel. Mr. Dietel has written an editorial in which he quotes Senator MIKE MANSFIELD on this subject who has for many years been an advocate of a sound foreign-aid program.

In his state of the Union message, President Eisenhower stated:

Outlays of the Department of Agriculture for the current fiscal year for the support of farm prices on a very few farm products, will exceed $5 billion. That is a sum equal to approximately two-fifths of the net income of all farm operators in the entire United States.

By the end of this fiscal year it is estimated that there will be in Government hands surplus farm products worth about $9 billion. And by July 1, 1959, Government expenditures for storage, interest, and handling of its agricultural inventory will reach a rate of $1 billion a year.

This level of expenditure for farm products could be made willingly for a temporary period if it were leading to a sound solution of the problem. But unfortunately this is not true. We need new legislation.

In the past I have sent messages to the Congress requesting greater freedom for our farmers to manage their own farms and greater freedom for markets to reflect the wishes of producers and consumers. Legislative changes that followed were appropriate in direction but did not go far enough.

The situation calls for prompt and forthright action. Recommendation for action will be contained in a message to be transmitted to the Congress shortly.

I trust that in the President's future message to Congress he will recommend the use of our food surplus for foreign aid to replace the hard-earned dollars which we have heretofore voted for this purpose.

I am submitting herewith the editorial from the Radio Post of Fredericksburg, Tex., written by Mr. Dietel on this subject:

FOREIGN AID AND FARM SURPLUS

Finally, after many years of waiting, a U.S. Senator has come forth with the idea that our Nation "could scale down foreign aid costs by substituting food for dollars in hungry world areas."

Although the suggestion is many years late, the idea should be promptly promoted and put into effect as soon as possible. The statement above was made recently by Senator MIKE MANSFIELD, Democrat, of Montana, who is assistant Democratic floor leader and a member of the Senate Foreign Relations Committee. He also serves as the Senate Democratic whip and becomes acting Senate Democratic leader when Senator LYNDON JOHNSON, the Democratic majority leader in the Senate, is out of town. JOHNSON is chairman of the Democratic policy and steering committees of which MANSFIELD is a member.

Some years ago this writer stated editorially, and in conversation or correspondence with others, that it might be a wise step if our Government would consider sending some of our farm surplus commodities (of which I understand there are millions of dollars worth, possibly billions, stored throughout the country) to the destitute people in the world who could really use this surplus.

Sending this food surplus, for which our taxpayers are paying, might be much better than sending cash or the equivalent thereof in other items to the foreign countries who have apparently been the thankless beneficiaries.

Our national debt is rising and yet our Government insists on more cash (which comes also from taxes) for foreign aid, and it is possible that very little if any of this cash, or goods, ever gets to the poor people, those who really need it. The rich people over there could not possibly use up all of our surplus food, but the poor people, those who would get most out of the farm surplus commodities, would certainly appreciate our gesture. They might even remember this Nation and speak some kind words on our behalf once in a while.

Foreign aid, as it might be, could be, and it should be, a good thing for our country if it were used wisely, for military purposes (for instance) and for purposes of adequate defense bases, but we've read and heard about too many instances where much of this foreign aid seems to go into a rathole, down which we drain our resources and our cash. Taxes are paid for the farm surpluses and they lay around in this country, rotting away. Then, instead of using this surplus and giving it to the needy (in which our people, our Nation, have always been stanch believers) they tax again so that cash will be forthcoming in order to supply the dukes and duchesses, the kings and queens, the rich and elite, those in position of power and authority, so that we might appease them and that they can go on living on a high plane, or, as is customarily and more frequently referred to, as a "high standard of living." Many people, everywhere, could no doubt go on a higher plane of social living if Uncle Sam will provide the means. A lot of people in this country might also want their standard of living raised a little. If our country really wants to check communism it could, perhaps, do much better if our surplus commodities were given to the needy instead of sending cash or other supplies to those who think we owe them a living and never really appreciate it anyway. I'm of the opinion that no one denies other more fortunate people all the wealth they possess and all the additional riches they might gather for themselves or their family in their span of life while on earth—if they actually get out and work for it, such as the average hard-working American taxpayer does. But it just does not seem to make good sense if the American taxpayer has to continue bearing the brunt, in providing luxurious living for overseas or foreign aid year after year with no apparent letup.

Senator MANSFIELD has made a suggestion which may culminate in a program of real overseas relief, real foreign aid, a program designed to foster good will and promote peace and understanding. Giving cash to those in the upper brackets and forgetting the poor, the great bulk of the masses, hasn't accomplished for this Nation the job that foreign aid was intended. Giving food and clothing could do a better job. It's worth trying, the sooner the better. Especially in view of the fact that we have a considerable farm surplus on hand, not too much cash surplus, and also in view of the fact that our national debt is not decreasing from year to year. It has been increasing at an alarming rate and many Congressmen in Washington are seriously becoming disturbed.

Are We Lagging in Atomic Ships?

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BONNER. Mr. Speaker, the recent success of Russia in launching its moon satellite emphasizes the unpleasant fact that the United States is no longer preeminent in scientific development. Our lag in satellites and missiles seems destined to extend to the use of nuclear power at sea. While we are producing the first nuclear-powered merchant vessel, we are content to default in the continuing struggle to keep abreast of other nations in the maritime field. In this connection, the following editorial from the Twin City Sentinel, Winston-Salem, N.C., point up our present unhappy state:

ARE WE LAGGING IN ATOMIC SHIPS?

The United States will launch the *Savannah*, the first nuclear-powered merchant ship, sometime in 1960—thus repeating its triumph with the first atomic submarine. But a ship is not a fleet and Chairman BONNER of the House Merchant Marine Committee fears that we are not moving fast or far enough.

Mr. BONNER admitted that both the Department of Commerce and the Atomic Energy Commission are working in this field. But he said that there seems to be nothing firm in the way of administration policy to put these plans into execution. Other nations, he said, are going ahead of us at a faster relative rate of development. The Soviet Union, for instance, is known to be at work on a nuclear-powered icebreaker—a craft that could alter the historic Russian desire for a warm water port.

Abortive projects for a similar ship to be developed in this country, for a nuclear-powered tanker, and for private industry to take part in atomic ship development were cited by Mr. BONNER. "None of these proposals has gotten anywhere," he wrote Commerce Secretary Lewis Strauss.

He asked Mr. Strauss to inform the House committee about present and future plans for atomic shipbuilding, and for a report on possible marine uses of nuclear energy not yet in the planning stage. His point is that having forged out front in this field, the United States ought not now to mark time while other nations catch up and go on.

Whether Mr. BONNER's fears are justified or not, his point is certainly well taken. And his emphasis on the importance of nuclear ships is apparently shared by the U.S. Navy. Merchant craft and men-of-war are not strictly comparable, of course. Still, it is worth noting that the new "Jane's Fighting Ships" reports the United States to have 150 nuclear-powered warships under construction, only 75 of them submarines. The Soviet Union, France, and Britain are also working on atomic naval vessels.

Moreover, the recent voyage of the *Nautilus* under the polar ice from Pacific to Atlantic demonstrates the vast new marine capabilities of nuclear energy. There is reason to believe the United States has done more than any other nation to develop those capabilities. As Mr. BONNER has warned, however, we cannot go to sleep on our laurels. It was the indolent rabbit who lost that famous race, not the tortoise.

Washington County (Ky.) Observance of the Lincoln Sesquicentennial

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article of December 4, 1958, from that fine newspaper, the Springfield Sun, at Springfield, Ky. This article covers the launching of Washington County's observance of the Lincoln Sesquicentennial which will be celebrated throughout the year 1959. Inasmuch as Lincoln's parents, Thomas Lincoln and Nancy Hanks, were married in Washington County, Ky., it seems fitting that this area, which is also a part of our Lincoln country,

should have a prominent part in the observances honoring our great former President on the occasion of the sesquicentennial of his birth. The Fourth District of Kentucky is truly honored to be able to claim the distinction of giving Abraham Lincoln to the Nation.

WEDNESDAY'S CELEBRATION ONLY A PRELUDE OF PLANS FOR SESQUICENTENNIAL YEAR

(By Mrs. Bennett R. Lewis)

Down Springfield, Ky., way, folks believe in making the stones they throw do double duty. For instance, the parade that turned normally quiet Main Street into Carnival Avenue on the afternoon of November 26 not only climaxed the activities of Farm-City Week but also launched Washington County's observance of the Lincoln Sesquicentennial which will be celebrated throughout the year 1959. The theme of the parade was the life of Abraham Lincoln and the floats depicted events in the lives of the Lincolns, their neighbors and relatives in the original Lincoln country in Washington County.

In 1782, 10 years before Kentucky was admitted to the Union and when all this vast territory was still a part of Virginia; Abraham Lincoln, Sr., and his family, consisting of his wife, Bersheba, and their 5 children, came to Kentucky and settled on a 100-acre tract on the Beech Ford of Salt River. There the pioneer Abraham, grandfather of the President, built the log cabin in which he lived until he was shot by an Indian, in 1788. There his son, Thomas, grew to manhood, and there his family continued to live until the year 1802.[1]

In Lincoln Homestead Park, 6 miles north of Springfield, a replica of the Lincoln cabin has been erected on the exact spot where the original homestead stood. Nearby is the Francis Berry home, a large, two-story building, in which Nancy Hanks was reared. This home was moved from its original site 2 miles northeast of the Lincoln home and carefully reconstructed within the confines of the park.

According to Washington County historians, the wedding of Thomas Lincoln and Nancy Hanks took place in the spacious Berry home and the young couple went to housekeeping in a small log cabin belonging to Richard Berry, Jr., the same cabin which some years later was sold for $50 and is now enshrined in the Pioneer Memorial Park at Harrodsburg. The date of the marriage was June 12, 1806, and the ceremony was performed by Rev. Jesse Head, a Methodist circuit rider. At least one child was born to Thomas and Nancy before they left Washington County; an infant lies buried alongside Abraham, Sr., in the family graveyard.[2]

Abraham Lincoln knew very little about the early life of his parents and less about the history of his earlier forebears. He believed that his mother and father had always lived in Hardin County, Ky., and that they had been married there. Consequently, in 1858 when his political enemies were circulating the sordid tale that his parents had never been legally married, Lincoln wrote to the clerk of the court of Hardin County asking for a copy of the marriage record. He received a reply from the clerk stating that no record was to be found. The President went to his grave believing that he was an illegitimate.

In 1878 the marriage bond of Thomas Lincoln and the minister's return of the wedding were found in the clerk's office in Washington County. There they may be seen today, along with numerous other documents pertaining to Lincoln history.

The Washington County Sesquicentennial Committee has already formulated ambitious plans for the sesquicentennial year. The high point of the celebration will be a reenactment of the marriage of Lincoln's parents on June 12 with direct descendants of the Lincoln, Berry, and Head families in the principal roles. An old time infare will follow with folk dancing on the green, games, merrymaking, and feasting. Hundreds of invitations will be sent out to former residents of Springfield and Washington County requesting their presence at the marriage and urging them to attend the biggest and most unusual homecoming the community has ever known.

Yes, it looked like just another parade at first glance, but it's really a preview of a busy and exciting year to come, here in the original Lincoln country.

[2] From the depositions made before notaries public by relatives and neighbors of the Lincoln and Berry families.

Commissioning of the U.S.S. "Independence"

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to comment on the commissioning of the U.S.S. *Independence* at the Brooklyn Navy Yard on January 10 at approximately 3 o'clock in the afternoon. Secretary of the Navy Gates and Admiral Burke participated in the ceremony. The commanding officer of the *Independence*, Capt. R. Y. McElroy, Lebanon, Ky., read his orders and accepted the commission. He relayed his command to the chief executive officer, Comdr. Warren Cooper, his fellow Kentuckian from Elizabethtown, who "set the watch" and officially put the ship in commission.

Both Captain McElroy and Commander Cooper are native Kentuckians, from the Fourth Congressional District which I have the honor to represent in Congress. In addition, Commander Cooper is from my own place of birth, Elizabethtown, while Captain McElroy hails from Lebanon, my adopted home in Marion County. I am extremely proud of both of these fine officers and feel that I have been amply repaid for the wee bit of service rendered to the then young McElroy, who was seeking an appointment to Annapolis, by going to the then Representative of the Fourth District, the late Honorable Edward Creal, and urging McElroy's appointment.

The *Independence* is the world's biggest aircraft carrier, it weighs 60,000 tons, took 3½ years to build, has a 4-acre flight deck space and cost $190 million. It is big enough to hold the liners *America* and *United States*, with room to spare on its deck.

It is a proud and glorious day for the United States, for the Navy, and for old Kentucky in that two of her distinguished sons both battle-scarred in defense of their country and recipients of many service medals, have been selected to command the ship. I would like to congratulate them and all members of their staff and crew most heartily and extend my warmest best wishes for their success. May the good Lord bless and protect them—and preserve for us all—peace and happiness "forever and a day."

I would like, also, to congratulate the parents of these outstanding naval officers. They have long been my good and close personal and political friends. Commander Cooper's father is the able and prominent attorney of Elizabethtown, Mr. Damon Cooper. Captain McElroy is the son of Mr. R. Y. McElroy, Sr., a leader in the community and a retired insurance executive at Lebanon.

I would like to include this splendid editorial from the Louisville Courier-Journal, under date of January 10, 1959:

OUR STATE'S PRIDE WILL RIDE WITH THE "BIG I"

Kentucky ties with the Navy will be strengthened next week when fellow Kentuckians meet in Lexington to welcome home Navy Capt. R. Y. McElroy. A native of Lebanon, Captain McElroy has just been named commanding officer of the spanking-new *USS Independence*, latest of the Navy's giant aircraft carriers and the largest and most powerful fighting ship afloat in the world today.

The occasion comes at a good time, for Kentucky's ties with the fleet have been sagging of late. Time and technological advances caught up with the battleship-hull that was to have carried our State's banner into the age of nuclear ships. Cutters' torches have long since reduced her to scrap. And today for the first time in more than half a century, no capital ship carries the name of the Bluegrass State on her prow.

But if there is no *Kentucky* to sail with the fleet, the *Independence* will have a strong Kentucky flavor. For not only is her first skipper a native of Marion County, her executive officer and second in command will be a Hardin County boy, Comdr. Damon W. Cooper, of Elizabethtown. What better reason could we ask for adopting the "Big I" as our own?

And if we have no namesake of our own, the *Independence* is an adopted son of which every Kentuckian may be proud. It is not just the largest ship in the world (stood on its bow, its stern would reach the 80th floor of the Empire State Building; afloat, its island will tower 25 floors above the keel; the flight deck is as big as two and a half football fields and could accommodate our two largest ocean liners with room to spare). It is also the most powerful. Its steam catapults can launch a plane every 30 seconds. Its 100 supersonic aircraft pack more explosive power than all of the air fleets of World War II combined. It is literally a highly mobile air base, ready and able to carry the striking power of the United States against 80 percent of the globe's surface on a moment's notice.

The name *Independence* is an illustrious one in the records of the Navy. The previous bearer of the name was sunk by the Navy after having been made dangerously radioactive in the first Bikini atom bomb tests. But before that she wrote a brave page in Navy history during the Pacific sea-air war against Japan. The two Kentuckians who will command the new *Independence* contribute equally illustrious records to their new craft, both having been highly decorated for bravery in action.

Perhaps it would be improper to contribute to the *Independence* some of the pieces from the old silver service that was returned to Frankfort after the last *Kentucky* was decommissioned. But it is good to welcome home the two native sons who have given Kentucky an interest in this new ship. Glad to have you aboard.

Few Americans Write to Their Congressmen

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am presenting for the thoughtful consideration of my colleagues a recent article by Roscoe Drummond, pointing out the need for an easier mode of communication between the average voter and the average Member of Congress. I purposely put in the word "average," Mr. Speaker, because my own district, the 13th of Illinois, sends me so constant and so huge a volume of correspondence that it is admittedly an exception to the rule which Mr. Drummond lays down.

However, I am exceptionally proud of the fact that the active citizens opinion poll, which Mr. Drummond praises as one method of increasing the mutual responsitivity of a Congressman and his district, originated and has grown to subtantive usage under the direction of a distinguished professor who lives in my district. I agree with Mr. Drummond that the method provides a most useful experiment which should be developed and utilized in all areas where the average voter has not formed the habit of making his views on current problems quickly and easily available to his representative:

FEW AMERICANS WRITE TO THEIR CONGRESSMEN

(By Roscoe Drummond)

One thing which impresses a roving correspondent looking in on this congressional campaign is the lack of communication—the lack of regular contact—between Members of Congress and the voters.

Most of the time it is as though there was a dead wire between Capitol Hill and Main Street.

It seems to me for the most part:

That relatively few voters really know what their Representatives in the Senate and House did to them—and for them.

That very few Congressmen have any sustained or reliable means of knowing what their constituents are thinking.

What needs to be done? I incline to look at this matter from the standpoint of the voter, and what is needed is:

1. A better means by which the voters can keep tabs on how their Congressmen and Senators are voting—continuously, not just as a quick look before voting.

2. A better means by which the voters can regularly get their views to their Congressmen—their views of what they want done in Washington and the way they want it, and not as a lobby for anybody except the interested citizen.

A beginning is being made to do both of these things.

This fall the Congressional Quarterly, an independent research organization in Washington, provided about 100 of its newspaper clients—those who asked for it—with a meaningful boxscore of how the Senators and Congressmen of each area voted. It also provided a place for each paper to fill in the known views of the opposing candidate (if not a Member of Congress) and a convenient place for each voter to fill in how he would have voted.

This kind of reporting is particularly helpful to voters who find themselves looking over politicians who, after doing all they can on earlier ballots to kill a measure, vote for it in the end so they can stand on both sides, depending on their audience.

A greater need is to provide a good mechanism by which more voters, outside of purposeful pressure groups, can make their views heard to better effect in the Halls of Congress on major issues.

There are two main hurdles in the way. One is that most citizens, unless really worked up or responding to some organized lobby, refrain from writing their Congressmen because they do not think their letters count for much. The other hurdle is that there is rarely enough spontaneous voter expression to make up a reliable and influential guide to public opinion.

Can these two hurdles be surmounted?

It seems to me that the Active Citizens Opinion Poll in Chicago points the way. Here is a not-for-profit, nonpartisan group, headed by Prof. W. P. Cortalyou, of Roosevelt University, which does three things.

Once a month it submits a series of yes-or-no questions relating to the main aspects of such topical issues as tax reduction, postal rates, foreign aid, policy toward Red China, to all participating voters throughout the country. Anyone can participate by paying a small fee covering costs. It analyzes and tabulates the answers and then sends the results to all participants—and reports its findings to all Congressmen.

Expanded and more fully developed, this could be a valuable and continuous reflection of public opinion applied at the point where it would count most. Mr. Cortalyou does not consider that his group is necessarily the best instrument for carrying out this of-the-people, for-the-people report to Government.

It seems to me that this is a useful experiment which ought to be taken up on a larger scale, possibly with the aid of one of the foundations.

I am not arguing that Congress should abdicate its independent judgment or make its decisions solely on the basis of polls or letterwriters, I am arguing that the interested, independent voters ought to have the means of making their views visible and influential.

U.S. Marine Corps: Vital National Asset

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. THOMPSON of Texas. Mr. Speaker, in November 1958 the U.S. Marine Corps, with which I am proud to have served in both peace and war, observed its 183d anniversary. Thus, it was historically fitting that Shipmate, the alumni monthly of the U.S. Naval Academy, the great school that has sent so many of its graduates to the Marine Corps, should devote its November 1958 issue to this commemoration.

While aware of its past exploits to a unique degree, the U.S. Marine Corps has never been intellectually stationary. Instead, it has been equally farseeing and a leader in a number of fields, especially amphibious warfare.

In an informative article in the November 1958 issue of Shipmate, Vice Adm. T. G. W. Settle, USN, retired, a distinguished Naval Academy alumnus, emphasizes Marine Corps versatility. The article follows:

THREE-DIMENSIONAL MARINES

The U.S. Marine Corps has fought our country's battles magnificently "from the halls of Montezuma to the shores of Tripoli," and in every clime and place where we could take a gun, "on the land as on the sea." These splendid words of the Marine hymn connote, however, two-dimensional warfare, on the surface of the sea and land.

In recent generations mankind has been expanding its battlefields vertically, both upward and downward. As was to have been expected, the Marines have been in the forefront of military verticalization. They have become a three-dimensional elite fighting corps. Our Nation can well be proud of them, as it was of the surface-bound Marines of former times.

Marine Corps fixed-wing aviation, its close combat integration with the surface Marines, and its splendid performances in World War II and Korea are so well known as to need no elaboration. Less well known, however, are three other varieties of three-dimensional Marines, i.e., the stratosphere, the submarine, and the helicopter ones. These will be briefly covered herein.

Twenty-five years ago, Col. (then major) Chester L. Fordney obtained cosmic ray and other research data at the highest altitude man had attained up to that time. He was the scientific observer and aid in the stratosphere balloon which, on November 20, 1933, spent 2 hours at the then record altitude of 61,237 feet.

Fordney was in charge of the Marine Corps exhibit at the Chicago Century of Progress Exposition. "Mike" Fordney, along with being a typical Marine with a splendid combat record, had mathematics as a hobby. He could translate feminine dress contours into third-power mathematical equations. So, he was also in charge of the mathematics exhibit in the Hall of Science at the exposition. He was, obviously, a natural for the stratosphere balloon research project sponsored by the exposition, the Chicago Daily News, the Marine Corps and Navy, and other organizations.

Among the eminent persons connected with the project were: Col. Frank Knox, publisher of the Chicago Daily News, and later Secretary of the Navy; Brig. Gen. Lewis Rock, USMC, retired, then business manager of the Daily News; Dr. Arthur H. Compton, Nobel price winner, scientific director of the project; Drs. Auguste and Jean Piccard; Mr. E. Howard Perkins, Dow Chemical Co., project engineer for construction of the magnesium alloy gondola, and now head of the Detroit firm which built the Vanguard's satellite; Mr. Glenn O. Carter (U.S. Naval Academy, 1905), then an executive of the Union Carbon & Carbide Chemical Corp. and later president of the Naval Academy Alumni Association; Capt. (then lieutenant) S. W. Townsend, USNR, communications officer of the project who, in World War II, had a leading role in development and service adaptation of antisubmarine warfare electronic equipment; and Fleet Adm. E. J. King, then a rear admiral and Chief of the Bureau of Aeronautics. The Marine Corps recruiting and Reserve units in Chicago valuably assisted in the project.

The 600,000-cubic-foot hydrogen inflated balloon took off from Akron, Ohio, about 0900 on November 20, 1933. Its crew comprised Major Fordney, scientific observer and aid, and Lieutenant Commander Settle, pilot. Fordney had 11 categories of scientific research gear to operate including several cosmic ray instrumentations, a solar spectrograph, sky color charts, air sample flasks, vegetable disease spores, and photographic

equipment. In addition there was the log to keep, aerological and physiological observations, and ordinary ship handling and navigation.

After takeoff we stayed in low altitudes until midday when, over the Ohio River, we commenced jettisoning the lead dust ballast and started up. Arrived at peak altitude about 1400 and oscillated at and near 61,237 feet until 1600 when we started down. Throughout the flight Fordney was as busy as a squad of Marines in a good scrap, with his scientific gear. He found time, however, to talk frequently by voice radio directly with Admiral King in Washington, Colonel Knox in Chicago, and Lieutenant Townsend in Akron, giving them reports on the progress of the operation.

At dusk we made a normal "egg-shell" landing in a swampy region near Bridgeton, N.J. It was inadvisable to try to get out of the swamp and bayou area during darkness. So, after securing the balloon and gear, we rolled ourselves up in the balloon fabric, with a bottle of an old Scottish preventive against mosquitoes, and had the best night's rest we had had in weeks.

In the morning a Coast Guard plane spotted us. New Jersey State police and local inhabitants helped us get the balloon and gear, and Mike's scientific records, to dry ground.

Dr. Compton and his colleagues found Fordney's observations and records of high value in important research programs then in progress. Fordney had spent months in preparatory work and testing. I later recommended that Colonel Fordney be awarded the Distinguished Flying Medal for his outstandingly valuable work in this important pioneering project. Regrettably, departmental policy precluded an award. Nevertheless, it was a high privilege to all of us concerned to have been associated with this fine three-dimensional marine in the first U.S. manned balloon operation to reach above 50,000 feet.

The Marine submariners are the "recon" units in the amphibious reconnaissance and raiding submarines of our fleets' amphibious assault forces. Security classification precludes disclosing detailed information on these three-dimensional marines, except that they are highly specialized and intensively trained units, of high value in amphibious operations. Their potentialities in amphibious warfare far exceed their relatively small numbers.

The fleet marine forces and the amphibious forces of the Pacific and Atlantic Fleets are closely integrated teammates in the combat teams of amphibious warfare. An amphibious task force with its embarked Marine assault troops and its integral supporting units comprising most of the other fleet surface, subsurface, and air types is a combat team for assaulting an overseas enemy's defended coasts and carrying decisive offensive combat into his territory.

In World War II we fought our way back from Pearl Harbor to Okinawa, and into north Africa and Europe, by amphibious assaults projecting our Marine and Army troops into enemy territories. These were essentially two-dimensional assaults as the troops were landed preponderantly from surface craft, albeit there were some paratroop drops, fixed-wing airlifts; and air support, offensive and defensive, was indispensable.

The brilliant Inchon amphibious assault in September 1950 was excellently described by Brig. Gen. V. H. Krulak in the September 1958 Shipmate. That operation may well have been the last major amphibious assault in which the troops were landed solely by surface means. For the Marine Corps has verticalized the concept of assault landings and has developed vertical envelopment tactics, utilizing troop-carrying helicopters in lieu of, or in concert with, surface assault troop carriers.

In recent years (insofar as the few ships available have permitted) helicopter assaults and supporting operations have been tested, and tactics further developed, in amphibious exercises and by simulation. The Marine Corps now has troop helicopters designed for amphibious assault. The Corps has unremittingly urged the Navy to design from keel-up, and build an adequate number of amphibious assault ships (helicopter) (LHP). However, most of the new-construction funds have been allocated for nuclear air-raiding, submarine, and anti-submarine types. A useful step was taken, nevertheless, 2 years ago in converting an old CVE, the *Thetis Bay*, into an experimental LPH. It is to be hoped that it will be feasible in the coming few years to properly implement the Marines' vertical envelopment concept, and revitalize the obsolescent prime offensive combat arm of the fleets with keel-up designed amphibious assault ships (helicopter).

If the Marines and Navy amphibians are to keep and further develop their amphibious know-how, particularly if the vertical envelopment concept is to be brought to fruition, it is essential to design and build LPH, other combatant amphibious types, and assault helicopters, in adequate numbers and within a few years. If this should be done (which seems doubtful to this writer) we could envisage a future major amphibious operation with three-dimensional Marines swarming onto and behind enemy beaches from clouds of helicopters, from ships, boats, vehicles and submarines, as well as by parachutes and fixed wing air lifts. And one can have a certain wry symapthy for the hypothetical unfortunate enemy coastal defense commander beset with U.S. Marines assaulting him from his front, rear, flanks, and from overhead. And with their greater prelanding mobility and free choice of landing spots the assaulting Marines, doubtless, could utilize their tactical nuclear weapons more effectively than could the defenders.

The conclusion is inescapable that our present-day three-dimensional Marines of all varieties, along with the surface Marines, are as vital a national asset, if not more so, as were the valorous Marines of the two-dimensional era.

The Case of Marie Torre

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. WAINWRIGHT. Mr. Speaker, I should like to bring to the attention of the House an editorial broadcast made by a radio station in my congressional district, Station WBAB in Babylon, L. I., in regard to Marie Torre of the New York Herald Tribune who today completes her 10-day sentence for contempt after refusing to disclose a news source. The case of Marie Torre strikes very strongly at the heart of journalism, a subject which deserves serious consideration by the Congress of the United States:

New York Herald Tribune radio and television columnist, Marie Torre, was put in Federal custody today to begin serving a 10-day jail term. She had been sentenced for contempt after refusing to disclose a news source. When Miss Torre surrendered before Federal District Judge Sylvester Ryan in New York, he gave her a chance to purge herself by telling where she got a story she wrote about Judy Garland in 1957. However, she refused and was ordered turned over to a marshal to go to jail. Miss Torre said in a statement, and we quote, "I have great hope that this action will lead to legislation which will protect a newsman's sources." The Herald Tribune supported Miss Torre in her defense that she could protect a news source through the freedom of the press guaranties in the first amendment to the Constitution. When the U.S. District Court of Appeals upheld her conviction last September 30, the case was taken to the U.S. Supreme Court, but the highest tribunal in the land refused to review the case. We who are involved in the gathering of news feel that a basic principle is at stake in this issue. And that principle is the right given in the Constitution guaranteeing freedom of the press. Freedom of the press should not be limited to basically the publication of news and information but should be carried on to hold newsmen harmless in disclosing the source (whatever it may be) of the news that is published. There is no doubt that legislation is needed to remedy the law as it stands today.

Marie Torre has the backing of all members of the fifth estate in her stand not to disclose the source of a news story. One doesn't have to look too far beyond his nose to see that a restriction such as the Marie Torre case implies could have far reaching effects in the business of news gathering. At present there is no law or previous decision that extends to journalists the privilege of withholding information from the courts. If that be the case, we make a public plea for immediate legislation to protect one of our most cherished rights, freedom of the press. We in the radio industry, firmly believe that legislation be requried for the gathering of news. We affirm, at the same time, however, that the decision of our courts must be obeyed and respected. To do otherwise, would to us be anarchy. A copy of this editorial is being forwarded to Senator JACOB JAVITS, Senator KENNETH KEATING, and Congressman STUYVESANT WAINWRIGHT. We will await their reaction and let you know the outcome of this legislation.

Junior Colleges Play Bigger Role Annually

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ULLMAN. Mr. Speaker, a recent article appearing in the Portland, Oreg., Journal provides some valuable statistics concerning the growth of the Junior Community College during the last two decades. An institution that was once viewed as an experiment is now, happily, accepted as an integral part of our educational system. Moreover, the 2-year college is becoming an increasingly important aspect of that system as witnessed by the establishment of a new community college every 2 weeks.

The advantages of this type of institution of higher learning are many. Easy accessibility coupled with low cost make the community college a natural next step in the further development of the Nation's educational opportunities.

As the sponsor of a proposal to provide Federal assistance for development of the 2-year college, I congratulate the

Portland Journal on its interest in this matter and ask permission to have the article inserted in the RECORD:

JUNIOR COLLEGES PLAY BIGGER ROLE ANNUALLY

(By Louis Cassels)

Twenty years ago junior colleges played an insignificant role in U.S. higher education. Their total enrollment for the 1938–39 school year was only 196,000 students.

Today there are 667 junior colleges in America, with an enrollment of 892,000. The 2-year institutions are springing up like mushrooms all over the country at an average of one new one every 2 weeks.

The latest directory of the American Association of Junior Colleges shows that 275 of the colleges are private institutions. Among them are several large schools, like Stephens College in Missouri and Colby College in New Hampshire, that draw students from all parts of the Nation.

A substantial majority—392, to be exact—are public institutions whose students live at home. There is an increasing tendency to refer to them as "community colleges" or "city colleges."

Most are operated as part of the community's public school system. Some are extension centers of State universities. The latter pattern is particularly prevalent in the northeast. Pennsylvania State University, for example, has 11 such off-campus branches.

Educators agree that junior colleges are destined to continue growing rapidly, both in number and in size. Last year they absorbed one out of every four students who entered higher education. By 1970 they may well enroll half of the Nation's total freshmen.

There are several reasons for their phenomenal growth. A basic one is that they make higher education financially accessible to many students who could not afford to go away to college. Many community colleges are free. Where tuition is charged, it rarely exceeds $300 a year, and often is considerably less.

And, of course, many commuting students have no room and board to pay.

By contrast, the cost of attending a regular 4-year residential college is high and increasing steadily. The latest estimate from the U.S. Office of Education put the average cost of attending a State college or university at $1,500 a year, and of a private college at $2,000 a year. Many educators believe these costs may double within a decade.

The junior college also has strong financial appeal for the public agencies charged with providing adequate higher education facilities for a college student population that is expected to grow from 3,258,000 this year to perhaps 6 million by 1970.

According to Government studies, it costs close to $6,000 a student to build dormitories, dining halls, classrooms and other necessary features of a 4-year residential college. Comparable educational facilities can be provided at a commuter college for $3,000 a student.

Money aside, community colleges are particularly appealing to the growing number of adults who want to continue their education after acquiring a family, a home, and a job.

Nearly half of those enrolled in junior colleges are adults who are attending classes on a part-time basis, or who are taking special vocational courses.

The first public junior college was established in Joliet, Ill., in 1902. The idea spread, slowly at first, to other States. Today California leads the Nation with 75 junior colleges. Texas is next with 45, and New York is in third place with 36.

Senator Humphrey After 10 Years

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. McGOVERN. Mr. Speaker, I read with great interest and enjoyment Mr. Russell Baker's article on the distinguished Senator from Minnesota, HUBERT H. HUMPHREY, which appeared in last Sunday's New York Times magazine.

Believing that this article will be of interest to the Members of Congress and many others, I, under unanimous consent, insert it in the Appendix of the RECORD:

HUMPHREY: THUNDER, LIGHTNING?

(By Russell Baker)

WASHINGTON.—As HUBERT H. HUMPHREY rounds out a turbulent decade in the U.S. Senate, he may be justified if he sometimes feels that destiny is beckoning him into a grander decade ahead. Ten years ago this month, when he took his seat in the Senate, the patriarchs who hold the place in trust looked him over and seeing nothing but a young pipsqueak from the windy prairie, quietly passed the word that he just wouldn't do.

Nowadays, ranked among the leading Democratic contenders for the Presidential nomination, he is doing very well indeed, not only through the country but also within that small coterie of men who dominate and give character to the Senate.

At 47, dynamic of spirit and limb and long of wind, he stands among the Democratic Party's men of the future, a monument to the political virtue of pure energy and a quick tongue—in many fields. He is equally at home talking feed-grain prices to Minnesota farmers, arranging a deal with Senate horsetraders or advising Nikita S. Khrushchev on what is wrong with Soviet policy.

"Everybody writes that I talk on every subject," he told a group of newspapermen recently. "Hell—I do. I like every subject."

This is probably the most succinct thumbnail sketch it is possible to draw of HUBERT HUMPHREY. No one else in the Senate (for that matter, few others anywhere in American politics) is quite so intensely fascinated with quite so many things about this earth as he. The energy and exuberance with which he pursues his multiple interests has alarmed some, set others to grumbling that he is a vacuous headline hunter and given him in the past a reputation around the Senate—where excessive zeal is frequently regarded as bad form—for being an upstart.

The catalog of HUMPHREY'S activities is a full one. In Minnesota, he has constructed and now operates one of the most efficient political machines in the country, under the all-inclusive label "Democrat-Farmer-Labor Party." In New York and Washington, he manages to keep the most dedicated Democratic liberals convinced that he is liberalism's most effective champion in the Senate. In the Senate, where liberalism is sometimes suspect as a vaguely alien philosophy, he manages to hold the respect of and work successfully with the grandees on the conservative side.

In his various other excitements, he is applauded as a defender of civil rights, of the ailing farmer, of the embattled Supreme Court, of Israel and of liberalized immigration policies—to name a few of his causes. He has also found time to make himself expert on the incredibly intricate question of disarmament and to come up with ideas for treating every world problem from starvation in Southeast Asia to the isolation of Berlin. Passing through Helsinki recently and learning that the anti-Communist Finnish Government was about to collapse under Soviet pressure, he quickly rounded up the best local opinion on what needed to be done to save the day, then wired his proposals to Washington. The State Department was still giving them "favorable consideration" when the Government fell.

Among all the Senators who are potential Presidential material, none quite equals HUMPHREY for executive energy applied to such a global range of problems. LYNDON B. JOHNSON of Texas, the most complex of the contenders, has built his case on a genius for getting things done through conciliation. JOHN F. KENNEDY, of Massachusetts, relies heavily on organization and personality. STUART SYMINGTON, of Missouri, has hitched his future to the single issue of national security and a quiet voting record considered perfect by Democratic liberals.

HUMPHREY is a fighter rather than a conciliator. For this era of television campaigning, he has obvious personal shortcomings in comparison with JACK KENNEDY. ("The trouble with HUBERT," complained one admiring Congressman who worries that television might hurt him, "is that he looks like a 'yakker'.") Unlike SYMINGTON, he has rarely been content to vote quietly on any issue. More often, clad in the armor of liberalism, he is on his warhorse and charging into the middle of every battle on the horizon.

The public HUMPHREY is clattering, strident, and bellicose, often a scold, sometimes a nuisance, always a nonrespecter of the proprieties. In this he has changed little from the Minnesota terror who first took his seat in the Senate a decade ago.

In rare moments when he is being the private HUMPHREY, however, it is obvious that he has changed a great deal. For one thing, he and the Senate have finally come to terms. In a private conversation recently he said that he doubted he would ever again seek the Vice Presidential nomination, as he did in 1956. "I've come to like the Senate too much to want to spend my life waiting for somebody to catch cold," he explained.

In part this may be due to LYNDON JOHNSON'S skill as tutor to Democrats eager to learn how to make the Senate work for them. Both JOHNSON and HUMPHREY started political life as New Dealers and while HUMPHREY'S Minnesota brand of liberalism is too rich these days for JOHNSON'S Texas constituents, there is a personal bond between the two men which is mutually beneficial.

Near the close of the last Congress, when JOHNSON was holding a private post mortem on a particularly delicate piece of business which HUMPHREY had managed on the floor, he was patiently analyzing HUMPHREY'S mistakes. At one point, JOHNSON noted, HUMPHREY had permitted another liberal—PAUL DOUGLAS, of Illinois—to get too prominently into the act. "Remember," he told HUMPHREY, "there can just be one leader—just one leader."

In all probability, HUMPHREY will emerge as the effective leader of the expanded cadre of Senate liberals in the Congress just opened. It is equally probable that his influence will be exerted behind the scenes to a larger extent than ever before. The first order of Senate business is the fight to break the old filibuster. In this, HUMPHREY is apparently destined to handle the private arrangements that will have to be made in the wings on behalf of the liberals if a solution is to be reached.

This is not to predict that the public HUMPHREY will be any less in evidence. As he confessed recently after his talk with Khrushchev, he loves to talk and is helpless

to stop himself. Each day, when the Senate is in session, he fills large segments of the CONGRESSIONAL RECORD. Once, running through the old formula of "Mr. President, I ask permission to insert in the RECORD—," he stumbled and said, "I ask permission to insert in my record."

It is this passion for talk, he believes, that kept Khrushchev interested during their extraordinary 8-hour conversation in Moscow early last month. HUMPHREY has since said that he suspects Khrushchev shares his vocal compulsion and recognized in him a worthy match for a battle of spellbinders. "You can't help it," HUMPHREY says of the overwhelming passion to be heard. "It's just glands."

Under cover of the sound and fury, however, HUMPHREY has quietly graduated to the Senate inner sanctum, composed exclusively of men who, for reasons not clearly understood, clearly count. To borrow from George Orwell, all Senators are equal, but some Senators are more equal than others. No one has ever quite defined why this should be, but it is nonetheless true, and it is true that HUBERT HUMPHREY now holds a membership in the elite.

This is largely a southern elite with little liking for HUMPHREY's politics but with great respect for the man—regardless of his politics—who understands the Senate. Thus, while HUMPHREY will usually be at odds with these elders, and may infuriate them on civil rights, there will be channels for reaching understanding and accommodation which are available to few other Senators of the liberal persuasion.

One other point is essential in understanding the HUMPHREY of today: he remains a consummate politician. During his Minnesota apprenticeship he forged the Democrat-Farm-Labor alliance that carried him to office and gradually turned Minnesota into a Democratic stronghold. Those most familiar with Minnesota politics doubt that EUGENE J. MCCARTHY could have been elected to the Senate in November without HUMPHREY's considerable assistance.

Like all finished politicians, he is exceedingly sensitive to what is going on back home and to the message of his mail. When the question of congressional calls to the Federal regulatory agencies created a lively controversy in Washington, HUMPHREY held forth heatedly at a dinner party one night with the argument that it was a Senator's solemn obligation to his constituents to go to their aid with every device within the law when they had problems before the agencies.

Nor does his liberalism express itself in a passion for fighting to the death in lost causes. When HUMPHREY fights, it is usually to win, but part of his Senate education has been that when you cannot win the whole loaf, half is better than none.

While he follows classic form in denying all interest in the Presidency for the moment, it requires only a few minutes in his presence to sense that he is beginning to run a low-grade White House fever.

The celebrated Khrushchev interview, he realizes, was a mixed blessing for his future. Khrushchev's whim in keeping him for 8 hours was a stroke of luck in that it pulled HUMPHREY out of the wings and put him at stage center in the American political drama long enough to make politicians and public remember his face and start examining his qualifications.

At the same time, it is plain to HUMPHREY that there is limited political fuel in the Khrushchev affair and that he must see his hopes rise or fall on his record over the next 2 years.

Moreover, there are real political dangers in the method of his projection onto the stage. His office has received angry letters complaining that he was taken in by the Russians. As a shrewd politician, HUMPHREY realizes that it might be expedient to do the demogogic thing and use his visit with Khrushchev as a claim to special expertise about the menace of the Soviet Union.

Some of his critics tax him with being, at heart, a demagog; but in the Khrushchev matter HUMPHREY clearly feels that he must forgo the politically expedient thing in order to keep open what could be an important point of contact with the ruler of the Communist world.

The HUMPHREY of today is a direct if considerably more sophisticated descendant of the agrarian and Populist leaders who held the West at the beginning of the 20th century. His father, a lifelong Republican, turned Democrat after hearing William Jennings Bryan speak in South Dakota. One of four children, HUMPHREY was born in Wallace, S. Dak., May 27, 1911, and christened, after his father, Hubert Horatio.

His mother had immigrated from Norway. His father was a small-town pharmacist. "I was born over a drugstore and raised inside one," HUMPHREY once told a biographer. In high school he was—like Vice President RICHARD M. NIXON—a prize debater. (Both men suffer in their speaking style from the oratorical glibness of formal debating technique.)

He finished high school in 1929 and enrolled at the University of Minnesota. Two years later, the depression forced him to quit. He went back to his father's drugstore and, with 6 months out for a course at the Denver School of Pharmacy, stayed there for 6 years, watching the South Dakota farmers lose everything as the dust storms consumed the land.

These memories still infuriate him. Recently, discussing Washington's attitude toward Latin America, he denounced it as the smug, self-righteous posture of the well-to-do man who constantly advises his struggling neighbors to "put your house in order." It reminded him, he said, of the bankers and businessmen who had come to the ruined farmers of the Dakotas during the dust-bowl years and used the old catch phrase.

"You're not in a very receptive mood when you're penniless and your children are hungry and some rich bird, who's probably just robbed the bank and gotten away with it, tells you to put your house in order," he said. "You feel like telling him, 'Look here, mister, how are my children going to eat?' "

In 1935, at the age of 24, HUMPHREY scraped together bus fare and made his first trip to Washington. He wrote back to Muriel Buck, his fiance, now Mrs. Humphrey: "I need to do more reading, more writing, and more thinking if I ever want to fulfill my dream of being someone in this world. Maybe I seem foolish to have such vain hopes and plans but, Bucky, I can see how some day, if you and I just apply ourselves and make up our minds to work for bigger things, we can live here in Washington, and probably be in Government politics or service. I set my aim at Congress. Don't laugh at me. Maybe it does sound rather egotistical and beyond reason, but, Muriel, I do know others have succeeded."

Back at the University of Minnesota, doubling as drugstore clerk and janitor to pay the bills, he soon became a voluble New Dealer and a figure widely known and heard on campus. He moved on to Louisiana State University to do graduate work in political science. His master's thesis was "The Philosophy of the New Deal." Returning to Minnesota, he taught briefly, then became impatient with the academic approach to politics and plunged into its practical applications.

After a brief whirl through the regional offices of various Government agencies, he decided to run for mayor of Minneapolis. He was then 31. Finishing second in a 10-man field, he lost the run-off by 5,000 votes and went back to work to pay his campaign bills. He taught political science, worked as a radio news analyst, did public-relations work, and, in between, managed to weld together the diffused farm and labor elements of Minnesota's political system into the cohesive Democrat-Farmer-Labor Party.

Two years after his first race for office, he ran again for mayor and won by 31,000 votes. He promptly rocked Minneapolis with a law-enforcement program that shut down the wide-open brothels, the after-hours liquor joints, the flourishing handbooks, dice games, and punchboard operations. When labor leaders complained about his choice of a police chief, he told them: "I'm my own boss." In 1947 he was reelected by the biggest majority in Minneapolis history, and began looking toward Washington.

He began by ordering a purge of Communist elements and Henry Wallace's Progressive backers who had begun to infiltrate the Minnesota organization. His lieutenants worked over the State, pruning them out. When the State convention met in 1948, he thrashed the remnants of the Wallaceites and won the senatorial nomination by acclamation.

First, however, there was the Democratic National Convention. HUMPHREY was among the "young Turks" who that year led the civil-rights fight that put a strong libertarian plank into the platform and forced the South to bolt the party. His rallying cry to the convention is still remembered: "It is now time for the Democratic Party to get out of the shadow of States rights and walk forthrightly in the bright sunshine of human rights." This plank carried by 69 votes.

In the Minnesota campaign, he traveled 31,000 miles, made 691 speeches, milked cows, led bands, and dressed in Indian bonnets. Campaigning, he told a newspaperman, "is like running a drugstore. When people come in, you've got to do things for them, show an interest in them, take them to the door." He overwhelmed the Republican incumbent, Joseph H. Ball, by 243,000 votes.

HUMPHREY arrived in the Senate with no great fund of goodwill among the elders and promptly turned their indifference into outrage. One of his earliest efforts was an assault on the full majesty of Senator HARRY F. BYRD, the reigning patriarch from Virginia. Even veteran Senators blanched when HUMPHREY proposed abolishing BYRD's famed Joint Committee on Reduction of Nonessential Federal Expenditures, the base on which BYRD had built his reputation as the taxpayers' friend. HUMPHREY's argument for getting rid of it was that the committee was "a waste of the taxpayer's dollar."

Shortly thereafter he was openly rebuked for disrespect for the Southern elders. This time it was a debate over a fair employment practice bill and HUMPHREY, during a floor speech, impugned the motives of the opposing Southerners. Twice during the debate the Southerners had him ruled out of order for using intemperate language, and twice he was forced to take his seat, like an offending schoolboy, before he could proceed.

And so it went, the long uneasy affair between HUMPHREY and the Senate. Time has since performed its alchemy. After the early mutual suspicion and annoyance, HUMPHREY is 10 years older, graying at the temples and no longer the enfant terrible of the late 1940's. He and the Senate are at peace. Each has had to bend its neck a bit to make the accommodation possible, but neither has yielded much on principle.

A HUMPHREY story, possibly apocryphal, has it that one of his university professors told him: "If God had given you as much brains as he has given you wind, you would be sure to be another Cicero."

As one looks at HUMPHREY today, it is possible to say: "Maybe God did. Maybe HUBERT will."

Permit Lease and Transfer of Acreage Allotments

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ROBERTS. Mr. Speaker, if the cotton farmer and the cotton industry are to survive under the economic pressures now being exerted upon them, it is mandatory that the 86th Congress act at the earliest possible moment to modify the laws regulating the allocation of cotton acreage.

I am today introducing legislation to allow transfer of commodity acreage allotments from one farmer to another, on a lease basis, within the same county.

The chief purpose of this legislation is to provide greater flexibility in the system of allocating land for farming cotton by giving to the small cotton farmer the incentive to expand and make more efficient his operation, while allowing those who no longer wish to devote themselves to cotton farming an opportunity to relinquish their allocations for valuable considerations and devote themselves to other employment.

The farmer who wants to grow cotton should have the right to do so profitably. Simply stated, this is what my bill seeks to encourage.

During the past few years, under the influence of the farm policies now in effect, there has been a mass exodus from the farm, as the incentive for farming waned in the face of mounting costs, decreasing acreage allotments, and the appeal of better paying off-farm employment. In the Fourth District of Alabama, for example, more than 40 percent of the farmers work off the farm 100 days or more each year. Many of these earn more in these jobs than the total value of agricultural products sold by them. Actually, farming has become a burden to them.

And so, in an increasing measure, the situation is leaning heavily toward part-time farming, much of which is pursued half-heartedly by individuals who have lost their interest in farming but who feel obliged to plant their allotments or else lose them. Under the rigid, inflexible allocation program, there is no practical or profitable way to yield their disinterested hold on the land.

In the cotton States, farming of cotton includes the existence of thousands of small operations where there is a woeful loss of productivity. Alabama had 119,844 cotton allotment contracts last year, of which 45,680 were for 4 acres or less. Many of these operators farm only as a sideline and would gladly give it up altogether if the Government did not make it difficult to do so.

At the same time, there are other small- and medium-size farms whose operators are truly interested in raising cotton but who are restricted from expanding their operations by the same rigid rules which encourage part-time farming.

It is clear that there needs to be flexibility in allocating cotton acreage to inspire the interested farmers to expand and to produce more efficiently, or to withdraw from the production of cotton in favor of off-the-farm employment. The result would be to attract to cotton farming those who want to farm and to give them incentive to do a better job at it.

This is the essence of my bill. The decision to stay at cotton farming or to withdraw would be left completely to the individual farmer. If he wishes to devote his time exclusively to outside employment, he could, under my bill, lease his allotment to a farmer in the same county who wishes to pursue the livelihood of cotton farming.

The farmer staying with cotton would be able to expand, on his own land, his cotton-farming operation. He would be given the encouragement to proceed with a degree of confidence to invest in equipment needed in this mechanized age to efficiently produce cotton.

The individual giving up his allotment would be free to work full time in other employment, and at the same time receive such stipend for his allotment as he and the leasing farmer may agree upon.

It is obvious that such a plan will appeal to the farmers. Now who else will like this idea? In a recent statement, Frederic H. Heidelberg, executive vice president of the North Carolina Cotton Promotion Association, pointed out that the transferability of cotton allotments should appeal to just about everybody associated with farming.

He states:

No opposition to such a provision should come from the agricultural leaders who believe small-scale farming must give way to large-scale farming enterprises. Their belief is based upon the view that developments in agricultural science and technology require large-scale farming operations in order to pay off. Flexibility in allotments which would enable regrouping of acreage would be in this direction.

Those who believe it is important to retain the traditional family scale farming enterprise of modest capitalization should welcome such legislation. If properly conceived it would rescue untold numbers of small-scale farmers from the brink of disaster.

Transferability of acreage would be welcomed by sincere agricultural educators. They have watched with dismay during the past decade the depressing results of over-diversification on small-scale farms. This trend has been particularly adverse in areas where each farm has kept a few acres in several controlled crops. An opportunity to shift acreages into volume adequate for adoption of improved practices in preferred and suitable crops could revitalize the development of individual farms.

It is right for new hope, fresh incentive, and a horizon of opportunity to be established for cotton farmers in a broad area of the Cotton Belt. Transfer of acreage allotments is an immediate step which can be taken in this direction. Opposition could be predicated only on sectional prejudice and selfishness.

RURAL DEVELOPMENT WILL BE STIMULATED

President Eisenhower, in his message to the 85th Congress on January 18, 1958, spoke of the rural development program initiated at his request by the Department of Agriculture.

This program is a cooperative one between local, State, and Federal governments. It has been in operation on a demonstration basis in 63 counties and 8 trade areas in 30 States for 3 years.

It has three major objectives: First to help families with the desire and ability to stay in farming gain the necessary tools, land, and skills to do so; second, to widen the range of off-the-farm employment opportunities; and, third, to help rural people enjoy more opportunities for adequate training and improved health.

This rural development program has been cited frequently to committees of Congress by the present administration as one of its real accomplishments for the welfare of the small-scale farmer.

When applied to areas where cotton production is an important agricultural pursuit, a close look at the first of the rural development program's objectives leaves one scratching his head. Many small-scale farmers in these areas do not need more land. They need more cotton acreage for the land they already own.

On the other hand, the second of these objectives aims to speed retirement of some small-scale farmers from active agricultural pursuits.

Would it accelerate attainment of objectives of this worthy program if the cotton acreage allotted to those who are finding off-the-farm employment satisfactory could be transferred to the agricultural programs of those who want to stay with farming full time It is certainly logical to believe so.

As matters now stand, there is no bridge for the flow of allotted acreage from farms whose owners are engaged in off-the-farm employment to those farms whose owners need and want additional acreage to meet rising costs of production and of living.

In the interest of success for its rural development program, USDA should certainly look with favor upon establishing such a bridge.

Mr. Speaker, the effect of revitalizing cotton production through an allotment transfer program will certainly be felt by the cotton industry. This great industry desperately needs the benefit of decreasing production costs and increasing production yields.

This is what the bill which I am introducing today seeks to accomplish.

Let Us Defend the Written Constitution

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. TUCK. Mr. Speaker, on October 23, 1958, our distinguished colleague from the Seventh Congressional District of Virginia delivered a masterful address at a meeting of the American Carpet Institute in Skytop, Pa. The sound doctrine expounded by Mr. HARRISON merit serious thought and consideration. Under leave to extend my remarks in the RECORD, I include the following complete text of the address:

There is an element in the United States dedicated to the principle that the working class is the only essential class, and that wealth produced by this class and paid to private ownership is surplus. To obtain this surplus, a constant class warfare must be waged for the control of the private prop-

erty essential for the production of wealth. The control of such private property should vest in Government, and the control of Government in Socialists' hands. You are fully aware of the vast progress the Socialists have made in the past 25 years toward these objectives. Tonight in every corporation represented here, the Government is the unwanted partner to the extent of 52 percent of net income. Fortunate indeed is the executive who does not contribute 50 percent of his net earnings to Government. A galaxy of laws, State and national, have invaded and pounded down upon our free enterprise system. But, as yet, the Socialist victory has not been complete and the outcome of the struggle remains in doubt. Corporations still earn and declare dividends, farmers still maintain some control over their lands, laborers still in some places may obtain employment without paying tribute, Government control of person and property is not yet fully realized though the outcome teeters in the balance.

To obtain their objectives, the Socialists must reduce the Constitution of the United States to shambles. To the extent its written word is observed, the rights of private property and private enterprise are observed because the Constitution protects them both. An authority cited with all inclusive acceptance by Chief Justice Warren in the school segregation cases was "An American Dilemma," by the Swedish sociologist, Gunnar Myrdal. This book to which the Supreme Court of the United States has given unanimous approval contains this passage: The Constitution of the United States "is impractical and unsuited to modern conditions" and its adoption was "nearly a plot against the common people."

Speaking 2 years ago of decisions of the Supreme Court of the United States, Edmund W. Flynn, Chief Justice of the Supreme Court of Rhode Island, declared "recent decisions have departed so far from constitutional precepts that this country no longer has a written Constitution any more than England."

Judge Learned Hand, of New York, one of the most eminent men ever to sit on the bench and the kind of man who used to be appointed to the Supreme Court, in a series of lectures at Harvard University, has charged that the Supreme Court is pursuing a tendency to set itself up as a third legislative chamber. He says that the Supreme Court has one rule where property is involved and another where liberty is at issue. He says public support disappears from the Court "insofar as it is supposed permissible for the judge to smuggle into his opinions his personal notions of what is desirable." "For myself," continues Judge Hand, "it would be most irksome to be ruled by a bevy of platonic guardians."

The chief justices of 36 States in a remarkable indictment have charged "that the overall tendency of decisions of the Supreme Court over the last 25 years or more has been to press the extension of Federal power and to press it rapidly * * * the Supreme Court too often has tended to adopt the role of policymaker without proper judicial restraint. * * * It has long been an American boast that we have a government of laws and not of men. We believe any study of recent decisions of the Supreme Court will raise at least considerable doubt as to the validity of that boast."

Let me give you one more quote. The California leader of the Communist Party said: "This decision will mark a rejuvenation of our party in America. We've lost some members in the last few years, but now we are on our way again."

No outsider can match the abuse which members of the Court have heaped upon one another. For example in one case, Justices Douglas, Black, and Chief Justice Warren said the action of their colleagues was "a shocking instance of the abuse of judicial power." This is not a suggestion that the majority has made an honest mistake, it has been pointed out. A shocking abuse of authority is an intentional act; a wicked and dishonest thing. In another case, Justice Tom Clark said: "Unless the Congress changes the rule announced by the Court today, those intelligence agencies of our Government engaged in law enforcement may as well close up shop for the Court has opened their files to the criminal and thus afforded him a Roman holiday for rummaging through confidential information as well as vital national secrets * * * and all in the name of justice."

The layman cannot realize the extent to which these nine men have gone toward destroying and distorting our written Constitution. They have decreed that under our Constitution a local school board of the State of New York may not dismiss a teacher who refuses to say whether he is a Communist; that this very State of Pennsylvania may not convict Steve Nelson, a notorious Russian spy, for plotting to overthrow the State government; that the Federal Government may not convict, under the Smith Act, one who advocates the violent destruction of the Federal Union provided such advocacy is "abstract," whatever that may mean; that the State of California and New Mexico must permit subversives to practice law in their courts; that the Government of the United States may not dismiss its own employee who plots the Government's overthow unless he occupies a sensitive position; that the Cabinet head of a Government department must keep on the public payroll a person he believes should not be entrusted with confidential assignments bearing on national policy; they have so tortured the salutary provisions of the fifth amendment, that "taking the fifth" has become a part of the language of the underworld meaning a smug and effective recourse of racketeers and subversives. These nine men have opened the secret files of the FBI to the criminal; they have struck down the criminal laws of the States; they have licensed the seller of filth and obscenity to the youth; they have assaulted the rights of officers of the law to arrest for serious felonies committed in their presence; they have swept away the power of the police to fight crime by reasonable interrogation of suspects and by introduction of voluntary and truthful confessions in evidence; they have decreed that the Congress of the United States, which this year spent $40 billion of the people's money to protect against Communist invasion, has no power to control hostile Communist activity in the United States or even to make inquiry into Communist doings or to remove Communists from Government payrolls; in countless other decisions they have gladdened the hearts and built up the power of criminals and subversives.

In the South conditions threatening chaos have been produced by the decision that racial separation in the public schools violates the Constitution of the United States. This decision did not contend that Southern States had denied equal opportunity to colored children in the public school. Upon the facts, such a contention could not be made. In my State of Virginia, for example, the average salary of a public school teacher is higher for the Negro than for the white. In 10 years, the value of school property per enrollee has increased 258 percent for the Negro as against 144 percent for the white. Thirty-four percent of the State money spent on school construction since 1950 has gone for Negro schools, although Negroes represent only 25 percent of the school population. The taxpayers of Virginia—and that means, by and large, the white taxpayers—have been paying willingly for the creation of truly equal facilities for education of the white and colored child.

Does the Constitution of the United States prohibit the separation of the races in the public schools?

The judges said the acts of Congress providing for segregated schools in the District of Columbia are in violation of the fifth amendment. The 5th amendment was written into the Constitution in 1791, and under it human slavery existed for 75 years until abolished by the 13th amendment. Can any honest man say that language which permits human slavery denies the right of separate school facilities? Separate schools in Virginia, the judges said violated the 14th amendment. The 14th amendment did not give to Negroes the right to vote which was conferred by the 15th. Can any honest man say that language which does not give the right of suffrage denies the right of separate school facilities? The very Congress which submitted the 14th amendment set up a system of segregated schools in the District of Columbia and six times the Supreme Court of the United States has decided that separate but equal facilities comply with the 14th amendment. Chief Justice William Howard Taft was the most recent and expressed the opinion of the Court that "the separate but equal principle * * * is within the discretion of the State in regulating its public schools and does not conflict with the 14th amendment."

However much we may argue about legal niceties, there are certain aspects of this decision which we in the South know, and know beyond peradventure of debate. First, we know that we cannot carry it out and at the same time educate the youth of either race. In the District of Columbia the public schools were integrated in 1954. A congressional committee has established that in the wake of this action has come disciplinary problems described as appalling, demoralizing, intolerable, and disgraceful. Fighting, lying, stealing, vandalism, obscene writing, vulgar talking, absenteeism, and truancy have increased to an amazing degree. Teachers have resigned in disgust, courses of study had to be abandoned because supplies were stolen so rapidly they could not be replaced, children go to school with weapons. The committee found that the vilest sex talk, dirty writing on walls, foul and unspeakable language to teachers, and vicious and obscene tongue battles in classroom, as well as during recess. They reported an enormous increase in venereal disease, which incuded 13 colored girls of 6 years of age. A majority of the people in the District of Columbia are white, but the school population is 73 percent Negro. Where are the children of the white parents?

A second thing we know about this decision is that no civil government, Federal or local, can enforce it. Under the principles of the Declaration of Independence, governments derive their just powers from the consent of the governed. When you have government exercising power to which the people do not consent, and to which they are deeply opposed, you have widespread violation if you leave enforcement to civil authority, as during prohibition. The only alternative must be a substitution of government by fiat and military might for civil authority and popular government.

I earnestly contend that when constitutional liberty, the right of peaceable assembly, the right to operate local government dies anywhere in the United States, it is threatened everywhere.

What is the real reason the leftwing, with the Supreme Court as its heavy artillery, wages war on the South? In an editorial in this week's U.S. News & World Report, David Lawrence says: "If it had not been for Democratic leaders from the South in the last session of Congress * * * America now would be facing economic disaster."

The leaders of the South, such as BYRD, RUSSELL, IRWIN, and HOLLAND, for 20 years, have held the pass against the Socialist

march. When they are succeeded in the Congress by a new generation of carpetbaggers and scalawags, kept in power by Federal bayonets, the votes will be in the Congress to carry the class war to victory not only against the South but over the last vestige of written constitutional government, the last trace of private ownership of property and private enterprise. Thus, the purpose of all of the decisions discussed tonight, including the segregation decisions, is not the protection of the Negro, or the workingman, or the downtrodden individual; the purpose is the destruction of the written Constitution, the breakdown of the police power of the States, the promotion of class warfare, the establishment of Marxist socialism.

As one people of one nation, let us defend the written Constitution and say of it, as did that great New England poet:

"Sail on, O Ship of State.
Sail on, O Union, strong and great.
Humanity with all its fears,
With all the hopes of future years
Is hanging breathless on thy fate."

Detroit Economy To Rise 10 Percent in 1959

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the CONGRESSIONAL RECORD, I wish to include the text of the following article by John R. Stewart which appeared in The Detroiter, a weekly publication of the Detroit Board of Commerce. In his article, Mr. Stewart makes certain predictions concerning Detroit's economy in 1959 which present a much brighter picture for that area which has suffered more during the recent recession than any other part of the country:

[From the Detroiter, Dec. 15, 1958]

DETROIT ECONOMY TO RISE 10 PERCENT IN 1959

(By John R. Stewart)

All phases of business and industrial activity in the Detroit area should improve in 1959. Gains over 1958 are expected to range between 3 percent for wages and 28 percent for passenger car production. The unweighted average rise predicted for the barometers tabled below is 10 percent. (Unemployment and consumer prices are excluded from this average.) Aside from the sharp increase noted for automobile production, substantial gains include nonresidential building, up 19 percent, truck output 15 percent higher and industrial power sales, up 12 percent.

These forecasts, representing the combined opinions of 17 local economists, were presented to members of the Detroit Area Economic Forum at its annual dinner and forecasting session held December 4.

Experts from Detroit banks, utilities, government agencies, manufacturers, builders, retailers, newspapers and trade associations made forecasts for each of the 14 measures of local economic activity tabulated below. These figures represent the average answers of the 17 economists, including the undersigned, made in questionnaires prior to the meeting. The only fields wherein the writer differs materially from the group are in building, where our estimate is 5 percent lower for nonresidential construction and 4 percent higher for housing, and in department store sales.

Payrolls in 1959 are expected to top those of the current year by 11 percent (the group estimates 9.2 percent) with a smaller proportion put aside in savings. Credit outstanding should increase. If department stores secure as large a share of the money spent in the area as in 1958—a reasonable expectation—sales by these outlets should increase somewhat more than the 5.5 percent indicated in the table. A 10-percent rise seems more likely, bringing the index up to 134 for 1959.

The writer agrees with the group estimates for employment, but feels that unemployment will be lower than shown in the table, perhaps as low as 150,000. This lower estimate is based upon a drop of 25,000 in the area's labor force as it seems probable that many of the 200,000 currently unemployed will look for jobs outside the area or drop out of the labor force in marginal cases.

In summary, next year should see a continuation of the current upward trend in business and industrial activity throughout the first 6 months with perhaps some leveling off in the last half. Activity in general is not expected to reach the boom levels of 1955–57, but many barometers, notably population, wage rates and perhaps retail sales, should be at alltime high.

Detroit area	1958 estimate	1959 forecast [2]	Percent change
Population July 1	3,840,000	3,906,000	+1.7
Nonfarm employment	1,267,000	1,343,000	+6.0
Unemployment	251,000	170,000	−32.3
Hourly earnings, manufacturing	$2.65	$2.73	+3.0
Weekly earnings, manufacturing	$104.43	$107.58	+3.0
Consumer Price Index [1]	124.0	125.0	+.8
Department store sales [1]	121.8	128.5	+5.5
Retail advertising lineage	40,000,000	42,700,000	+6.8
New dwelling units, number	21,000	23,050	+9.8
Nonresidential building, value	$200,000,000	$237,500,000	+18.7
Passenger car output, United States	4,264,000	5,447,000	+27.8
Truck output, United States	880,000	1,014,000	+15.2
Power sales, Edison, kilowatt-hours	5,234,000,000	5,865,000,000	+12.1
Bank debits, Detroit banks	$70,000,000,000	$76,100,000,000	+8.7

[1] 1947–49=100.
[2] Combined average of 17 economists.

Hon. Davis Elkins

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. PHILBIN. Mr. Speaker, it was with deepest sorrow that I learned of the recent passing of the esteemed and beloved former distinguished Senator of the great State of West Virginia, the Honorable Davis Elkins.

Illustrious scion and great leader of a family which for more than 75 years has been a prominent, vital force in the upbuilding and development of his great State, Senator Elkins leaves a precious legacy of devoted public service and constructive business leadership.

Educated at Lawrenceville, Andover, and Harvard College, Davis Elkins early enlisted in the Spanish-American War as a volunteer with Company E of the 1st West Virginia Volunteer Infantry, and served with great distinction with that unit throughout that history-making conflict. During World War I inspired by that high sense of patriotism and civic virtue for which he and his family were noted, the Senator again enlisted in the Army and served in Europe with the high rank of major and once more distinguished himself as a gallant fighter and a devoted son of Uncle Sam.

Of his outstanding service in this war, the late famous Percy D. Haughton, famous Harvard football coach of the era, himself an officer in the American Expeditionary Force, said of Senator Elkins: "Dave Elkins was a great soldier and a great human being, respected and loved by all."

Evidently the people of his home State felt the same way about his patriotic contributions, high character and ability since, while he was still on the European battlefront, they elected him to the U.S. Senate in November 1918.

Much could be spoken of his fine service in the Senate. He early won the high regard of his colleagues and served his constituents, the State, and the Nation with unquestioned integrity, outstanding fidelity, and great ability during his term.

He did not run for reelection. His large and varied business interests, civic and family responsibilities which he had long unselfishly sacrificed to serve his country, demanded his consideration and attention and he reluctantly retired to private life.

Senator Elkins' warm friend of Senate days, President Warren G. Harding, greatly honored him by offering him an important Cabinet post, but his many business affairs and domestic duties enjoined him from acceptance, notwithstanding the persistent urgings of the President and his many friends and advisers. As the Senator put it himself: "I am grateful for the honor and wish it were possible for me to serve. But I must give some attention now to my business and my family."

Senator Elkins' family life was typically American and fabulously happy. In 1926, he married the charming, talented, and gracious Mary Regan of Washington, a young lady noted for her beauty, keen wit, and popularity, who bore him three lovely children, Katherine, now Mrs. Charles J. Kelly of New York City, Maureen, now Mrs. A. Thomas Zirpolo of Cleveland, Ohio, and Davis Elkins, Jr., now of Elkins, W. Va.

The Elkins family life was also truly ideal and brought great joy and great pride to the distinguished Senator.

Very many friends of official Washington, the Nation, and even the world, the famous and the unsung, drawn from every walk of life, moved from time to time in and out of the noted Elkins home where hospitality, graciousness, love, generosity, kindness, and a strong Christian faith always abided.

I can speak with intimate personal knowledge of this lovely Elkins family because it was frequently my privilege and pleasure to visit them in their home. Never have I known more generous hosts; never have I experienced more gracious hospitality; never have I seen a more beautiful family or a more wholesome, interesting, inspiring home environment.

The great and the humble passed through the doors of that inspiring home. It was a salon, in the very best sense, of fine culture, enlightenment and gayety. Above all, it was a home which exemplified the finest qualities of parenthood and the most appealing attributes of filial love and devotion. The home of Davis and Mary Elkins was a home to remember, as those who have ever visited it will gratefully testify.

The Elkins children were brought up with scrupulous, yet loving vigilance, care, and affection and they have lived up to high early promise. The girls are happily married, are blessed with beautiful children; the boy is rapidly making his way in the business world. Together, they brought great joy to their devoted dad and granddad and to their loving mother and grandmother—a family of which anyone could be proud—American to the core, that can "walk with kings nor lose the common touch," that shines out like a bright star in the firmament of modern life in our great Republic.

Davis Elkins was a man of rectitude and high honor, a two fisted American who up to the time of his disability attended prize fights, wrestling matches, and athletic contests. Born to the manor, so to speak, he was plain in speech, democratic in manner, kind of heart, generous of impulse.

He was a hard hitter, blunt spoken against injustice, sham, and quackery, firm in his convictions, rugged of character, stern in his sense of duty. Essentially, he was a kind and generous soul, deep in his knowledge of humanity, keenly aware of its problems, eager to do his part whether by bountiful private philanthropy or public action to lighten the burden and better the lot of all those unable to help themselves.

His loyalties and affections knew no narrow bounds of party, race, creed, or class. He was a friend to man, a public servant of whom any nation could be proud; a husband and father of whom any family could be eternally grateful, as I know his devoted family is.

In the poignant sorrow of their bereavement, I extend to Mrs. Elkins and to each and every one of them the most heartfelt sympathy of my family and myself. May the good Lord bring them strength and courage in their dark hour of sadness and travail. May they find "that peace of God, which passeth all understanding."

An able honest man, a noble statesman, and a great American, Davis Elkins, has gone to his heavenly reward. His State, the Nation, the people and his many friends join his bereaved family in mourning his lamented passing. May God bless and keep him.

Why Blame the Small Tobacco Farmer?

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. HECHLER. Mr. Speaker, I rise in defense of the small tobacco farmers of West Virginia of whom there are over 4,000 in my Fourth Congressional District.

These small farmers grow burley tobacco, and their average acreage is only about six-tenths of 1 acre. Their average income is less than $600 per year, and for many of them tobacco is the only cash crop.

Over the past few years we have experienced the effects of Secretary of Agriculture Benson's policies which have driven millions of our smaller farmers off the farms. On November 18, 1958, Secretary Benson indicated he was planning a 16-percent cut in the quota for burley tobacco.

Mr. Speaker, the Department of Agriculture itself stated in hearings of the Tobacco Division which I attended only yesterday morning that the Department had overestimated 1958 production of burley tobacco by some 20 million pounds. I submit that there is no surplus of burley tobacco. And even if there were, I cannot get it through my thick head why the small West Virginia tobacco farmers should be blamed instead of the big tobacco growers who have large acreages of tobacco.

I say it is about time we in Congress stand up and protect the little fellow. Many of these small tobacco farmers will go bankrupt if Secretary Benson is allowed to cut the burley tobacco quota. Then what will happen? They may go to the cities and add to our already overburdened relief facilities. But most of them cannot even do that, and they will either starve or eke out a meager existence on Federal surplus commodities, on which over 300,000 people in the State of West Virginia are now barely subsisting.

Mr. Speaker, the tobacco farmers of my district are law-abiding people. They recognize the need for quotas and controls. But I am not going to stand idly by and watch them starved by a policy of favoring the big tobacco interests. I serve notice that if there is any cut in the burley tobacco quota, I will introduce and fight for legislation to restore that quota.

Thomas Jefferson once said that farming is not only a means of making a living but a way of life itself. That is the case with our mountaineer tobacco farmers. Let us not sell them down the river.

Mr. Speaker, under unanimous consent, I ask to print excerpts from letters I have received from small tobacco people in West Virginia.

TEAYS, W. Va., *January 12, 1959.*

DEAR MR. HECHLER: The farmers in this section of Putnam County want me to write to you in regard to the tobacco situation in this neighborhood. None of us have more than six-tenths of an acre allotment and some not more than five-tenths of an acre. And we don't earn more than an average of $500 a year, but that little bit is vital to most of us. It enables the landowner to buy his seed, fertilizer, and necessary farm machinery and repairs.

Yours truly,

MRS. DAVID WHITE.

MILTON, W. Va., *January 13, 1959.*

DEAR CONGRESSMAN HECHLER: You are well aware of the fact that many a poor man is dependent on his small allotment of one-half an acre of tobacco or maybe less to keep him off D.P.A. To reduce allotments would result in some having to apply for relief and, at the same time, lowering their pride and morale.

Yours truly,

H. L. WOODY.

Needed: More Defense Contracts in Indiana Areas of Unemployment

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BRADEMAS. Mr. Speaker, I want to praise the action taken this week by the Rules Committee of the House in urging that the Committee on Armed Services investigate the failure by the Department of Defense to award Government contracts to areas of substantial unemployment.

I refer specifically to House Resolution 19 which, among its other purposes, authorizes the committee "to conduct a full and complete investigation" into the procurement and use of materiel, equipment, supplies, and services by or within the Department of Defense.

Mr. Speaker, since 1953 we in the Third District of Indiana have suffered violent fluctuations in employment. Two of the four counties in my district have too often been in the substantial labor surplus or distressed area category.

Because of economic conditions within my district and because of similar conditions in other distressed areas throughout the Nation, I am glad to see the scope of the investigation covered by House Resolution 19 extended to include a study of whether or not defense contracts are properly being awarded to business firms in areas suffering from serious unemployment.

I have discussed this possibility with the Honorable RAY J. MADDEN, of Gary, Ind., who was among those members of the Rules Committee reporting H. R. 19 favorably to the House. My distinguished colleague from Indiana has in-

formed me that the Honorable CARL VINSON, of Georgia, chairman of the Committee on Armed Services, is in agreement with the extension of the committee's power to study the relationship between first, unemployment, and second, the favoritism by the Defense Department of big companies over small firms in the granting of Government contracts.

I specifically call to the attention of the Armed Services Committee and of Congress the critical unemployment situation in the South Bend area, and I want to commend my good friend, Congressman MADDEN, for his emphasis at the Rules Committee hearing yesterday on the situation at the Studebaker-Packard plant in South Bend.

I respectfully submit that the investigation of which I speak can develop much valuable information toward the end that areas of substantial unemployment are, whenever practical, awarded more contracts by the Department of Defense.

The human and economic cost of high unemployment is ample justification for awarding more government work to such areas.

Smears and Slogans, and What They Mean

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the current issue of Labor, official organ of the railway unions:

SMEARS AND SLOGANS, AND WHAT THEY MEAN

Congress is open again, the President is talking again, and however short the supply of new jobs in 1959 there's no doubt the year will bring a plenitude of one commodity—words.

Some of the glittering phrases now being tossed around don't shine quite so brightly, however, if you look beneath the chrome. Here are some undraped definitions for a few of these glittering phrases:

Better business climate: This is the slogan worked out by the giant General Electric Co., and used by some manufacturers associations too, to describe their goal in jumping into politics.

This phrase doesn't sound antilabor. But GE President Robert Paxton, speaking to an audience of industrialists recently, was much more frank. "Unless businessmen can build an effective counterforce to the alliance between the labor unions and the welfare-state politicians," he told them, "the political climate for business is going to deteriorate rapidly." For GE, a better climate means one where unions are weak or nonexistent.

Union monopoly power: This refers to the ability of unionized workers to stop work all at once, that is, to strike. A popular phrase among the heads of monopolistic corporations. It's usually coupled with a demand to put unions under the antitrust laws to prevent union monopoly power, and thus outlaw many strikes.

Monopolistic labor bosses: The ones who make use of union monopoly power by leading a strike. Nearly always, to hear the industrialists tell it, the helpless workers are dragooned into striking by the labor bosses. No mention is made of strike votes by the members.

Union crooks: This refers to the approximately 40 trade union officers against whom Senate and House committees in the last 5 years have uncovered proved or provable dishonest acts. The labor movement has 16,000 full-time paid national and international union officials and 420,000 local union officers.

Citizen Action Committee: Political front group for industrialists. In last year's elections, according to Charles R. Sligh, Jr., executive vice president of the National Association of Manufacturers: "At our suggestion Citizen Action Committees were formed, not NAM committees but committees of like-minded people who were willing to work, to organize, and to serve at their own local levels."

Conservative: A fine old English word, but not to be applied to Britain's Conservative Party, which supports national health insurance and is too radical for U.S. manufacturers. As used by big business spokesmen, a conservative is a politician who would conserve America's institutions by ripipng out all the reforms of the New Deal and Fair Deal.

Radical: What Ford calls Chevrolet's new styling this year. What the Republicans call the Democrats who won last year. Also, any politician opposed to the wrecking job urged by conservatives, as cited above.

Big spender: Any Member of Congress who's not content with voting $40 billion a year for the military but who also wants adeqaute funds for the Food and Drug Administration to stop sale of filthy foods and poison drugs, or a few million more for the Wage-Hour Administration to stop employers from cheating on the $1 an hour minimum wage, or for other measures to protect workers and consumers.

Right to work: This old chestnut is still with us, alas. Five years ago Labor Secretary James P. Mitchell nailed it as follows: "They call these right-to-work laws, but that is not what they really are. In the first place, they do not create any jobs. In the second place, they result in undesirable and unnecessary limitation upon the freedom of working men and women and their employers to bargain collectively. * * * Third, they restrict union security and thereby undermine the basic strength of labor organizations."

When you come across any of these glittering phrases, pause just a moment to think what they really mean. Nowadays, as many workers have found to their sorrow, the old nursery rhyme needs rephrasing: "Sticks and stones can break our bones, but words can hurt us too."

Dr. Felix J. Underwood

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. SMITH of Mississippi. Mr. Speaker, Dr. Felix J. Underwood, who contributed more to Mississippi than any other Mississippian during my lifetime, passed away on Friday, January 9. Although Dr. Underwood had officially retired last June as head of the Mississippi State Board of Health, he was still hard at work in his office when death came so suddenly.

Dr. Underwood left private practice to enter the public health service in 1917.

I can never care for more than 2,000 or 3,000 people as a private physician—

He said.

As a public health physician I can care for millions.

Dr. Underwood's own career proved this to be literally true. It was a popular saying in Mississippi that he had saved a million lives. During his administration deaths from malaria were cut from nearly 1,000 annually to less than 1 per decade. Maternal deaths were reduced from 7 for each 1,000 live births to slightly more than 1. Tuberculosis deaths dropped from 4,000 a year to rare cases. Venereal disease is down 93 percent.

Dr. Underwood received the Laska Foundation Public Health Service award and many other tributes for his great work in the health field. I was especially pleased by the fact that in the year of his retirement the editors of my State voted him the man of the year in Mississippi for 1958.

Under unanimous consent, I would like to include as part of the RECORD, first an excerpt from my book "The Yazoo River," which describes some of Dr. Underwood's work in the Mississippi Delta, and an editorial from the Clarksdale Press Register and from the Memphis Commercial Appeal:

EXCERPTS FROM THE YAZOO RIVER

(By Hon. FRANK E. SMITH of Mississippi)

A few farsighted indiyiduals began to protect themselves and their homes from mosquitoes after the Gorgas discoveries became known, but relatively little was accomplished that was not already foreordained in the interest of personal comfort—protection from the bite of the mosquito, not its consequences. The first real attack on malaria made in the delta came only after 1920, when a young man from the hills came down to Jackson to become director of the Mississippi Department of Public Health. Felix J. Underwood and the miracles he has accomplished on a threadbare budget are something of a legend in American public health services, but there is no better record than his attack on malaria in the delta. His first job was to persuade the counties to set up proper public health departments as a means of spreading health education and preventive practices. The people had to be taught that the mosquito bite brought malaria and that the mosquito could be controlled by eliminating his breeding areas. The 1920's were a period when Federal Government agencies were a long way from the idea of major health expenditures in Mississippi; Dr. Underwood had to get his pump-priming money from the Rockefeller Foundation.

Dr. Underwood was convinced that most malarial transmissions were made by night-biting mosquitoes. Homes could be screened to keep the mosquito away from sleeping victims. More than just telling about this, the State board of health established screen-door factories at strategic points in the delta. Strong screen doors were made to fit tenant houses and furnished at cost to plantation owners who would agree to screen the cabin windows, which could be done by merely tacking screen wire across the window casings.

During much of the early period of the delta's history, many of the largest life insurance companies in the country came into the area only for investment purposes. Farm mortgages produced a good income, and

eventually financing of farm operations became part of the overall insurance investment program. Some of these same life insurance companies would not write policies on delta citizens because of the high malaria mortality and other adverse health conditions. In the late 1920's the State board of health submitted the first survey of the accomplishments of the malaria control program, and the insurance companies decided they could take the risk on deltans. Today all special area rate discriminations have been eliminated.

The depression knocked out Dr. Underwood's screen funds, as well as his cooperating planters, but the depression-born WPA offered him a chance for an even more extensive program. For 7 years, beginning in 1935, a malaria control program emphasizing elimination of mosquito breeding places was in operation, with approximately 1,000 WPA workers assigned to the project in the Yazoo-delta area.

WPA ended with World War II, but the war-borne development of DDT as an antimalarial insecticide brought dividends to the delta. A Federal malaria control program was carried on 5 years after the war. Dr. Underwood allotted all of Mississippi's share of this program for the mass use of DDT as a residual spray in the interior of substandard homes in the delta. The Federal program has been ended, but many delta counties and cities today still carry on a limited spraying program in some fashion, with generally popular results.

The residual spray program, like most of the other malarial control measures, had very important secondary benefits. The spray killed flies and other pests just as it killed mosquitoes. In one county the infant death rate dropped 64 percent, largely as a result of the practical elimination of dysentery and other intestinal disorders.

Cold figures best tell the story of the antimalarial campaign which the Mississippi State Board of Health has led. In 1920 there were 65,271 reported cases of malaria in 17 delta counties, with death resulting in 477 cases. In 1951, in the same counties, with much better reporting facilities, there were only nine cases of malaria, with no deaths.

The delta feels sure that it has licked malaria, but Dr. Underwood is still on the alert. Malaria is still endemic in the area, and there is always the chance of more aggressive forms of it being brought in by returning troops. The development of rice planting is going to offer opportunities for increased mosquito breeding. Dr. Underwood and his board of health will be watching.

[From the Clarksdale (Miss.) Press Register, Jan. 10, 1959]

DR. FELIX J. UNDERWOOD

The death late yesterday of Dr. Felix J. Underwood, 75-year-old "retired" executive officer of the Mississippi State Board of Health, took from the scene a dedicated public servant.

Dr. Underwood's entire life stands as an enduring monument—a credit to the man, to his profession, and to the people of the State he dearly loved and served with an unselfish devotion.

We use the term "retired" in quotes to describe him, because for a man like Dr. Underwood there could be no such thing as retirement as long as there were battles to be fought in man's never-ending struggle with disease and death. The only kind of retirement possible for him came yesterday when he died suddenly while hard at work in an office which he no longer officially held.

For 10 years after graduating in medicine in 1908 Dr. Underwood practiced at Aberdeen, Miss., growing dissatisfied with private practice because he could "never care for more than a few thousand people." So he joined the State health board in 1917, becoming executive head 7 years later at a time when mass killers and cripplers like typhoid, malaria, dysentery, pellagra, infantile paralysis, and other mass infectious diseases still stalked Mississippi like the Horsemen of the Apocalypse.

Under his leadership in public health maternal deaths were reduced from 7 to 1 in every thousand births. Where malaria once claimed a thousand lives a year, there is now scarcely more than one case every decade. Swamps were drained and people educated to screening and sanitation under his guidance. Working with the late, great Dr. Henry Boswell he played his part in developing the sanitorium, and tuberculosis no longer claims 4,000 Mississippians every year. Venereal disease has been reduced 95 percent in the past 30 years, and pellagra, typhoid and infectious dysentery are almost unknown to this generation.

Much recognition but little material reward came to Dr. Underwood. He passed up many opportunities to improve his own position in order to fight the good fight for the general health of the people of this State.

Just last month Dr. Underwood was properly honored as man of the year in Mississippi for 1958, and next week he was to receive one of the first annual awards for distinguished service to the State, presented by the First Federal of Jackson Foundation and administered by the University of Mississippi.

Any recognition extended to Dr. Felix J. Underwood, the man who saved a million lives, was more than deserved.

[From the Memphis Comercial Appeal]

DR. FELIX J. UNDERWOOD

On the roster of those who have rendered invaluable service to the people of Mississippi in particular and the Nation in general the name of Dr. Felix J. Underwood will stand very high. When he retired, last June, as executive officer of the State board of health he had held that post for 34 years and had won the right to be called the man who saved a million lives.

Dr. Underwood had battled unceasingly against ailments such as typhoid, malaria, and diphtheria until their ravages among the people of Mississippi had been reduced to a minimum. He was of great aid to the late Dr. Henry Boswell in developing Mississippi's highly effective campaign against tuberculosis. In fact, anything that affected the public health was his concern so that he became outstanding in that field.

In addition to his immediate duties, Dr. Underwood worked with professional organizations and had been president of State, regional, and national associations. He was physician to a nation, that is to say.

It is good to know that United Press International newspaper, radio, and television editors had named Dr. Underwood Mississippi's man of the year for 1958 last month. He had also been selected to receive the University of Mississippi's "Missy" Award for Distinguished Service.

Dr. Underwood so employed his talents and energies that he left the world a far better place than it would have been without him, and the fact is an epitaph among the finest.

New Republican Leader in the House

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. BRAY. Mr. Speaker, I wish to insert in the RECORD a story from the Washington Sunday Star of January 11, 1959, concerning the recent change in Republican leadership:

STORY OF G.O.P. REVOLT HAS VARIED CHAPTERS

(By Richard Fryklund)

A succession of election defeats, White House standpatism and lack of dynamic leadership all contributed to the Republican discontent which exploded last week in the removal of JOE MARTIN as G.O.P. leader in the House.

So say those who did the deed. The revolution that ended in the dethronement of Mr. MARTIN and the coronation of CHARLES HALLECK, of Indiana, was really a composite of smaller revolutions, they say, and the only surprise was that the parts fitted together at the right time and place.

The final piece fell into place only half an hour before the fateful party caucus began last Tuesday—but that piece had been ready for years.

As a starting point, one might go back to a meeting of House Republicans at the end of the 83d Congress. Republicans had the White House, both Houses of Congress and peace, prosperity, and progress. They should have been sitting pretty for the 1954 congressional elections, but many of them thought they weren't.

MORE FIGHT DESIRED

They blamed their leaders for a lack of vigor in presenting the Republican case to the public. They wanted, specifically, more fight from then Speaker MARTIN, less friendly cooperation with SAM RAYBURN and his Democrats.

Mr. MARTIN urged caution and then said, it is reported, that if the Republicans did not win the House again in November, he would let someone else assume the leadership.

The Republicans lost, but Mr. MARTIN did not resign.

Floor leader and heir apparent was Mr. HALLECK. He not only didn't get the minority leadership post, or even the assistant's job, but he was given no post at all. The now-public Martin-Halleck feud was well under way.

The pot simmered while the White House cautioned against change.

ANOTHER BEATING DEVELOPED

"Through the 84th Congress we took a beating again," said Representative BOB WILSON, of California, one of the active leaders in Tuesday's revolt. "We were slow on debate, uncoordinated in our actions. Our floor management gave all the advantages to the Democrats."

Again, in 1956 congressional Republicans lost seats in the election. Again the word circulated on the Hill that Mr. MARTIN would step down. Again the White House advised against change. Again Mr. HALLECK was passed over for the post he thought he had earned.

During the 85th Congress, some of the newer Congressmen tried to provide new vigor on their own hook. A half dozen of them organized a research group and without any active help from Mr. MARTIN, began digging out ammunition with which to arm their colleagues in fights with the Democrats.

This was an inadequate, but significant prelude to more positive action.

LAST NOVEMBER LAST STRAW

When the Congress adjourned, Mr. MARTIN again talked of stepping down or at least naming an assistant leader. But again, no action.

The heavy loss of seats last November was the last straw. Mr. HALLECK told friends he was determined to make an open fight for the minority leadership in January. Large numbers of House Republicans obviously began to think of ways of removing Mr. MARTIN. And White House aides said quietly that the President would take no part in the fight.

There was an uncoordinated seething on the Hill, reported by many correspondents, but taken seriously by almost no one.

An organized movement was still needed. This was provided in mid-December when members of the research group decided to organize.

On December 15 Mr. WILSON, a member of that group, started to call every House Republican in town to invite them to a meeting in his office to discuss the House leadership. He rounded up only 14 men, most of them young eagerbeavers, men who had been in Congress less than 10 years.

NOMINATIONS DIVIDED

They found they agreed only that a new leader was needed. They divided their nominations for the job among Mr. HALLECK, JOHN W. BYRNES, of Wisconsin; GERALD R. FORD, Jr., of Michigan; and RICHARD M. SIMPSON of Pennsylvania—a variegated group alike only in their comparative youth and vigor.

But they decided to stick together and drum up more support for a change.

In a canvass of Members they found plenty of sentiment for a change but only one active campaigner for the position—Mr. HALLECK. They decided he would be their man.

Their canvass showed that of the large State delegations, they could carry for Mr. HALLECK, New York and California but would lose Ohio, Pennsylvania, Massachusetts, and Illinois.

The anti-Martin States are significant. They encourage MARTIN forces now to say the old leader was the victim of a Nixon-Dewey-White House plot. The Halleck side says New York and California Congressmen were for him because they liked him—and had no important MARTIN friends to lead them in the opposite direction.

On New Year's eve the Young Turks aligned themselves formally with Mr. HALLECK and went into the fight on the assumption they could win.

On Thursday, January 1, they started committing members to vote for Mr. HALLECK. There were only about 20 active solicitors, but they soon had the 75-odd votes necessary in their pockets—they thought.

On Saturday they sent a spokesman to Mr. MARTIN to tell him he could be defeated and to offer a compromise: Mr. MARTIN was to accept an assistant leader and he was to give up his second high post of chairman of the Republican Policy Committee.

Mr. MARTIN said he knew all about the revolt and he also knew it didn't have the votes. He could win. He wouldn't bargain.

GIVEN ANOTHER CHANCE

On Monday the rebels approached Mr. MARTIN again. This time, they say, he did offer to take an assistant, rotating the job frequently among several Congressmen. This did not satisfy the Halleck side.

Later Monday, after another assurance that the White House was keeping hands off, the rebels met for the final time. About 35 Members went to the Congressional Hotel to plan for the following day's Republican caucus.

They named a strategy committee, headed by JOHN RHODES, of Arizona, and including Mr. WILSON and Mr. BYRNES, JACK WESTLAND, of Washington; MELVIN R. LAIRD, of Wisconsin; and ELFORD A. CEDERBERG, of Michigan. This group decided first to try for a secret ballot. In the open, they reasoned, Mr. MARTIN's personal friends—and the timid—would not vote for a change.

They decided also to ask for a split in the leadership: Mr. HALLECK for floor leader and Mr. BYRNES for chairmanship of the Policy Committee.

MARTIN SLOW TO SEE LIGHT

Monday night Mr. MARTIN still said "No." He said he could win. Most Capitol Hill observers agreed with him.

But Tuesday morning, before the Republican caucus, Mr. MARTIN apparently had his first doubts. The rebels say he offered a compromise—the same compromise the Halleck group had offered in their first meeting with Mr. MARTIN.

But by this time it was too late. The insurgents felt they could not turn back—and they felt they were winning.

A rebel spokesman called archconservative NOAH MASON, of Illinois, and asked him if he would nominate Mr. HALLECK for the floor leadership. He said he would. He was not a part of the movement but, he said later, he had long wanted a change and would have nominated any one of several men.

All of the pieces were in place. The fateful meeting started a half hour later.

On the issue of secrecy and splitting the leadership jobs, the rebel motion won, 96–50. Since all of the Members knew a secret ballot would help Mr. HALLECK, the rebels thought this was a good count of their strength but on the actual ballot for floor leadership, Mr. MARTIN's friends rallied enough support to hold Mr. HALLECK to 73 votes—1 short of the necessary majority. Mr. MARTIN had 72 votes. One ballot was invalid.

On the second try, the Halleck forces won, 74–70, and as one rebel put it, "We had regretfully repudiated Mr. Republican."

Today there is surprisingly little bitterness. Mr. MARTIN himself is understandably angry and deeply hurt. But even as close a colleague as CLARENCE J. BROWN, of Ohio, says both sides should now join ranks and heal up last week's split.

Mr. HALLECK himself has gone to Mr. MARTIN's closest friends with offers of good will and promises of fairness in future party work.

Member after Member summed it up in this phrase last week:

"The king is dead. Long live the king."

A Great American Family

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. PUCINSKI. Mr. Speaker, it gives me great pleasure to call attention to a great American family which now resides in Chicago and which perhaps exemplifies the very spirit which has built America.

Alexander and Mary Krol have fought hard to guide their nine children toward one uncompromising goal: to be worthy American citizens, even though Mr. and Mrs. Krol themselves came to this country as immigrants from Poland. I am inserting an excellent article by Mr. Paul Friggens which appeared in the January 11, 1959, issue of the Chicago Tribune about this remarkable family.

I am inserting this article so that we as Americans of second and third generation, and perhaps fourth, fifth, and sixth generation of immigrant parents will be reminded that this Nation today is prosperous, free, and strong only because immigrants from all over the world came here with a spirit of dedication to the dignity of man.

Too often we look upon the immigrant as a second-class citizen or even perhaps an interloper upon our shores. I am convinced that all who read this excellent account of the Krol family and the sacrifices this gallant man and woman made to make their children worthy citizens would be inspired with a new respect for these wonderful immigrants who build America.

But most important, I wish that every young American mother and father could read this article and see what great sacrifices—what determination and dedication and great responsibilities—go with parenthood. The Krol family indeed could well serve as a symbol for American parents today.

I might add, Mr. Speaker, that Mr. and Mrs. Alexander J. Krol, Chicagoans of foreign birth, were awarded a citation for distinguished achievement in the field of family living by the Immigrants' Protective League of Chicago.

This particular family happens to have come from Poland but it exemplifies the spirit of immigrants who came here from Italy, Ireland, Germany, Czechoslovakia, Lithuania, Latvia, Hungary, the Ukraine, the Scandinavian countries and many other nations.

The article follows:

REPORT CARDS FOR MAMA

(By Paul Friggens)

In Chicago recently a modest pink-cheeked Polish couple in their seventies were hailed as the outstanding example of family life among the city's foreign born. Mama Krol looked down the speakers' table at the civic banquet—Adlai Stevenson and Supreme Court Justice William O. Douglas were among the dozens of national and civic leaders present—and was overcome. "Never in my life so many look at me like this." She slipped her hand through the arm of her husband, Alex, and stood up to receive the distinguished-achievement award.

This immigrant couple had sent all nine of their children through school and college and had given Chicago four doctors, two engineers, a chemist, an electrical contractor, and a dental nurse. Later Mary Krol found words to explain something of their accomplishment:

"For more than 40 years I save my children's report cards. Always my biggest thrill was when they come home from school with fine report card. But I tell them America is a good country. They must do better because the country is better."

Alex and Mary Krol have made the most of their opportunities and have repaid America many times since the day, 51 years ago, when they took their wedding vows in St. Mary's of Perpetual Help in Chicago and entered on their new life in the United States. Alex was a skilled cabinetmaker; Mary, pretty and dark eyed, a seamstress, who earned 17 cents an hour in a garment factory. She walked 20 blocks to and from work daily to save two 5-cent carfares.

Like most immigrants at about the turn of the century, the newlyweds had no place to live except among their own people in the segregated foreign section. In this polyglot neighborhood—of which the Krols are still proud—their first four children were born—Henry, Walter, and the twins, Adam and Edward. The young mother wheeled her babies along the wooden sidewalks and dreamed of the day when her children's education would begin. Alex had to work hard for small pay. Thinking of her own pitifully poor education, Mary prayed, "God help me to raise mine different."

And so began the story of the Krols and their report cards.

Henry was the first to bring home the wonderous piece of paper. Mama had never seen one before and had difficulty deciphering the marks and symbols. "You sure it says good?" she pressed her first grader.

Henry nodded. Mama proudly showed the card to Alex.

When Henry completed the eighth grade Mama was triumphant. The Krols dressed in their homemade best and sat up front for the exercises at St. Mary's. The children wore a colored ribbon to denote promotion. Henry sported one, too. Mama nudged Alex: "Now, you see, our Henry is as smart as anybody."

In time there were other babies—Alex Jr., Zenon, and Leonard. The cabinet maker scraped together enough for a downpayment on a modest bungalow in the same neighborhood. By now Papa was making $20 a week, and Mama supplemented this by sewing at night under the new gas light.

With Henry in high school and six other young Krols following him, Mama became an authority on report cards. As the children raced home with them, she examined each card in turn. "Good. See what Walter has done, and Eddy. Now, Adam, you do it, too." One of the Krol sons told me: "Mama was always raising our sights." But she never censured because of a poor grade. "Do the best you can," she urged. At year's end Mama kept the precious cards in a cooky jar and reviewed them.

Report card day was always an occasion for celebration. For the best grades Mama awarded a new shirt, or mittens or shoes, whichever the children needed most. Then everybody scrambled for a special treat—Mama's homemade Polish pastry. Sometimes while the children were eating, she pictured how they would all grow up to make their way in the professions. "You should get good report card, and you can be anything."

Study nights for seven children became a highly organized affair. As soon as supper was over, Mama cleared the big kitchen table and work began in earnest. Papa and Mama did homework, too—Alex taking on extra jobs in his carpenter shop and Mary singing over her secondhand sewing machine. Probably no family in Throop Street in those days was happier. Neighbors recall Mama's favorite saying: "God is good to us. We are strong to work, and such a good country to raise children ana make friend."

By 1930 Henrietta and Arthur, their two youngest, had arrived and Alex now had nine children to support. Then the depression struck and Alex was among the first to lose his job. He walked the streets for months, job hunting. When he dragged himself home one night he learned that they were going to lose their home because they couldn't keep up the payments. He had paid $3,000 and only owed a few hundred dollars, but a mortgagor was foreclosing on several Throop Street homes.

Papa and mama discussed having the older boys quit school and work to save the home. At that time there were three in college. Mama decided, "They can take home away but never education. Alex, we keep boys in school."

The Krols moved their scanty furnishings (including a set of Shakespeare) to an $18 a month, second floor walkup flat in a seedy neighborhood. The children slept three in a bed, helped lug coal up two flights of stairs. In Chicago's bitter winter the Krols' only floor covering was newspapers—mama good naturedly called them Polish carpets.

Now the entire family pooled its efforts and carried on. Alex was able to pick up odd jobs and mama sewed heroic hours. The boys hustled as grocery clerks, delivery boys, and newspaper carriers. Leonard Krol recalls: "When we started out on our paper routes at 3 o'clock on winter mornings, mama put hot baked potatoes in our pockets to warm our hands."

Walter was the first of the family to earn a degree. He was graduated in architectural engineering. Mama's brown eyes still get misty when she talks about it. "I tell you it was a miracle. Come night before Walter register and still we need $50 to pay schooling. I go down on my knees and pray. And you know, next morning a neighbor come and squeeze $50 in my hand."

Not all of the neighbors were as charitable. A few ridiculed mama for keeping her oldest sons in school when they might be earning, and street gangs jeered the studious Krol children. Sometimes the Krol youngsters went to school with mustard sandwiches, while the family's mainstays were potato pançakes, Polish dumplings, and stew.

Mama Krol looks back on this period pridefully. "We were happy. Always they bring home good report cards. It was better than money."

With three boys at home doing college work now, Mama arranged a double study shift. While the younger Krols did their homework, the future medics and engineers slipped off to bed. Then when the house quieted down they got up to study until the early hours of the morning. Mama, the alarm clock, stayed up ironing, sewing, or baking. Some nights she never went to bed. These study nights became the talk of the neighborhood.

Come weekends and holidays, Mama relaxed the study discipline. The family gathered around the piano and sang, and the drab flat became a festive place. The Krol children, encouraged to bring home their friends, sometimes invited a dozen guests. Mama cheerfully set the table three times. "I always know what kind of company my children keep. No saying, 'I'm going out' as they do these days and then disappear." The Krol home welcomed Japanese, Jewish, Italian, Ukrainian, Irish, and Slavic friends of the children.

In the late thirties Papa finally found steady work. Putting the rest of the children through school proved a bit easier. And now every June found a Krol graduating, and sometimes two or three—from grammar school, high school, or college. By 1940 the determined couple had seven of their nine children through college.

The Krols saw four sons off to war, while two others gave outstanding service to their country. Edward joined as a surgeon in the Air Force Medical Corps; Henry, who used to sit up half the night studying languages, served as an interpreter for the military government in Germany; Zenon was in the Army Dental Corps in Japan; and Arthur in the Army dental school. Engineer Walter worked on the Manhattan project, helping to build the atom bomb, and Adam was called to do top secret chemical work for the Government.

"It was most happiness day," Mama recalls when, at the war's end, all returned to Paulina Street.

In 1947 Arthur finished dental school, and Papa and Mama Krol had their final victory. Mama looked wistfully at the cooky jar with the accumulation of nine children's report cards. "Those best days of all. What I give now to have few more report card." As a parting reward, the children arranged to move Mama and Papa out of Paulina Street into a newer section of Chicago.

It had been an unbelievable struggle.

For years Alex and Mary never afforded a 20-cent carfare to the Loop.

They never went to a movie.

They never bought an automobile and drive none today.

But there were bright memories, too. Senior prom night, for instance, when the twins had saved only enough money to rent one tuxedo. Eddy rushed home midevening, repressed the suit, and Adam donned it and took his turn at the affair. There was Sunday when the family faithfully attended church, but in twos and threes so as to change coats with each other. Mama was proud that there was always a Krol as altar boy.

And there was Papa's incredible Christmas tree.

Papa Krol always waited until Christmas Eve when the tree sales were over and he could get a leftover tree for nothing. Then, picking up loose branches, he went home and glued them into the trunk. It turned out the most beautiful Christmas tree in the neighborhood. Afterward, the family shared the sacred Polish wafer, oplatek, and wished each other God's care for the coming year.

Thus a Polish immigrant family grew up in the Chicago tenements and found lights to live by. "The miracle is that none of them turned out to be delinquents," declares an authority who knows the district well.

But it was never a miracle to Papa and Mama Krol.

This last year brought crowning events for the Polish couple. They celebrated their 50th wedding anniversary with their 9 children and 19 grandchildren. Mama flew to Poland to unite with brothers she had not seen since sailing to America 52 years ago. "I came back glad to kneel and kiss ground in the United States." And the Immigrants' Service league, foremost organization of foreign born in Chicago, nominated the Krols for the best example of family life among Chicago's immigrants. Papa and Mama were whisked off to a plush Loop hotel for the recognition ceremonies. Waiting in the audience were proud sons and daughter.

Mama shushed Papa in order to hear Adlai Stevenson. He was reading the children's list of achievements—Edward, senior surgeon and president of the staff of Holy Cross Hospital; Zenon, senior oral surgeon in the same hospital; Adam, fellow of the American Institute of Chemistry; Arthur, professor of dentistry at Loyola University Dental School, and down the list.

Stevenson concluded: "All I have to do is look at you and your family and I am convinced that if the United States ever loses its vitality, history will fix the date as May 1921—the year Congress passed restricted immigration quotas."

Now Justice Douglas gave the final salute. Addressing the honored couple, he told them:

"You are part of the American dream. You have been as distinctly human, as markedly individualistic in thought and achievement as Einstein, Fermi, or Toscanini."

Alex and Mary were too moved to reply. But, as a Chicago newspaper said, it didn't matter, because the standing ovation would have drowned out any thank you's.

When it was all over, reporters crowded around the Krols and Mama summed up their formula for families everywhere.

"Go to church every Sunday.

"Don't let them get sassy.

"And make sure they bring home good report cards."

The Question of German Reunification

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. McGOVERN. Mr. Speaker, one of the most realistic articles that has come to my attention on the difficult question of German reunification is the article in today's Washington Post by Mr. Walter Lippmann. I believe that this distinguished commentator's views on the German question will be of interest to the Members of Congress. I include the

article at this point in the CONGRESSIONAL RECORD:

[From the Washington Post, Jan. 15, 1959]

MR. DULLES MOVES

(By Walter Lippmann)

At his press conference on Tuesday, Mr. Dulles opened the door to negotiations on the future of Germany. He was scrupulously careful to say that he was not now negotiating with Mr. Mikoyan. But he has made it possible for Mr. Mikoyan to report back to Moscow that there is a desire on both sides to get together and talk.

Mr. Dulles did this by making two points. Neither of these points is entirely new. But the emphasis upon them, considering the circumstances, gives them a new importance. The first point is that while the formula of reunification by free elections is the "agreed formula" and, while we think it is "a naural method," he "wouldn't say that it is the only method by which reunification could be accomplished." The second point is his acceptance of the principle that for a reunited Germany there must be military guarantees to reassure the Soviet Union—"if there is going to be any reunification of Germany, it has got to be under conditions which take into account realistically some of those very elemental, primitive facts of life."

The record shows that the point which Mr. Dulles made about free elections was first made in our note to the Soviet Union on September 30 of last year, and was reiterated in our note of December 31. For some months at least we have not regarded free elections as the necessary first step to German reunification. And the record shows also that we have long recognized that if the Soviet Union withdraws from a reunified Germany, it is entitled to have military guarantees against the possibility of German aggression.

Nevertheless, it is important that Mr. Dulles emphasized these two points on the eve of his second round of talks with Mr. Mikoyan. It was evident at the press conference that he was acutely aware that there would be a reaction in Bonn, possibly in London and other West European capitals. To soften this reaction, he dwelt on the thoroughness of our consultations with our allies, and he spoke at length on his agreement with and admiration for Dr. Adenauer's conception of European policy.

But his remarks that free elections are not the only method by which reunification can be accomplished have, as the dispatches show, aroused Dr. Adenauer. It remains to be seen whether once again, as on several previous occasions when Mr. Dulles tried not to be entirely inflexible, Dr. Adenauer will compel Mr. Dulles to retract and reverse himself.

The real question about free elections is whether they must come first, whether they are the necessary first step to German reunification. Those who hold this view are, in effect, demanding the liquidation of the East German state and the absorption of the East Germans into the West German state. The trouble with this view is that it is absolutely impossible to achieve it in any foreseeable time. For it demands an unconditional surrender of the Soviet position in the whole of Germany, and unconditional surrender by the Soviet Union is a pipedream.

I think it is not unfair to say that those who demand free elections as the first step to German reunification are not urgently interested in bringing about reunification. Some of them want to believe, hoping against hope, that the Soviet Union will somehow collapse. Many of them do not want to have to face the enormously complicated problems which a reunified Germany will pose. In the status quo with a divided Germany there are very powerful interests which would prefer not to be disturbed.

Thus, for example, a reunified Germany with free elections would be far more to the left than Adenauer's Germany. For another example, the whole fascinating structure of the West European political and economic community which Mr. Dulles spoke of would have serious problems if it had to digest the 17 million East Germans. For still another example, a reunified Germany could not long remain the camping ground of the NATO armies, and this would raise the problem of where the NATO forces should be stationed.

Against all these difficulties there has, however, to be weighed the grave and incalculable dangers of the continuing partition of Germany. For, sooner or later, there will be uprisings against the Soviet hold on East Germany and on Poland, and if there are these uprisings, we may all be sucked into the struggle. To avert that it is necessary to proceed to the reunification of Germany which, if I understood him correctly, is what Mr. Dulles has decided that he must try to do.

If that is our purpose, there is no reason why German reunification should not begin with a provisional regime—that of a dual state with some common political institution—under a pact or constitution which promised that there should be a gradual integration over a period of years, culminating in a free election to elect a constituent assembly, which would form an all-German state.

This is only one among innumerable conceivable ways of bringing about reunification of the two Germanys. The crucial question is whetheer on the Soviet side and on our side there is in fact a genuine will to make one German state.

Segregation by Sex Might Ease Fears of Racial Intermarriage

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the text of an article which appeared in the December 6 issue of the Saturday Evening Post. This editorial presents an interesting theory that perhaps integration of races but segregation of sexes might prove to be the answer to qur school segregation problem. I felt this should be brought to the attention of the House since, in my opinion, any possible solution to this issue should be thoroughly considered:

SEGREGATION BY SEX MIGHT EASE FEARS OF RACIAL INTERMARRIAGE

An obstacle to school integration in the South is local resistance to mingling white and Negro youngsters of both sexes in institutions that are social as well as educational—as coeducational public schools are.

Many southerners consider this the basic stumbling block. However one judges that, the issue bulks large in the southern mind. To remove it might help clear the air and enable all parties, North as well as South, to make more sense on the subject.

Here and there southerners trying to observe the Supreme Court's "all deliberate speed," are experimenting with various methods of integation—for instance, starting it in the first grade instead of high school, the most sensitive area. So far, this range of integration experiments is missing one trick that could eliminate much of the sex angle from a situation already difficult enough.

Integrate the races, but segregate the sexes. Put all the boys, both white and Negro, in one set of schools; put all the girls, both white and Negro, in another set.

The scheme is not original. The late Senator Hiram Bingham, of Connecticut, suggested it a good while ago. Every year or so somebody else dreams it up and mentions it publicly. Tennessee has passed a law permitting school boards to integrate in this fashion. Macon, Ga., revised a school building program with this in mind. But at the opening of schools last September no place had actually tried it. Perhaps they fear that the Supreme Court might discover sociological support for the idea that boys separated from girls, and vice versa, develop inferiority complexes of serious dimensions.

However, separate educational institutions for boys and girls are a long-standing American tradition still persisting in most private and parochial schools and in a few public high schools. Australia, committed to this system, considers that it does much to keep down juvenile delinquency and premature romancing.

The success of the Armed Forces in mingling southern whites and Negroes indicates that somewhat younger southern white boys and Negro boys could somehow make out in the same schools. The arrangement satisfies the Supreme Court's requirements by giving youngsters equal access to the same tax-supported facilities, teachers, courses, and so on, regardless of race. It answers the formula of Mr. Thurgood Marshall, chief counsel of the National Association for the Advancement of Colored People, that the Negro can go along wtih any criteria for grouping youngsters for education—I.Q., aptitude, achievement, health, cleanliness—except one, race.

True, a two-ply school system costs more than a single-ply one. But this consideration never moved the South to revise the two-ply white-Negro system permitted, up to 1954, by the Supreme Court's (1896) doctrine of "separate but equal." If segregation by sex proved to be the answer, the South's education dollar would at least be buying her conformity with what now stands as the law.

Communist-Inspired Smear Campaigns

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. SCHERER. Mr. Speaker, I request permission to bring to the attention of my colleagues the recent series of scurrilous attacks against the Federal Bureau of Investigation and its highly respected Director, J. Edgar Hoover.

I particularly commend to your attention the underlying forces behind this patterned campaign of vilification and abuse.

For more than a quarter century, Mr. Hoover and the FBI have been targets of malicious smear campaigns launched by subversive organizations. Communists and other unsavory groups, through distortion and deceit, have directed a wealth of misinformation, innuendoes, and smears against the FBI. But, in the light

of its past achievements it is, of course, not too difficult to understand why. Like a stuck pig, they have had good reason to squeal, and are out to get the FBI.

Mr. Hoover is a public servant who has given a lifetime of dedicated effort to unselfish public service. He has dedicated every legitimate resource to an unrelenting war upon the criminal underworld and against those whose ideologies are contrary to our American way of life.

Those whose wish it has been, and is, to unlawfully overthrow our Government are Mr. Hoover's sworn enemies. We all know this. And they leave no stone unturned in their vicious efforts to hamper his effective work. Their malicious smears, however, go on and on.

In 1940 there was a concerted wave of Communist-inspired criticism denouncing the FBI as "an American Gestapo" and a "threat to freedom." Communist demands were heard for a "sweeping investigation of the FBI."

Again in 1947, the Communists spearheaded a vicious drive to slander this agency and undermine public confidence in its operations. Behind this all-out attack were the fear and hatred of subversive groups for the then newly established Government Employees Loyalty Program, a measure clearly designed to strengthen our national security. The attack failed.

In the late 1940's, and early 1950's the FBI's investigative machinery dealt crippling blows to the Soviet spy system here in America. It was during this time, you will remember, that Judith Coplon, Valentin Gubitchev and Harry Gold were arrested and exposed; the Rosenbergs were convicted, and later executed, as atomic spies.

Following these successes, Director Hoover and his staff were subjected to renewed castigation and abuse. Through hate propaganda, and the technique of the big lie, efforts were made to dupe an unsuspecting public into the ridiculous belief that J. Edgar Hoover and the FBI were the menace to the citizenry of our Nation, not the Communists and their allies, the pseudo-liberals.

The Federal Bureau of Investigation has admirably weathered periodic storms of Communist-directed scorn and contempt. Its record of past accomplishments speaks for itself. But in taking a stand for the preservation of the American way of life, Mr. Hoover has invited upon himself the wrath of experts adroit and skilled in the art of character assassination.

In more recent months, this attack has assumed a well-organized pattern of smear, slander, and hate. The leopard has not changed its spots: As in bygone years, the current hate Hoover campaign is implicit in the forces of the Communist Party, U.S.A., its willing dupes, its sympathizers, and its respectably cloaked apologists and pseudo-liberals.

"THE NATION"

The initial impetus to this rabid anti-FBI drive was sparked by the Communist-line magazine, "The Nation." Its entire issue of October 18, 1958, some 60 pages, is devoted exclusively to a highly distorted and biased attack upon J. Edgar Hoover and the FBI by Fred J. Cook, a writer who has earned the unenviable distinction of being an apologist for Alger Hiss. This article contains many of the same contradictions, falsehoods, and innuendoes characteristic of those hurled at the FBI by Max Lowenthal and others of similar ilk. The Ford Foundation's Fund For the Republic, a tax-exempt organization, was the largest single advertiser in this smear issue of "The Nation."

"The Nation" is edited by Carey McWilliams, a character whose record relating to Communist Party activities extends over a period of more than 20 years. These facts speak for themselves.

COMMUNIST PARTY U.S.A.

Blistering criticism, nurtured by a feeling of bitter resentment and hate, of those who would zealously defend the country against its internal enemies, has always been, and still is, an unceasing Communist Party tactic. Yet the very ruthlessness and violence of these attacks are a grudging acknowledgment of FBI vigilance in its relentless fight against the treacherous guiles of Communist subversion and intrigue.

One of its latest salvos appeared in the official publication of the Communist Party, U.S.A., "The Worker," on November 16, 1958, in an article brazenly captioned "Edgar Hoover's Four Decades of Fight Against Peace."

But let us not be misled. Today, the American people are being fed the phoney propaganda line that the Communist Party, U.S.A., is just another legitimate political organization. Of course, what it really is—is just what it has always been: A Soviet-dominated link in the international Communist conspiracy, dedicated to the ultimate forcible destruction and overthrow of the U.S. Government.

Soviet leader, Nikita Khrushchev, himself restated this aim in a television interview in June 1957, when he boasted your grandchildren would live under the heel of Communist socialism.

EMERGENCY CIVIL LIBERTIES COMMITTEE

Elaborately linked to the current conspiratorial chain of smear forces are the many fronts exploited by the Communist Party, U.S.A. to convey insidious propaganda designed to discredit truth. They are "the marks" of the conspiratorial con-game swindlers: the willing dupes of the Communist "roper" and "inside man."

These are the individuals whose sly and slanted writings oppose urgently needed internal security measures; present the menace of communism as a myth of hysteria, urge that we tolerate the subversive acts of Communists because the Communist Party is just another political movement; and whose outraged cries have been joined in the attack against everyone and everything related to the exposure of the Communist conspiracy.

It was back in September 1957, you may still recall, that the Emergency Civil Liberties Committee started its campaign of vilification to abolish the House Committee on Un-American Activities. Immediately, the efforts of these Communist stooges were broadened to include the Federal Bureau of Investigation.

Their motives were all too obvious. The record will show that the Emergency Civil Liberties Committee was designated a Communist-front organization by the Internal Security Subcommittee of the Senate Judiciary Committee. Harvey O'Connor and Corliss Lamont are its officiating heads.

For some years the name "Harvey O'Connor" has been on the Nation's list of editors as a staff contributor. It was this individual to whom the House Committee on Un-American Activities referred when it stated:

> Harvey O'Connor was identified as a member of the Communist Party by Benjamin Gitlow, the Communist Party's former secretary general, in sworn testimony before the Committee on Un-American Activities on September 11 and October 17, 1939.

And this same committee, in its report on Lamont, states: "Corliss Lamont has been one of the foremost apologists for the Soviet Union in the United States," and then factually recounts his association with many Communist-front organizations.

NEW YORK POST

Next to join forces with the "hate Hoover" campaign was the New York Post whose efforts are being directed by James Wechsler, its editor, a self-admitted former member of the subversive Young Communist League.

The New York Post has probably published more character-assassination attacks on J. Edgar Hoover than any other paper except the Daily Worker. It now has assigned a staff of reporters in the United States and abroad in a farflung attempt to dig up dirt for a professed objective study of the FBI.

We should note that James Wechsler, editor of the New York Post, in the 1930's was on the National Committee of the Young Communist League, and was also formerly an editor of the Nation.

SOCIALIST WORKERS PARTY

The latest blast in the current series of vicious attacks to discredit Mr. Hoover and the FBI was launched on December 8, 1958, by the Militant, a weekly organ of the Socialist Workers Party, in a smear bearing the warped caption, "J. Edgar Hoover, Chief of Thought-Police."

But, here again, let us not forget that the Socialist Workers Party is a militant revolutionary group advocating the immediate violent overthrow of our Government. It is an organization which was cited by the Attorney General under Executive Order 10450.

Over the years, the attitude toward law enforcement of American Communists, leftwingers, and those skilled in concealing foul and despicable acts behind the fifth amendment, has been one of deliberate hostility, coldly calculated to smear, slander, and hate. Their repeated attacks against the FBI are not rooted in a spirit of honest criticism and fact.

But we do know this: Their hostile smears are based upon wishful thinking. They want the FBI abolished. Therefore, they ridicule and vilify its personnel. They condemn its lofty purposes,

revile its methods, and rail at its lawful techniques employed to cope with their trickery. In essence, Communist hatred of democratic law enforcement is rooted in the fact that our system is a strong bastion against violent revolution by a minority of political gangsters. Because it is such a barrier, it must be destroyed.

The Communists have raised no audible objection to a system in which the whims of each new tyrant and his hierarchy become the law of the land. The citizen who survives the torture chambers, brainwashers, and firing squads is consigned to a slower death in the slave-labor camps. In the sardonic and semantic lexicon of the Communist conspiracy, this system is called the people's police.

The individual who does not recognize Communist techniques may find himself providing grist for the Red Fascist propaganda mill.

The sinister chain of smears currently being leveled against the FBI prompted Preston J. Moore, national commander of the American Legion to issue a statement in which he recently declared, in part, and I quote:

It is difficult to attribute any purpose to these attacks other than a desire to destroy this Federal law enforcement agency and its leader as an effective deterrent to undetected, unopposed Communist subversion in this country. * * * The American Legion believes that the American people will not permit their justified confidence in Mr. Hoover and the FBI to be compromised by scurrilous distortions and half-truths. Nor will they allow irresponsible journalism to blind them to the need for continued FBI investigation of the dangerous Communist conspiracy in this country.

I feel that this statement by the national commander of one of America's foremost patriotic organizations very well summarizes the issue: "FBI smears do not stick."

Public Demands More, Less at the Same Time

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. SMITH of California. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Pasadena Star-News dated December 12, 1958, written by Irving Fang:

PUBLIC DEMANDS MORE, LESS AT THE SAME TIME

As our Nation has grown, the role of government, especially the Federal Government, has expanded until today it reaches into corners of our national life undreamed of a century ago.

Whether this is an overall good trend or bad trend depends on the honest attitude of the American people toward it. The public cannot very well condemn burgeoning Government and in the same breath demand more services from it. In short, our Government is what we ask of it.

Herbert V. Prochnow, vice president of the First National Bank of Chicago, in a speech to the American Bankers Association, penetratingly analyzed the double-faced demand for more government and less government at the same time, a demand which is voiced louder and louder as the national budget grows.

He said, in part:

"The Government has now become a vital factor in most of the Nation's major economic decisions, whether they involve business, agriculture, or labor. Furthermore, there seems to be a widespread willingness to have Government assume this role.

"If a strike threatens to tie up a great industry for weeks, the Government is expected to prevent it. If the dockworkers strike and close a port, we turn to the Government for relief. If housing construction declines, the Government is expected to arrange easier credit, lower downpayments and other remedies. If we seek slum clearance, we ask the Government to provide a large part of the funds required. If some businesses grant exceptionally easy installment terms, other businesses believe Government should correct the trade practices of their competitors by installment regulations.

"If metal prices fall, there are instant demands for larger Government stockpiles, regardless of whether present stockpiles are considered adequate for national defense. If the price of an agricultural product falls, there are demands that the price be supported even though large stockpiles result. If drought burns up some farmlands, we expect the Government to deal with the problem. * * *

"We expect Government to provide security for tens of millions of us in old age. We expect Government to determine the number of hours we work, our minimum wages, and our unemployment compensation. We expect Government to provide a vast expansion of our highway system. We seek larger contributions from Government to improve our particular harbor or river.

"Some of these requests are desirable functions of Government. Others are not. We contribute time and money to an infinite number of organizations which seek to get something from the Government or urge Government to expand its activities. In countless areas we now turn to the Government where we did not do so a generation ago. * * *

"We condemn the expanding role of Government over the world, but we encourage it here. With one hand we work to reduce the role of Government in our economic life. With the other hand we work even harder to increase it. We ask for a reduction in Government expenditures, but not where it would affect our business.

"We demand that Government expense be cut, but not for Federal projects in our communities. On one day, we write our Congressman to reduce Government expenses and taxes. The next day we write urging him to bring home the Federal bacon to our communities."

'Nuf said?

Proposal To Create a Pan American Parliamentary Association

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ANFUSO. Mr. Speaker, I am introducing a joint resolution expressing the sense of Congress that a Pan American Parliamentary Association—PAPA—should be established and that the United States be authorized to participate in the parliamentary conferences of such association.

All of us are well aware of the need to establish the greatest possible measure of understanding, harmonious relations and cooperation between the nations of the Western Hemisphere. Despite our good neighbor policy of the past quarter of a century, we know that much resentment and dissatisfaction persist in Latin America with U.S. policy toward those countries. Much of this dissatisfaction, of course, is stirred up in recent years by Communist elements who seek to create chaotic conditions among our neighbors to the south in the hope of gaining a foothold in this hemisphere.

The truth of the matter is that the Latin Americans desperately need our help in their efforts to attain a higher standard of living, in the exploration and exploitation of their natural resources, in economic growth, in expanding their agriculture and industry, and most especially in giving them an equal voice and the right of joint participation in the affairs of the Western Hemisphere and in the formulation of hemispheric policy.

Mr. Speaker, I was privileged to visit several Latin American countries during part of November and December 1958 in connection with my joint resolution on a Pan American Parliamentary Association. A full report of my visit there, as well as my views and findings, appears in the CONGRESSIONAL RECORD of January 12, 1959, pages A61–64.

It is high time that we look upon the peoples of Latin America not only as good neighbors but also as our best friends, which they are. Here we have a wonderful opportunity to regain some of the ground we have lost in other parts of the world, our moral position and our international prestige in the eyes of all nations, by stressing democratic principles and championing human rights. We can do so by offering the fullest measure of aid possible in order to achieve genuine friendship and inter-American support. We must prove to them that they stand to gain more by aligning themselves with the United States in order to protect their political freedom, their national independence, their economic gains, and the security of the whole hemisphere.

Fortunately, we are in a position to be of invaluable assistance to Latin America in many ways, particularly in helping them with their economic and development problems. The standard of living in those countries is extremely low. The average per capita income for all of Latin America is reported to be only $312 per year, compared with over $2,500 average in the United States. We must help them raise this standard of living through economic development and expansion, through increased production and consumption, and by increasing their purchasing power in domestic markets.

The more we help Latin America achieve these goals, the more we too shall benefit in the long run because of increased trade relations. Even now our trade with Latin America is greater than with any other area in the world. About one-third of our imports come from this area and about one-fourth of our exports go there. They sell to us half or more of such products as copper, coffee, raw wool, petroleum, and other products, while the value of our exports to them is approaching the $5 billion mark annually. Thus, by aiding them in their economic growth and in attaining a higher standard of living we can look forward to increased trade relations which should prove mutually advantageous.

What we need today is greater unity of purpose and a program of action which, I believe, should and could best be done on a people-to-people basis. It is for this very reason that I have proposed the establishment of a Pan American Parliamentary Association. My original resolution containing this proposal was offered to Congress in the summer of 1958 when the hectic period of adjournment was approaching and no time left for consideration. Nevertheless, within a few short weeks several of our leaders in Congress approved the idea in principle, it was similarly approved in principle by statesmen from 12 of the 20 Latin American countries, and the Department of State encouraged me to undertake my visit to several South American countries to discuss the proposal in detail with leading legislators there.

Following my visit I reached the conclusion that the idea proposed in my resolution is very timely and very urgent. Thereupon, I revised it and expanded it on the basis of my findings. The resolution proposes the establishment of a Pan American Parliamentary Association which is to meet annually, or as frequently as deemed necessary, in the different capitals of the Western Hemisphere. It is to be attended by the parliamentary representatives of the 21 American nations, since they are the direct representatives of the people having been elected by them as their spokesmen.

The purposes of the association are set forth in the resolution in the form of a 12-point program, which may be expanded upon whenever necessary. This program is as follows:

1. Create better understanding and foster closer personal contact among the elected legislators of the 21 American nations.
2. Stimulate greater public knowledge of, and making more effective, the Organization of the American States (OAS) and other agencies designed to promote the best interests of the American nations.
3. Expand the educational and scientific exchange programs.
4. Develop closer cultural relations throughout the hemisphere.
5. Improve trade relations and reduce the barriers to trade between countries in the Western Hemisphere.
6. Encourage large-scale tourism between the Americas.
7. Help to provide relief in times of disaster and other emergencies.
8. Seek means to dispose of surplus commodities of all sorts in the various countries in order to help their economies.
9. Help to raise the standard of living throughout Latin America.
10. Aid in the development of plans for the sound economic expansion of the Latin American countries, including U.S. public and private investment in their economic development.
11. Assist them in modernization of their agricultural methods.
12. Seek solutions to other problems of common concern to the countries of the Western Hemisphere.

My resolution further calls for U.S. participation in the Pan American Parliamentary Association and the appointment of 18 Members of Congress from both Houses and both political parties as the delegation of the United States to the conferences of the Association. The U.S. delegation is to submit a report to Congress each year on the activities and decisions of the Association.

I am convinced that if the elected representatives of the 21 American nations could meet in person to discuss pressing problems of mutual interest to the entire hemisphere, much could be achieved in the way of better understanding and harmonious relations. We must stop taking Latin America for granted. We must develop a positive and direct people-to-people approach in our relationship, treatment and dealings with our neighbors of the Western Hemisphere.

Mr. Speaker, I believe sincerely that my resolution is the key to such improved relations of the future, only we must bring that future closer—not some distant tomorrow, but today. I hope and trust that the idea to set up a Pan American Parliamentary Association, as proposed in my resolution, will soon become a reality. Let us be the first to pave the way.

Amendment Offered to Federal-Aid Highway Act of 1958

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. CRAMER. Mr. Speaker, Congress worked its will in regard to Federal aid to highways by passing H.R. 10426 which was an amendment to the Federal-Aid Highway Act of 1956, and provided for an additional 2 years for advance purchase of rights-of-way. Notwithstanding this fact, a later enactment which was in essence a codification of basic highway law passed and became law. Thus the amendment introduced by me and passed by Congress was nullified by the subsequent passage of the Federal-Aid Highway Act of 1958. In the final form of the codification of the highway legislation into title 23, United States Code, which was a very essential bill and one which I actively supported, my amendment was not embodied.

It is my desire in reintroducing this measure to have Congress reinstate its approval of the extended term of 2 years so that we may take full advantages of this program and to make the benefits more effective. Last year when this amendment was first introduced I pointed out to the House that additional time is justified and needed between the purchase, not only for construction of the Interstate System but also on primary, secondary, and rural and urban highways, of rights-of-way and actual construction.

The present law provides that a 5-year period is the outside limit of time between the fiscal year in which a request for reimbursement of the cost of acquired rights-of-way is made and commencement of actual construction. Under the present provisions the States are seriously hampered from purchasing rights-of-way unless construction is definitely programed to begin within the 5-year period. In many States such as Florida, where the cost of rights-of-way is daily increasing and plans for substantial highway construction are being made far in advance of the actual beginning of work this provision is not as fully helpful as was intended.

I am in fact, by introducing my amendment, asking Congress again to do that which was intended to be accomplished on August 6, 1958. Due to provisions in codification of highway legislation in United States Code, title 23, repealing all other previous passed legislation, my bill approved August 6 and becoming Public Law 85–597 of the 85th Congress was repealed by this code which was approved on August 28, 1958.

It being the obvious will of Congress that the rights-of-way time limit be extended from 5 to 7 years, I trust immediate action on my bill will be forthcoming. This being the case, I understand that the Bureau of Roads is holding in abeyance, but on active basis, State requests coming within the 5- to 7-year extension in anticipation of such favorable congressional action.

Broadening the Market for State and Local Bonds

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I am joining with Mr. HERLONG, my colleague on the Ways and Means Committee, in reintroducing a bill to broaden and relieve the market for State and local bonds. It will accomplish this by attracting investment companies, both regulated and unregulated, with their ever-increasing pools of investable funds, into the so-called municipal bond mar-

ket. The incentive is that they may distribute or pass through the tax-exempt interest to their shareholders. At the present time the shareholders can invest in these bonds directly, but their corporate funds are effectively sealed off from the market by the fact that the interest becomes fully taxable when distributed to the shareholders.

This bill, except for minor refinements, is the same as H.R. 8702, which I introduced in the last session. Earlier in the last session I had introduced a very narrow passthrough bill, H.R. 4380, which applied only to regulated investments and only if they were 90 percent invested in tax-exempt bonds. Thereafter I became convinced that the narrow bill would extend negligible help to State and local governments. The present bill, however, will provide substantial, essential, and inexpensive assistance by really broadening the market for State and local bonds.

I want to emphasize that we are dealing with an existing exemption. This bill makes that exemption more effective from the point of view of the issuers of tax-exempt bonds. For that reason, the legislation is actively supported by leading national organizations in the municipal, county, and educational spheres, such as the American Municipal Association, National Association of County Officials, and National Education Association.

I have been advised by a prominent economist, Mr. Harry L. Severson, that leaders in the field of municipal finance have been worried for some time about the failure of markets for tax-exempt bonds to increase as rapidly as the supply, and that more recently the underwriters who handle these bonds have been discussing most seriously how and where the ever-increasing volume of new issues can be placed.

The legislation is unique in that it grants substantial assistance to local governments at little, if any, cost to the Federal Government. For this particular reason the legislation has the support of such diverse organizations as the American Farm Bureau Federation and the Council of State Chambers of Commerce.

State and local governments are finding it increasingly difficult to finance the growing volume of new capital improvements which are required to meet the needs of our expanding economy. Traditionally, large capital improvements, with the exception of highways, have been financed largely by borrowing. Since all of the costs of government are rising, there is little reason to hope that it will be feasible for these jurisdictions to meet a significantly greater proportion of the cost of capital improvements on a pay-as-you-go basis in the foreseeable future. The problems of financing capital improvements are made more difficult by the fact that new bond issues do not sell as well as they did a few years ago.

During World War II the supply of new tax-exempt bonds was not only relatively small but it was contracting at the very time that the demand for tax exemption was expanding due to raises in the income tax rates. The result, of course, was an extremely favorable market for State and local bonds. As the volume of new issues increased following the close of World War II, this situation has gradually changed until it is now the investors who enjoy most of the advantages at the bargaining table.

Under existing law the large and growing pools of investable funds held by investment companies are effectively excluded from the municipal bond market by the fact that tax-free interest is converted to taxable dividends when paid out to the shareholders of these companies. The need for a broader market is even more pressing now than when I first introduced this bill in July 1957. The volume of new offerings of these securities continues to mount. In 1957 a total of $7 billion came to the market which was practically the same as the previous high reached in 1954 when new toll road bonds were at the heighth of their popularity. In 1958 a new high of approximately $7.5 billion was reached in spite of the tight money conditions in the last two quarters of the year which undoubtedly caused the postponement of some new offerings.

What is more, there is every reason to expect that the volume of new offerings will continue to increase. Our growing economy will make it necessary for State and local governments to install many new capital improvements all of which must be financed. The widely quoted Severson projections show a steady increase in the volume of new offerings. According to these projections the volume in 1959 will be above $8 billion, increasing to more than $16 billion in 1968. This represents a lot of bonds to place with investors. The market is choking up periodically on the present volume and this gives us some idea of the task ahead in finding permanent outlets in 10 years for a flow more than twice as large as the greatest we have known.

The enactment of the passthrough would be of material assistance in placing these new issues. Investment companies not only hold large reservoirs of funds but they are growing steadily. An important advantage of the passthrough is the fact that it would open up these new markets without upsetting existing institutional arrangements. Furthermore, the cost to the Federal Treasury would be nominal. If the aspirations of the people for new improvements are to be realized, the volume of new issues must continue to grow. In many instances the failure to sell these bonds would result in the economic strangulation of the area.

Since these bonds will be tax free in any event under existing law to whoever buys them, no tax loss of any consequence is involved. Moreover, certain offsets must be considered. By holding down the rate of interest on new issues the total volume of interest on which tax is not paid is reduced. Also by reducing the cost of debt service the passthrough will tend to reduce or hold down local taxes which are a deduction in computing the income subject to tax.

State and local governments are requesting assistance in meeting their obligations. Their burdens are heavy. About this there can be no question. In considering these requests for assistance I think it well to give real consideration to those forms of aid which would enable these governments to help themselves, since this type of assistance is likely to be the most efficient. As governments are called upon to perform more services, efficiency becomes increasingly important, and I think we will all agree that keeping the controls close to home tends toward economy. It is easier to waste a dollar which comes from Washington than one which must be raised locally.

In closing, I feel that the broad passthrough should be enacted into law at this session of Congress since it would assist State and local governments in financing their capital improvements by reducing or at least holding down the cost of debt service, and debt service will become an increasingly important item for these governments. The control of the capital improvement programs would be left with local government. The Federal Government would not be concerned over what a local community did or did not undertake. Each locality could build its improvements as simply or as elaborately as it chooses.

The bill follows:

H.R. 2341

A bill to amend the Internal Revenue Code of 1954 with respect to the income tax treatment of dividends paid by certain corporations which hold obligations of States and local governments

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 103 of the Internal Revenue Code of 1954 (relating to interest on certain governmental obligations) is amended by redesignating subsection (c) as subsection (e) and by inserting after subsection (b) the following new subsections:

"(c) EXCLUSION FOR EXEMPT-INTEREST DIVIDENDS.—In the case of a taxpayer other than a corporation, there shall be excluded from gross income an amount equal to the aggregate amounts received during the taxable year as exempt-interest dividends. Any amount excludible from gross income under this subsection shall be treated for purposes of this subtitle as an item of interest excludible from gross income under subsection (a)(1).

"(d) DEFINITIONS.—For purposes of subsection (c)—

"(1) EXEMPT-INTEREST DIVIDEND.—The term 'exempt-interest dividend' means any dividend or part thereof (other than a capital-gain dividend within the meaning of section 852(b)(3)(C)) paid by a corporation and designated by it as an exempt-interest dividend in a written notice mailed to its shareholders not later than 30 days after the close of its taxable year, if such corporation meets the requirements of paragraph (2) for such taxable year. If the aggregate amount so designated with respect to a taxable year of the corporation is greater than the amount of interest received or accrued by such corporation during such taxable year and excludible by it under subsection (a)(1), the portion of each distribution which shall be an exempt-interest dividend shall be only that proportion of the amount so designated as the amount of such interest so excludible bears to the aggregate amount so designated.

"(2) SECTION 103 CORPORATION.—A corporation shall be treated as meeting the requirements of this paragraph for a taxable year if—

"(A) such corporation is a domestic corporation other than a bank as defined in section 581 or an insurance company taxable under subchapter L,

"(B) such corporation files with its return for such taxable year an election to be a section 103 corporation or has made such election for a previous taxable year which began after the effective date of this Act,

"(C) at least 90 percent of its gross income is derived from dividends, interest, and gains from the sale or other disposition of stock or other securities (and for purposes of this subparagraph and subparagraph (D), the terms 'gross income' and 'interest' include interest excludible under subsection (a)(1), and

"(D) less than 30 percent of its gross income is derived from the sale or other disposition of stock or other securities held for less than 3 months."

SEC. 2. Section 265 of such Code (dealing with nonallowance of deduction for expenses and interest relating to tax-exempt income) is amended as follows:

(a) In paragraph (1) by deleting the period at the end thereof and substituting the following: ", or any amount otherwise allowable as a deduction which is allocable to interest received and distributed as an exempt-interest dividend by a corporation meeting the requirements of section 103 (d)."

(b) By adding at the end of the section the following new paragraph:

"(3) INTEREST RELATED TO EXEMPT-INTEREST DIVIDENDS.—Interest, on indebtedness incurred or continued after the effective date of this Act, to purchase or carry stock of any corporation, for any period during which such corporation meets the requirements of section 103(d)(2)."

SEC. 3. The amendments made by this Act shall apply only with respect to distributions by corporations with respect to taxable years of such corporations which begin after the date of the enactment of this Act.

Comments on the Visit of Anastas Mikoyan

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. SMITH of Kansas. Mr. Speaker, every Member of Congress gets a lot of mail. Part of this mail is largely inspired by the press, radio, and TV; some of our mail is due to propaganda campaigns put on by pressure groups. Once in a while we get mail that we feel is deeply sincere and an honest expression of opinion. Recently I received a lot of letters from members of a senior high school located in my district. The name of this town is Damar. The population is listed as 305. Just a small rural community but from the tone of their letters they are deeply disturbed at attention that has been given in our country to the bloody-handed "traveling salesman?" from Communist Russia, namely Anastas Mikoyan.

I append hereto the comments from their letters:

We are informed by newspaper and television that we have a Commie over here to talk (possibly about a loan). * * * I don't understand why we have to play "footsie" with them in the first place. Are we so impressed and frightened by them that we must jump to oblige their every whim?

We Americans have the privilege of petitioning our Congressmen and this is certainly a matter of national importance. * * * I am speaking of the Russian beggars coming over here on a "good will tour" in order to [probably] try to wheedle us into a trade agreement involving our extending some credit to a country whose alleged aim is to destroy us. * * * I do admire their nerve, though.

Why do we giveaway money to all these foreign countries? Surely past experience shows this is not loaning but outright giving. * * * When will our leaders find out we can't buy friendship? We've already aided Yugoslavia, a Communist outfit if there ever was one, to buy their friendship against Russia, now is there really a chance we will aid Russia? Say it isn't so, please. When is it going to stop? Only you, our Representatives, can stop it.

I think our giveaway program is getting quite disgusting, especially in actually giving to communistic countries—already Yugoslavia, and now possibly Russia. * * * What are we doing? * * * It seems our Government could give a little more thought to some of our own people who could use a little aid.

When are we going to quit playing "chicken"?

In debt $280 billion and helping the worst enemy to democracy that the world has ever seen. It's bad enough the way we throw it [money] around to our allies, but it's impossible to think we'd give it [money] to our worst enemy.

Couldn't this money be used just as well to build the needed schools, support war widows and orphans, our own poor, and help our American Indians in the Southwest; or do we just figure they're no threat so we needn't worry about them? * * * As our Congressman, please do what you can. Thank you.

In regard to a possible loan to Russia, please tell me it's out of the question.

I am writing to you to appeal to you to do everything in your power to stop this giveaway, especially to Russia. * * * If something has to break it may as well be before we help make them stronger. * * * As for some of these other "hand-grab" countries, I think we should turn our head when we meet them on the street.

To give aid to Russia would be just like putting a knife in your worst enemy's hand. As soon as your back is turned he can kill you with this knife.

Basketball and Stamps

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting article entitled "Basketball and Stamps" by Kenneth E. Crouch, which appeared in Weekly Philatelic Gossip on December 27, 1958.

Basketball and baseball are two games which originated in the United States. The latter game has been recognized by the United States and various other countries by the issuance of postal stamps. According to this article basketball, which originated in Massachusetts, has spread throughout the world and received widespread recognition philatelically, yet our own country has not so honored the game.

The article follows:

BASKETBALL AND STAMPS

(By Kenneth E. Crouch)

Records state that in mid-December, 1891, the game of basketball originated in the Y.M.C.A. Training School at Springfield College in Springfield, Mass., the originator being Canadian-born Dr. James Naismith.

The game was created because of a desire for a new game for the students at the training school. Naismith was given the assignment by the dean of the physical education department, Luther Gulick, to see if he could come up with any ideas.

The new game was to be one which could be played in the winter season, between the football and baseball seasons, and one that could be played indoors or out in the open.

Dr. Naismith drew up a set of rules, assembled 18 students into which he made two teams of nine men each. He carried with him a soccer ball and asked the janitor to find two boxes to be used as goals. The janitor found two half-bushel peach baskets and thus the name of the game was established.

In the original game a man was stationed at each goal in the balcony to retrieve the ball from the basket after it had been scored and to put the ball back into play.

The first game was played between students of the "secretarial" and "physical" classes and as it was intended only as a new game at the school, the date it was played was never noted but has been established as in the middle of December.

Newspaper accounts state that the first game played as a public contest was on March 11, 1892, between the secretarial class of Dr. Naismith and the faculty, with the secretarial team winning five baskets to one.

James Naismith was born November 6, 1861, in Almonte, Ontario, Canada, a son of John and Margaret Young Naismith. He was an orphan at the age of 8 and in 1883 graduated from the Almonte High School.

In the fall fo 1883 he entered McGill University in Montreal, Quebec, Canada, and in 1887 received his A.B. degree from that university. That year he enrolled at the Presbyterian College in Montreal, Canada, graduating in 1890 and that same year was ordained into the Presbyterian ministry.

Naismith played football at McGill University and from 1887 to 1890 was director of physical education at that university. In the fall of 1890 he enrolled at the Y.M.C.A. Training School at Springfield College, graduating in 1891. He served as director of physical education at the school from 1890 to 1895.

In 1895 he became a physical director at the Y.M.C.A. in Denver, Colo., and attended the Gross Medical College (later to become the University of Colorado Medical School) in Denver from which he received his doctor of medicine degree in 1898.

In 1898 he joined the faculty of the University of Kansas at Lawrence, where he remained until his retirement as professor emeritus in 1937.

In 1939 the Presbyterian College in Montreal, Canada, awarded him the doctor of divinity degree honoris causa.

The game of basketball was included as a regular part of the Olympics in 1936 in Berlin, Germany and Dr. and Mrs. Naismith were sent to the international event.

He was the author of numerous articles on physical education and of the books "The Basis of Clean Living" in 1918 and "Basketball: Its Origin and Development" in 1941.

Dr. Naismith died November 28, 1939, of a heart attack at his home in Lawrence, Kans. Funeral services were conducted December 1 from the First Presbyterian Church in Lawrence, Kans., with burial in Memorial Park Cemetery in that city.

There is living today one man who played in the first game of basketbill that memorable day in 1891. He is Raymond P. Kaighn, 89 years old, who was a member of Naismith's "secretarial" team, and lives in Chapel Hill N.C.

A memorial to the founder of the game and to honor stars, past and present, is to be erected on the campus of Springfield College. This is to be known as the Naismith Memorial Hall of Fame for Basketball and the executive secretary of that committee is 80-year-old Edward J. Hickox.

The sport has received recognition in the philatelic world in the issuance by 19 nations of 28 postage stamps—these coming from every continent but North America (where it originated) and Australia. These postal recognitions range from 18 regular issues to 7 airmail issues and 3 semipostal issues.

CHECK LIST

Philippines, 1934, Scott, No. 382, issued to commemorate the 10th Far Eastern Championship Games.

Panama, 1938, Scott, No. C43, issued to commemorate the fourth Central American Caribbean Games.

Lithuania, 1939, Scott, No. B52–B54, issued to commemorate the third European Basketball Championship in Kaunas, Lithuania.

Ecuador, 1939, Scott, No. 379, issued to commemorate the first Bolivarian Olympics in 1938.

Bulgaria, 1947, Scott, No. 579, issued for the Balkan games.

Bolivia, 1948, Scott, No. C151, issued for the fifth Athletic Championship Meet in La Paz, Bolivia.

Bulgaria, 1948, Scott, No. 606.

Peru, 1948, Scott, No. C79, issued to publicize Peru's participation in the 1948 Olympic games in Wembley, England.

Statement by Andrew T. Walker With Reference to a Post Office Department Ruling

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. FINO. Mr. Speaker, I am privileged to insert in the CONGRESSIONAL RECORD, statement made by Andrew T. Walker, president of branch 1 of the United National Association of Post Office Craftsmen, with reference to an unfair and arbitrary Post Office Department ruling:

POSTAL BULLETIN OF NOVEMBER 20, 1958, RUPTURES EMPLOYEE MORALE—NEW POSTAL SCHEME PASSING MARK MOST UNFAIR STATES UNAPOC OFFICER

(By Andrew T. Walker, president, branch 1, UNAPOC)

The personnel division of the Post Office Department in Washington has dealt employee morale a most damaging blow causing discontent among postal clerks by its Postal Bulletin of November 20, 1958. The bulletin sets a high qualifying mark for clerks to attain in taking regular scheduled postal scheme examinations. A qualifying mark, postal clerks state, not alone high but because of it, is causing greater tension and nervous strain before and during such examinations.

For a number of recent years clerks have had to distribute 100 representative cards bearing the names of various cities out of an assigned total of 1,000 cities. These 100 cards must be distributed within 8 minutes to comply with the examination. In all of this the clerk must attain 95 percent having a margin of 5 allowable errors. In the case of schemes devoted solely to the distribution of mail according to station carrier routes the total number of numbered buildings and streets are 600. Out of this total the clerk has to distribute 100 cards to pass with a margin of 5 errors.

With the issuance of this bulletin the requirement for passing the test rose to 97 percent thereby giving the margin of three errors out of a possible 100 percent. The measure of tension and nervous strain engendered by the upward revision of the passing mark has mounted tremendously causing great discontent among the clerical force. The issuance of the bulletin was certainly ill advised or issued by someone in the department who had never taken an examination or else he would have been well aware of the tension a required passing mark of 97 percent would create.

Some years back the system had been whereby the clerk taking the examination had had to distribute all of the 1,000 cards in the examination, taking over an hour to do so, and was allowed five errors for every hundred cards. This system had been in force for a great number of years previously. With the introduction of the 100-card system by the Postal Department the general clerical force accepted it in a cooperative spirit, for the percentagewise breakdown was fair and equitable. Without a doubt the conversion from the 1,000-card system to the 100-card setup certainly saved for the postal department thousands of dollars in man-hours. The former hour-long test was reduced to 8 minutes and thereby released the clerk sooner for mail distribution. It also saved man-hours of the scheme examiners. All in all the transition was orderly with finest cooperation from the clerks. However in the issuance of the November 20, 1958, order raising the mark without any obvious savings or benefit to the department or to the postal employee has raised resentment and critical comment from the dedicated and sincere postal clerk.

My office has been besieged by phone calls, personal letters, and visits to headquarters by delegate and members objecting strongly to this new scheme requirement directive. Without a doubt this is being repeated in every UNAPOC branch throughout the Nation. Mr. Joseph F. Thomas, national president, and Joseph V. Silvestri, national secretary, have made strong representations to the officials of the personnel department of the Post Office Department. The only response has been that the matter is being given further study; however, the order is in force and every clerk has to attain 97 percent right out of studying 1,000 cards and distributing 100 cards for the test.

The spotlight of congressional interest in this matter could only result in a beneficial effect. The controversial order also contains a section setting up individual production standards, which have certain quotas also causing great concern.

The need for complete union recognition is pointedly highlighted by the fact that prior to the issuance of this order there had been no thorough consultation with employee organization representatives. The introduction of this November 20, 1958, bulletin regarding scheme passing was so far reaching, in that it touches the service life of each and every clerk, that it should have been considerably discussed before its issuance.

Again in the 86th Congress postal organizations will endeavor to secure the enactment of a suitable union recognition bill, guaranteeing full and complete discussion of all contemplated personnel orders between labor and management before these orders are activated.

Congressman PAUL A. FINO has been one of our foremost congressional friends in all of our equitable requests. When we were wrong in our requests, Congressman FINO has advised us so. Many of the Congress have been very helpful to us in a similar fashion.

Perhaps in time this objectionable order will be rescinded, but up to that time the degree of tension will continue to exist. We hope that the Department will call a meeting soon of organizations and rescind its individual production standards, along with the new scheme passing mark.

Reporting the News?

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in the January 12, 1959, CONGRESSIONAL RECORD, page 549, there appears an item I clipped from the St. Louis Post-Dispatch news section which if it deserved reporting at all belonged on the editorial page as editorial comment.

I am inserting into the RECORD the pertinent portions of an item appearing under a banner headline on page 1 of the Washington Post, Thursday, January 15, 1959, which purports to report what President Eisenhower said on the subject of his attitude toward the Republican presidential candidate in 1960. I am then inserting what the President is reported to have actually said in toto on this subject, from the transcript ap-

pearing on page A18 of the same newspaper.

The question I raise is this: Is the alleged news article under these headlines, "Ike Says He Will Oppose Isolationist for Republican Nomination in 1960—Modifies Policy of Hands Off—He Makes it Clear Support Will Go to World View Sharer," news or editorializing on the news? The conclusion seems to me quite obvious that it is editorializing of an extreme and partisan nature. If this is so what do those in the newspaper profession have to say about the ethics of this kind of reporting? Both the St. Louis Post-Dispatch and the Washington Post are held up as examples of the best in the newspaper world and yet the two specific articles that I have called attention to are rather common examples of the manner in which both these newspapers handle political news reporting. Nor do I wish to point a finger at these two newspapers simply because the examples I have used happen to refer to them, because this type of reporting is so common today that the ordinary citizen simply shrugs his shoulders when it is called to his attention.

The following is what the news story reported:

(By Edward T. Folliard)

President Eisenhower said in effect yesterday that he would veto the choice of an old guard isolationist for the Republican presidential nomination in 1960.

His statement was a modification of his earlier stand that he would maintain a hands-off policy with respect to the 1960 nomination.

In a 50-minute televised press conference at the National Press Club, the longest he has ever held since moving into the White House, the Chief Executive made it clear that he would give his support next year only to a Republican presidential nominee who shares his views on cooperation with other governments of the free world.

He also made it clear that he would withhold his support from any like the late Senator Robert A. Taft, of Ohio, who voted against the North Atlantic Treaty Organization in 1949, and who was his rival for the GOP nomination in 1952.

The President said he could write out a list "of half a dozen, or 10, or maybe a dozen fine, virile men in the Republican Party that I would gladly support."

But if a man didn't go along with his own ideas on cooperation between the United States and other countries for preservation of freedom in the world, he said, he "couldn't possibly support him, if my influence had anything to do with the matter."

Now here is what President Eisenhower said:

QUESTION ASKED ON NOMINEE CHOICE

Mr. HORNER. Mr. President, if you will take just one more on politics, I will let you go at the press. You have indicated, sir, you will follow a strictly hands-off policy in selecting the Republican presidential nominee next year. Does that not run the risk of selection of a man with whose Republican political philosophy you do not agree?

The PRESIDENT. I'm quite sure, Mr. President, that everybody would know that if a nominee were possibly made whose basic philosophy I could not go along with, whose general attitude toward the relationship of Government to the private citizen and to the State and to the community—who did not go along with my basic idea that only in a coalition of strong governments or at least an association through cooperation with strong governments can we make certain that freedom is not lost in the world.

If any man could not go along with that kind of basic thinking, well, I would say this: I couldn't possibly support him, if my influence had anything to do with the matter. Therefore, I could—I won't, but I could—write out for you a list of half a dozen, or 10, or maybe a dozen fine, virile men in the Republican Party that I would gladly support.

But I do say this: Those are men that I'm thinking in my mind—who really want to see America go ahead, its economy sound, and to be very, very careful that our security is maintained, not only by our building, own building of armaments, with support, the cooperation of other governments that want to live in independence and in liberty.

Castro Not Fit To Rule Cuba

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ANFUSO. Mr. Speaker, I have long sought and hoped for a democratic and peaceful change in dictator governments like Cuba. The revolutionary change in Cuba, commencing with uncivilized bloodbaths, does not seem to be a change for the better. Today violence reigns in Cuba, instead of order and democracy for which the people have long prayed.

Already some 200 lives have been needlessly taken, while many hundreds more are reported facing secret trials and possible death. Although executions have been temporarily suspended by the new regime, rebel leader Fidel Castro has defended these mass executions as "necessary to purify the nation." The civilized and free world had high hopes that the Castro movement would establish a government of freedom and democracy for the Cuban people, but it has been disillusioned.

On the basis of what has taken place in the brief period since the Castro regime has come to power, we can only reach one conclusion and that is: Castro is no better than Batista. The methods he has used to attain power—and I am thinking of his kidnaping of U.S. military personnel and civilians in Cuba—and his conduct after the bloody revolution clearly demonstrate that Castro has little or no regard for human lives or human rights. In less than 2 weeks he has authorized the murder in cold blood of 200 human beings under public view and without any semblance of law or order.

At the same time, it is reported that some 500 other persons are being held in Oriente Province alone and they will soon face summary mock trials by hotheaded rebels, lasting perhaps a few minutes per person and with very little chance of defense. And this the Castro regime is trying to tell the world is legal and civilized procedure. In the United States we call these lynchings and murders.

Present-day justice in Cuba under the Castro regime is succinctly discussed in an editorial in the Washington Post of January 14, where it is stated as follows:
